Public Administration and Economic Stabilization

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, March 28 (legislative day of Monday, March 24), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix a speech entitled "Public Administration and Economic Stabilization," which was delivered on March 14, 1947, by the Honorable Edwin G. Nourse, chairman of the Council of Economic Advisers, before the American Society for Public Administration.

Mr. President, I am advised by the Public Printer that the manuscript of the address of Mr. Nourse will require 3 pages of the CONGRESSIONAL RECORD, being 1 page more than the 2 pages allowed under the rule without a statement of cost. The estimated cost is $213.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since August 9, when the Council of Economic Advisers was sworn in, we have been diligently engaged in seeking to get a fuller measure of the significance of the Employment Act of 1946, under which the Council was created. Our first annual report to the President made clear our realization that it had significance for the political scientist as well as the economist. In addressing the American Economic Association recently on economics in the public service, I undertook to explore somewhat further my personal views as to how the economic content of the act might best be developed. I greatly value this opportunity of discussing with you some of its public administration aspects.

Nothing could be further from my thought than to suggest that the economic problems we must face are really separated from issues of public administration or that either can be dealt with understandingly or effectively in isolation from the other. In a paper which, by a strange coincidence, was published [1] only a few weeks before my appointment to the Council, I pointed to the need of marriage—a happy and fruitful marriage—between political science and economics if we are to avail ourselves adequately of professional work in grappling with the problem of organizing a democratic people in a national program for achieving their own material well-being. My gratification at the passage of the Employment Act of 1946 and my willingness to take a part in the attempt to bring it into effective operation stems largely from my belief that this legislation represents a real and substantial step in the evolution of our politico-economic institutions. It seems to me to promise better coordination between private units of economic enterprise, large and small, and other undertakings—from local to national—which, by reason of the functions involved, need to be organized on a public or governmental basis.

I am sure that before an audience of this sort I need not belabor this point of the interrelation between our economic system and our governmental institutions. Government is inescapably integrated into the economy. This is not merely by virtue of the fact that the Government must establish the legal foundation of property rights which underlie all business life and must establish standards of business conduct and police their enforcement if we are to have a peaceful and orderly business world. Beyond this there are many activities in which government enters substantively into the business process either through its participation in the distribution of wealth or flows of income (that is, its monetary and fiscal operations) or through its participation in the productive process. This latter may be through the provision of facilities and services (postal, highway, water, and sewage, or what not), or even of physical goods such as timber, fertilizer, or electric current. Even to the most conservative, economic well-being is the major end for which the state exists. If government were denied every power except military, it would still be basically economic as to its ends, either a defensive posse to protect its domain as national resources for productive use or the private property rights of its citizens against the incursions of rival users. Or it might be an offensive posse seeking to seize economic resources or trade controls from some rival holder.

With this view, then, as to the thorough interpenetration of the economic process and the political process in modern civilization and specifically in industrial America, let us turn to consideration of the Employment Act of 1946 as the latest restatement of the intentions of the American people as to how public administration can be brought to serve more adequately the purpose of economic stabilization or sustained use of the Nation's economic resources.

THE EMPLOYMENT ACT IS ESSENTIALLY WITHIN OUR TRADITIONS

The Employment Act of 1946 is faithful both to the political traditions of our republican form of government, with its division of powers, and to our economic tradition of maximum private enterprise, with complementary use of public agencies for economic ends.

Looking first at the political side of the question, it is obvious that the act does not in any way touch our judicial system. It is focused about equally on the legislative and the executive branches of the Government. On the legislative side, it, of course, does not abrogate or restrict in any way the primacy of the Congress in the determination of policy of the devising and enactment of measures through which policy is to be carried out. The device of a joint congressional committee is nothing novel, and the methods by which this committee is to work are the same as those traditionally used by congressional committees, though larger funds have been supplied for its professional staffing and larger use of the facilities of the Library of Congress is contemplated. As to the executive branch, also, the Employment Act conforms to the fundamental traditions of our past. From George Washington down, the President has reported to the Congress on the state of the Union and made to it his recommendation of that program of legislation which he believed would best promote the national welfare. This pattern is, we hope, enriched but certainly not altered under the Employment Act. An annual economic report of the President is to be prepared with the assistance and advice of the newly created Council of Economic Advisers, and submitted to the Congress promptly at the opening of its session. This is essentially an extension of the state-of-the-Union procedure.

Traditionally also—indeed constitutionally—the President has been entrusted with the duty as Chief Executive of carrying out the measures enacted by Congress, the major parts of this work being directly administered by department heads who also sit as Cabinet officers advisory to the President. His administrative family has gradually been augmented by the establishment of a variety of agencies and establishments whose heads counsel the President in special areas and upon occasion sit with the Cabinet. Directly within the Executive Office are the Bureau of the Budget and the White House staff, who help the President's over-all planning and management functions. This traditional system of operation in the executive branch is in no way altered by the Employment Act. The Council of Economic Advisers merely augments the facilities of advice and policy formulation under the President.

Turning to the economic aspect of the Employment Act, it reaffirms and in fact makes more explicit and comprehensive than ever before the national policy of adhering to a system of predominantly private enterprise. At the same time, it also states more explicitly and comprehensively than ever before a policy of the National Government to

[1] Serfdom, Utopia, or Democratic Opportunity? Public Administration Review, vol. VI, No. 2, spring 1946, pp. 177–187.

follow such lines of positive action as the legislature may see fit to authorize under the leadership of the Chief Executive or on its own initiative, subject to his veto powers. This declaration of residual public responsibility on a foundation of private enterprise simply reaffirms as a matter of conscious policy the traditional course we have followed ever since colonial times. This is the "mixed" economy under which in Federal, State, and local matters we have been accustomed to operate. We, of course, have never had our socio-politico-economic carburetor rigidly set to any particular mixture; but neither have we ever undertaken to operate either on pure air or pure gasoline.

A century and a half ago, the infant National Government planned the disposal of its public lands; the creation of a system of highway, waterway, and railroad transportation; a scheme of international commercial relations and of internal fiscal, monetary, and banking arrangements and institutions that were expected to facilitate and stimulate the vigorous use of our labor and natural resources and to fit our business life effectively into the changing conditions of the world economy. From time to time changes in the Government plan were introduced—from the internal improvements controversy of the 1830's to the varied New Deal programs of the 1930's.

The Employment Act of 1946 is strictly in line with the spirit of 1776. It reaffirms the American practice that has been followed again and again as we have found ourselves confronted by new problems. That is, we have given the individual and the privately organized group the first chance to perform a given economic service and to reap its gains—within general codes of proper conduct. But when it became clear that private resources were insufficient or private venturesomeness too feeble or the terms of private trade incompatible with social need, we have never hesitated to invoke community organization, State activity, or Federal aid or outright operation. Sometimes—as in the carrying of the mail—the public has prejudged the case and launched a public agency without giving much opportunity for private business to show what it could do. Sometimes, on the other hand, the public has put up with poor service because of a feeling that the field should, as a matter of principle, be left to private exploitation. That view may have been propagated by special interest groups.

In a surprisingly large number of economic functions we have organized along parallel lines of private and of public activity. We have accelerated or checked the expansion of postal, highway, education, health, power, forest, and amusement services as local and temporary circumstances seemed to require. It is nonsense to say that we have had any consistent or rational policy or economic or social theory in these matters. We have been opportunists trying to get something done, and to preserve freedom of action of the citizen as well as the business enterpriser in the process of getting it done.

I strongly suspect that we shall continue these rather unsystematic practices under the Employment Act much as we have followed them for a century or more before its passage. But in conjunction with—and in a sense compensating for—this flexible and easygoing way of business life we have at length enunciated a basic policy of economic action for the Federal Government, coordinated—so far as they will permit—with State and local governments. This policy is in no way to abrogate or interfere with the embarking of the people in such private ventures as seem to them promising. Nor does it propose any logical or ideological rule or criterion for determining the line between private, publicly regulated, and governmental activity, in the economic area. The one distinctive change in this regard that the act introduces is in defining the concept of a national economic goal, attempting to gage the amount by which actual performance falls short of that goal, and declaring formal governmental responsibility for seeking every means of closing that deficiency.

Finally, besides being traditional as to the frame of government and the structure of the economy, the Employment Act of 1946 maintains the basic tradition of individual freedom of the citizen in a democratically organized society. The act neither guarantees a job to everyone nor lays upon the members of the labor force any compulsion to accept a work assignment or to abridge the choice of type, location, or duration of work. It simply undertakes to provide a regular process through which maximum opportunities for useful employment for those able, willing, and seeking to work will be created and maintained. This preservation of individual freedom applies equally to the saver, the investor, and the entrepreneur. But the act does, at least by implication, face the distinction between formal freedom and the actual restrictions of an unfavorable organizational situation. It affirms a responsibility of public administration to remove impediments to maximum production or full-employment opportunity, but without trading in the citizen's birthright of individual liberty for even the largest mess of pottage.

Thus we pass to consideration of what more adequate ends the act envisages within the tradition of long-established values. I have suggested that while basic traditions of personal liberty and freedom of enterprise have not been violated—have indeed in some ways been intensified—the act envisages in all these regards somewhat larger goals than have thus far been attained within that tradition. We shall proceed, therefore, to consider the nature of these enlargements.

SOMETHING NEW HAS BEEN ADDED

The enlarged goal of public and private administration in the economic sector may be defined briefly as fuller and better sustained use of the Nation's resources—human and material. With the passage of this act, we ceased to be content, in the ebullient spirit of youth, with bland confidence that the richness of nature's provision and the spontaneous industry and ingenuity of our people will keep up a vigorous march of economic progress and cause us to rebound promptly from any temporary periods of economic recession. The passage of this act reflected a sober realization that, in the state of technological and organizational development to which we have now advanced, it is quite possible for our economic life, once it is thrown out of adjustment, to fail to rebound with the resilience of an immigrant population pioneering a virgin land during the early decades of a technological revolution. It reflects the sobering possibility, revealed during the 30's, that even such smart people as we are could be subject to even more severe spasms of depression or the chronic invalidism of low production, under-employment, and meager purchasing power. It recognizes that if we are to hold the momentum attained under the stimulus of war and convert it into a steadily held high pace of peacetime activity, economic administration must do much by way of conscious and intelligent contriving.

It is a distinctive feature of the Employment Act that among the means it conceives to this end, it places a larger responsibility than has ever been recognized or is perhaps yet accepted upon private business administration—corporate management, union leadership, agricultural organization, and consumer behavior. Since my assigned topic is "public" administration rather than "private" administration, I may not go into this phase of the act further than to quote a few sentences from an exposition of the matter which I laid before the NAM at their recent Congress of American Industry:

"The war record of industry was a stupendous technological and engineering achievement * * * not, however, an equal economic achievement. To have carried through the bookkeeping and disbursing operations necessary even to this gigantic operation can hardly be considered a solution of the economic problems of self-sustained prosperity in a peacetime economy. * * *

"It is pretty generally agreed that in 1947 business will move into a truly, and at many spots no doubt a sharply, competitive market. That will be the testing time of business. It is up to you to show your capacity to do business in a buyers' market. Unless you can allow the full volume of productivity of our capable labor force, our ample plant, and our marvelous technology to continue unabated and can absorb within your long-time accounting, financing, and managerial system such price declines as result, you will not have shown a capacity of the competitive free enterprise system adequately to serve the Nation's needs."

Of course it would be unfair or ineffective to lay full responsibility for the attaining and maintaining of stabilized maximum employment, production, and purchasing power upon private business administration or to expect a high level of performance within the major area which it occupies unless public administration was, within its distinctive area, so conducting itself as to promote the conditions most favorable for the effective functioning of private enterprise. Since my time is so limited, all that can be said here as to the nature of this responsibility is that it is manifest in the operations of government in setting up, improving, and administering the distinctive institutions through which private business operates, and second, through the consistent and economically sophisticated handling of those substantive activities, fiscal and other, which government itself must carry on. What, precisely, this means is not anything which can be written into a single law or that the Employment Act of 1946 undertook to describe in any specific way. It is its great merit that it left details to be filled in in the subsequent process of legislative and administrative action and did not bind either the Congress or the executive agencies to any individual panacea or particular type of remedy. Instead, it enunciated its purpose in the policy clause of the Act "to coordinate and utilize all its plans, functions, and resources * * * for the purpose of creating and maintaining * * * conditions under which there will be afforded useful employment opportunities * * * and to promote maximum employment, production, and purchasing power."

The very fact that this measure does not authorize the use of a specific remedy, but rather establishes a process for choosing and combining either preventure or remedial measures emphasizes the responsibility which devolves upon public administration in the broadest sense, legislative and executive, Federal, State, and local, to promote the objectives of economic stabilization on a high level of efficiency. What the act does definitely provide is that, instead of the piecemeal and uncoordinated way of going at the problem, to which we have been accustomed in the past, we shall from this time forward have two foci of rationalization—one in the legislative branch and one in the executive. At each of these points it now becomes incumbent upon the individuals administratively responsible to work out the details of an integrated program through which the

purpose of the act may be most steadily and fully brought to fruition.[2]

The members of the joint committee of the Congress are proceeding with their part of the task, of developing a national economic program, and perhaps next year you will wish to invite one of their representatives to discuss with you the steps by which they are seeking to bring public administration to serve the goal of economic stabilization. In the short time which remains to me today, I shall undertake to give you a very brief sketch of the steps which the Council of Economic Advisers have taken toward discovering and occupying their place within the Executive Office of the President and of some questions which yet remain to be answered as to how our work is to be most effectively articulated with other agencies in the Government and in the economy.

ECONOMIC ADVISERS VIS-À-VIS ADMINISTRATORS IN THE ECONOMIC REALM

Since the Council of Economic Advisers is set up in the Executive Office of the President, I suppose we are technically to be classed as administrative officials. But we are possessed of no administrative authority or power to issue directives. Ours is a purely consultative and advisory role not merely as to the President individually but also, as a staff arm of the President, to a considerable number of administrative offices in the Federal Government. This advisory role extends in a way even to State and local governments, and to private business organization through our consultative arrangements. All this is covered in the act through provisions that we "assist and advise the President in tne preparation of the Economic Report" and that we "compile and submit to the President studies relating to trends and developments interfering or likely to interfere with the achievement of the policy [of the act]"; that we "appraise the various programs and activities of the Federal Government in the light of the policy declared"; that we "utilize to the fullest extent possible the services, facilities, and information (including statistical information) of other Government agencies as well as of private research agencies"; and that the Council "may constitute such advisory committees and may consult with such representatives of industry, agriculture, labor, consumers, State and local governments, and other groups, as it deems advisable."

Thus we must live our life and develop our usefulness on the administrative level but in the atmosphere of ends-and-means analysis and comparative evaluation not in the atmosphere of authority. Far from being in a position to issue directives, we do not even voice our own recommendations or make a formal case in support of them. Whatever influence toward economic stabilization this agency eventually attains will not depend merely on how cordially the President welcomes the aid of professional economists in the formulation of his economic program. To attain a large measure of usefulness we must also win among the executive heads of departments, agencies, and commissions a solid respect for the professional competence of our work and for our power to grasp the complex interrelationships of a total economy (in its international setting). In our own thinking and in theirs we must build up an objective devotion to the master concept of national welfare set forth in the Employment Act. This applies likewise to the State and local administrators and the business, labor, and agricultural organizations with whom also we have working and consultative relations.

In the attempt to achieve this position of significant influence in bringing public administration in the broadest sense to promote fully the ends of economic stabilization without ourselves wielding administrative authority three general points must be recognized:

1. We must be aware of the far-reaching and deeply penetrating influence of the public administrator in promoting or impeding the stabilization of our economy on a level of high production and consumption.

2. We must give full weight to the particular requirements, difficulties, and potentialities of the locality, the industry, or even the individual organization, corporate, or union.

3. We must be able to bring to these particular interest groups a vivid sense of the solidarity of the system as a whole and the generalized program which will in the long run best promote their own prosperity. This is the most intangible part of our role but one which seems to me clearly written between if not actually in the lines of the act.

Of course the legislative process must be invoked from time to time to modify our institutions in the interest of a better stabilized economy. Likewise the legislature must act in regular course to levy taxes and direct revenues into particular channels of disbursement which, for better or worse, affect the stability of the economy. It might seem from a cursory reading of the Employment Act that the work of the Council of Economic Advisers is focused primarily, if not exclusively, upon this legislative function. More careful consideration, however, will, I believe, considerably alter this emphasis and give large or even correlative importance to our relationships with the administrative process.

I suspect that in the long run the value of our counsel must derive in large measure from the wisdom of administrative officers—Federal, State, and local—and a large part of whatever influence this agency may have toward promoting the stability of the economy must derive from what it can do toward helping these administrative officers to get a broader vision and more accurate understanding of the relation of their actions to the stability of the economy as a whole. Day in and day out in every part of the Nation, these public administrators are making decisions and taking actions by which the broad policies and the particularized mandates of formal law become the substance of our economic life. They put flesh and blood upon the bones of a legislative act and are themselves the brain and spirit through which that body acts.

Hence I think it would be impossible to exaggerate the importance of the informal but vital relationships which need to be built up between the Council of Economic Advisers and its staff and this great corps of administrative officers. This defines one of the principal matters to which the Council must give its attention—a field whose surface we have as yet only scratched. In cultivating this field we bespeak your studious and friendly cooperation. Time permits me to speak only briefly of three general aspects of this problem: (1) Our relationships with Federal administrators; (2) our relationships with public administration in the State and local area; (3) relations with administrative officers of private organizations mainly limited, of necessity, to national agencies.

Under the provisions of the law, we are a small synthesizing agency close to the Presidential apex of the Federal executive establishment. The factual and much of the interpretative material much we must attempt to synthesize into a consistent and sharply focused national program is drawn from the staff work of scores of agencies scattered through most if not all of the Federal departments and independent boards and commissions. Our staff mingles freely with these staffs on the plane of professional cooperation, giving us the broadest and most intimate view possible of the functioning of the economy in its almost infinite complexity. As our interpretation of these materials converges upon broad questions of national policy, it is incumbent upon the Council as such to establish consultative contact with the administrative heads of these agencies at the policy level.

It is important to us to make sure that we have not, in attempting to grasp the over-all picture, failed to give proper weight to the distinctive needs and operative difficulties of the functional interest groups of which the economy consists—labor, finance, management, agriculture, consumers, and whatnot. At the same time it is incumbent upon us to challenge the thinking of the top administrators in each of these areas as to whether they have become unduly influenced by the special interests of their clientele and have subordinated the highest productivity and stability of the economy as a whole to the promotion of that particular interest. It will probably occur to you at once that this kind of informal influence toward harmonizing the thinking of interrelated agencies of the Federal Government is very much in line with President Truman's frequently indicated desire to have all parts of the executive branch working together smoothly as a team pursuing the common goal of national unity.

Turning now to the State and local area, the growth of big Government at Washington in recent years has made it easy for many people to get a false perspective as to where the true springs of our economic life are located. In fact, the statutes of the States and even the ordinances of our cities provide a substantial part of the institutional framework upon which our business system rests or through which it operates. State and local revenues and expenditures ordinarily run at a level something like 40 percent of Federal. And their public works in normal times run twice as large as those of the Federal Government. Obviously no systematic study of just how the economy as a whole functions and no program for its better stabilization can be adequate which does not give searching consideration to the State and local phases.

We must seek a harmonizing of the thinking and action of State and local administrations into a coherent and consistent pattern of stabilizing the Nation's economic activity. It must not, in ignorance or selfishness, be pulling off in all sorts of mutually defeating directions. These State and local administrators' knowledge of local conditions and limitations must be brought in to enrich the over-all pattern of policy and program.

But from the other side too, we must be concerned that the broad general picture be seen in the proper perspective, and that the general purpose is disseminated into the thinking of all these administrators. If a process of truly stabilizing adjustments is to be effectuated, every administrative ruling and personal act must be directed toward a consistent purpose, comprehensive as to the whole economy. To cite a single example, State administration cannot safely erect trade barriers or devise siphons of capital at the expense of neighbor States. Nor can municipalities safely construct economic walls around themselves after the physical pattern of the Middle Ages.

---

[2] Since the cost of the war from which we have just emerged put the problem of debt reduction and budget balancing much to the fore, it is worth observing that piecemeal legislation and lack of a consistent and usefully integrated national program is one of the greatest sources of waste and inefficiency in government. From the other side of the picture a well-considered program for sustaining maximum employment and production is the surest way of maintaining the ability of the economy to bear such tax burden as is needed for carrying the debt and performing the necessary national services.

Finally, what has been said as to public administrators must be said of private administrative officials of business, labor, agriculture, and other organizations of an economic character outside the Government. The council has been giving particular consideration to the problem of building up consultative relations with these quasipublic administrators to the end that we may gain the sharpest insight possible into the true needs and difficulties of private enterprise and at the same time quicken their realization of the complementary relationship of public enterprise if even their own objectives are to be realized in the long run and to the fullest extent possible. We believe that this two-way avenue of communication will, over the years, help to promote a better understanding of the most effective role of Government in economic life and better meshing of governmental with private agencies.

In conclusion, then, may I urge all public administrators and students of public administration to study the interarticulated political and economic philosophy of the Employment Act of 1946. A quarter of a century ago we began to develop machinery for a coordinated financial program for the Federal Government through the Bureau of the Budget. Belatedly we have now launched a parallel agency to aid in developing national economic policy on a similarly comprehensive basis. Deep study and careful experimentation will be needed if we are to develop democratic but efficient means for interlacing public and private machinery to achieve such stabilization of our economy as an intelligent and well-intentioned people should be capable of achieving.

May I invite you as specialists in public administration to propose or to respond to such consultative or operating relations as may best bring the professional training and business experience of America to bear on the perennial and widely ramifying adjustments through which alone our complex industrial economy may be kept running at a rate approximating its potential productive efficiency.

Industrial Disputes

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a message from Hon. Robert F. Bradford, Governor of Massachusetts, to the Senate and House of Representatives of Massachusetts on March 18 with reference to a report filed with him by the Massachusetts labor-management committee. The message is as follows:

In my inaugural message I informed you that I had asked nine leaders in the field of industrial relations to recommend to me such changes in our existing laws as they believed to be most helpful to narrow the area and limit the damaging effects of industrial disputes. I took this step because I am convinced that the road to progress in this field lies through labor-management understanding, rather than by Government intervention.

I am herewith submitting the report of that committee.

It is a unanimous report. In my judgment it is a remarkable contribution to the cause of industrial peace and prosperity. It is so comprehensive in character and so forward-looking in its recommendations that I have no hesitation in incorporating its entire content in this message as a program for your consideration.

The report is divided into several parts. Each part deals with a different phase of the entire problem. The committee recommends:

1. Specific proposals to make collective bargaining more effective, and to set up a new and stronger service of conciliation and arbitration.

2. A procedure to prevent labor stoppages which jeopardize public health and public safety.

3. Amendments to bring into balance the State Labor Relations Act.

4. Definite machinery to solve the vexatious questions raised by the closed shop and jurisdictional disputes and other disputes between unions.

The final section deals with the question of financial reports from trade unions. This question was settled last November through a law adopted by the people of the Commonwealth. This law should not be changed until it has been given a full opportunity for trial. The committee's report does not propose to change the law. It does recommend definitions and clarifications which will implement its administration and carry out its intent.

To my knowledge this is the first time in industrial history that so comprehensive a subject has been so conscientiously studied to an ultimate, unanimous agreement by representatives of every group affected. Molded by you into legislation, this Massachusetts plan can become a modern Magna Carta for labor and industry.

This committee was appointed by Governor Bradford on January 2 to study pending legislation and to make recommendations. As Governor Bradford stated in his message, this was a unanimous report. The fact of that unanimity is most significant in view of the fact that the public, labor, and management were represented equally by outstanding leaders in those fields.

On the committee were: Sumner Schlichter, Harvard University, chairman; Rev. Thomas E. Shortell, of Worcester, Holy Cross College; Douglas V. Brown, of Brookline, Institute of Technology; Anthony J. DeAndrade, of Boston, vice president of the International Printing Pressmen and Assistants of North America, AFL; Jack Hurvich, president of Greater Boston Industrial Union Council, CIO; Harold D. Ulrich, of Melrose, general chairman of the B. & M. system board of adjustment, Brotherhood of Railway and Steamship Clerks; James Wall, of North Adams, president of Wall-Streeter Shoe Co.; Seabury Stanton, of South Dartmouth, president of the Hathaway Manufacturing Co.; Clarence G. McDavitt, of Newton, retired vice president of the New England Telephone & Telegraph Co.

Mathews on "Group Libel"

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. HAND. Mr. Speaker, the Saturday Review of Literature published an editorial on a suggested new form of legal action called group libel, which was intended as a remedy for various groups and classes who had been libeled as such.

Several hundred persons were sent a prepublished copy of the editorial and were asked for their comments. From these replies were selected letters from Bernard M. Baruch, Senator Arthur H. Vandenberg, Judge Learned Hand, Senator Joseph H. Ball, Hon. Bernard L. Shientag, Senator Elbert D. Thomas, and my colleague from New Jersey, Judge Mathews.

The subject itself and the letter from my colleague are so interesting I feel that all the Members of this House should have an opportunity to read that letter.

The letter as published in the Saturday Review of March 15, 1947, follows:

SIR: The problem you are trying to solve is an important and difficult one. Your suggested solution, although somewhat original, is basically the same as the solutions offered for all our problems—more laws and additional legal remedies.

Almost every progressive and liberal doctrine is based upon further governmental restrictions of liberty because of social and economic conditions which we ourselves have created by our own man-made system of civilization. Which, as Lewis Carroll might say, makes everything "complexer and complexer." And the further mixed up we got the louder are the cheers for the passage of legislation which gets us further mixed.

Within the last year and a half I have startled audiences (sometimes composed largely of members of what we call minority groups) by telling them there are no such things as rights of minorities. I ask them to examine the Constitution of the United States and tell me if anywhere in that document they find mention of any such things.

What they will find is just what was intended to be there—rights of individuals. I plead with them to stop talking in terms of minorities and minority groups. I ask them to talk and think in terms of individual American citizens. If any actual right is violated, it is the right of an American citizen, not the right of a member of a minority, even though it may have been violated by someone who may do so just because the one whose right has been violated belongs to a minority group. I have told them that they have confused the reason for the violation with the right violated, and that by their very reference to themselves as minority or special groups or classes, by this very segregation of themselves they are only making more and more acute and bitter the consciousness of something which the Constitution did its very best to eliminate. Instead of quenching the fire, they are adding fuel.

And now you suggest that we go further and recognize by legislation not only the legitimate existence of classes, groups, and sets but afford them some kind of legalistic remedy eo nomine. And by that one further step we will add to class consciousness, whether it be because of birth, religion, or economic status or whatnot. And out of the legal fights that will ensue still further class antagnoisms and hatreds will grow.

What about us Congressmen? Is there a group or a minority in the United States that has been more libeled and maligned than Congress, as such? What do you propose we do about that?

Before I came to Congress I did quite a little writing. During the days of the New Deal I wrote some articles and one book, the book about 4 or 5 years ago. No magazine editor wanted them. I only offered the book to one or two publishers, but they were so patently frightened by both the title and the content it was almost funny. The title was

"The Hypocrisy of Democracy." The content was in essence a defense of the Constitution. But liberalism was popular, democracy was our idol. And now we are wondering what happened to us.

You are engaged in the very profession which can do the most good in solving this problem—the education of the American public to true fundamentals. Yet you propose legislation of a novel and, to my mind at least, dangerous type. May I refer you to Conwell's Acres of Diamonds?

You are the best protectors of liberty. I know that a magazine is run to make money and not as a crusade. But unless editors begin to risk something for liberty just as men have suffered and died for it, do not think that it will be saved by fascinating formulas such as your editorial suggests.

FRANK A. MATHEWS, Jr.,
House of Representatives,
Washington, D. C.

American Legion Air-Power Program

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. JOHNSON of California. Mr. Speaker, because of the vital significance of the American Legion air-power program to our national security, I take this opportunity to call it to the attention of my fellow Members of Congress.

On the prime importance of American air power to our security, may I call your attention to a recent statement by Gen. Dwight D. Eisenhower, who better than any other person can appraise the potency of air power. In a recent speech he said:

> The War Department believes that the Air Force occupies a dominant position in war. We believe the Air Force represents the only immediate weapon available for retaliatory action if we are attacked. We must at all times have an air force—and a decent air force—in being.

I heartily endorse the following statement from a Legion pamphlet outlining that program:

THE AMERICAN LEGION PROGRAM ON ADEQUATE AIR POWER FOR NATIONAL SECURITY

The American Legion has always been a forthright spokesman on the great value of air power to our national security. Had the American Legion's prewar recommendations on military and naval aviation been followed by the country and the Congress, our Nation would not have entered World War II as a dangerously weak, fifth-rate air power. The record of American foresight in matters of national defense is far worse than the public realizes. It is an unfortunate byproduct of our habit of winning wars. Once final victory is achieved, America is quick to forget the terrible cost in lives and money of its initial unpreparedness, and the fact that it risked losing either or both of the World Wars because of its short-sighted peacetime attitude on adequate national security.

The American Legion is firmly convinced that the urgent lesson of the recent war was the advent of air power as the greatest striking force in the world. Our great military leaders, as well as those of our recent enemies, have testified that air power was the greatest single factor in defeating the Axis. In our blackest hours, American air power staved off defeat in the Battle of Midway and at Guadalcanal. It went on to turn the grim tide in the Pacific war. In Europe, air power smashed the Luftwaffe and strangled the Axis war machine. Everywhere, it spearheaded Allied offensives to final victory. From its puny beginnings in 1939, American air power grew to be the largest and most powerful in the world. However, America must remember that when the war ended, the Germans were years ahead of us in the newest phases of aerial warfare—jet planes and rockets. Had the Nazis a little more time to further develop and mass produce their jet planes and long-range rocket bombs, we might be still fighting to win the Second World War.

Jet planes and rockets have outmoded America's aerial weapons of the recent war, yet jets and rockets are only the forerunners of revolutionary new developments in aeronautics. To keep its world leadership of the air, America must invest heavily in new aeronautical research and development, for we are just beginning to probe into supersonic speeds The high price of such aviation research and the cost of an adequate air force are America's surest guaranty of national security and world peace.

Should there be a next war, it is obvious that the United States will be the first target of any aggressor. Any future enemy will strike through the air with lightning suddenness and in great force. Unlike the last two wars, there will be no sea or land barriers to protect us. Today and tomorrow America has only its air frontiers, like that over the Polar region. Either America can defend its air frontiers instantly and successfully and then strike back in kind within a few hours, or it will lose the war. If our country fails to act on these facts, we are again trifling with our own freedom and openly inviting attack and disaster.

The American Legion believes that our country must always retain its world leadership of the air as the foremost factor in national security and world peace. To that end, the American Legion has launched an educational air-power program built around the slogan "Air power is peace power." The basic themes of this program are:

1. Leadership in air power is the first essential of our national security.
2. American leadership in the air is essential to the fulfillment of our international obligations.
3. Strong American air power guarantees the maintenance of world peace.

Predicated on the knowledge that world leadership in air power is the key to our national security, the American Legion community air-power program is based on these six basic precepts which constitute adequate American air power:

1. PUBLIC AIR-MINDEDNESS

A complete public understanding of the singular importance of air power to our national security and to world peace is the vital requirement for American leadership in the air age. We must learn quickly that air power has uprooted our traditional civilization and ways of life; that it has made private flying a commonplace thing; that it has made America completely and logically vulnerable to air attack by wiping out our traditional barriers and changed lines of defense. Remembering the terrible cost of its past complacency, America must act now on the obvious fact that the nation which commands the air commands its own fate.

2. AERONAUTICAL RESEARCH

An intensive program of aeronautical research and development is a basic, urgent requirement for American leadership. This country now stands on the brink of the greatest technical revolution in the history of aviation. Before us are the unsolved mysteries of atomic energy, electronics, jet propulsion, and supersonics. Because of these advances in science and aeronautics, this Nation's World War II combat planes are now outmoded. More importantly, America's aviation research and testing facilities are becoming obsolete. Unless our country wants to stand still on the threshold of this air age, we must have extensive research programs and adequate testing facilities.

3. INDUSTRIAL PREPAREDNESS

The air battles of World War II were as much contests between Allied and Axis industries as they were between armed forces. For this reason, our future national security depends equally upon both military and industrial preparedness. Industrial preparedness must be carefully planned and ready in advance to meet any emergency. We must insure a maximum production of superior aerial weapons in a minimum of time. The high operational mobility of our Air Forces must always be matched by a like industrial mobility. Alert industrial preparedness can save us not only thousands of lives but billions of dollars.

4. AIR TRANSPORTATION

A sound and growing air transportation system, competent to assume its role in the movement and communications of any future war, is of vital importance to American air power. The Nation's commercial air transport system must provide the thousands of planes required as an adequate reservoir by the Air Forces in the time of war emergency. Our scarcity demands that we develop and maintain an adequate air transport system at a high level of efficiency. This is most essential because global air transportation has now wiped out the natural barriers which have protected men for centuries. American commerce and its armies of the future must move easily and swiftly to any part of the world because nations have shrunk to neighborhoods.

5. ALERT AIRCRAFT INDUSTRY

As World War II proved, a strong aircraft industry is the bulwark of an adequate Air Force, and, consequently, of our national security. Essential American leadership in the air must be guaranteed by the constant developemnt of new and improved equipment by an alert aircraft industry which is capable of rapid expansion to meet any emergency. After world peace is a concrete reality, the full scope of American inventive genius and methods of production must be sustained by a rock-bottom minimum of 3,000 military planes a year. This volume of production is required to maintain the reservoir of engineering, tooling, and production skills which are indispensable for rapid expansion.

6. STRONG AIR FORCES

In this age of lightning warfare and increasingly terrible weapons, America has no defense or no security unless they are spearheaded by strong, permanent air forces which have superior equipment and adequately trained personnel. These air forces-in-being must be instantly ready to defend our air approaches and strike down any aggression at its source in a matter of hours. To support these active air forces, America must also maintain a much larger, properly equipped, intelligently staffed and adequately trained Air Reserve Force which is ready at all times for immediate combat.

Mr. Speaker, to launch this community educational air-power program, the American Legion held its first National Aeronautics Conference in Indianapolis March 20–22, during which time I had the pleasure of addressing delegates from 47 States, Alaska, Hawaii, and Canada on a phase of this vital program.

This first National Aeronautics Conference of the American Legion received wide recognition in the press and over the radio throughout the United States.

Witness the following editorials from the New York Times, the Indianapolis News, and the Indianapolis Star:

[From the New York Times of March 24, 1947]

AMERICAN AIR POWER

Some plain if unpalatable facts were placed before the American Legion's National Aeronautics Conference in Indianapolis by Gen. George C. Kenney, Senator Brewster of Maine, and Major General Echols, who performed so great a service during the war in assuring the flow of our matériel.

Senator BREWSTER submitted evidence to show that we are rapidly becoming, by contrast with our position of dominant power during the war, the world's third-ranking air power, with Britain and Russia leading us. General Kenney argued that so-called push-button warfare, with its radio-controlled, long-range, pilotless aircraft and rockets with atomic warheads, is a long, tough and exceedingly expensive road. General Echols revealed that the production of American military aircraft has fallen far below the safety level set by the Presidential Air Coordinating Committee. He called for the maintenance of an American air force in being at a level sufficient to discharge our obligations in connection with the maintenance of peace. He called also for establishment of a Congressional air policy board to examine and coordinate all the elements, including military aircraft, commercial air development and a healthy, expandable aviation industry, which go to make up our first line of defense.

These messages to the Legion were not the words of warmongers, but of men who realize that weakness, especially in the air, is no harbinger of peace.

[From the Indianapolis Star of March 22, 1947]

KEEP OUR AERIAL ARM STRONG

Safeguard America's freedom and the world's little peoples with a mighty air force. Such is the earnest plea of ranking military authorities attending the American Legion's National Aeronautics Conference here. These disciples of preparedness are not alarmists. They are not warmongers. They are defense experts who know the odds of future scientific war.

The distinguished group included Gen. George C. Kenney, commander of the Strategic Air Force; Maj. Gen. William E. Kepner, head of the AAF's tactical training division; and others prominent in development of military and civil aviation.

These defense authorities are not fearful of early war. They fear only dangerous public complacency. If America maintains an aerial armada alerted to immediate action and in step with the latest advances in aeronautic engineering, its security should be assured.

Essence of future preparedness is time. Protection of the oceans has vanished. The era of push-button warfare is not distant. A few hours may hold the balance between victory and annihilation.

Tacticians warn how rocket ships and guided missiles have revolutionized the future's strategy. For generations the Arctic has been little more than an empty waste of eternal ice. Now it is the short route for air attack from Europe and Asia.

Those are the grim facts of national defense. Every citizen must pay more for the insurance of aerial might. The American Legion has rendered a notable service in arranging this first national conference. Its success should assure the continuity of this fervent appeal, ringing out from the heart of the Nation.

[From the Indianapolis News of March 22, 1947]

CLIPPING THE EAGLE

A 2-year United States power dive from first to third rating in world military aviation strength is a matter of rightful concern to delegates and speakers at the American Legion's National Aeronautics Conference in its 3-day Indianapolis sessions. Representatives from all the 48 States, Alaska, and Hawaii have been hearing a succession of warnings on letting down a Nation's air guard from such speakers as Maj. Gen. W. E. Kepner, Senator Owen Brewster, of Maine, Rear Adm. J. J. Clark, Col. Eddie Rickenbacker, and Gen. George C. Kenney.

In line with these warnings is a statement issued by the Army Air Forces in Washington detailing, among other facts, that the AAF now is left with a fleet of only 500 aircraft which are not considered obsolete out of a total assortment of some 16,000 planes in varying stages of antiquity. And even though it has been virtually taken apart by the massive postwar shrinkage demobilization program, the American sky defense faces even further shrinkage in the congressional clamor for budget and tax reduction, Army officers feel that the personnel cut to one-tenth of wartime strength is even more serious than the lack of modern aircraft. And the research jet bombers and fighters may have to fizzle out like a Roman candle, if requested funds are not provided.

The Legion's conference is timely. The world still is far from the stage when Americans again can abandon the maxim "to maintain the peace, we must be strong."

Mr. Speaker, under leave to extend my remarks, I include the principal addresses delivered to this first National Aeronautics Conference by Senator Owen Brewster, of Maine, on Soviet Air Power; Gen. George C. Kenney, commanding general, Strategic Air Force, Army Air Forces, on Push-Button Warfare and the Polar Concept; Robert Ramspeck, executive vice president, Air Transport Association of America and for 14 years a Member of this Congress, on Air Transport Equals Mobility Unlimited; John F. Victory, executive secretary, National Advisory Committee for Aeronautics on Scientific Research the Foundation of Air Power; Rear Adm. J. J. Clark, USN, Assistant Chief of Naval Operations for Air, on Naval Aviation and National Security; Maj. Gen. William E. Kepner, commanding general, Technical Training Division, Army Air Forces, Scott Field, Ill., on Air Power Supremacy and Security; Maj. Gen. Oliver P. Echols, AAF, retired, president, Aircraft Industries Association of America, on Air Power, the Aircraft Industry, and the American Legion; and my own address, Air Power and Preparedness—Security.

Tax Bill Coddles the Rich and Soaks the Poor

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1947

Mr. SABATH. Mr. Speaker, as I pointed out in my 30-minute speech on March 26 on one of the most drastic gag rules ever presented to this House, the rule made in order the consideration of a tax bill which coddled the vested interests, the economic royalists, the war profiteers and the black marketeers who accumulated $26,000,000,000—billions, not millions—during the awful war years, and who will be relieved by the bill from paying taxes to the tune of nearly $3,500,000,000.

During the 8-hour debate on the bill my Republican friends tried with their usual ingenuity and resourcefulness to mislead the people, particularly that 96 percent of the people who will benefit least from the bill, into the belief that this measure will inure to their benefit, will provide new incentives to business, and provide employment.

They stressed the alleged and fictitious savings to people who receive relatively low incomes.

The bill passed in the Seventy-ninth Congress was actually a Republican bill, forced through by a solid Republican bloc, aided, unfortunately, by a few votes from reactionaries on our side.

The proponents of the bill now before the Congress failed to provide a comparison with the Revenue Act of 1939, passed by a Congress with a heavy Democratic majority inspired by President Roosevelt.

The fact is that now, when the war is over, the common people are paying a heavier tax bill than they did before the war.

Here is a table I have myself arranged to show the true comparison between the fair and equitable tax bill of 1939, based on the accepted principle of ability to pay, which shows the real comparison between the present bill and the 1939 act. This new bill coddles the rich and socks the poor.

Original table prepared to show that under the 1939 Democratic Revenue Act individuals earning up to $2,500 paid no tax even during the war years

MARRIED COUPLE, NO DEPENDENTS

Income	December 1939 tax bill	1945 tax bill	Tax bill under Knutson bill as amended	Saving
$1,200	0	$38	$27	$9
$1,500	0	95	67	28
$2,000	0	190	133	57
$2,500	0	285	228	57
$10,000	$415	2,185	1,748	437
$25,000	2,489	9,082	7,266	1,816
$50,000	8,869	24,795	19,836	4,959
$100,000	22,469	63,128	50,502	12,623
$500,000	304,144	407,465	342,074	65,391

I inserted several tables in my speech but I feel the above table and figures are easier to understand, and taking all the figures into consideration the facts are that 4 percent of the taxpayers will receive nearly $2,000,000,000 more reduction in their income taxes than 96 percent of the taxpayers. The efforts of the Republicans to relieve the American taxpayer are amazing and their misrepresentations will not stick.

I remember, and you remember, last summer when the industrial czars, the business magnates, the lords of trade and press, told us and the American people that if price control was abolished the black market would disappear and there would be a free flow of commodities to the American dinner tables at low prices.

And what are the facts?

Since price ceilings were removed, the legal prices of meat and vegetables and

dairy products are equal to or above the black-market prices during the war.

The cost of living has shot up nearly 60 percent since the election, while incomes stood still or went backward.

Housewives, many of them, were misled by the NAM propaganda.

Now they know better.

When they go to the market they know now that the so-called meat shortage of last summer was really a strike by big packers.

Mr. Speaker, from now on I feel that the American consumers, wage earners, and people with small incomes will not believe in the promises of the Republicans and will not be led astray again. It is a fact that they are now turning to the Democratic Party, which must and will safeguard the interests of the underprivileged and the common man.

I opposed the tax-reduction bill because it was an unfair bill and not that I did not want the taxes of persons of low incomes reduced. We should also try to balance the budget and then start to pay off our bonded indebtedness in the interest of the Government bondholders. If we will not start doing it now—when the annual income is $175,000,000,000 and when business is making good profits and accumulating surpluses and wealth—when will we start?

Constructive Proposals on American Foreign Policy

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Constructive Proposals," published in the Progressive of March 31, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSTRUCTIVE PROPOSALS

There has been so much understandable commotion over the Truman administration's demand for an aggressive American foreign policy that little attention has been paid to three constructive proposals advanced during the past week which would far more effectively advance the cause of peace than would the shipment of money and munitions to bankrupt monarchies.

The three proposals, made on separate occasions by different persons, manage to add up, nevertheless, to a pattern or program of democratic action on at least three vital subjects which are being ignored by the diplomats in their haggling over boundaries, reparations, and spheres of influence.

Tucked away in the acres of newsprint devoted to the "Greek crisis," "the Truman doctrine," and the Moscow Conference were these striking, and grossly underplayed, recommendations for affirmative action in world affairs:

1. GENERAL MAC ARTHUR'S PLAN FOR JAPAN

In his first formal press conference since the end of the war, General MacArthur gave the United Nations a badly needed shot in the arm when he announced that the time had come to write a peace with Japan and place that country under UN control immediately. MacArthur's achievement in Japan is almost without parallel in history, and it is all the more striking when compared with the tragic mess the Big Four have made of Germany. The fact that he is convinced that Japan has progressed to the point where the UN can take over shows how much more than a soldier MacArthur is. Coming as it did, when the UN had been dealt a body blow by President Truman, the MacArthur statement was hailed by UN officials and delegates as a blood transfusion which might make a healthy youngster of a stricken infant—if the MacArthur proposal isn't pigeonholed.

2. THE TYDINGS DEMAND FOR DISARMAMENT

Senator MILLARD E. TYDINGS, of Maryland, who has a distinguished record of fighting for worldwide abandonment of conscription, delivered a major foreign policy address in the Senate calling for immediate, total disarmament by all nations and the adoption of a new policy of placing full reliance on a "newly sinewed" United Nations. In its present form, he said all too accurately, the UN is "nothing more or less than a glorified debating society."

TYDINGS called for an end of straddling, an end of concentrating disarmament talk on the atomic bomb alone. "What we must control is not the atomic bomb," he said, "not the scientists who make it, but the ability to make war. In short, we must control ourselves, and the people of all other nations must do likewise.

"The time has come to confront the naked truth. The time has come for us to make the great decision which will mean the survival or the end of civilization. The time has come to make the United Nations the living, potent, decisive factor in the affairs of men and nations which 51 nations have pledged their sacred word that it shall be."

3. A UNITED STATES OF EUROPE

A single sentence resolution was introduced in both houses of Congress—in the Senate by Senators FULBRIGHT, of Arkansas, and the Senator from Utah [Mr. THOMAS] and in the House by Representative Boggs, of Louisiana—providing:

"That the Congress favors the creation of a United States of Europe within the framework of the United Nations."

The aim of the resolution, said Senator FULBRIGHT, is to provide a "positive solution to an important source of trouble in the world." It is appropriate, he added, for the United States to propose this solution to some of Europe's problems "for the same reasons that we are called upon to spend billions of dollars in Germany, in Greece, in Turkey, and to lend billions in other lands. If there is ever to be peace, or ever to be an end to the expenditure of these vast sums in foreign lands, I believe a federation of European states is one of the essential conditions."

Here are three constructive planks in an American foreign policy which make a great deal of sense—far more long-range sense than the patchwork of negation currently being pushed in Washington. Of course, the diplomats and the brass hats will sneer them off as visionary and unrealistic—the State Department, for instance, has already dismissed the MacArthur proposal as premature and impractical—but we have tried the realism of practical men for a long time now, and enduring peace seems as remote as it ever was in our time.

A program of action based on attainable ideals and fired by a crusading idealism will go far toward breaking down world-wide cynicism and frustration, and embark us on a course of democratic peacemaking that we can be proud to proclaim and sell to the other peoples of the earth.

The School-Lunch Program—Investment in Nation's Youth

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. KEFAUVER. Mr. Speaker, I wish to add a few remarks about the school-lunch bill. This bill to continue the school-lunch program had my support when it was before the House in the last Congress. And I am just as strong for it now as I ever was. I know of no project more necessary to the health and vigor of the children of our Nation. Proper nourishment is the first requirement in building strong bodies.

The strength and security of our Nation depends upon a robust and intelligent manhood. The urgent need for physically fit men and women was demonstrated in the last war. Forty percent of young Americans were rejected for military service because of physical defects. The causes of rejection for the most part were from malnutrition. What can be more important to our future welfare than adopting a remedy for this defect? Growing children need nourishing food to develop into alert citizens.

We are liberal in appropriations to many causes that pertain to conservation of our natural resources, to agriculture, and others too numerous to mention. Is it extravagant or wasteful to safeguard the health and well-being of our children?

The health of 5,000,000 school children benefits from nutritious lunches now furnished at their schools through Federal, State and local cooperation. The pupils in rural schools particularly have been helped by these lunches. They have meant the difference between physical well-being and malnutrition to them.

The school-lunch program would have come to an end within this week without this deficiency appropriation to carry it through the next 3 months. We have talked and preached economy this entire session. But I do not agree that it is economy to risk impairing the health of the school-age child by denying him sufficient and proper food. The House is to be commended in continuing this program for the welfare of men and women of the future. I am delighted this bill has passed and I hope the Senate approves it before the schools are out of funds.

Smear

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1947

Mr. REED of New York. Mr. Speaker, the Democrats, the Communists and fellow travelers are resisting any cut in the

President Truman budget. The smear campaign against those who seek to eliminate waste and extravagance in government is on in full swing. It is refreshing to find that some publications are aware of the drive now being made to discredit those who believe in economy in government.

The Wall Street Journal is to be commended for its editorial exposure of the organized campaign against cuts in expenditures. Under leave to extend I am inserting an editorial which appeared in the Wall Street Journal on April 2, 1947:

REVIEW AND OUTLOOK

FIGHTING ECONOMY

Mr. Royster reports to this newspaper from Washington that Congress is finding its budget pruning an arduous task. That was bound to be the case under the best of circumstances. The apparent lack of cooperation in the executive departments certainly increases the difficulties.

Appropriation bills are framed by subcommittees of the House Appropriations Committee. These subcommittees spend many hours questioning the various departmental heads, and anyone who has eve read a transcript of these sessions will be impressed by the knowledge and diligence that many of the committee members display.

Departmental heads do not like these sessions and those who have indulged in loose fiscal practices like them least of all. It is common knowledge that in many departments considerable effort is devoted to bamboozling the subcommittee, and in certain cases those who are to testify are carefully rehearsed.

The department heads have all year to prepare and defend their requests for money. The Congressmen must frame an appropriation bill after some days of consideration. Obviously the department heads have an advantage unless they know, as was the case in the Coolidge administration, that resistance to economy will be followed by punishment.

The present atmosphere in Washington is certainly very much different. It is hard to remember a time when resistance to budget cuts has been more open and more bold. Deliberate and undisguised propaganda, some of it not very frank, has been put under way in an attempt to bring pressure on Congress. Certainly members of the Cabinet and the White House know this and there is no protest on record.

Anyone who watches the news from Washington will have difficulty in escaping the impression that there is a more or less organized campaign against cuts in expenditure. Against those who are trying to save there has been something like a smear campaign attempting to picture the proponents of economy and tax reduction as a rather shoddy lot of demagogues.

A year ago when OPA was trying to have its life prolonged something very like this took place. There was a rather steady stream of abuse of those who wanted to modify the OPA act. Various groups throughout the country were inspired to deluge Congress with demands for continuance of price control. Apparently the sponsors of this propaganda at least convinced themselves and they also succeeded in convincing President Truman. The result was a stunning defeat of the majority party in the November elections.

People who remain long in the Washington atmosphere can reach some queer conclusions and in light of the record it would not be surprising if some people had adopted the theory that cutting expenses and reducing taxes will be unpopular. Perhaps the Democratic leadership has not identified itself with that theory; we hope not. Nevertheless, the case could be made much clearer than it is. Both for the good of the country and for his own future, Mr. Truman might find occasion to make his position more clear.

Statement by Labor-Management Advisory Committee on Appropriations for the Conciliation Service

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement issued on March 27, 1947, by the labor and management members of the Labor-Management Advisory Committee of the United States Conciliation Service. For the information of the Senate, Messrs. Ahearn, Ruthenburg, and Skinner are industry members; while Messrs. Fenton, Golden, Shishkin, and Strachan are labor members.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ISSUED BY THE LABOR-MANAGEMENT ADVISORY COMMITTEE

MARCH 27, 1947.

The members of the Labor-Management Advisory Committee of the United States Conciliation Service have discussed the action of the House of Representatives with respect to appropriations for the Conciliation Service. If the Senate concurs, certain key positions in the Conciliation Service will be eliminated.

Everyone agrees that a strong conciliation and mediation service is essential if the peaceful settlement of labor disputes is to be encouraged and sound labor-management relations fostered.

Congress is now considering a number of proposals for strengthening and expanding the Conciliation Service. Until Congress has made its decision, the present Conciliation Service has an important job to perform. The disorganization of the Service, before Congress has decided basic policy matters, would be unfortunate at this critical time.

Our committee has the responsibility for making recommendations to the Secretary of Labor or to the Director of the Conciliation Service with respect to the policies, procedures, organization, and the development of adequate standards and qualifications for the personnel of the Service. We believe that substantial progress has been made in the past 12 months and that Mr. Edgar Warren, as Director of the Service, has conscientiously discharged the duties of his office.

We have no doubt that the Service, under Mr. Warren's leadership, has sought to represent the public interest in the peaceful settlement of labor disputes, and we are of the opinion that all who have been associated with Mr. Warren regard him as a loyal and patriotic American.

V. P. AHEARN.
FRANK P. FENTON.
CLINTON S. GOLDEN.
LOUIS RUTHENBURG.
BORIS SHISHKIN.
CLARENCE O. SKINNER.
ALAN STRACHAN.

The Postal Deficit

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a statement made by me before the Committee on Post Offices and Civil Service, on April 1, 1947:

Mr. Chairman, before we begin the deliberations of this morning, I request recognition to make a brief statement for the record of these hearings on your bill, H. R. 2408.

Exactly 100 years ago this month, on March 3, 1847, another Congress enacted into law a bill authorizing the Postmaster General to issue postage stamps as evidence of prepayment of the fees for transportation and delivery of mail matter. That bill, as a revenue measure, originated in one of our predecessor committees, and may fairly be said to be the beginning of our modern postal service.

The first adhesive, or stamp, authorized by that legislation, was sold in New York City on July 1, 1847, the first day of the new fiscal year.

We are, therefore, the centennial committee of the Congress for the inauguration in America of the postage stamp.

It is intensely interesting to note that from the beginning of the postal service under the Constitution, in 1789, to the date of the first postage stamp, 1847, postal receipts practically balanced expenditures. The total postal receipts for these 63 years were $113,748,998, while the expenditures were $111,790,393. The total net surplus for the 63 years was $1,958,605. I complete this fiscal picture with the fact that in 1850, the average American spent 20 cents a year for postage. In the bill before us, this is exactly the price the post office today proposes for a single special-delivery stamp for one first-class letter.

Today, as the Centennial Committee of Congress for the Postage Stamp, we are observing the one-hundredth anniversary by trying to find ways and means to correct the greatest deficit in the history of our postal service, estimated at $352,000,000, a total approximately equal to the entire revenues of the Post Office Department in 1917 at the time of our entry into World War I.

We are here trying to enact legislation to meet as much as possible of this deficit, beginning July 1, 1947, the centennial date of our first postage stamp. I hope that we will succeed in this effort, and that the bill before us in its final form will be our great contribution to the proper observance of the centennial.

Displaced Persons

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fol-

lowing editorial from the Milwaukee Journal of February 22, 1947:

DISPLACED PERSONS AND THE UNITED STATES

What shall the United States do about the displaced persons of Europe?

That question was discussed for 2 hours at the annual meeting of the International Institute of Milwaukee County by a panel of interested and unusually informed persons. The conclusion was that the United States should, during the next 4 years, permit entry of 100,000 displaced persons annually, entirely outside of present quotas but in theory out of the unused accumulations of the war years. There is a letter on this page today on the same subject.

We believe the speakers at the institute meeting arrived at a sensible and generally acceptable solution of a difficult problem.

There are now about 1,000,000 individuals in the displaced-persons camps in Europe. Some permanent plan must be made for them. It is right that the United States should assume leadership in effectuating a plan. The American share has been set at 400,000 persons, which is not so high as to constitute an assimilation problem for us but which is high enough to encourage other receiving countries to do their full share.

Our problem is to accept our responsibility with the greatest benefit to ourselves and with the least damage to the quota system of immigration, to which we have now been committed for about 25 years. Since many countries will not completely use their quotas in the next few years, it is likely that we shall not exceed the permitted total of 150,000 immigrants in any one of the next 4 years, even though we allow 100,000 displaced persons to come in annually, regardless of current quotas.

There is, therefore, a minimum of danger to the quota system itself, which should be preserved, and no possibility of an excess of immigration beyond our power to assimilate. Since all the usual tests of fitness will be applied, there is little likelihood that the wrong kind of immigrants will be admitted.

Our country is now suffering from a shortage of doctors, nurses, farm laborers, garment workers, and a hundred and one other professional and trades people. There are many such people among the displaced persons. Since most of those who will finally come have relatives here and all must have guarantors, they will make little demand on housing, and the jobs they will seek are the jobs which are crying for takers at this time. They should be no great problem, therefore, either socially or economically.

From the standpoint of the displaced persons themselves and from the standpoint of helping to get Europe back on its feet, the problem is so urgent that Congress should lose no time in passing the legislation necessary to permit America to do its part. The quicker a start is made in opening up this country to limited reception of these people the surer it will be that we get the cream of those seeking a new settlement and a new life. The longer we delay the harder it will be to bring over here the kind of people who will be assets to us.

Collectivism Versus Freedom of the People

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. KEFAUVER. Mr. Speaker, with leave to extend my remarks, I include the text of an article by Senator JOSEPH C. O'MAHONEY, of Wyoming. It appeared in the American Bar Association Journal in March under the title of "Collectivism's Rising Tide." Senator O'MAHONEY correctly points out that the growth of collectivism in this country and the world is a challenge to freedom of peoples. He presents facts on which he places his opinions. He does not prescribe the cure but asks the people "to think on these things." It is time that we follow Senator O'MAHONEY's advice. The article is as follows:

The Eightieth Congress is not yet 1 month old, but there have already been introduced in the two Houses 30 bills increasing the powers of the Government at Washington. These measures have been sponsored by members of both political parties, and are defended by their authors as absolutely essential in the public interest.

One of these bills, introduced by a Republican Representative, would establish the Office of Power Administration. Another, introduced by a Democratic Representative, would establish a Water Pollution Advisory Board in the Federal Public Health Service. A Republican Senator introduced a bill to create a new Department of Peace. A Democratic Senator introduced a bill to establish a Federal Transportation Authority as an independent agency.

Some of these bills deal with matters that are clearly national in scope. Others deal with matters that are purely local. All of them, if enacted, would make big Government bigger. This is taking place within 3 months of a national election at which the people of the country, in unmistakable terms, let it be known that they wanted, not more Government, but less.

What is the explanation of this steady drift toward central government, and what are we going to do about it? These questions must be answered by the people of the United States if we are to preserve the system which we so automatically call the American way of life.

The American lawyer, with a great tradition of public service behind him, has an opportunity now to do for the people of the United States and the world what was done for the people in 1787 by the lawyers who made up the majority of the convention which drew the Federal Constitution. Of the 55 delegates who attended that immortal session, 34 were lawyers. Ten of them had been judges, and they all went to Philadelphia not to serve the interests of groups or classes, or even geographical sections. They went there in the interests of all.

When these men drew the preamble of the Federal Constitution, they were not thinking in terms of special groups or of class government. They were thinking in terms of the people as a whole. They were thinking of justice for people. They were thinking of "domestic tranquillity," of common defense, and of the general welfare. They sought to build a government that would, in their language, "secure the blessings of liberty to ourselves and to our posterity." They were thinking, therefore, of individuals. They were thinking of the men and women and children who at that time constituted, and who in all the days to come would continue to constitute, the people of this great Nation.

If we who are the lawyers of this generation, following in the footsteps of these, our great predecessors, are to preserve the ideal of Government they cherished, we shall have to begin by rededicating ourselves to the great cause in which they served; namely, the cause of freedom for people. And our first task will be to determine why it has come about in our generation that the principles of popular government have been giving way steadily to the principles of authoritarianism.

I know of no nobler task to which the modern lawyer can dedicate himself than this. The rising tide of collectivism threatens to engulf the whole world. It will engulf us here if we do not understand the cause and go immediately about the task of applying the remedy.

A CHALLENGE TO THE MODERN LAWYER

Centralism in government has markedly increased in our time, not alone in the totalitarian states, but in countries like Great Britain and this, where people are still loyal to the principle of popular sovereignty. It was a British lawyer who several years ago wrote a great book on the development of administrative law under the title "The New Despotism." He used the word "despotism" because he recognized that government bureaus tend to develop arbitrary powers. The same theme was adopted here by a great American lawyer, who was also a member of the House of Representatives, in a volume which he called the Wonderland of Bureaucracy. Both of these books were written long before the New Deal, a fact which I casually mention in order that it may be clear that the development of centralism in the United States is not to be charged against any particular party or individual. Administrative bureaus in Government, more of which are being suggested even now by Members of the Eightieth Congress, like national labor unions, are the result of the appearance of national and international business corporations. Indeed, it is not too much to say that the modern business corporation is the most significant single social institution of our time.

Public comprehension of the nature of the modern corporation has been slowly taking form. As long ago as 1929, President Herbert Hoover established a special research committee on social trends. The chairman of that committee was the distinguished economist, Dr. Wesley C. Mitchell, under whose editorship a report was published during the closing year of President Hoover's administration.

One of the most significant chapters of this work was written by Dr. Charles E. Merriam, who compared the economic power of certain corporations with the economic power of States and cities, as measured by their revenues and the number of their employees.

This chapter showed that in 1930 New York City, which enjoyed the largest gross revenues of any political organization in the country except the Federal Government, actually had smaller gross annual receipts than the Pennsylvania Railroad System, General Motors, the Great Atlantic & Pacific Tea Co., or the United States Steel Corp.

In 1942 the State of New York had reached a higher rank in terms of revenue than the city of New York by about $6,000,000 ($720,306,000 for the State as against $714,653,000 for the city). Yet it was still outranked by corporate giants. The modern industrial corporation has become so great that it can match resources even with governments.

CREATURES OF MAN AND CREATURES OF GOD

To think of such organizations as though they were individuals is a fundamental error out of which stems much of the confusion that makes our age so turbulent. Although the modern industrial organization is actually more like a government than it is like an individual, we treat it as though it were an individual. We think of it as having the privileges and rights of an individual, whereas every lawyer knows that a corporation is a creature of man, while man is a creature of God. No corporation can come into existence save by the permission of some government. But man makes the government which makes the corporation.

Failure to comprehend this distinction and to provide the rule of order by which the modern economic state shall be made, as the political state was made by our Federal Constitution, a servant of the people, has led directly to the appearance of totalitarianism.

When the business and political leaders of Europe failed to solve this, the greatest question of our time, and the people of Europe were unable to support themselves because they no longer had control of the economic instrumentalities by which the modern world lives, they turned to central government for relief. They listened to the false preaching of Lenin, Mussolini, and Hitler, and gave to the political state arbitrary power over themselves as well as over the economic system, with the appalling results that were written in the blood of 34,000,000 people from 1939 to 1945.

Some of us act now as though World War II were like last year's Army-Navy football game, a contest that is over and done with. We seem to cherish the fond hope that we can revert to some vague normalcy and go on about the business of living without coming to grips with the underlying cause of the modern crisis. This cause is the fact that we no longer are living in a world of individuals, but in a world of organizations, and that there can be no solution of our problem until we find a rule by which these economic organizations, whatever they are—corporations, trade associations, labor unions, organizations of consumers, pressure groups of every kind—may live together in understanding and mutual helpfulness for the benefit of all the people.

One of our mistakes has been the effort to proceed by way of punishing abuses instead of encouraging the obvious good that proceeds from modern industrial organization. There are abuses to be sure. There are corporate abuses and labor union abuses. Racketeers in their time have sought to use both types of organization for narrow and selfish personal ends rather than for the public good. But despite these blotches upon the body of modern economic organization, no one can doubt that both the corporation and the labor union have been productive of definite social benefit. The modern world would be impossible without them.

TODAY'S NEED—A NEW RULE OF ORDER

It would be just as great an error to try to destroy the labor union as it would be to try to destroy the corporation. We cannot go back to the time when our economic life was the product of the capital and labor of a few men under a system whereby the worker could talk personally with his employer, and both could move on to new geographic frontiers when dissatisfied with the conditions they were enduring. The frontiers of this generation are in the field of technology and science, the great blessings of which cannot possibly be developed for mankind except through economic organization. It follows, therefore, that we have no alternative but to write a rule of responsibility for the new social institution which is the mark of our time, the organization, corporate or otherwise, by which groups of men act together. If we believe, as the lawyers who wrote the Federal Constitution believed, that the people are the source of all authority that may be exercised over them, then we cannot possibly be willing to endure a condition by which a handful obtain the power to wield these modern agencies, and the masses are compelled to endure whatever conditions may be imposed upon them.

BIG BUSINESS, BIG LABOR, BIG GOVERNMENT

We must open our eyes to the fact that the large corporation, the national labor union, and the Government administrative bureau are all aspects of the same development. The large corporation was necessary because otherwise mankind could not use the great instruments invented by genius and discovered by science. The national labor union was necessary because otherwise the workers, who could no longer negotiate with the owners of the enterprises for which they labored, would have been unable to safeguard their just interests. The Government administrative bureau was necessary because, as the new economic organizations spread beyond local boundaries, crossing mountains and rivers, and spanning the whole country, it was no longer possible for local governing authority to regulate them in the public interest.

Thus, the powers of the city and the State have been steadily diminishing, while the power of the central government has been steadily expanding. As it expands, collectivism spreads from the economic sphere to the political sphere. We see it all around us. We see political collectivism stretching out to embrace all Europe. We see socialism taking over the government of England. We see great industrial enterprises taken over by the Government of Great Britain. We know that of all the great nations of the world only the United States still adheres to a belief in the capitalistic system. If it is to survive, then it follows that we in the United States must make it survive. That, I think, is the task of the lawyer—the lawyer whose function has always been to make as well as to interpret the rule of social order. The lawyer fills our legislatures and our Congress, just as he filled the Constitutional Convention, and if the modern lawyer believes as his predecessor believed—that the people are the sovereign masters—then he will undertake now to help save the capitalist economy by helping to write the rule under which the managers of all modern economic organizations are made responsible to the people.

This rule can only be written by the Congress of the United States, which in the Federal Constitution was given explicit power to regulate all commerce among the States and with foreign nations in the interests of the whole people for whom that Constitution was written.

Boxcar Shortage

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Sunday Tribune of March 30, 1947:

CHARGE RAILS CONTRIBUTE TO CAR SHORTAGE

Delays by the railroads in handling cars in switching yards and terminals, routing loads to factory sidings, and picking up cars ready for shipment are major factors in the boxcar shortage, Midwest shippers charged yesterday.

These complaints about railroad service came from several dozen sharply critical and plain-spoken agricultural and industrial shippers who attended a meeting of the executive and railroad committees of the Midwest Shippers Advisory Board in the Palmer House.

IMPROVEMENT IS PLEDGED

Speaking for the railroads, J. J. Mahoney, superintendent of transportation for the Atchison, Topeka & Santa Fe Railroad, admitted serious shortcomings in railroad service, but promised substantial improvement in the next 3 or 4 weeks.

He said unfavorable weather, employee absenteeism, and government priorities on grain shipments for export had disrupted freight distribution. He pledged the carriers to immediate aid in moving millions of bushels of wet or high moisture corn in Illinois and Iowa before the grain deteriorates.

Lawrence Farlow, secretary of the Farm Grain Dealers' Association, and other spokesmen for country grain elevator interests warned that 50,000,0000 bushels of wet corn in Illinois must be hauled to buyers and processors in a "matter of days" if severe losses from spoilage are to be avoided.

FAR BELOW REQUIREMENTS

The elevator operators said they were getting only fractions of the number of cars required and were turning to trucks for transportation. One operator said he needed 20 cars a week and was getting two. Another said that in a recent period he received 100 cars, against 300 in previous years. Others said they were getting only 5 to 7 percent of the cars required and told how loaded cars were left in switch yards 10 days to 2 weeks.

J. C. Justesen, Mosinee Paper Mills Co., said car delays had caused a 7-day shut-down in the company's plant and that one car that was traced required 30 days to travel from Tomahawk, Wis., to Harvey.

"The railroads are not short of cars," he said. "They are just short of what it takes to keep the cars moving around."

Mentally Ill Veterans Are Entitled to Better Treatment

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. McDONOUGH. Mr. Speaker, a grave injustice is being inflicted on many veterans of the last war who served honorably in the armed forces in the defense of this country. These men, in many cases suffering from break-down or delayed reaction, have become mentally ill after leaving the service from the effects of the rigors of battle, extended periods of actual combat, and all the horrors of war which they have experienced. Now, because the Veterans' Administration has ruled that they are not entitled to hospitalization, these veterans are faced with commitment to State institutions for the insane with the resultant stigma which must follow them through life and bar them from many jobs, including civil-service employment with the 10-percent credit due to all veterans.

Such a situation cannot be tolerated, and must not be allowed to continue. Our veterans are entitled to proper medical care, if they are now ill from the effects of their war service, regardless of the date when their illness became apparent or whether they suffer from disease, physical injury, or mental derangement.

In many cases the mental illness of our veterans is only temporary, and I

believe it is our duty to provide adequate veterans' facilities for the proper care and treatment of these men so they can be restored to health. Our veterans are entitled to this consideration in gratitude for their unselfish devotion to duty during their service for this Nation.

I also believe provision should be made to insure that a complete case history should be submitted for the consideration of any court where a sanity hearing is held for a veteran. This report should include a full statement of the veteran's war record, as well as his service medical record and a report of any treatment from a Veterans' Administration facility.

In Los Angeles County a number of veterans, refused admittance to the veterans' hospitals, have been placed in State institutions—hospitals already overcrowded and with inadequate facilities for the care of these men. The following resolution has been adopted by the Los Angeles County Board of Supervisors urging the Congress to act to provide adequate care for these unfortunate veterans. I believe it is up to us to act now, and urge the Members of the House to give serious consideration to this problem.

OFFICE OF THE BOARD OF SUPERVISORS OF THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA,
Tuesday, March 18, 1947.

The board met in regular session. Present: Supervisors Raymond V. Darby, chairman presiding; Leonard J. Roach; John Anson Ford; and Roger W. Jessup; and J. F. Moroney, clerk, by Ray E. Lee, deputy clerk. Absent: Supervisor William A. Smith.

IN RE CARE AND TREATMENT OF MENTALLY ILL VETERANS: RESOLUTION PETITIONING VETERANS' ADMINISTRATION AND CONGRESS TO PROVIDE IMMEDIATE ADEQUATE FACILITIES

On motion of Supervisor Ford, unanimously carried, it is ordered that the following resolution be and the same is hereby adopted:

"Whereas on February 27, 1947, a ruling came down from the Veterans' Facility at Sawtelle to the effect that effective immediately it would be impossible to commit any veteran to any veterans' facility unless it were first shown that said veteran's mental illness was service-connected; and

"Whereas in the county of Los Angeles there are many veterans, both residents as well as transients, who are mentally ill, who are unable to be placed in a veterans' facility and are sent to State hospitals for the insane; and

"Whereas under the law of the State of California, as set forth in the welfare and institutions code of said State in regard to mentally ill persons, the court must make a finding that veterans in this category are mentally ill or insane, and the veteran who is committed to a State hospital for these reasons is not only thereafter barred and precluded from becoming a civil service employee entitled to a 10-percent credit due to the fact that he is a veteran, but his whole future is jeopardized because of commitment to a State hospital for mental treatment; and

"Whereas because of inadequate facilities (obvious to every citizen who reads the newspapers and current periodicals), it is at this time impossible in a state hospital to give the proper treatment and care so deserved by our veterans: Now, therefore, be it

"*Resolved*, That the Board of Supervisors of the County of Los Angeles go on record as petitioning the Veterans Administration at Washington, together with the Congress of the United States, that every possible step be taken to provide immediate adequate Federal Government facilities for the care and treatment of all mentally ill veterans."

The foregoing resolution was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on March 18, 1947, and is entered in the minutes of said board.

[SEAL] J. F. MORONEY,
County Clerk of the County of Los Angeles, State of California, and ex officio Clerk of the Board of Supervisors of Said County.

How Not To Retire the National Debt

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. COLE of Kansas. Mr. Speaker, in June 1944, our boys were storming the beaches of Normandy.

In that same month, the Treasury opened its Fifth War Loan. Of fifteen and five-tenths billions in marketable securities, it offered only three billions which matured in a longer period than 10 years.

In late November and December of that same year, when it was touch and go in the Ardennes Forest of Belgium, the Treasury offered in its Sixth War Loan, seventeen and two-tenths billions in marketable securities. Only three and five-tenths billions were consigned for repayment in a period longer than 10 years.

With Germany down and Japan ready for conquest, the Treasury sold the mighty Seventh War Loan of May 1945, nineteen and seven-tenths billions in marketable securities, of which five and three-tenths billions could not be paid for 14 years and eight billions could not be paid for 22 years.

Thus with half a war already won, was born the Truman doctrine of dumping the debt on the next generation.

But this doctrine reached its finest flower after the war was completely ended and wartime expenditures had sharply dropped. Two months after the Japanese surrender in Tokyo Bay, the United States Treasury borrowed money in the Victory loan by selling $19,000,000,000 in marketable securities. Of this amount, less than four billions can be retired within 14 years, and eleven and seven-tenths billions must wait 22 years for payment, if not 27.

This is a record unrivaled even in the depths of war or depression; the New Deal and World War II loans never included much more than 50-percent long-term debt as opposed to short-term. It remained for an administration priding itself on debt reduction to reduce debt by financing out of a clear sky a loan of which three-fourths must wait 14 or 22 years for repayment.

For whom was the Victory loan a victory?

The Hand Bill To Restore Pensions

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I insert a statement concerning my bill, H. R. 71, which appeared in the New Jersey Education Association Reporter, and I likewise insert a resolution favoring this bill passed by the Retired Men's Association of the Fire Department of the City of New York.

This bill has met with universal favor with all affected groups.

HAND INTRODUCES PENSION EXEMPTION BILL RIGHT AWAY

The first session of Congress was only a few hours old when Representative T. MILLET HAND, of Cape May City, introduced a bill to cut the income tax on teachers, and others, receiving pensions from Government units. The bill was listed as H. R. 71.

It provides that all amounts up to $2,000 per annum as annuities, pensions, or retirement benefits for past services as an employee of the Government of the United States, as an employee of any State, or political subdivision thereof, shall be excluded from gross income and shall be exempt from taxation" under the income-tax law.

This is a slightly more generous provision than the teachers have been asking. They requested an exemption on retirement pay up to $1,440. This, coupled with the normal exemption of $500, would give a total exemption of $1,940. This figure was backed by the NEA because it is the amount exempted under the Railroad Retirement Act.

RESOLUTION BY RETIRED MEN'S ASSOCIATION, FIRE DEPARTMENT, NEW YORK CITY

Whereas the sustained increase in the cost of living has seriously threatened the physical well-being and economic stability of thousands of citizens whose means of support is from fixed income paid to them by various public retirement systems; and

Whereas such retired employees, by reason of advanced age, are particularly subject to illness, frequently requiring medical or surgical treatment in addition to their normal living expenses; and

Whereas public employees have received increase and bonuses in income to offset the increased cost of living, while retired public employees have had and will receive no income adjustment of any kind to assist them to meet the ever-increasing raise in the cost of living; and

Whereas prior to the enactment of the Public Salary Act of January 1, 1939, pensions and annuities were exempt from Federal income tax; and

Whereas Government agencies contribute annually for pensions, i. e., to assure that employees will be able to retire when they become incapable through age or disability for efficient performance of their duties, their Government units make similar contributions in proportion to their pay rolls; Federal income tax neutralizes these contributions, as 23 percent annually more or less of the contributions toward the pensions is deflected from support of the aged pensioner to support the Federal Government; and

Whereas exemption from income taxation is the only form of relief that can be given to retired public employees to help them to

maintain the purchasing power of the pension they earned by long years in the public service: Now, therefore, be it

Resolved, That the Congress of the United States be and hereby is respectfully requested to enact appropriate legislation to exempt from Federal income taxation, all pensions and annuities up to $2,000 per annum, received by any retired employee from any public retirement system of the United States, any State or any political subdivision thereof; and be it further

Resolved, That we support Hon. T. MILLET HAND'S bill H. R. 71 and use every effort by this association and other organization to bring about its final enactment; and be it further

Resolved, That a copy of this resolution be transmitted to all members of the Ways and Means Committee of the House of Representatives and the Finance Committee of the United States Senate and to each Member of Congress in which members reside.

Income Tax Reductions

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. LODGE. Mr. Speaker, I voted in favor of this bill. It does not represent my idea of a perfect income-tax reduction measure, but in a body of 435 Members such as the House of Representatives, it is rare indeed that the individual Congressman has an opportunity to vote for something of which he approves in its entirety.

This bill is designed to relieve the individual tax payer from a substantial portion of the heavy tax burden which he carried courageously and patriotically during the war years. It is intended to provide well-deserved relief to those millions of persons of fixed incomes who suffer from shortages, high cost of living and inflation. It provides for special relief for the aged, the retired, and the infirm. Finally, it provides substantial additional relief for more than 30,000,000 people.

This bill recognizes that the people of small incomes are having a hard time. It recognizes this by providing that 61 percent of this reduction shall go to persons receiving net incomes of $5,000 a year or less. Of this amount, 71 percent goes to individuals of incomes less than $3,000 a year.

I believe that this bill will furnish incentives for business expansion and for the creation of new businesses by our millions of returned veterans. It will stimulate our national economy, create new wealth, provide a higher standard of living through increased production, and furnish an increase in gainful employment.

It provides for greater relief for the so-called little fellow than the Democrat tax reduction bill passed by the Seventy-ninth Congress. These millions of people will under this bill be able to save something from their earnings and obtain increased comfort and enjoyment for themselves and their families.

We achieved industrial and military predominance and the highest standard of living in the world because of the vitality and flexibility of our free competitive incentive private property system. This bill will do much to increase our productive effort. It will also give new hope to those unhappy people who are slaving in totalitarian countries, new hope and renewed faith in a solvent, prosperous, and vigorous America.

The Rise of Senator Thye

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include the following editorial which appeared in the St. Paul Pioneer Press, St. Paul, Minn., on March 31, 1947:

THE RISE OF THYE

A new farm-group leader is rising in the United States Senate. His rise, though unassuming and thus in keeping with the recency of his election to that body, is nevertheless clear. And, looking backward, people may someday see his quiet emergence, into this role just now as historically important, because it coincides with the beginning of the postwar agricultural era, whose acute problems this man has shown the capacity to understand.

The new farm-group leader is EDWARD J. THYE, of Minnesota. Of course, in a formal or titular sense, leadership in any phase of Senate activity is established only after an extended time, many years perhaps, of hard work. So there may be for a while no widespread recognition of the rise of THYE in his field.

All the same, the mark of farm-group leadership already is on him, and this should steadily become more evident as he goes more deeply and actively into the complex postwar farm problems. Several reasons for this conclusion are now plain.

First was the penetrating and courageous character of THYE'S first farm speech as a Senator in Minnesota at Albert Lea, Saturday afternoon. That address demonstrated that THYE is keenly alive to the deflationary perils which are inherent in the present price inflation. It demonstrated that he perceives the urgency of adopting new permanent farm legislation before a collapse comes, rather than following the former congressional course of delaying action until after the arrival of disaster. It showed that THYE is ready with a practicable plan, that of his proposed joint congressional committee, to get the ground work done in time. And the address also proved that THYE will not go along with but will fight against proposals to cut valuable existing farm programs, such as the REA and school-lunch program, to pieces on grounds of economy. These are the marks of leadership.

The next sign of THYE'S rise in the farm group grows out of his background. He is a "dirt farmer," one of very few real farm operators in the Senate. He has had practical experience in a marketing cooperative. And he has dealt repeatedly with the public side of the farm question as Governor of this State. Also, there is not in him any antilabor bitterness that could handicap good farm leadership.

Finally, THYE'S chance grows out of the situation in the Senate itself. An older generation of Senate farm leaders is passing. "Cotton Ed" Smith and John Bankhead are dead. George Norris is gone. The venerable ARTHUR CAPPER, now chairman of the Senate Agriculture Committee, is asking and receiving help from younger hands. And there is abundant young blood at hand, with about 15 new Republicans and 3 new Democrats from farm States in the Senate. The farm group undoubtedly will play an expanding role. A new leader is sure to arise. Very few will have the qualifications and the patience for the job, and THYE seemingly has both.

So Senator THYE'S rise to a leading place in the Senate farm group has begun. How far he can go will be important in this State and to this region, as well as to THYE himself. He has a good chance to make a large contribution to the welfare of American agriculture and through it to the national welfare in the years to come.

Conciliation and Arbitration Services

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include excerpts from the report of the Massachusetts Labor-Management Committee, recently filed with Gov. Robert F. Bradford, of Massachusetts. These excerpts deal with the problem of the improvement of the Conciliation and Arbitration Services. I have included the excerpts so that they may be available in connection with House Resolutions 17, 34, 68, 75, and 76, five identical bills filed by Representatives AUCHINCLOSS, CASE of New Jersey, HALE, HERTER, and myself, which propose somewhat similar improvements in the Conciliation and Arbitration Services of the Federal Government. The excerpts are as follows:

The improvement of industrial relations must be accomplished in the main by the parties themselves with such assistance as the Government may be able to give. That is why the committee has devoted a substantial part of its report to a discussion of what employers and unions can do to improve the effectiveness of the bargaining process.

If labor and management are entrusted with the principal responsibility of making collective bargaining work more effectively, they are entitled to the best possible conciliation service. Consequently, the committee attaches great importance to its suggestions for a conciliation service. It believes that the adoption of these suggestions would give the employers and the labor organizations of the Commonwealth an unprecedented opportunity to provide themselves with an efficient and impartial conciliation service. No industrial community has ever gone as far as the committee recommends in placing the responsibility for developing conciliation in the hands of employers and labor organizations. The committee believes, however, that this is where the responsibility should be. The committee also recommends a procedure by which the employers and labor organizations of the Commonwealth

can provide themselves with a competent and impartial arbitration service.

* * * * *

III. A NEW AND STRONGER CONCILIATION SERVICE WHICH GIVES NEW OPPORTUNITIES AND NEW RESPONSIBILITIES TO EMPLOYEES AND TRADE-UNIONS, AND A NEW ARBITRATION SERVICE OF ASSURED COMPETENCE AND IMPARTIALITY

The committee has pointed out that the responsibility for industrial relations in the Commonwealth should rest with employers and employees through their organizations. Their best opportunity to exercise this responsibility is in their dealings with one another. The employers and trade unions, however, should have an instrument to help them maintain good industrial relations when unassisted negotiations fail. That instrument should be the conciliation service. In addition, the Commonwealth should have an arbitration service of assured competence and impartiality.

The employers and the employees of the Commonwealth have the greatest interest in an efficient and fair conciliation service and in a competent and impartial arbitration service. Consequently, it is fitting and proper that the two groups through their respective organizations be given the opportunity to develop the kind of conciliation service and the kind of arbitration service which meet their needs. Such an opportunity has never been given employers and trade-unions either in Massachusetts or anywhere else in the world. The proposal of the committee, therefore, marks an important step forward (1) in imposing on employers and employees the responsibility for developing good industrial relations, and (2) in giving them powerful instruments with which to meet that responsibility.

Specifically, the committee proposes the following steps:

1. The conciliation service shall be an independent agency within the department of labor and industries.

2. The conciliation service shall be under the administration of a director of conciliation who shall be responsible for appointing conciliators, and who shall, in general, be directly responsible for the satisfactory administration of the service.

3. The director shall be assisted in the administration of the service by the advice and counsel of a joint labor-management committee which shall consist of four representatives of management and four representatives of labor. The four representatives of management shall be appointed by the governor from a list of not less than eight nominees submitted by the Associated Industries of Massachusetts. The representatives of labor shall be appointed by the governor from a list of not less than four nominees submitted by the Massachusetts State Federation of Labor, and not less than four nominees submitted by the Massachusetts State Industrial Union Council. Two of the labor representatives shall be selected from the nominations of the Massachusetts State Federation of Labor, and two from the nominations of the Massachusetts State Industrial Council. The governor shall be authorized to request the nominating organizations for additional nominations, but no appointments to the joint labor-management advisory committee shall be made except from persons nominated by the designated employer and labor organizations. The members of the committtee shall serve without compensation. They shall be appointed for an indefinite period subject to the continuing approval of the nominating organization. If a member of the advisory committee fails to attend two successive quarterly meetings, his place shall become vacant, and the director shall notify the governor and the nominating organization.

4. The director shall be a person of established reputation and proven experience in industrial relations. He shall be appointed by the Governor from nominations submitted by the joint labor-management advisory committee. The Governor shall be authorized to request additional nominations from the committee, but the director shall be selected from nominations submitted by the committee.

5. The term of the director shall be for 5 years, and his salary shall be $9,000 a year. The labor-management advisory committee may at any time, by unanimous vote, recommend to the Governor that the director be dismissed from his position, and the Governor shall be bound by such unanimous recommendation.

6. There shall be not less than four full-time conciliators appointed by the director of conciliation, with the advice and consent of the joint labor-management advisory committee. Each conciliator shall receive a salary of $8,000 a year. He may, however, be removed for cause by the director of conciliation; with the advice and consent of the joint labor-management advisory committee. As many additional conciliators shall be appointed as may be necessary. With the approval of the joint labor-management advisory committee, the director may appoint special conciliators on a per diem basis of compensation in the event that the services of the full-time conciliators are not available, or in special cases where the desirability of such appointments is clearly indicated.

7. The joint labor-management advisory committee shall meet quarterly, and at such other times as the director may deem necessary or advisable, or at the joint request of one member of management and one member of labor. The committee shall receive quarterly reports from the director on the operation of the service.

8. The conciliation service shall maintain a panel of arbitrators. No person shall be included in such panel unless he has received the unanimous approval of the joint labor-management advisory committee. The full-time conciliators of the service shall not be eligible for inclusion in the panel.

Your committee believes that the steps which have been proposed will result in conciliation service of the highest possible quality. The ultimate responsibility will rest with the organizations of employers and employees within the Commonwealth. We believe that they will faithfully carry out their obligations. We expect that their nominations for membership on the joint labor-management advisory committee will be made with care, and that the persons appointed from the lists of nominees will be regular in their attendance at meetings of the committee and conscientious in the performance of their duties.

The unanimous approval of the joint labor-management advisory committee would be the surest guarantee of the integrity and competence of the arbitrators included in the panel. Arbitrators would be available on a per diem basis to the parties to disputes arising within the Commonwealth. Compensation for their services and expenses would be paid by the parties. The existence of such a panel of arbitrators should provide substantial encouragement to the disputes to submit their disputes to peaceful adjudication rather than to resort to the use of economic force.

If the above proposals are adopted, your committee is confident that the conciliation service can and will constitute an invaluable implementation of industrial peace within the Commonwealth. We visualize the conciliation service not as an agency to be called upon only as a last resort when other procedures have failed but as a more positive agency, continually striving to avoid "last resorts." We visualize it as a fire-prevention agency, and not merely as a body whose function is to put out fires once they have occurred. The service must exert a persistent influence in persuading employers and labor organizations to settle their differences by peaceful methods. It will naturally try to promote the use of voluntary arbitration as a substitute for interruptions of work. It will make every effort to persuade the parties to potential disputes to enter into voluntary agreements for the submission of future differences over contract terms to arbitration. Such agreements—to be distinguished from agreements on substantive terms of employment—might well run for periods of 3 to 5 years or more. It will be a particular duty of the service to use its best efforts to bring about such agreements in those segments of industry where stoppages of work might have serious repercussions on public health or public safety.

McCormack, the Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include herein a well-deserved compliment that warrants the attention of every Member of the Congress. All of us heartily concur with the sentiments expressed by the editorial writer of the Lynn Telegram-News, Lynn, Mass., under date of March 31, 1947.

M'CORMACK THE LEADER

One of the prime requisites of a great political leader is the faculty of sensing impending danger to the government to which said leader gives his allegiance.

In view of the recent declarations by our great national leader, President Harry S. Truman, and the FBI Chief J. Edgar Hoover, as to the dangers that atheistic communism pose toward the American way of life, it is interesting to review some of the statements made by the then House majority leader, the Honorable JOHN W. MCCORMACK, on the floor of the National House of Representatives as far back as Wednesday, March 6, 1946.

At that time MCCORMACK's plea was like a voice in the wilderness crying out against potential dangers. Said he then: "Russia is going out of its way openly to attack religion in an effort to divide the religions of the Western World." This was a most significant statement.

Congressman MCCORMACK followed it up with another that went like this: "One thing seems certain—the United States cannot and should not, for its own best interests, as well as for future peace, continue what appears to be a policy of appeasement of Soviet Russia and its imposition of communistic control upon other countries of the world. Appeasement of Hitler contributed to bringing about World War II. Appeasement of Russia will contribute to the defeat of international cooperation necessary for permanent peace." Those were strong words from a strong man.

More than 10 months after Leader MCCORMACK's prophetic speech, Pope Pius XII, on Saturday, January 18, 1947, addressed a group of American pilgrims in the following language:

"Denial of men's civil and religious rights has not abated. Nor is it surprising. But it is tragic. It could be depressing, the thought that the heroic deaths of hundreds of thousands of the Nation's brave and promising youth should have left so little peace and justice and charity in its wake.

"But one dare not be discouraged. Leaders will not be wanting, they are not wanting, men of sterling character, not self-seeking

but genuinely devoted to the physical and social betterment of all classes, who in the light of Christian principles will gladly and effectively recognize what was so luminously clear to him, whom you are pleased to call the 'Father of Your Country,' that religion and morality are the indispensable support of political prosperity and that morality will not be maintained without religion.

"We pray daily that God may give these leaders the patient courage of their convictions and the strength to guide civilization back to its safe moorings. We bless you and your loved ones at home, and we express the hope that you may see the truth and speak it unafraid."

Truly may it be said that JOHN W. MCCORMACK looms larger than ever in our American pattern of life. Like a true leader, he blazes the way. May God, in His infinite wisdom, spare him and his devoted wife many, many more years of public life so that America and the world may have the benefit of the inspired leadership of the Honorable JOHN W. MCCORMACK, of Massachusetts.

Opposes Present Ratification of Italian Peace Treaty

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. HAND. Mr. Speaker, under leave to extend my remarks, and for the information of any constituents who are interested, I am inserting a copy of my letter of March 28, 1947, laying certain criticisms of the proposed peace treaty with Italy before the chairman of the Senate Committee on Foreign Relations, and I am appending the prompt and cordial reply of Senator VANDENBERG:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 28, 1947.

Hon. ARTHUR H. VANDENBERG,
Chairman, Committee on Foreign Relations, Senate of the United States, Washington, D. C.

MY DEAR MR. CHAIRMAN: I am deeply concerned with the proposed treaty of peace with Italy—so much so that I feel impelled to intrude my concern on your attention.

I have examined with care a number of memoranda on this subject, including a pamphlet entitled "What's Wrong With the Proposed Treaty of Peace With Italy," by A. A. Berle, Jr., a former Assistant Secretary of State. This document was sent me by the Committee for a Just Peace With Italy, Inc., and it seemed to me to be worthy of consideration.

Senator, there are a great many citizens of my district of Italian extraction. I am personally acquainted with many hundreds of them. They are first-class citizens whose opinions and feelings are entitled to respect. They tell me they are deeply troubled with many of the items in the proposed Italian treaty.

On March 24, 1947, nine important associations joined together in a letter to me, which reads as follows:

"DEAR SIR: The undersigned constitute the heads of all the Italo-American organizations in this area who have united, in this instance, in order to interpose a very strong objection to the proposed attempt to ratify the existing peace treaty for Italy.

"We feel that the ratification of the proposed peace treaty will cause a definite threat to world peace. We also want our Representatives to know that we feel very deeply for the present sad plight of the Italian Nation and urge you to use all your resources in fighting for a more equitable peace. The reasons are many and we therefore are enclosing a copy of an article by that famous journalist Mr. Vincent Sheean who voices, in eloquent manner, our sentiments on this most crucial situation.

"The thousands of persons represented by the undersigned are anxiously waiting for favorable action from you.

"With kindest regards,

"Very truly yours,

"Carl Valore, Columbus Association; Vincent Speciale, Italian Social Center; Biagio Bartolomei, Sons of Italy; Frank DeFeo, Independent Order Sons Italy; Joseph Borzellino, Circolo Delia; James Daniels, San Nicola di Bari; Nick Fazio, Naso Capo D'orlando; Anthony Ciolorito, Figli Di Sicilia, Frank Silvagni, Holy Name Society."

On the same day that I received this letter, I read accounts and saw pictures of the mass evacuation of Italians from the principal naval base, Pola, which is being given to the Yugoslavs. We are all familiar with the situation at Trieste. I should be greatly surprised if there is not trouble on the Adriatic. Trouble always follows the arbitrary separation of people from their homes and their own groups.

I appreciate the difficulties confronting your committee in the Senate. Italy, of course, cannot be rewarded as a former enemy country, but the historic friendship of the Italian people to us should be weighed in all considerations affecting them, and there likewise should be considered the interests of our own citizens bound by ties of deep affection to Italy.

It is wholly the province of the Senate to consider these matters, but may I presume to suggest that the proposed treaty be scrutinized in every particular with care and also with sympathy? The rapid development of events in Europe may shortly indicate an entirely different approach to this problem. It should not be ratified now.

Sincerely.

T. MILLET HAND.

UNITED STATES SENATE,
COMMITTEE ON FOREIGN RELATIONS,
March 29, 1947.

Hon. T. MILLET HAND,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN HAND: This will reply to your letter of March 28. I can fully understand your concern and anxiety about the pending Italian peace treaty. I can understand the sentiments of your Italian-American constituents. You may be very sure that the whole situation is also unsatisfactory to me. But we confront a condition and not a theory. Unless we are to have separate peace treaties (which could easily lead to complete chaos for Italy and everybody else) we must have a multilateral treaty which requires agreement with our war allies including the Soviet Union and its satellites. After participating myself in 9 months of these negotiations, I am forced to say that the pending treaty is the best that can be obtained at the present time or in the foreseeable future.

The treaty represents many concessions obtained for Italy by the Government of the United States. For example, the burden of reparations is only a minor fraction of the total reparations originally demanded. (Of course, no reparations come to us at all.) Another example is the fact that we wanted Trieste and most of the peninsula to remain Italian. When this became impossible we established the "free state" as the only alternative to delivering these areas to Yugoslavia. I think the present Italian Government will testify that the United States made every effort to protect the legitimate rights of the new Italy; and that in many aspects we succeeded. We are still conducting conversations with the Italian Government as to additional helpfulness on our part if and when the treaty is executed.

The practical question which we now confront is whether the new Italian democracy is better off with or without this treaty (because no other treaty is possible for some time to come). I cannot escape the conviction that Italy is better off with the treaty than without it. Otherwise I would anticipate multiplying friction with her neighbors and a progressive instability which would make successful rehabilitation very difficult. The choice unfortunately is the lesser of two evils.

Until all of these pending treaties are ratified there can be no withdrawal of foreign troops from either Italy or the Balkans; and until this happens there can be no real autonomy. If we must tear up the only agreements that have thus far been made to liquidate the war, I fear we would drift back into worse confusion and chaos. I do not see how Italy could hope to profit from such a trend. It is easy to criticize the Italian treaty. I frankly do so myself, but to do better is a different story and a doubtful one. Meanwhile our Italian-American friends must judicially weigh all the factors involved and temper their understandable emotions with realistic prudence. Their own American Government is the friend of Italy as demonstrated not only by its conduct at the Peace Conference but also by postwar contributions which already exceed $1,000,000,000.

With warm personal regards and best wishes.

Cordially and faithfully,

A. H. VANDENBERG.

Interruptions to Production Jeopardizing Public Health or Safety

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include excerpts from the report of the Massachusetts Labor-Management Committee, recently filed with Gov. Robert F. Bradford, of Massachusetts. These excerpts deal with the problem of interruptions to production which jeopardize the public health or the public safety, a problem with which House Resolutions 17, 34, 68, 75, and 76 deal:

The committee has given long and careful attention to the problem of interruptions to production which jeopardize the public health or the public safety. When negotiations fail to resolve differences, the committee believes that both parties should submit their differences to arbitration. The procedures which the committee suggests are designed to encourage arbitration where negotiations fail. The committee must take cognizance of the possibility that arbitration will be rejected and that a strike or lockout will jeopardize the public health or the public safety. Consequently the government

should have effective instruments for protecting the public health and public safety in these circumstances. The committee believes that its recommendations, if adopted, would provide the Government with such instruments.

IV. THE PROBLEM OF STRIKES AND LOCK-OUTS WHICH JEOPARDIZE PUBLIC HEALTH AND PUBLIC SAFETY

The great interdependence of the modern economy means that the health and the safety of the community are immediately jeopardized by interruption to the production of certain types of goods and services. Some goods and services on which the community is most immediately dependent are provided by the Government. Examples are police protection, fire protection, water supply, and the services provided by public institutions, such as institutions for the aged, the feeble-minded, the insane, the handicapped, and prisons and hospitals, and the activities of many Government departments which are essential to the day-to-day enforcement of laws.

Private industry and private institutions provide services which are almost as essential as those provided by the Government. Examples are hospital service, electric light and power, and gas. The community is less immediately dependent upon deliveries of food or fuel, but an interruption of these services would soon jeopardize public health and public safety. One can easily understand what a calamity would be caused by a strike or lock-out of nurses in a hospital or by a strike or lock-out in an electric light and power plant in a large city in midwinter. Thousands of homes would be cold because oil burners do not run without electricity. Many factories and stores which depend for their operation upon electricity would close. Elevators would not run and, unless transportation systems had their own source of power, streetcars and subways would not operate. A shut-down in the production of gas would deprive many homes of heat and many more homes of cooking facilities. The resumption of service would involve many hazards.

An interruption of other important types of service, such as street railway and bus transportation or telephone service, would disrupt production and cause inconvenience and economic loss far beyond strikes or lock-outs in most other industries. Nevertheless, they would not jeopardize the public health and public safety.

It is obviously important that the Government have clearly defined authority and well-planned policies to protect the community against interruptions to production which would gravely imperil the public health or the public safety. The following principles are useful guides in formulating procedures and policies for protecting the community against strikes or lock-outs which gravely imperil the public health and the public safety.

1. The right of employees or employers to interrupt the production of goods and services which are immediately required for the public health and public safety is a more qualified right than the right of employees and employers to interrupt the production of less immediately essential goods and services. People upon whose work the public health and safety immediately depend may have on paper the right to strike, but an extensive use of the right to strike would result in its being taken away from them. In other words, the right to strike is in effect a right which they possess only so long as they do not use it.

2. Public officials are entitled to have their duty and authority to protect the public health and public safety clearly defined, and they are entitled to be provided with effective instruments. It is neither fair nor wise to compel public officials to rely upon makeshift instruments of doubtful legality.

3. If arbitration through an impartial board is available to the parties, and if one or both of the parties refuse arbitration, the paramount issue in the dispute becomes, not the differences between the parties over contract terms, but the merits of the reasons of one party or both for insisting upon jeopardizing the public health and public safety rather than submitting the case to arbitration.

The committee believes that the long-term arbitration agreements proposed in section III of this report can be developed to give the Commonwealth complete protection, or nearly complete protection, against strikes or lock-outs which might imperil the public health or public safety. One of the responsibilities of the new type of conciliation service recommended by the committee is to induce employers and unions to make long-term arbitration agreements in all industries where an interruption to production would seriously injure the community. The committee, however, must take account of the possibility that there may be a few situations in essential industries where the parties are unwilling to negotiate a long-term arbitration agreement. Effective protection of the interests of the community requires that there be ways of providing for these cases. The committee suggests the following arrangements:

If the director of conciliation believes that a dispute is likely to produce an interruption of service which would gravely threaten the public health or the public safety, and if conciliation has been refused or has failed to produce an agreement, and if arbitration has been refused, the director shall inform the Governor and recommend that the Governor declare an emergency. The Governor may in his discretion act on the recommendation of the director of conciliation.

If the Governor declares an emergency, the committee recommends that two procedures be specifically authorized which the Governor in his discretion may employ:

(a) Require the party or parties refusing arbitration to show cause for this action. This hearing shall be conducted before a specially appointed moderator selected by the governor. The moderator shall be a person skilled in industrial relations and with an established reputation for impartiality. In the event that the governor orders a show-cause hearing, the parties may be required, if necessary, to maintain the status quo for 15 days. The show-cause hearing shall be strictly limited to a review of the reasons for the refusal of arbitration, not a review of the merits of the unsettled issues between the parties. It shall be the duty of the moderator to endeavor to work out a form of arbitration which is mutually acceptable to the parties. If the show-cause hearing fails to produce an agreement to arbitrate, the moderator shall make public his findings.

(b) Invite the parties to submit their case to a special emergency board of arbitration appointed by the director of conciliation from the standing panel of arbitrators. The emergency board shall conduct its hearings and make its report within a period of 30 days unless a longer time is mutually agreed upon. During the hearings before the emergency board and for 30 days after its report has been made public, the parties shall be bound to maintain the status quo, with respect to the matters in dispute, except as they may make changes by mutual agreement. The emergency board, in determining the effective date of its award, shall consider any evidence on the responsibility of either party for prolonging the procedure or rejecting arbitration.

The committee is aware of the possibility that the availability of emergency boards may discourage the parties from settling their differences by negotiation or voluntary arbitration. It has attempted to guard against this danger.

If one party or both reject the recommendations of the emergency board, a strike or lock-out may occur which imperils the public health or the public safety. In that event it is important that the Governor have adequate and specific authority for dealing with the situation. Broad powers are conferred on the Governor by section 9H of chapter 23 of the general laws, and by the Commonwealth Defense Act of 1917, which is referred to in section 9H of chapter 23. Section 9H of chapter 23 of the general laws reads as follows:

"Whenever the Governor shall determine that an emergency exists in respect to food or fuel, or any other common necessary of life, including the providing of shelter, or any two or more of such necessaries of life, he may, with the approval of the council, by a writing signed by him, designate the adjutant general, the commissioner of labor and industries, and the commissioner of public safety to act as an emergency commission, and thereupon the commission shall have, with respect to the necessary or necessaries of life as to which the emergency exists, all the powers and authority granted by the Commonwealth Defense Act of 1917, being chapter 342 of the General Acts of 1917, to persons designated or appointed by the Governor under section 12 of said chapter 342 and the Governor may revoke such written authority at any time. During such an emergency the Governor, with the approval of the council, may make and promulgate rules and regulations, effective forthwith, for the carrying out of the purposes of this section and for the performance by the Commonwealth and the cities and towns thereof of any function affecting food or fuel or any other common necessary of life, including the providing of shelter, authorized under article XLVII of the amendments to the constitution. Violation of any such rule or regulation shall be punished by a fine of not more than $500 or by imprisonment for not more than 6 months, or by both. The provisions of said chapter 342 are hereby made operative to such extent as the provisions of this section may from time to time require."

The Commonwealth Defense Act of 1917 contains the following sections which bear on the Governor's authority to deal with emergencies in respect to "any common necessaries of life."

"SEC. 6. Whenever the Governor shall believe it necessary or expedient for the purpose of better securing the public safety or the defense or welfare of the Commonwealth, he may, with the approval of the council, take possession: (a) Of any land or buildings, machinery or equipment. (b) Of any horses, vehicles, motor vehicles, airplanes, ships, boats, or any other means of conveyance, rolling stock of steam or electric railroads or of street railways. (c) Of any cattle, poultry, and any provisions for man or beast, and any fuel, gasoline, or other means of propulsion which may be necessary or convenient for the use of the military or naval forces of the Commonwealth or of the United States, or for the better protection or welfare of the Commonwealth or its inhabitants. He may use and employ all property so taken possession of for the service of the Commonwealth or of the United States, for such times and in such manner as he shall deem for the interests of the Commonwealth or its inhabitants, and may in particular, when in his opinion the public exigency so requires, sell or distribute gratuitously to or among any or all of the inhabitants of the Commonwealth anything taken under clause (c) of this section, and may fix minimum and maximum prices therefor. He shall, with the approval of the council, award reasonable compensation to the owners of any property of which he may take possession under the provisions of this section and for its use, and for any injury thereto or destruction thereof caused by such use."

"SEC. 23. Whenever the governor, with the advice and consent of the council, shall determine that an emergency has arisen in regard to the cost, supply, production, or distribution of food or other necessaries of life in this Commonwealth, he may ascertain the amount of food, or other necessaries of life within the Commonwealth; the amount of land and labor available for the production of food; the means of producing within or of obtaining without the Commonwealth food or other necessaries of life as the situation demands; and the facilities for the distribution of the same, and may publish any data obtained relating to the cost or supply of such food or other necessaries, and the means of producing or of obtaining or distributing the same. In making the said investigation he may compel the attendance of witnesses and the production of documents, and may examine the books and papers of individuals, firms, associations, and corporations producing or dealing in food or other necessaries of life, and he may compel the cooperation of all officers, boards, commissions, and departments of the Commonwealth having information that may assist him in making the said investigation."

These statutes provide the Governor with broad powers. These powers are especially useful if the interruption of essential services is caused by the recalcitrance of management The powers granted to the Governor by these statutes are presumably also adequate to deal with strike situations.

The committee does not believe that the seizure of plants is a desirable way of dealing with disputes between labor and management, and calls attention to the fact that seizure does not settle differences over the terms of employment. In the case of public seizure of a plant, the committee recommends that the Governor shall continue to maintain existing wages and working conditions unless he puts into effect the wages and conditions of employment recommended by the emergency board. In the event that an emergency board has not been appointed in the dispute, the committee recommends that the Governor maintain existing wages and working conditions unless he asks the Director of Conciliation to appoint a special board from the panel of arbitrators to determine wages and working conditions under public operation.

The committee believes that the procedures outlined will make emergencies exceedingly rare, and that they will permit any emergencies which arise to be handled with due consideration to all of the interests involved.

Resolution Adopted by the Supreme Council of Polish American Congress

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. ROONEY. Mr. Speaker, pursuant to the permission granted me by the House, I include the following resolution adopted by the Supreme Council of the Polish American Congress at its second annual meeting held at the Statler Hotel here in Washington on the 13th and 14th days of February, 1947. This resolution was presented to Hon. Dean Acheson, Assistant Secretary of State on March 18, 1947 by Mr. Charles Rozmarek, president of the Polish American Congress, Inc.:

More than 2 years have elapsed since the war has ended, and yet world hope for genuine peace and security is still far from reality—mainly because of the obstruction of Soviet Russia.

Victory of the Allies has meant only that the brown fascism of defeated Nazi Germany has been supplanted by the red fascism of Communist Russia, which is equally oppressive and rapacious. In the interlude of the 2 years Soviet Russia—encouraged by the unpardonable policy of appeasement of the democratic nations—has grabbed many lands, subjugated millions of peoples and looted their capital.

This policy of appeasement indulged by the United States with the evident tragic consequences is politically wrong and without realistic justification. For much of Russia's industry and agriculture has been ruined by her erstwhile Nazi accomplice and to regain offensive war power Russia would need billions of American dollars and at least 5 years for industrial reconstruction.

The evil, however, with which Soviet imperialism has beset the World had its origin in the now infamous Yalta Conference, where for temporary political expediency democratic principles were compromised, solemn pledges broken and whole nations bartered away into bondage of Communist Russia.

The most ignominious barter of the Big Three at the Yalta Conference was the delivery of democratic, Christian Poland to communistic, anti-Christian Russia. In shameful disregard for the valor and unbounded sacrifice of the Polish people spent in the course of the common struggle, it was decreed at Yalta that their country be partitioned, their institutions debased and their government disavowed in preference to Russian installed puppet regime. This settlement of the Polish question, however, only challenges the wisdom and the good faith of world statesmanship and threatens at once any plan for durable peace and security.

In recent weeks, Soviet Russia, having apparently fully exploited the Yalta compromises and being aware of her present internal and economic weakness, has begun to make desperate efforts to bring about world disarmament, especially that of America. First through legal means and then through her network of espionage, Russia is trying desperately to learn the secret of the atom bomb. In this respect American pacifists and misguided liberals unwittingly and the Communist fifth column deliberately are aiding the Russian objective by clamoring for disarmament and the disclosure of the secret of the atom bomb.

In view of these ominous facts and in an effort to help realize international peace and security, the Supreme Council of the Polish American Congress, representing over six million Americans of Polish descent, voices these declarations:

1. To prevent any further blackmail of the democracies by Soviet Russia, the Supreme Council of the Polish American Congress calls upon the United States and Great Britain to revoke at once the Yalta deal with all of its evil compromises concerning not only Europe but Asia and the Pacific.

The flagrant violation of Russia's pledge to allow "free and unfettered elections in Poland" presents these two signatories with extraordinary legal and equitable basis for such an immediate revocation of the deal. Reconsideration of all the issues compromised at Yalta would at once create a new world situation in which not imperialistic Russia but the United States and the other democratic nations would of righteous necessity assume the dominant role. With the revocation of the Yalta pact the great wrongs inflicted upon Poland and the other defenseless countries could be redressed and thereby the Bolshevik designs for world domination effectively thwarted.

2. Common decency and sound statesmanship demand the reestablishment of a truly strong, integral, and independent Poland with a democratic government. The so-called Polish elections of last January, rigged up in an atmosphere of Russian coercion, terror, and brutality were a grotesque fraud.

The long-awaited "free and unfettered elections" in Poland can be secured only if Russia will withdraw its armies and its secret police from that country and the elections are conducted under the surveillance of an international commission free from any coercion.

3. Recognizing the fact that the territory ceded to Poland in the west has always been historically and economically an integral part of Poland, except for the time it was seized and held by force by Germany, the Supreme Council uncompromisingly is opposed to any revision of these western or so-called Oder-Niesse boundaries of Poland. Moreover, this land is but small compensation for the unparalleled devastation and loss of life and property which the German war-machine inflicted upon Poland.

4. The surviving members of the Polish armed forces, who fought so gallantly for the cause of the United Nations and the Polish political refugees, whose only transgression has been to want freedom and democracy, have today become outcasts of the "four freedoms", barred from their homeland and left destitute throughout the globe. Cannot now the democratic nations in gratitude offer them haven?

(a) In order that the United States might in good conscience assume its responsibility to admit a fair share of these displaced persons—we earnestly appeal to Congress to enact the necessary legislative changes, permitting:

(1) "recapturing" past unused quotas.

(2) utilization of current unfilled quotas.

(3) mortgaging or borrowing ahead of future quotas not yet due.

In the interim the Supreme Council appeals to all people of charitable heart to bring immediate relief to these unfortunates and to their brethren in Poland, who face starvation and ruin.

5. To assure the security of this country and to enable it to conduct a virile and positive foreign policy with the view of establishing world peace, the Supreme Council:

(a) Calls for the maintenance of full military strength of the United States;

(b) Supports the policy of retaining the secret of the atom bomb and of its continued improvement and production under the surveillance of the military;

(c) Approves universal military training to assure this country's state of preparedness;

(d) Opposes any disarmament sought by Russia at the expense of the democracies and calculated only to serve communistic imperialism;

(e) Supports the American claim to the Pacific island bases.

To these ends the Supreme Council of the Polish American Congress dedicates its will and efforts in the sincere hope that it will thus in some measure help the United States discharge its international responsibility with dignity and efficacy and redeem its promises to its faithful allies.

For the Supreme Council of the Polish American Congress:

CHARLES ROZMAREK, *Chairman.*

JOHN A. STANEK, *Secretary.*

MARCH 1947.

The Italian Peace Treaty

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1947

Mr. ROONEY. Mr. Speaker, the present Italian peace treaty proposes that Italy's interests and future should be sacrificed to totalitarianism in a vain effort to find a basis for lasting peace. Events have now proved that this is not the way it will be found. As conclusive evidence that this is the case, the Greek crisis has already revolutionized our outlook and foreign policy.

These views have been expressed by the Committee for a Just Peace with Italy, Inc., which is composed of our leading American citizens of Italian birth or extraction. This substantial committee very properly insists that the Senate must take the foregoing statement into consideration in taking action on the Italian peace treaty, that Italy should remain, with Greece and Turkey, in the democratic orbit of influence, and that the treaty should definitely be rejected and a new treaty negotiated. The committee further urges that in the meantime, the Senate declare the war with Italy at an end.

Under the permission granted by the House, I include in my remarks the following analysis of the Italian peace treaty by Mr. A. A. Berle, Jr., former Assistant Secretary of State, in charge of Italian affairs.

My friends on this committee take the position that although Mr. Berle's analysis only recommends that we withhold ratification at this time; the reasons he gives for his position may well favor outright rejection of the treaty. His analysis reads as follows:

A REPORT SUBMITTED TO THE EXECUTIVE COMMITTEE OF COMMON CAUSE, INC., BY A. A. BERLE, JR.

Your committee has been kind enough to ask my views on the proposed treaty of peace with Italy. You are, as I understand it, particularly interested in whether the peace treaty accords with the pledges made to the Italian people prior to the collapse of Mussolini and to the principles for which the United States fought during World War II.

My suggestion, for reasons hereafter stated, is this:

The wisest course would be to urge the Committee on Foreign Relations of the United States Senate to study and conduct hearings on this treaty; but that it should recommend to the Senate that ratification of this treaty be withheld for the time being and until the other treaties embodying the European settlement, particularly those with Austria and Germany, are negotiated and are placed before the Senate and the American people. When this shall have happened the Senate and American public opinion will be able to form a judgment as to whether all the treaties should be ratified.

This suggestion must not be considered as even remotely implying a course of American isolationism like that adopted after World War I. The United States is now locked by circumstances and history into the European situation. She could not isolate herself if she wished. Whatever settlement is reached with respect to Italy or the rest of Europe, the United States is one of the powers which will be held to primary responsibility. This, in itself, requires great caution in approaching the Italian treaty. If the result is bad, a repercussion will be a movement against its makers, including the United States. It may be added that, in view of American participation in the United Nations, the United States Government is in a position to deal separately with peace treaties, while maintaining all of her responsibilities and interests in the European scene.

The governments of the Soviet Union, Great Britain, the United States, and China, together with the allied and associated powers, have committed themselves to signing the treaty of peace with Italy.

So far as the United States is concerned, all parties understand that her signature is subject to ratification by the Senate of the United States. The problem now presented is whether or not your organization and other American citizens should urge on the Senate (1) ratification of the treaty; (2) refusal of ratification; or (3) to withhold ratification at this time. I think the third course should be followed.

I

At present, neither the Senate nor the American public can judge whether this treaty effects a settlement of the Italian problem.

Secretary Byrnes and his colleagues, through the long negotiations of 1945 and 1946 which led to drafting the proposed treaty, readily grasped the central problem. It was not the problem of Italy. It was the wide gulf between the Soviet Union and the group of nations under her control, and the practically unanimous opinion of the other nations of the world. The negotiations, in fact, were only secondarily negotiations for a treaty of peace with Italy. They were really attempts to reach a modus vivendi between the Eastern and the Western Powers. The basis was the situation created by military occupations of territory set up when Germany collapsed, and when the principal allied armies met in central Europe. Certain demarcation lines were agreed on, theoretically for convenience of military administration. They were not intended to be the basis for settlement of final relations between the Allied Powers. Yet they powerfully influenced the relationships which are set up by the draft treaty. Treaties based on battlefield conditions, temporary occupations, and disturbances following a huge war, are rarely enduring.

Both Secretary Byrnes and President Truman recognized this with commendable frankness. They state that the treaty is unsatisfactory in some respects but is the best obtainable under the circumstances. In blunt fact, the terms of the present treaty satisfy no one.

Nevertheless, the negotiation of the five treaties represents a great service to the American people rendered by Secretary Byrnes, Senators Vandenberg and Connally, and their colleagues. But this service was not the solution of the Italian problem. It was the crucial, though temporary, checking of imperialist movements which endeavored to use postwar confusion to seize territorial and political advantage in all directions. Secretary Byrnes was able to bring this in some degree to a halt. He deserves the highest commendation. This was the real result of the first five peace treaties.

Time may show that the result obtained is the only result politically possible, and that acceptance is dictated by circumstances. But in view of the rapid changes in the European scene, we have the right to hope that with the passage of time a less passionate atmosphere will be created; and that solutions may become possible which more nearly accord with the underlying desires of the populations of the countries.

So long as the Italian treaty is unratified, there is a possibility of a more satisfactory and sound agreement either by negotiation between Italy and Yugoslavia (which has been suggested already) or by clarification of the European situation, or both. Either possibility might be foreclosed if the treaty were ratified now.

The first reason for delaying ratification is that the treaty as it stands is not satisfactory; that it is not, in fact, a treaty of peace with Italy at all; and that more time may permit repairing some of the injustices of the treaty.

II

The Government of the United States made a single pledge to the Italian people prior to the landing of troops in Italy. This pledge was that United States would assure the preservation of the essential nationhood of Italy. This pledge was, properly, read against the background of the Atlantic Charter and the repeated declarations of war aims.

Unless, therefore, Italy as a great nation can live, maintain herself, and resume the position in Europe to which her attainments entitle her, the pledge has been broken. The provisions of the proposed treaty may not inevitably infringe on this pledge; but they do not guarantee that it will be carried out. Unless other elements appear which are not now visible, the result of the treaty might conceivably be to create a situation in which the people of Italy are as helpless as are apparently the people of Poland. The United States is already struggling with a situation in Poland arising out of a breach of the understanding arrived at on which the Polish people relied. Clearly we cannot afford the creation of another situation in which a people believes that it has been betrayed. The comments that follow are therefore addressed to various phases of the maintenance of the "essential nationhood" of Italy.

On the political and territorial side, the draft treaty with Italy is in the nature of a blank check. Its real significance can only be filled in by other settlements not yet made.

Besides making certain minor changes in favor of France on the French border, this treaty deprives Italy of Venezia Giulia, sets up an artificial Free Territory of Trieste guaranteed by the United Nations with a clearly artificial boundary; substantially disarms Italy on land and sea; and requires the demolition within one year of any defenses which Italy may have on the new frontier. Thereafter, she is to be perpetually undefended.

Under certain circumstances, these provisions might be livable. But this depends on settlements not yet made. Thus:

The Italian arrangement will mean one thing if a free, friendly, independent state of Austria emerges. It will mean something else if a Russian or other Great Power army remains in Austria, or dominates Austrian life.

The treaty will mean one thing if the Italian colonies in Africa, ceded to the United Nations, become real internationalized areas moving toward a free and friendly life. It will mean quite another if sole trusteeship of these colonies, notably Tripolitania, cause them to become, in substance, colonies of a nationalist European empire. The Soviet Union has already requested that she be named the sole trustee for Tripolitania. At an earlier period, Great Britain apparently also had hopes of becoming sole administrator.

The treaty will mean one thing if general disarmament is finally worked out so that

the entire Yugoslav frontier, and the Yugoslav side of the Adriatic, becomes a peaceful, nonmilitary strip of territory. It will mean quite another thing if actually the entire Dalmatian and east Adriatic coast remains, as now, a heavily armed military frontier. At present Albania, in agreement with Marshal Tito, is creating (and perhaps has already completed) a powerful air base and a powerful naval base near Tirana and Valona respectively. These command the Strait of Ostranto. Taken together with the military dispositions north of Trieste, and other Balkan arrangements, they really turn the Adriatic into a lake dominated by Marshal Tito. Meanwhile, there is open conflict on the frontier between Yugoslavia and Albania on the one hand and Greece on the other. The peace of the Mediterranean, and with it of Europe, under this treaty, would be substantially placed in the hands of Marshal Tito. His government has not as yet given evidence that it is entitled to guard the peace of a great part of the world.

It is possible to imagine settlements effecting general disarmament which might make the arrangements of this treaty moderately safe, despite its harsh language. Such settlements have not been made, or even outlined. The claims of the various parties do not yet foreshadow that they will be easy to attain.

The only certainty resulting from immediate ratification of this treaty would be that Italy would be disarmed, that American and British troops would be withdrawn; that a disarmed Italy and Adriatic would be left facing Yugoslavia with an army estimated at 600,000 men, maintained at war strength, and backed by a militarist government which has proclaimed its desire to seize more Italian territory, and dominate or, if possible, annex the proposed Free Territory of Trieste; and to strengthen its position in the Adriatic and the Balkans by every possible means, including use of force short of war.

As a result we have neither balance obtained by mutual good-will of peoples, nor balance obtained by equivalent force; nor stabilization obtained through complete and friendly understanding of the great powers. Under the present circumstances, the Italian peace might easily become, not a peace settlement, but a diplomatic stepping stone to further disturbance.

It follows that the wise and prudent course, in the point of view of the United States (and, I think, of the rest of Europe) would be to delay ratification of this treaty until we know with reasonable clearness, what else is going to happen.

III

On the economic side, the proposed treaty leaves room for few illusions. It is not, in fact, seriously defended, except as a settlement of expediency.

The Italian people are to pay reparations; this they cannot do unless other nations, particularly the United States, are generous to them with gifts and loans. Since the treaty takes from Italy part of her current production, and much of her raw material, especially coal, she will be less able to pay in future than at present. In substance, the United States must thus pay the reparations bill of Italy, or accept responsibility for a long period of Italian misery, or even of a possible collapse in which the entire Italian people will suffer.

The United States is, of course, able to pay Italy's reparations bill. If this solution is the only one possible, it might be better to accept rather than add to the already huge total of misery in this area. Yet, by no possible reasoning, can the situation be described as satisfactory.

The total of reparations amount to $365,000,000, of which the Soviet Union gets $100,000,000; Yugoslavia, $125,000,000; Greece, $105,000,000; Ethiopia, $25,000,000; Albania, $5,000,000. The amounts, like most reparation figures, are arbitrary—which is natural. Relatively, the Greek claim should be superior to any other; but Greece has not even a membership on the commission of the four Ambassadors which is to administer the settlement. Payment is to be made from various sources, but notably from Italian current industrial production including mining. The Soviet Union proposes to take her reparations in part by furnishing raw materials to Italy, and taking back the finished product, thus securing in effect a mortgage on Italian labor.

One could go into detail. For instance, in the Soviet settlement, Italy will continue to pay until the excess of the value of finished products over the value of raw materials sent her by Russia adds up to the reparation figure. Control of these "values" apparently rests in the hands of the four ambassadors. By manipulating these values, reparations could be extended indefinitely. We might take the cynical view that this is a matter for Italians. But, when it is realized that Italy must live on imports, and must pay with her exports for the necessities she must import, such manipulations might extend, indefinitely, claims on American generosity to salvage for the Italian people a bearable standard of living. This is merely one illustration of some of the possibilities which this treaty contains.

It is, of course, possible to conceive a turn of affairs in which the financial and economic provisions contained in part VI of the treaty could be worked out. In dealing with the Italian reparation figures and economic clauses, the negotiators avoided the fantastic figures which attended negotiations of reparations with Germany at the time of the Treaty of Versailles. For their relative restraint, they deserve commendation. Yet the reality is none the less unpleasant. The Italian people have not now sufficient current production to take care of their current needs. They have been living partly on American supplies, sent through UNRRA, or paid through American loans, or by the personal sacrifices of thousands of Americans who buy food and clothing from their own resources, and send it to their Italian friends. The reparations clauses will perpetuate this situation for a considerable period of time.

In certain cases—notably that of Greece—there is a clear obligation on Italians to do what they can for the Greek people. In Greece also American economic assistance has come close to being the difference between life and death for many people. It is possible, of course, to channel a part of our assistance to Greece, for example, by way of Italy; a portion being diverted, through the reparations route, to Greece. But it might be plain common sense for us, in that case, to lend assistance to Italy by diminishing reparations and increasing our direct assistance to Greece—since we seem to be the ultimate source from which reparations might come.

The history of Europe after World War I taught us that postwar economic situations can be transitory. Despite a bleak outlook at the moment, some economists feel that the upsurge of production, once war conditions have been eliminated, can be great. The picture, particularly in respect to food and textiles, may well undergo a marked change within the next year or two. Again the logic of the situation suggests waiting until we see more clearly what the outline of postwar European economics will be.

IV

The plan creating the Free Territory of Trieste and its territorial statute government deserve a word. The facts have been widely publicized, and little detailed examination is needed here.

Trieste is an Italian city. Its outskirts and hinterlands are Yugoslav. There has been, and is now, a state of suppressed war between the two nationalities. The main economic significance of Trieste is as a port, not only for Italy, and for Yugoslavia, but also for trade from Hungary, Yugoslavia, Austria, and northern points. We cannot yet know whether that trade will be allowed to flow freely; or whether a series of closed economic arrangements will channel this trade for political purposes through unnatural routes. It has been reported that the Free Territory of Trieste, guaranteed by the United Nations, and with a fine geographical position to serve the commerce of central Europe and the Mediterranean, is considering granting concession for a hotel and gambling casino as a means of financing at low level its public services. Perhaps nothing could better illustrate the irony of the proposed arrangement as conditions now stand.

Geographically, the situation is acknowledged to be tenuous in the extreme. The city is dependent for communication with Italy on a strip not much more than a couple of miles wide; and on the least adequate of the railroads which serve the city and port. The water supply, the electric-light plants, and other of the plants serving the city lie outside the free territory. Workmen employed in the free territory live in the suburbs outside and are at the mercy of the authorities who could decline to permit passage across the border, either to enter or to leave. The negotiators, realizing this artificial condition, concluded agreements by which the Government of Yugoslavia undertakes to safeguard the essential necessities of the situation. Anyone familiar with agreements of this sort knows that, even without technical violation, life under such conditions can be made unbearable for human beings. Agreements of this kind can be short-lived and rest primarily on good will. At present, only the presence of Allied force in Trieste prevents violent conflict between Yugoslavs and Italians.

Were the relations between Italians and Yugoslavs like the relations which exist, say, between the United States and Canada, an arrangement of this kind would be possible. The common sense and goodwill of individual citizens and local authorities would then find ways and means of making the arrangement work. Americans immediately think of the easy relationships which prevail, let us say, along the Canadian border where we freely interchange jobs, entry, electric power, and where hundreds of men pass from Canada to the American side for work or recreation with no inconvenience. The ultimate hope in this singularly explosive region is that Yugoslavs and Italians (who left to themselves, get on very well together) will eventually take charge and eliminate the nationalist politicians who have made life unbearable for both sides. But it would be unreal to say that this situation prevails now. Until it does, the Free Territory of Trieste is merely a weaker and more impractical version of the Danzig settlement which failed so signally after World War I.

There are indications that time, tolerance, and good sense will eventually produce better relationships on this border. Then, conceivably, the fragile arrangement of Trieste may work. As of the moment, it must be recognized for what it is: An unsatisfactory compromise resulting from an attempt to move the line of Yugoslav domination by force across the head of the Adriatic for the purpose of adding to nationalist domination of that part of the Mediterranean area.

Again it follows that, before ratifying, further light is needed on the ultimate relationship of the parties immediately involved—Yugoslavia and Italy; and, behind that, of the relations which are to prevail between that sector of Europe which is Russian-dominated, and the rest of the world. That is not and cannot be spelled out in the Italian treaty alone, but must await the fitting together of the totality of peace treaties. Therefore,

logic directs they be considered together as a whole rather than piecemeal.

V

Even in peace treaties, I suppose, decent attention ought to be paid to the amount of misery they create. One effect of this treaty will be the immediate migration of a great number of Italian citizens from territory to be turned over to Yugoslavia. They will, in fact, become homeless refugees in Italy. This is not what the treaty says. It is the result of a condition of affairs by which many thousands of Italians will not risk remaining in Yugoslav territory, where there exists a period of revolutionary terror, and where political revenge is being carried out with extreme ruthlessness. The number of added displaced persons can only be estimated; Venezia Giulia sources insist it will produce 40,000 from that area alone. In any event, the number will be substantial. And there is thus added another item to the black page of individual misery which so-called peace making in Europe has already caused. This condition also may be ameliorated by time. There is, in my judgment, no reasonable doubt that, as of the present, the human results of the proposed new border will be bitter indeed.

This memorandum does not undertake to discuss the proposed disposition of the Italian colonies in Africa, nor of the cession of the Dodecanese Islands to Greece. The theory of the treaty is that the Italian colonies in Africa will be disposed of by the Governments of the Soviet Union, Great Britain, United States, and France; if agreement is not reached, the matter is to be submitted to the United Nations. Most Americans prefer submission to the United Nations, rather than continuation of a condition putting a premium on territorial grabbing. The cession of the Dodecanese Islands to Greece seems acceptable; responsible Italian statesmen agree that these islands, which are Greek, should be restored to Greece. In neither case would any interest be prejudiced if the treaty were not ratified now, though direct delivery of the Dodecanese to Greece might be arranged even in advance of ratification.

There remains the single question: Is not an immediate settlement, however bad, better than continuing conditions where there is not peace at all? This is, in effect, the principal argument for immediate ratification. It is not sufficient. In the absence of a just European settlement, or of the clarification of relations between the Soviet Union and the Western Powers, or both, there is no reason to believe that this treaty, even if ratified, would constitute a settlement at all.

CONCLUSION

For these reasons, I suggest to your committee that they consider recommending to the appropriate authorities, including the Foreign Relations Committee of the United States Senate, that this treaty be received and studied but that its ratification be delayed until the outline of the European settlement shall be agreed upon.

Lincoln Day Speech of Hon. Charles A. Plumley, of Vermont

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. PLUMLEY. Mr. Speaker, under consent heretofore granted, I am inserting as an extension of remarks a verbatim stenographic report of a speech I made at the Lincoln Day celebration at Fresno, Calif., on February 11, 1947:

Mr. Chairman, ladies and gentlemen, I take no exception in being introduced by the chairman as a Member of Congress from Maine—with this exception: Maine slipped once; Vermont never has.

This has been a hectic week for you; but what do you think of me? Being called only last Sunday and told that I was to make three—and now they tell me four—speeches out in California. There was only one thing for me to do—that was to accept the invitation.

I am no stranger in this part of the country. That was one reason I came out here on such short notice, to see again your wonderful valley and the Sierras. I love no other mountains more, unless it be the Green Mountains of Vermont.

Last night, having ridden from 2:30 p. m., Washington time, I arrived over the airport at Los Angeles at 1 a. m. I was going to say 4 a. m., but that was Washington time. You can figure it out better than I, but it was half-past 4 or 5 back home when I got into the airfield; then it took me an hour and forty-five minutes to get to the hotel; so that I hadn't had much sleep when somebody from this town, and then somebody from Long Beach, called me and said it was time to get up. I called up Mrs. Plumley to let her know I had a fine trip—I did not tell her anything about the landing because once before she waited 2 hours and 35 minutes for me to get out of a California fog—wasn't the first fog I was ever in either.

I did think it was kind of adding insult to injury today when the Long Beach Chamber of Commerce gave me a dinner and had an undertaker there. I got his number, so that if I ever feel as I did last night in the fog over California I can call him up.

None of you listeners can be more surprised to hear me than I am to be here to talk to you. None of you can regret more than I do that Senator HICKENLOOPER found it impossible to be here. It is a difficult and a thankless job to undertake to pinch hit for so eloquent an orator and so great a statesman as the Senator from Iowa. However, while I appreciate your disappointment in not having Senator HICKENLOOPER with you, and his in being unable to come, I am glad to be here to renew old friendships and to make new ones.

The Republican National Committee was insistent that you should not be disappointed, so they told me—which was an indirect compliment calculated to induce me to substitute for the Senator. The compliment was not justified, as you will soon learn, but it worked; so I am here.

I am going to make you a real old-fashioned Vermont-Republican, Jeffersonian-Democrat speech. If you don't like it you can leave any time.

I come as a Vermonter across the continent to emphasize the fact Kipling so well stated:

"There is neither east nor west, border nor
breed nor birth,
When two strong men stand face to face,
tho' they come from the ends of the
earth."

So stands the Republican Party today, solidified East and West, honest-to-God, Jeffersonian Republicans—Republicans survived, I say modestly, by reason of the attitude taken by that so small group known as Vermont Republicans.

I promised not to omit to say to you that I was embarrassed, during the third attempt of Franklin D. Roosevelt to be elected, by the fact that my State of Vermont voted Jefferson a sword and invited him to run again. I have had difficulty in dodging that issue.

We meet today to observe the anniversary of the birth of that uncommon commoner, 100-percent American, great emancipator, savior of the Nation; a type whom nature wills to plan but once in all a peoples' years—Abraham Lincoln.

So many people have so well said of Lincoln those things which all of us would be proud to put in words, that little remains to be said or can be said which has not already been spoken. Poets, authors, statesmen, all have vied with one another in an attempt to do justice to the memory of the man and his achievements. One poet has said:

"Some opulent force of genius, soul, and
race,
Some deep life current from far centuries
Flowed to his mind and lighted his sad eyes,
And gave his name, among great names, high
place.

"Unschooled scholar! How did you learn
The wisdom a lifetime may not earn?
Unsainted martyr! Higher than a saint!
You were a man, with a man's constraint,
In the world, of the world was your lot;
With it and for it the fight you fought
And never till time is itself forgot
And the heart of man is a pulseless clot
Shall the blood flow slow, when we think the
thought
Of Lincoln."

True it is that a strange light shone from his sad grey eyes; all the magic of morning, noon, and night, all the mystery of dark forests and starry skies were in them; a strange divinity shone from his face, carved with lines of worry and suffering, cut deep with care and love for mankind, a boundless love, fathomless as the sea, illimitable as space. No monarch ever had greater power than he; none ever employed it so tenderly, so benevolently, so graciously. No power of pardon except that of providence was ever exercised so mercifully, so divinely. No other human being dried so many tears, stopped so many heartaches, revived so many hopes. Don't think me sacrilegious when I say: "He was a man of sorrows, acquainted with grief. He was bruised for our iniquities; he was wounded for our transgressions, and the weight of our Government was upon him. He saved others; himself he could not save."

Shepherd of the people, that old name that the best rulers ever craved, he fed us with counsel when we were in doubt, with inspiration when we sometimes faltered, with caution when we would be rash; with calm, clear, trustful cheerfulness through many an hour when our hearts were dark. His rugged, honest, steadfast perseverance and staunch Americanism still stand as examples and objectives which the nations and all of us as individuals may well try to emulate.

Unwavering in his loyalty to the fundamentals of American government, his genuine respect for the Constitution and his great concern for the destiny of the Republic ended only with his death.

"So they buried Lincoln! Strange and vain.
Hast any creature thought of Lincoln hid
In any vault 'neath coffin lid?
In all the years since that wild spring of
pain?
It is false—he never in grave hath lain.
You could not bury him, although you
slid
Upon his clay the Cheops pyramid,
Or heaped it with the Rocky Mountain chain.
If so, man's memories not a monument be,
None shalt thou have."

A redeemed and reunited Republic is Abraham Lincoln's monument.

We Vermonters still believe in the Constitution of the United States, the Constitution of Vermont, the Declaration of Independence, and the Bill of Rights. We still insist among other things that Congress shall

make no law abridging freedom of speech; that no person shall be deprived of life, liberty, or property without due process of law; and that the powers not delegated to the Federal Government by the Constitution itself are reserved to the respective states or to the people. We believe that the Constitution is still the supreme law of the land and that no plea of emergency may ever suspend its provisions in any particular, at any time, anywhere.

I want to say to you women that it is about time you recognized your responsibility. It is about time that you realized as the owners of five-eighths of all the property, real, personal, and mixed, in the United States of America today, as joint depositors in savings banks, or as beneficiaries of life insurance policies, and in a hundred other ways beneficiaries—yours is the money to control and yours to save, and if the old man will not go out to vote, take your sister and go along and both vote.

With the people of Indiana (whose general assembly has adopted a concurrent resolution to this effect) we Vermonters know we were fooled for quite a spell by the magician's trick to make us believe that a dollar taxed out of our pocket and sent to Washington would be bigger or twice as big when it came back. Of all the foolish asinine things ever perpetrated on a nonsuspecting public. The idea of taking a dollar out of your left pocket and putting it behind your back and putting it in the pocket of the Federal Government and then putting it in your right pocket with partial payment of some obligation which your State has incurred.

Well, we are through with that kind of program. We certainly are. We propose to bring government back home to the States and to restore the American Republic, and the 48 States which now comprise it, to the foundation built for it by our fathers. We know that a republican form of government has over a long period of years, made greater material progress, produced higher standards of living, inspired superior love of peace, tolerance, and goodwill than has been achieved in any other period in any other nation on earth.

We Vermonters vote with that party which stands for the sanctity of the home and church, for the constitutional right of free speech, of free criticism of Government, for independence in thought, work and play, worship and prayer; individual license to plant and sow and harvest without dictation by any brain trust or any bureaucrat.

I don't know and I don't care whether I overstep my time. I came out here to make a speech and I am going to do it while I am at it. I want to tell you this: You Californians, if you don't want to have the State of California produce the next President of the United States, you had better be darned careful. There are millions of voters, from Maine and Vermont westward, looking this way, who think you have one of the strongest candidates today that the Republican Party has to offer. I am not out here to run your politics, but I notice he is smart enough to be up in Washington. I saw his picture today in the paper. He is getting around in Washington. There are two or three others who would like to have the lightning strike them. This man Warren knows his way around.

Once to every man and nation comes the moment to decide in the strife of truth or falsehood for the good or evil side. That hour has struck for t' e Republican Party. If we do not make good our promise to balance the budget, reduce taxes—up or down or across the board or any other way—at least 20 percent, cut a million off the payroll and to do about 49 other things that have got to be done in order to save this Government—it cannot all be done in 2 years, but if we don't make some progress at it right away, we will not be entitled to be running this Government.

Now, we Vermonters believe in being good neighbors. We have lived peacefully along an unfortified boundary line running between ourselves and our Canadian neighbors so long that there is nothing new or wonderful to us about this good neighbor idea. Why shouldn't we be good neighbors? We always have been. Moreover, Vermonters are ready to fight to establish and to continue and to maintain that status, but we hate paternalism, and we insist that this is our Government and that it does not own or control us; nor can it define or classify us as serfs or menials.

The story the ages tells us is that no method of procedure has ever been devised by which liberty can be divorced from local self-government; no plan of centralization has ever been adopted which did not ultimately result in bureaucracy, tyranny, inflexibility, reaction, and decline.

Of course we are for real reciprocity. If you've got some potatoes that you want to swap for butter—if you've got something that I haven't, or I have something that you haven't, that's a fair trade; that's reciprocity.

But when Argentina or Uruguay and one or two other countries are burning up tons of corn which they would like to get up here to sell in a market to compete with western farmers and to make it impossible for you to sell your corn, that's not reciprocity. I'm not for it.

Vermont Republicans have registered, undismayed and in no uncertain terms, their repudiation, disapproval, and contempt of those whose tactics and programs would undermine and eventually destroy our representative form of government.

Now, let's see—just before I left JOE MARTIN, our Speaker, said, "Tell those folks on the west coast this Congress is dedicated to the task of getting the Government out of the people's hair; returning to constitutional government; drastically reducing the cost of government, reducing taxes; starting on the long trail of debt reduction; bringing about better relations between labor and industry; and establishing peace at home and abroad." That's your Speaker who says that.

Now, what did the chairman of the House Committee on Appropriations say? He said: "Tell 'em, Charlie, that the President's budget message calls for expenditures of $37,500,000,000. It means the carrying of 2,100,000 people on the pay rolls—there are now 2,300,000 people on the pay roll. We do not need over 1,300,000 on the pay roll in any event, and we should be able to reduce the Government's expenses next year by at least $5,000,000,000. The salvation of American liberty depends upon balancing the budget, reducing taxes to the point where there will be some incentive for people to go out and produce. This is the way to raise America's standard of living."

Now, this Nation, which the Civil War was fought to preserve, will have ceased to be when the legislative powers are surrendered to executives who are but too willing to accept them; when the judiciary strives to find reasons for upholding laws enacted at the behest of noisy minorities; when the plain language of Federal and State Constitutions is given new and strange meanings in order to meet assumed emergencies; when debasement of the currency is adopted as a sound financial policy; when the sovereignty of the individual States is disregarded and local self-government becomes an obsolete phrase; when individual initiative is discouraged, the lessons of experience cast aside; when personal liberty, in great measure, becomes a thing of the past. All these things are involved in, will be the ultimate end and result of, and are a part of the policy and program which the New Deal party endorses and pledges itself to support blindly like an automaton or a robot.

Now, you cannot pick up a paper today in which there is not an intimation made by somebody, representing the New Deal element in Congress, to the effect that it is going to be impossible for the Republicans to carry out their policy.

No such crisis as now exists has confronted this country since the date Abraham Lincoln declared that our Nation could not endure half slave and half free. The battle has just begun.

The Republican Party has made mistakes—yes; and it is big enough to admit them, subsequently to correct them. It has maintained a record for achievement and accomplishment which will not permit it to lie down. The Republican Party has always been the party of action, of progress and achievement, since the day of its founding, and every time the so-called Democratic Party has been in power it has messed up the Government to the extent that eventually the people of the country have waked up and hollered like the very devil for the Republicans to get back and take over. They have done it now. They put the responsibility squarely on us, and it is ours to assume. If we do not do it—just too bad for the country and for us because we will never again get the opportunity. We are going to do it. We are going to keep our promise. We are going to pay off our pledges just as fast as we can.

On November 5, 1946, the people of the United States had their first opportunity in years to vote in a national election with their minds unburdened by the repressive consideration that our country was engaged in war, or threatened by war. I know thousands of good Republicans voted the Democratic ticket because we were at war, and that was the only reason they did it; but since the war is over, look at the vote we had. And we will have one three times as big in 1948—in California!

The issues in the election were clearly drawn. No one can deny that an overwhelming majority of the people of the United States have said that:

Our national house must be put in order.

Government controls must be ended so that private enterprise may be free to produce in abundance, and at reasonable prices, the goods the country needs.

National policy and action affecting labor relations must be reformed to the end that protection of the welfare of the people as a whole will be a consideration superior to the special interests of either employers or labor organizations.

Don't worry about the Wagner Act—it's going to be amended, so it will be fair to both sides. We are not going to start out with a lot of punitive legislation—that's the wishful thinking on the part of those who want to make you think that we don't know any better than to do that, but we do. We think we know pretty well what we are trying to do, and we are not going to let them tell us when to do it or how to do it. When we get our program ready we will announce it and you will back it.

The people of the United States demand that an end be put to the confusion, indecision, lack of direction in national affairs, to the continuing attempts to impose on the country the wishes of small but powerful minorities, and the unwarranted Government restraints on individual freedom.

You would be surprised to see the scarcity of the old type of lobbyist since January 1.

They aren't there any more—those boys that came into your office and said, "Now, you sign right here on the dotted line if you want to come back to the Congress." I am not bragging, because, as a Vermont Republican, I fear neither God, man, nor the devil. I don't think it took any courage for me to show them the door. I'm telling you it is pretty embarrassing for some folks. It will be a major aim of the Republican program to restore and safeguard the political, economic, and social freedom of the individual.

The powers of Government should be embodied in laws enacted by elected legislators. We've got more men hanging around Congress—and more in those bureaus than there are in Congress—who couldn't be elected fence builders in Fresno, and never have been elected to any office—here's a gentleman who can tell you something about it—he's been down there trying to do business. They don't know enough to—well, I won't say what I think about it.

We're going to stop calling names, as you've noticed here tonight. We're going to say what we are going to do. We are just going to thank God that we've got a chance to do it, and clean out that rotten mess there in Washington. We'll do it.

The Government cannot legislate prejudice out of existence. You think that over. That's something you cannot legislate out of existence, either prejudice or intolerance. How many years have we been trying to install the Christian religion by legislation? No, by its own direct dealings and by use of its influence the Federal Government can and must set the country a high example of impartiality, tolerance, and good will, and so must the States.

This is not a matter which Government can deal with directly successfully. The sound approach to the problem is through the process of education. And another thing, you watch your school books and see what is in them. Have somebody who is fair-minded let your children know that there have been improvements, and that there has been progress, but kick out of your schools this phoney stuff based on theories that are as dead as the bullrushes around little Moses. How? You've got to begin right here at home—mother, you had better look at the book, read through that history. One of the most insidious places where they undertake to put the wrong ideas into the minds of the younger children is in their English text-books. They write a theory with a little story and it is as communistic as anything that ever Foster wrote. It's there, all over this country, in the schools.

The expense of Government must be cut to the bone. There should be a surplus of receipts over expenditures to be used to reduce the Federal debt and reduce an overhanging threat of inflation, and before we know how much we can cut we've got to know how much we are going to get. You can't start out to build a house unless you know where you are going to get the money, and you cannot undertake to reduce the amount that you first thought to expend until you know that you are going to have more than you are going to spend.

I think it's Saturday that the Legislative Budget Committee—that's what I've got to be back to Washington for—is to bring in an estimate as to the amount of revenue which can be produced. When we know how much revenue we are going to have, then we'll know how much we can apply on our national indebtedness. We'll know how far we can cut the budget. We'll know how many things we can do. But until we know we're not going to tell anybody about it.

Expenses, I say, must be cut to the bone. Taxation of individuals and business firms should be decreased in proportion to the reduced expenses of the Federal Government. When we don't need this money for Federal expenditure you'll have it to use in the State, and you'll run your own business and say how much you'll tax yourself, in the State, in the town. A thorough overhauling of the Federal tax system ought to be undertaken at the earliest possible moment in order to gear the system to its sole rightful purpose—the raising of the revenue required for economical, pay-as-you-go operation of an efficient Government.

The basic labor law—the so-called Wagner law—was enacted to minimize labor disputes by legalizing the right of collective bargaining on matters affecting hours, wages and conditions of work. Now the truth is, on the theory that the economic power of labor unions was inferior to that of employers, the law was made deliberately one-sided. Benefits of the law are available only to labor unions; penalties of the law apply only to employers. The law discriminates not only against employers—you hear very little about this—but also against the rank and file of American working men and working women, because while they are legally protected against coercion, discrimination, and interference on the part of their employer, they have no such similar protection against coercion, discrimination, or interference from the unions or from John Lewis or anybody like him. That's why that law has got to be amended—to protect the ordinary working man and working woman.

I had a petition sent me within 2 weeks signed by 400 members of labor unions in the northern counties of my State asking me to see to it that the Wagner law was amended. Now you folks, active as you are in politics, know that it took an awful lot of courage to sign that petition on the dotted line and send it down to me—possibly for me to put in the CONGRESSIONAL RECORD; but they are sick and tired and fed up on being ordered around; they are going to take care of it if we don't; and if we don't, then they are always going to vote the Democratic ticket, and I don't know as I blame them.

Today it is the unanimous wish of the people of the United States for a permanent condition of peace and good will among the nations of the earth. If possible, the wish is now more sincere and ardent than ever before. The world of today has been so shrunk by science that when war breaks out anywhere it tends to engulf nations everywhere. Twice within one generation wars that originated between other nations have involved the United States. Under these conditions it is clearly in the interest of the people of the United States to encourage and promote all reasonable proposals and programs that will lead to maintenance of permanent peace. That's easy to say, but very, very difficult of accomplishment.

The United States should contribute unreserved support toward the building of a truly effective international organization. The United States—and I weigh well my words—I am a graduate of a military institution, was president of one for 14 years, my two boys are graduates—so I say, the United States should make a standing offer to take steps equal to those of other strong military powers to limit its war-making potential. In the meantime, however, while the international situation remains unclarified as it is, and until the disposition of other nations is revealed and they put all their cards on the table in front of an iron curtain, the United States must continue to assure itself of maximum military preparedness.

Republicans will undertake all possible measures not only to preserve peace, but to promote actively cooperative and friendly relationships, with all other nations to achieve and to cherish a just and lasting peace in order that the government of the people, by the people, and for the people, shall not perish from the earth.

Russia in the Postwar World

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I include an article by Paul Hutchinson, which appeared in the Christian Century of March 5, 1947, and which appears to be an important contribution to the current discussion on our foreign policy:

RUSSIA IN THE POSTWAR WORLD

HONOLULU, February 14.—After 8 months of travel, I have come to earth here for a few weeks. Stretched on the Waikiki sands, looking across the sun-splashed blue of the Pacific (I insert this for the benefit of my snowbound colleagues in Chicago), I am trying to use these days to sort out and reflect on the impressions of a journey that has taken me all but around the globe. It has been an experience conducive to meditation. While I was in Japan the PRO (press relations officer) at headquarters told an Army gathering that I was the first correspondent to complete a round-the-world assignment since the end of the war. Whether that is true, I have no means of knowing. But I do know that I have been enabled to see many of the present tension spots at first hand, and the temptation to try to summarize some of the conclusions to which I have been driven is irresistible. This I intend to do—Waikiki languor permitting—in five concluding letters.

Two questions fill the minds of the thoughtful throughout Europe and Asia: What is the United States going to do? What is Russia going to do? Politically, and to a large extent economically and socially, the postwar outlook reduces largely to the answers given those questions. The policies of other states, and developments within them, of course, enter into the total picture. But everything revolves about America and the Soviet Union—their relations with each other and their intentions with regard to foreign and domestic affairs. There is, therefore, no other place in which to start considering the prospects for peace than with the part to be played by these two nations, the two true great powers that emerged from the war. And I might as well begin with Russia.

One of the facts gradually impressed on a person who wanders about this jittery world is the omnipresence of the Russian question. From Sweden through Germany and Italy and on to the eastern end of the Mediterranean, the oil lands of the Middle East, India, China, and occupied Japan, national leaders everywhere are trying to compute the Russian factor and are shaping their policies in the light of their conclusions. Let trouble break out anywhere—as for example in the agrarian revolts in the Philippines or the resort to terrorism in Palestine—and the question invariably arises, "How much of this can be traced to Russia?" The Russians may protest that this is unjustified, that it is bad faith, warmongering, the deliberate fabrication and spreading of baseless suspicion. But it is also a fact.

On the other hand, the Russians keep themselves on edge with constant fear of what the rest of us are up to, and especially of the United States. Is this country forming a combination of nations, through the United Nations or otherwise, to thwart the policies and ambitions of the Soviet Union? Do we consider her a carrier of infection, and

are we trying to arrange to quarantine her? That may sound ridiculous to Americans. But it is what the Russians suspect, and the suspicion enters deeply into their actions. That, too, is a fact.

I

Lasting peace (and all I mean by that is a peace that is more than another armed truce covering one or two decades) therefore seems to depend largely on the ability of Americans and Russians to reach a degree of understanding sufficient to take the edge off their mutual suspicions and to permit friendly—or at least not belligerent—working relations. I am aware that some Americans minimize the importance of this by interpreting a recent "unstiffening" of the Russian attitude as evidence that Moscow has been sufficiently cowed by American firmness to retreat from its former aggressiveness. Others, especially in the higher levels of our Army and Navy, are convinced that Russia is so exhausted that the Soviet general staff will not permit a major crisis to develop, no matter what line we may follow. I would not count too heavily on either hypothesis. Unless there is a meeting of minds between American and Russian leaders, I expect that the present precarious peace will constantly be subjected to attrition.

For Americans, therefore, the question of the hour is: What is Russia trying to do? I return from this trip convinced that, in the large, her policy can be summarized under five points:

1. To play for time, in order to complete her domestic recovery and to arm herself with atomic and biological weapons.

2. To complete her seizure or domination over what the geopoliticans—following Mackinder and Haushofer—have defined as the controlling "Heartland" of the "World Island."

3. As a means to this end, to eliminate Great Britain as a rival for dominant position in Europe and Asia.

4. As a means to this end, to attempt to keep the United States from throwing its gigantic strength to the support of Great Britain.

5. To foster, by every means short of war, the continuation of confusion everywhere outside the Russian sphere, relying on the drift toward chaos to favor the growth of national Communist parties which may be expected, on attaining power, to gear their foreign policies in with those of the Communist homeland.

II

Each point in this program is important, but I wish to direct attention especially to the middle three. Here will be the real battlefield during the Moscow Conference; out of these three policies will arise the detailed issues which conceivably might divide the world into two armed and arming camps. And any reader who will work out for himself what these issues are likely to be will then be able to decide for himself whether an "inevitable" war is involved. To me, there does not appear to be anything especially enigmatic or mysterious—Mr. Churchill to the contrary—about this Russian program. Yet the three vital points, which I have numbered 2, 3, and 4, have not yet sufficiently been taken into account by American thinking, unless they are what Mr. Lippmann had in mind when, on his return from Europe last spring, he summarized Russian policy as an effort to secure Germany as an ally for a coming war with Britain.

I am astonished that so little attention is paid to the relation of geopolitical ideas to the policies of the Kremlin. However deep their loyalty to the ideological tenets of Leninist communism, the men who control Russian policy pride themselves on their realism. That, essentially, was the issue on which Stalin drove out Trotsky. As realists, they see themselves in a world of power politics, where the survival and triumph of the Communist revolution depends, in their view, on their ability to play the power-politics game as well as, or better than, any other power or combination of powers. Geopolitics provides the blueprints for this game. And geopolitics says that he who controls the heartland rules the world island, while he who controls the world island rules the world.

Now, anyone can discover what the geopolitician means by the "heartland" by looking at the maps in the "bible" of this school of thought, the lectures delivered by Sir Halford J. Mackinder, Oxford professor of geography, before the Royal Institute in 1919, and published in the United States by Henry Holt & Co. under the title "Democratic Ideals and Reality." There can be seen what Hitler, insofar as he came under the influence of Mackinder's disciple, Haushofer, was trying to take. But far more important, there can be seen how close the Soviet Union now is to control over the heartland, and how comparatively small is the fringe area which it still must absorb or dominate in order to fulfill the geopolitical conditions for supremacy over Europe, Asia, and most of Africa.

The process of absorbing this fringe area constitutes the present program of Soviet expansionism. It is succeeding beyond anything even remotely accomplished by Hitler, partly as a military result of the war and partly as a result of the internal crumbling of rotten governments. But the process cannot be completed until Great Britain is pushed out of the domination she has exercised in many parts of Europe and Asia. Again, consult Mackinder's maps and you will see what the tension points are bound to be. This brings us to points 3 and 4 in the basic Russian policy.

Great Britain, the Soviet leaders know, today is just as strong in world politics as the United States says it shall be, and not a whit stronger. (This is not a diplomatic way of describing the present international situation, but we are now concerned with the realities, and the more starkly we see them and state them, the less fuzziness will there be in our minds as we try to deal with them.) Left to deal with Britain alone, Russia has no doubts about the outcome of her struggle for first place in Eurasia. The question which obsesses her leaders, therefore, is whether the United States means to stay out of this struggle. And Molotov at his worst is accordingly not to be regarded as picking a fight with the United States; what Molotov is trying to do is to make the consequences of active American intervention seem so costly that Washington will hesitate before making sweeping commitments to British support.

III

This is a dangerous game, but it is in the familiar tradition of Realpolitik. The American people, who so far have tended to consider everything connected with Russia in terms of almost unrestrained emotion, pro or con, need to learn to look at this policy coolly and to see it for what it is. It is power politics, played with great determination and greater resources than any single European government has been able to command since 1914. There should be nothing obscure about this. The obscurity, such as there is, seems to me to be on our side of the line. For this geopolitical drive from the Kremlin requires, if it is to be intelligently dealt with, that the United States shall make up its mind how far it intends to go in backing up Great Britain and, to a lesser extent, the present government of China. That is the immediate problem with which Russian policy confronts us, and that is the problem we don't want to face.

Perhaps I am simplifying this question of Russian policy too much in my desire to get it out of the category of the enigmatic and the mysterious. For while Russian policy at present is an adventure in power politics, it is not solely that. The Communist revolution is still a reality. The world still teems with hundreds of millions of wretched, desperate poor to whom the Communist promise is as dazzling as any Christian apocalypse. However grim the conditions within the USSR, however uninviting the fate of the individual in the Soviet police state, however much the preoccupations of power politics may have subordinated the socialist zeal of the members of the Politburo, there is still plenty of dynamism in the Communist faith. In a Europe and an Asia which have all but lost every other dynamic faith, this is a fact with which to reckon.

Most of the peoples of the western democracies fear this Communist revolutionary fervor. In the light of the record, they have ample reason to do so. Where Red rule has been established, personal freedom has nearly vanished. Contrary to Marxist doctrine, the development has not been toward the withering away of the power of the state but toward the most ruthless and complete concentration of power in the hands of the state that modern history has known. A simple test by which to understand what is at stake for the democracies is to list the changes that would take place in the U. S. S. R. and its satellite states if the American Bill of Rights should go into effect there.

But if this means that Americans have cause to oppose the expansion of Communist power over democratic regions, it still leaves for decision the question as to how this opposition is to be maintained. Is it to be by a countering resort to power politics—the quarantine method with its final appeal, if necessary, to war? I think we must conclude from recent utterances by the Pope that the Roman Catholic Church holds the answer is yes. By that I do not mean that the Roman Church wants such a war or is working to bring on such a war. The Vatican is well aware of the devastation such a war would involve, and of the critical condition in which the church, along with all the other institutions of a shattered society, would find itself at its close. But the Roman Church feels itself in so exposed a position now that it fears further advances of communism would reduce it, at least in Europe, to a church in chains or in the catacombs. Therefore it believes that, if it finally proves that the Russian drive to complete control over the Heartland cannot be stopped in any other way, it is the moral duty of the western powers—which, in the final analysis, means the United States—to stop it by force.

IV

There are many outside the Roman Church, or any church, who believe the same thing. Influential figures in the United States, in Britain and Canada, in all the countries of western Europe, as well as in China, hold this view. By no means all of them are social reactionaries or even conservatives. What, if not this, was the meaning of President Van Dusen's declaration, in a recent article in Life, that if communism overruns China the United States will have to fight Russia? And at what point, I cannot help wondering, would the Emil Brunner to whom I listened at Cambridge last August draw the line of moral duty beyond which western Christians should not go toward the use of force in opposing any further Communist advance?

I am returning from this journey of exploration more than ever afraid of the threat to human freedom implicit in the totalitarianism of the Communist state. But I am by no means persuaded that freedom can be defended against that danger by war. For one thing I do not believe that any freedom would survive another world war—the first atomic war—no matter for what purposes, or under what slogans, it was fought. Neither do I believe that guns or atom bombs or germ-scattering rockets can long suppress the desperate longing of the exploited poor for an easing of their lot and an opening

of the door of opportunity to their children. And so far as the Christian church is concerned, if it ever allows itself to bless a holy war against Communist advance it is going to find itself speedily entangled with a deplorable crew of allies who will stigmatize it indelibly as a tool of reaction and a complacent partner in exploitation. Precisely that can be seen happening on a restricted scale in Spain today.

I trust that nothing I am writing will be interpreted to mean that I dismiss the problem of dealing with Russia lightly. Some of my leftist friends believe that I regard it as more serious than it is. Because of the astuteness with which the men in the Kremlin are playing their game, and because of the fertile fields which misgovernment and terrible poverty offer their propaganda at so many spots on the Eurasian map, I think that we are going to have a bad time—a very bad time—in our dealings with Russia. Our difficulties are going to be increased by the fact that there is no effective way by which we can reach the Russian people with assurances of our pacific intent. No way, that is, while the Russian newspaper and radio system remains as it now is, short of complete submission to whatever policies the men of the Politburo may support.

Yet difficult as this prospect is, there is no reason to grow panicky. If we will but keep constantly clear in our minds what communism essentially is, we should be able to chart a construction course of our own. Communism is a dynamic revolutionary force promising heaven on earth to the masses. As such, it is a beacon of hope to the hordes of the exploited. But it is also being tested in the laboratory of human experience. In the long run, it cannot avoid the results of that test. For the time being, however, if we believe that human welfare requires that communism shall not continue to expand its power indefinitely, we must prepare to prove that our social and political system can provide more comfort, more security, more opportunity, more liberty, and more satisfaction than any other.

If we can do that, the prospect of a Communist wave engulfing our democratic world will gradually fade away. If we can do that, even an atomically armed Soviet state will hesitate to force a showdown with the rest of the world genuinely devoted to the democratic cause. But if we cannot do that, all our arms and all our techniques will never save us from the rejection which history will visit upon us. For "History," as Auden says, "to the defeated may say alas, but cannot help or pardon."

PAUL HUTCHINSON.

Appropriations for the Customs Bureau

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I addressed to the Senator from Oregon [Mr. CORDON], chairman of one of the subcommittees of the Senate Appropriations Committee, regarding the reduction of the Customs Bureau as contemplated in a bill recently passed by the House of Representatives.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 2, 1947.

Hon. GUY CORDON,
United States Senate,
Washington, D. C.

DEAR SENATOR: I am sure that your subcommittee has by now had the opportunity to determine the essential facts regarding reduction of the Customs Bureau as contemplated in the bill passed by the House. Having the facts, I am also sure that your subcommittee and, I trust, the full committee will recognize the false economy inherent in a drastic reduction of the customs patrol.

It appears incredible to me that responsible committees of the Congress could possibly favor stripping our borders and coastal areas of the force necessary to prevent a wave of lawlessness, gangsterism, and smuggling. Since it is economy the Congress appears to be concerned about, it strikes me that openly inviting smuggling, aside from the moral and legal factors, is the ultimate in false economy. I am sure the revenues we can expect by effective prevention of smuggling far exceed the cost of maintaining an adequate antismuggling patrol.

Sincerely yours,

FRANCIS J. MYERS.

The Housing Situation

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter relative to the housing situation, addressed to the Senator from New Hampshire [Mr. TOBEY], chairman of the Senate Banking and Currency Committee, by Philip Murray, president of the Congress of Industrial Organizations, and R. J. Thomas, chairman of the CIO Housing and Community Development Committee, and vice president of the United Automobile Workers, CIO.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 19, 1947.

Senator CHARLES W. TOBEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TOBEY: It is a matter of sincere regret that we are unable personally to give you the views of the Congress of Industrial Organizations on housing legislation. Word of the hearings reached us too recently to enable us to attend your hearings. We are writing to assure you that our organization is deeply concerned with the extreme gravity of the housing situation and to urge speedy enactment of comprehensive housing legislation.

The housing shortage today is a national disaster. Crowding and doubling up have grown worse during the past year. The worst sufferers are those who have had to seek new dwellings, notably war workers and veterans. Their plight is even more desperate than a year ago and the strongest measures are needed to cope with the situation.

The CIO pledges its support to the National Housing Commission Act, which is similar in most respects to the bill that passed the Senate by an overwhelming vote last year. The CIO urges your committee however, to add the following necessary provisions in order to reflect the increased need and soaring prices: (1) to include the Douglas-Taylor bill as an amendment to S. 866 in order to fill part of the gap which high construction costs have created between public housing and private housing; (2) to provide 100 percent insurance of loans for private rental projects and mutual or cooperative projects, at interest of 3 percent, and advance loans of 1 percent to assist cooperative groups to get started; (3) to invest the administrator of housing activities with directive powers, on the ground that a strong, central agency will act economically and effectively; (4) to establish a technical director for housing with authority to use funds, previously appropriated for housing, to finance the pioneer developmental and experimental work on factory-built housing in order to reduce costs; and (5) to provide that development funds and 100-percent loans be available to new producers of factory-built housing in order to speed up the modernization of the building industry.

These improvements in S. 866, we are confident, will contribute decisively to reducing housing costs and will hasten fulfillment of the national goal of a decent home for every family in a suitable environment.

We again urge prompt and courageous action to solve the Nation's foremost social and economic problem.

Sincerely yours,

PHILIP MURRAY,
President, Congress of Industrial Organizations.
R. J. THOMAS,
Chairman, CIO Housing and Community Development Committee; Vice President, United Automobile Workers, CIO.

Industry-Wide Bargaining

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Scranton Times, a fearless, independent, Pulitzer prize-winning newspaper published in Scranton, Pa., on a subject of great current interest—the matter of industry-wide bargaining.

I commend this editorial especially to the attention of members of the Senate Labor Committee. For background purposes, perhaps I should point out that the Scranton Times is beholden to no group, party, or class, and is entitled to be heard with respect.

Incidentally, I might point out that the great anthracite-mining industry, centered almost entirely in my State, is really free enterprise—enlightened free enterprise—in that the operators of these mines were able to sit down with the representatives of their employees and reach agreement on a wage and working contract without the need for Government intervention, seizure, or operation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDUSTRY-WIDE BARGAINING

So far as the House Labor Committee is concerned it appears now that demands for an end of industry-wide bargaining, heard during the open hearings, will not be approved or attempted. It is felt no workable alternative has been brought forth. Most of the industrialists making the demand to ban industry-wide bargaining appeared to be prompted chiefly by a desire to weaken unions. The strongest demand has come from the southern coal operators, whose record in the part for collective bargaining, it is conceded, has been none too good.

It is noticeable that there has been no demand for such a ban from the anthracite region, where industry-wide bargaining has been the practice since 1900, when John Mitchell came into the region to lead the first strike of hard-coal workers. Industry-wide bargaining in the anthracite region was given official as well as public sanction by the award of the Roosevelt Anthracite Mine Strike Commission back in 1902. That award covered the region and has largely been the basis of all awards since.

It is worthy of mention, although it doesn't prove anything much, that even Representative NIXON, who said he conducted a personal survey in Scranton regarding union and labor sentiment, made no mention of opposition to industry-wide bargaining. Mr. NIXON said the workers, merchants, lawyers, etc., whom he interviewed here were surprisingly frank in their criticism of leaders and need for certain types of regulatory legislation. If that be so their silence regarding industry-wide bargaining may be construed as approval of the practice so long in vogue.

Banning of industry-wide bargaining would, as we understand it, force the union to negotiate separately with companies, like the Glen Alden, Lehigh Valley, Reading, or individual operators. Instead of one general agreement covering the industry there would be a hundred or more. That could easily create a disturbing if not chaotic condition.

The situation in the bituminous industry is somewhat different from the fact soft coal is mined in regions hundreds of miles apart where mining conditions may vary. The anthracite region is confined to a comparatively small area in Pennsylvania. In our opinion industry-wide bargaining, as long practiced, is desirable for the anthracite industry.

Nomination of David E. Lilienthal—Supplemental Notes by Senator McKellar

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 24), 1947

Mr. MCKELLAR. Mr. President, in making my address on the Lilienthal nomination I did not confine myself strictly to the notes I had prepared. There were certain other matters not included in the address, and in order to give a complete history, I ask unanimous consent to have the notes published in the RECORD.

There being no objection, the notes were ordered to be printed in the RECORD, as follows:

Mr. President, in the more than 30 years' service I have had in the United States Senate, the Lilienthal case is the most remarkable case of confirmation that has been before this body. I served during a small portion of Mr. Taft's term as President, the entire terms of President Wilson, and during the part of a term of Mr. Harding, and the nearly two terms of Mr. Coolidge, the one term of Mr. Hoover, and three and a portion terms of Mr. Franklin D. Roosevelt, and during this term of Mr. Truman.

During that entire time so far as I can recall, I have opposed three nominations. One was Mr. Aubrey Williams, who was shown to be a near Communist, and he was defeated by an overwhelming vote of 52 to 36, on March 23, 1945. Remember that the charges against Mr. Williams was that he was a Communist or near Communist. I have looked over the list of those voting in that case and there are 40 who voted against him who are still in the Senate. They are as follows: BALL, BREWSTER, BRIDGES, BROOKS, BUCK, BUSHFIELD, BYRD, CAPEHART, CAPPER, CONNALLY, CORDON, DONNELL, EASTLAND, FERGUSON, FULBRIGHT, GEORGE, GURNEY, HAWKES, HICKENLOOPER, MCCARRAN, MCCLELLAN, MCKELLAR, MILLIKIN, MOORE, O'DANIEL, OVERTON, REED, REVERCOMB, ROBERTSON of Wyoming, RUSSELL, SALTONSTALL, SMITH, STEWART, TAFT, TYDINGS, VANDENBERG, WHERRY, WHITE, WILEY, and WILSON.

The evidence against Mr. Williams was not half as strong as the evidence against Mr. Lilienthal. It wasn't shown, as it is in this case against Lilienthal, that Mr. Williams was ever guilty of downright dishonesty; that he was ever guilty of serving utility corporations while serving as an officer to regulate in part those very same corporations. It was never shown that Mr. Williams turned out everybody that he thought was inimical to him or that he had gathered around him the great number of dishonest persons and a great number of Communists that Mr. Lilienthal had gathered around him in the TVA, and the Atomic Energy Commission.

THIS CASE

What I have to say about this case I am going to divide into five general parts:

The first subject of discussion will be the career of Mr. Lilienthal up to the time of his appointment to the Tennessee Valley Authority.

This will include his so-called practice of law in Chicago and will include the remarkable story of his research work for the railroads and other public utilities from 1926 to 1932. It was while engaged in this work that Gov. Phil La Follette employed him as commissioner of public service in Wisconsin.

The Wisconsin law forbade him engaging in any other work, but he kept his work in Chicago for 18 months and 15 days and drew income both from the Public Service Commission of Wisconsin and the Commerce Clearing House in Chicago. It was a dishonest and corrupt transaction and the Wisconsin law declared that his commissionership was vacated by his engaging in other work. The fact that he engaged in work directly contrary to what he was doing in Wisconsin made it the more dishonorable and the more dishonest.

In the second place I am going to discuss Mr. Lilienthal's career in the Tennessee Valley Authority from the time of his appointment early in 1933 until he rooted out Dr. A. E. Morgan, the Chairman of the Tennessee Valley Authority Board of Directors, and had himself made Chairman of the Authority. This was in 1938. This phase of the case against Lilienthal is undisputed.

Dr. Morgan testified on two different occasions before the committee. Lilienthal was present and afterward testified concerning another matter, but never mentioned Dr. Morgan or his testimony, which leaves Dr. Morgan's testimony as to the dishonesty and corruption of Mr. Lilienthal completely undenied.

In the third place I am going to discuss Mr. Lilienthal and his career of communism in the TVA. This will include his whole leftist and Communist course in dealing with the affairs of the Authority.

In the fourth place we will show the loss of hundreds of thousands of dollars in his trying to establish cooperatives in Tennessee. This will include his running of the Authority for himself, his violation of national general laws and his legislating for the Authority.

In the fifth place, we will discuss his character witnesses and his character in general.

MR. LILIENTHAL

Mr. Lilienthal was born in Morton, Ill., July 8, 1899, of parents who had been born in what is now Czechoslovakia, which is now under Russian domination.

Some newspapers seem to think it was cruel for me to ask where Mr. Lilienthal's parents were born. There was no intent to be cruel. It was not their fault that they were born in what is now a Russian-controlled country. The remarkably cruel thing about this story is that Mr. Lilienthal claimed not to have known where his parents were born and had to have it looked up. Upon my second request several days afterward to know if he had found out where his father and mother were born, he said they were born in Pressburg, Czechoslovakia. Think of it for a moment, Senators. We are asked to confirm a man to what may be the most important office on earth who does not even know where his parents were born and had to look up their records.

Not only that but we are asked to confirm a first-generation American. Our Army discriminates against first-generation Americans and, as I am informed, has uniformly done so heretofore. And here we are discriminating in favor of first-generation Americans whose parents came from what is now Czechoslovakia, always nearby Russia and now dominated by Russia. I do not know whether or not Mr. Lilienthal's parents were ever naturalized citizens of the United States. Apparently he was not asked this question by me or any member of the committee.

Mr. Lilienthal graduated from DePauw University in Indiana. He then went to the Harvard Law School and graduated. He then went to Chicago for the purpose of practicing law. For a short time he was in the office of Mr. Donald Richberg.

He admits that he worked for railroads and other utilities from 1926 to 1931. He claims that in 1931 he went to Madison, Wis., to become public utilities commissioner for Wisconsin. He testified that at that time he had no unfinished lawsuits. The claim that he was a practicing lawyer seems to be utterly without foundation.

In 1926 he entered into a contract with the Commerce Clearing House, Inc., at $20,000 per year to make research and get all decisions and publications favorable to the railroads and other public utilities including power utilities and this work he continued until August 1932, and perhaps later. Remarkable to state, Senators, in his biography in Who's Who for 1944-1945 he shows the following: "Editor, Public Utilities and Carriers Service, 1926-31." In the 1946, or next year edition of Who's Who he very carefully omits from his biography "editor, Public Utilities and Carriers Service." Why did he omit it? Not only that—he testified for days and never mentioned having worked for the Public Utilities and Carriers Service. He never said a word about that to the commit-

tee; he gave all of his other service but never a word about editing Public Utilities and Carriers Service. He deliberately held back that information from the committee that he had worked for the Public Utilities and Carriers Service. It was his principal source of income. How did we find that out? By Mr. Lilienthal's truthfulness in answering questions asked him? Not at all, but by a very remarkable piece of evidence.

MRS. LEITZELL'S TESTIMONY

On February 19, 1947, Mrs. Meads Duncan Leitzell, 1520 North La Salle Street, Chicago, came before the committee and was sworn by Chairman HICKENLOOPER. I had never seen or heard of her before. I did not have the slightest idea what she was going to testify.

She said she was born in St. Louis, Mo., and moved to Chicago in 1928. She held a position as stenographer with the Commerce Clearing House in the Continental-Illinois Bank Building. She testified that at that time Lilienthal was employed by the Commerce Clearing House as editor of Public Utilities and Carriers Service. His office was in the same building as the Commerce Clearing House at first. She soon became his secretary and also employed with her were two others, Harry Booth and Joseph Swidler.

She also testified that she received $24 a week, that Mr. Booth received $28 a week, and that Mr. Swidler, now the general counsel of the TVA, received $17.50 a week, and that Mr. Lilienthal received $20,000 a year. (Record, p. 588 and following.)

She said that the Public Utilities and Carriers Service was a legal publication service dealing with court decisions and legislative bills of interest to utilities and carriers. Mr. Lilienthal paid Mr. Booth, herself, and Mr. Swidler by check. She testified that on February 19. For some remarkable reason which has never been explained or attempted to be explained by Mr. Lilienthal or anyone else, the next morning the amount of the salaries that Mrs. Leitzell testified that she, Mr. Booth, and Mr. Swidler received was omitted from the record.

Later on when I went before the committee, I called to its attention the fact that this evidence was left out and told the committee that I had heard the witness testify to these various amounts. I asked unanimous consent that it be inserted into the record. The committee allowed it to go in—page 782:

"Senator MCKELLAR. Mr. Chairman, I want to put into the record, the testimony from pages 666 to 671 of the House committee hearings, the hearings of the Special Committee on Un-American Activities, 1939–40, volume 1033. Also I seek to correct the record. The other day when a lady was put on the stand by the name of Mrs. Leitzell, certain testimony was given by her. I had never seen her before, and I did not know that she was to go on the stand. I judged when she first started that she was a character witness for Mr. Lilienthal. I just assumed that.

"But she turned out to be a very different kind of a witness, and I have no objection to it. Quite the contrary; I was glad that her evidence was taken.

"But there were several statements that were omitted and the questions, too.

"One was that she stated, as I recall, that she was working for Mr. Lilienthal in her private capacity for the utilities company at a salary of $24 a week, and that a Mr. Booth was working for Mr. Lilienthal in that same capacity in Chicago, for $28 a week, and that a Mr. Swidler, Joseph Swidler, was working for the same concern at $17.50 per week. And as I recall, the chairman asked her if that was the same Swidler that there was so much talk about lately.

"Now, that is my recollection of it. And if the chairman and the committee recollect it as I do, then I would like to have the record corrected to that effect. I tried to get the information from Mrs. Leitzell and did not do it. I want to be perfectly frank about it. I tried to do that when I found it was omitted.

"If not, I would like to have the privilege of introducing testimony of those who were here—some of those who were here—to correct the record in that way.

"The CHAIRMAN. Unless there is some refutation of the statement as to those salaries and the statement made by the Senator, I believe we can let the record stand as the Senator stated it. If there is some contradiction of that, we will correct the record upon testimony."

Mr. Lilienthal was present when Mrs. Leitzell testified and naturally his face was very red and his eyes were down.

I had two witnesses ready to testify that they heard her testimony on the subject. Mr. Lilienthal was present that morning but made no statement about it. The chairman of the committee recollected the matter as I did and asked if there was an objection to putting these salaries back into the record, and there being no objection, the salaries were put back into the record.

"The CHAIRMAN. I said the suggestion was made that the point of your testimony would be that Mr. Lilienthal was receiving pay, or income, or compensation for his services in connection with the Commerce Clearing House activities while he was a member of the Wisconsin State Utilities Commission.

"Mrs. LEITZELL. Yes; as I say here in my statement he did receive checks from the Commerce Clearing House during that time, and I was paid by him. You see, he went to the commission in 1931, and I was still working for him through the summer of 1932.

"The CHAIRMAN. Oh, I see. Now, as I recall it, a question was raised that as an employee of the Wisconsin State body there he was prohibited under the Wisconsin law and the obligations of his job from accepting compensation from other employment any place else. Did you know anything about that?

"Mrs. LEITZELL. I didn't at the time. I know now that that is true.

"The CHAIRMAN. I see. And how long did this compensation from the clearing house continue, so far as you know?

"Mrs. LEITZELL. So far as I know, as long as I worked there. Whether it continued later I do not know.

"The CHAIRMAN. Your employment ended prior to your vacation in the summer of 1933? Is that correct?

"Mrs. LEITZELL. Yes; that is right." (Record, pp. 590–591.)

"Their office was at 1 North La Salle Street, Chicago. After moving into the 1 North La Salle Street office, I continued to act as Mr. Lilienthal's secretary. In that capacity, I prepared manuscripts for the Public Utilities and Carriers' Service. * * * Mr. Lilienthal often wrote his notes and material in shorthand. I could read and transcribe his shorthand notes. I handled his check book, preparing checks for payment of myself, Booth, and Swidler, and for office expenses, such as telephone bills and rent.

"I checked his monthly bank statements against the stubs in his checkbook, which was kept in the office.

"Early in 1931 Mr. Lilienthal was appointed to the Wisconsin commission and went to Madison.

"He continued to maintain his office at 1 North La Salle Street, Chicago. He continued to pay the office rent. He continued to pay Mr. Booth and Mr. Swidler.

"He handled these checks in one of two ways—either he would come into the office and sign the checks or I would mail them to him in Wisconsin for signature.

"After his appointment to the Wisconsin commission, Mr. Lilienthal told me to tell anybody who asked for him that the office was no longer his. I followed his instructions.

"I continued to work for Mr. Lilienthal under these conditions through and beyond the summer of 1932." (Record, p. 590 and following.)

Of course, it will be remembered that Mr. Lilienthal went to Wisconsin as a member of the public-service commission on February 12, 1931.

And again:

"Senator CONNALLY. No; after he went to Madison or before he went to Madison. What was he supposed to do?

"Mrs. LEITZELL. He was the editor of it.

"Senator CONNALLY. Editor of a magazine?

"Mrs. LEITZELL. It was not a magazine, sir.

"Senator CONNALLY. What was it?

"Mrs. LEITZELL. It was a service for attorneys, utilities, and carriers. That was the name of it: Public Utilities and Carriers' Service. It was gotten out in loose-leaf form and sent at different times, after court decisions.

"Senator CONNALLY. To keep them advised as to the status of the affairs of the utilities and the railroads? Is that right?

"Mrs. LEITZELL. More court decisions dealing with utilities and the carriers.

* * * * *

"Senator CONNALLY. Well, you say he continued to receive a salary for it?

"Mrs. LEITZELL. He did.

"Senator CONNALLY. And he continued to pay you for the work on this stuff?

"Mrs. LEITZELL. Yes, sir.

"Senator CONNALLY. Was there any difference in his conduct of the business after he went to Wisconsin, as compared to what he did before?

"Mrs. LEITZELL. Well, surely he was not as active after he went to Wisconsin.

"Senator CONNALLY. Because he was not there all the time?

"Mrs. LEITZELL. Because he was not there.

"Senator CONNALLY. But was there any change in the nature of the work that he was doing?

"Mrs. LEITZELL. The work was the same, as far as the office went.

"Senator CONNALLY. All right." (Record, p. 592.)

And again:

"Senator MCKELLAR. Did he just occasionally come down to your office?

"Mrs. LEITZELL. Yes, sir. That is right." (Record, p. 592.)

Now the Code of Wisconsin provides:

"No commissioner [meaning Public Service Commissioner] shall be pecuniarily interested in any railroad, public utility, or motor carrier, and if any such commissioner shall voluntarily become interested, his office ipso facto shall become vacant."

And again:

"No commissioner shall hold any other office or position of profit or pursue any other business or vocation or serve on or under any committee of any political party, but shall devote his entire time to the duties of his office." (Record, p. 806.)

Immediately I examined into the facts concerning this remarkable testimony. I first found that in 1944 and 1945 edition of Who's Who that Lilienthal put in his biography that he was "Editor, Public Utilities and Carriers' Service, 1926–31."

I looked in the new year's edition, 1946–47, and found that he left out that he was "Editor, Public Utilities and Carriers' Service 1926–31." (Record, p. 636.)

I learned from the secretary of state of Wisconsin that his salary as public-service commissioner was $5,000 a year and that he served as such public-service commissioner until June 30, 1933.

I also learned from the Commerce Clearing House, Inc., that at the same time in violation of the law that he was paid between the dates of February 12, 1931, and August 27, 1932, 1 year, 6 months, and 15 days, the sum of $17,574.

In Wisconsin he took the oath of office:

"Each commissioner shall take and file the official oath and shall in addition thereto swear or affirm that he is not pecuniarily interested in any railroad, and that he holds no other office of profit, nor any position under any political committee or party."

What a record.

MRS. LEITZELL'S EVIDENCE AND LILIENTHAL

Mrs. Leitzell testified on February 19. Lilienthal was present as before stated. I had never seen her until she took the stand and I never saw her after she got off the stand; but evidently Lilienthal saw her, because the next morning there was left out of the record her statements about her own pay and that of Mr. Booth and that of Mr. Swidler and that evidence was put back by unanimous consent as shown on page 782 of the record. I telegraphed Mrs. Leitzell to know why it was left out and her reply was she had not left it out but, of course, the committee had heard it just as I had heard it and just as the audience had heard it. We could not have gotten those figures unless she had so testified and it was put back. Then Lilienthal in some way undertook to doctor the record by referring to a statement in the Appendix 935, marked "Exhibit 17." Of course, this short memorandum from Joseph Volpe, Jr., who signs himself deputy general counsel, of the Atomic Energy Commission has no evidential value at all because he merely says he checked the matter with the stenographer and with others who were present when Mrs. Leitzell testified and that she did not so testify. That was directly contrary to what the committee remembered about it and what I could have shown by witnesses and offered to show by witnesses if it had not been for the committee's action in correcting the record. That is just another one of Lilienthal's slick tricks. The memorandum was put in on page 35 more than 2 weeks after the testimony and after the record had already been corrected by the committee and without any knowledge whatsoever on my part until I read it in the so-called record. You will see these figures are not denied at all on page 935. Of course, they came from Mrs. Leitzell and it was another one of Lilienthal's slick tricks to get Mrs. Leitzell to leave them out. She had been his private secretary and even after she had come here at the request of somebody or on her own initiative and given the facts Lilienthal testified that she was of high character. He never undertook to show by her in any way that her figures were not right or that her statements were not right.

"Senator MCKELLAR. Now, by the way, your former secretary, Mrs. Leitzell, is a woman of fine character?

"Mr. LILIENTHAL. I certainly saw nothing to the contrary when she was in my office" (p. 812).

He later said that Mrs. Leitzell was in error in thinking he told her to keep the Chicago employment secret but I have no doubt that was just merely his bad recollection (p. 813). Pages 814, 815, 816, 817 show that Lilienthal was absolutely wrong in his recollection.

As I stated before (record, p. 782), I had asked and received the unanimous consent of the committee to insert the amount of the salaries which were paid to Mrs. Leitzell, Mr. Booth, and Mr. Swidler by Mr. Lilienthal. This pretended denial, on page 935 of the record, is just an attempt to muddle the record. It is a reflection on the committee. The chairman remembered the matter, just as I and several others remembered it, and it will be remembered also that Mrs. Leitzell was not my witness at all.

This is the slick kind of work that Lilienthal has been engaged in all of his life. It is just another evidence of his slickness—not of his ability but of his slickness and his dishonesty.

He got salaries at the same time both from the utilities and from the State of Wisconsin. In this connection he tried to get Governor La Follette to come down and testify, but Governor La Follette didn't do it. He sent a telegram which is in the record (p. 783). I quote:

"Hon. BOURKE HICKENLOOPER,
"United States Senate,
"Washington, D. C.:

"I note the imputation that David Lilienthal was underhandedly serving private interests while on Wisconsin Public Service Commission. When offered the appointment he was active in his profession and naturally had to wind up his affairs. He fully and completely disclosed his affairs and subsequently filed in the Governor's office a copy of the contract which his affairs were wound up. His record as commissioner was outstanding, voted public service, and wholly honorable.

"PHILIP F. LA FOLLETTE."

In other words, I judge from the telegram from Governor La Follette that he refused to come down here when he was as nearby as Pennsylvania; that what he meant was that he didn't catch up with Mr. Lilienthal when he was working for the State of Wisconsin, but, of course, Governor La Follette is too intelligent a man not to know that all of Lilienthal's work was nullified by the Supreme Court and that he did nothing for the State of Wisconsin.

It will be seen that Lilienthal, contrary to the law of Wisconsin, which would prevent him from doing so, conducted his work for the Commerce Clearing House at the same time he was employed by the State of Wisconsin as one of a commission to control the utilities. In other words, he was on both sides of the case. He was for the corporations and against them. He was for the State and against it. And this is the kind of man that some of you Senators are going to vote for. How in the name of heaven you can vote for that kind of man, I cannot understand.

Under the arrangement begun in 1926 he was to get $20,000 a year and was to pay the expenses, which amounted to four or five thousand dollars, and under the new arrangement he was to get about $14,000 a year from the utilities and $5,000 a year from the State of Wisconsin as a public-service commissioner.

Is that the kind of man that you want as the head of the Atomic Energy Commission?

Nor does his double-dealing stop in his young days. Just look at this record where he, or somebody for him, left out part of the testimony (record, p. 782):

Exhibit No. 17
(Record, p. 935)

"UNITED STATES ATOMIC
ENERGY COMMISSION,
"Washington, D. C., February 28, 1947.

"To: Mr. Fred B. Rhodes, Jr., executive director, Joint Congressional Committee on Atomic Energy.

"From: Mr. Joseph Volpe, Jr., deputy general counsel.

"Subject: Senator MCKELLAR's suggestion for correction of record with reference to testimony by Mrs. Leitzell.

"On Wednesday, February 26, Senator MCKELLAR asked the committee to correct the record to show that Mrs. Leitzell gave testimony on the salaries paid to her, Mr. Swidler, and Mr. Booth. I have checked this matter with the stenographer and others who were present when Mrs. Leitzell testified, and as well against my own notes. I am certain that Mrs. Leitzell's only reference to compensation was with respect to the amount paid Mr. Lilienthal. This appears on page 1409 of the transcript. We ask that the figures furnished by Senator MCKELLAR be stricken from the record."

Mr. Volpe did not go on the stand. I never heard of him until I got hold of the record today. I have made an investigation, however, about Mr. Volpe. He was appointed deputy general counsel for the Atomic Energy Commission by Mr. Lilienthal at a salary of $9,000 a year. I quote from Senator BRICKER's statement, based on FBI records: "Joseph Volpe, Lilienthal appointee as deputy general counsel * * * has a brother who is a Communist Party member, and delayed informing the Commission of the radical records of two other appointees."

Lilienthal waited 2 weeks, namely, March 3, 1947, after the case was closed. The committee felt he ought to make some explanation of that testimony and sent for him, and here was his answer. He read a letter from Commerce Clearing House, Inc., signed by William Kixmiller, president, and accepted by David E. Lilienthal. This was a week prior to his going to work for the State of Wisconsin as railroad and public utility commissioner.

COMMERCE CLEARING HOUSE, INC.,
February 5, 1931.

DEAR MR. LILIENTHAL: Following your report to me yesterday that you would like to accept the position of member of the Wisconsin Railroad Commission, provided your appointment is confirmed, I am glad to inform you that we should be willing to give you a leave of absence for a year, with an option to renew the absence the second year.

It is understood that you will render no personal services for us during this period and will receive no compensation from us. The editorial work heretofore performed by you and carried on in your office by assistants under your direction is to be continued by them during your absence, pursuant to this arrangement.

Your present weekly check from us of $385 will be reduced initially to $240 per week. This check will be drawn directly to you to avoid unnecessary bookkeeping, and is to reimburse you for liabilities (such as rent, salaries, etc.) heretofore assumed by you primarily to carry on your work. In addition to such reimbursement, these weekly checks drawn to you during your absence will include a margin above reimbursement as part payment for your past services, particularly in the training of assistants to carry on this editorial work. We estimate this sum to be $2,000 per year, though it may be less. Your right to the reimbursement of payments above provided for is not and will not be in any way affected by the extent to which we market the service.

COMMERCE CLEARING HOUSE, INC.,
WM. KIXMILLER, *President.*

Accepted:
DAVID E. LILIENTHAL (p. 808).

Lilienthal would never have put this letter in unless the committee had sent for him and had him explain it and is there any explanation about it? It is precisely what I claimed and what Mrs. Leitzell said it was, that he worked for this Commerce Clearing House, Inc., which was a utility company organization, for 18 months and 15 days after he was appointed by Governor La Follette as commissioner of Wisconsin utilities in violation of the Wisconsin statute, and he undertook to make some kind of explanation on page 809. There is not a particle of doubt about his being employed both by the utility companies and against the utility companies in Wisconsin.

No man ought to be appointed to any Federal office or confirmed to any Federal office who would violate the Wisconsin law as he did; who would violate his oath of office; deliberately swear to a falsehood, and he knew it to be a falsehood when he took the oath; who would violate every propriety of honesty and fair dealing in the world and work for and against the utilities. If he would violate the law when he was 30 years of age, if he would disregard all the proprieties of honest dealing when he was 30 years of age, if he would try to cover up his acts when he was 30 years of age, if he

would falsely swear when he was 30 years of age, he would do it when he was 47 or 48. It was another one of his slick tricks.

Lilienthal seems to be a genius for advertising himself. When he got that place in Wisconsin he at once got very popular in politics and in advertising himself in politics. His first act and his most famous act in Wisconsin was to cut down the telephone rates. He was going to save the people of Wisconsin millions of dollars in telephone rates. It created quite a furor. He was with the people. He was aiding the people, and the gullible newspapers were singing his praises all over the State. He got the Commission to lower the rates and the companies fought the order. They had to put up a lot of money. At one time I think the record shows they had $5,000,000 deposited in escrow in order to pay back the savings to the people in the event the telephone company lost the case, but the Supreme Court of Wisconsin finally held that the reduction in rates ordered by Lilienthal was illegal and Lilienthal never saved the people of Wisconsin a nickel.

While Lilienthal was doing this research work for the utility companies in Chicago he claimed to be practicing law. He especially claimed his practice of law in his biographies he gave, but inadvertently he himself testified that he had no practice in Chicago.

"Senator MCKELLAR. Now, Mr. Lilienthal, what lawsuits did you have unfinished when you went to the Wisconsin commission in 1931?

"Mr. LILIENTHAL. My best recollection is that there were no lawsuits in which I was counsel or party at that time" (p. 830).

He was only a lawyer when he came to advertising himself. Evidently, however, his Communist tendencies, his leftist weaknesses, got him appointed on the Tennessee Valley Authority.

DR. A. E. MORGAN

Dr. A. E. Morgan had been president of Antioch College in Ohio. He was Chairman of the Tennessee Valley Authority for more than 5 years. He knew Mr. Lilienthal intimately as Lilienthal was appointed soon after Dr. Morgan was. Dr. Morgan appeared in answer to a subpena from the committee and among other things testified as follows:

"Senator MCKELLAR. From your knowledge of how Mr. Lilienthal conducted himself in the TVA while you were there, do you think that he would be a proper man or a safe man to put in as head of what may be probably the most important organization ever attempted by man?

"Dr. MORGAN. No" (p. 352).

He then gave his reasons.

As early as 1940, Dr. A. E. Morgan stated of Mr. Lilienthal, "The difficulty I found in dealing with Mr. Lilienthal—the difficulties were of two kinds: One arose out of his personal desire to be irresponsibly in power." What a true prophet Dr. Morgan was at that time.

We now have this selfsame man Lilienthal actually seeking the most powerful place on earth without the slightest aptitude for holding such a position. We find a man who believes in the government of men and not of laws. He has been seeking power from the time he left Harvard. He is seeking power now, and he says of this power, "Those who control energy control people." (Progressive Farmer, October 1945.) He no doubt feels that if he is given this power he will control the world.

If Mr. Lilienthal is an honest man and has been an honest man, who would be his best witnesses? Someone who knew him as a young man. No such witness has appeared.

Then the men he was employed by—men of the Commerce Clearing House—who paid him a handsome salary to work for the power companies. None appeared.

Then came his appointment to the TVA. His associates there should be his witnesses if he were an honest man. We heard one of those associates, Dr. A. E. Morgan, and Dr. Morgan denounces him as one of the crookedest crooks he had ever known, after his testimony is boiled down. Does his associate, whom he seems absolutely to control, Dr. H. A. Morgan, appear? Not at all. He never utters a word, though he has always voted with him. What can the agreement between those two be?

And who are the rest?

James P. Pope, a former Senator in this body. Does he appear for him? Not a word. He made speeches for him down in Tennessee, but not a word has he said on the witness stand.

Who are the next? His various attorneys down there. Have we had a word from one of these? Not a word. Mr. James Lawrence Fly was one of his attorneys. He does not come forward to stand up for his chief. Mr. W. C. Fitts, of Birmingham, also former general counsel of the TVA. Does he appear? Not at all. Joseph C. Swidler, present general counsel, whom he raised from a $1,020 salary to a $12,000 salary per year. Does he appear? And Herbert S. Marks, one of the celebrated foursome in the TVA, known as Herb Marks, Joe Swidler, Mel Siegel, and Dave Lilienthal. Among themselves it was "Herb, Joe, Mel, and Dave." Not one of them appeared. Mel does not appear. Joe does not appear. Herb does not appear. What has become of these men when Dave is in so much trouble? It is true that Mel was a well-known Communist. It is true that Joe never got a license to practice in the Federal courts, where nearly all the litigation of the TVA is, until last July, when he had already been general counsel of the TVA for 2 years, but that would seem to make him come forward the quicker, but never a line of testimony from Joe.

Mr. Lilienthal says he is not in politics. Therefore, he ought to be able to get Democrats and Republicans alike for him. Whom did he get? Did he get former Governor McAlister, or former Governor Cooper, or Governor McCord, of Tennessee, to come and testify for him? He and his subordinates were constantly before the Tennessee Legislature asking for various things and the passage of various laws. Did any of the legislature come forward? None at all. Congressman JENNINGS and Congressman GORE and Congressman KEFAUVER and Congressman PRIEST, all of whom testified for Clapp, did not testify for Lilienthal. Clapp got two Senators from Alabama and maybe one or two Congressmen from Alabama, but none of them testified for Lilienthal. They may have heard of his working both for the power companies and the State of Wisconsin as public-utilities commissioner at one and the same time? Did he get any businessmen in Knoxville? Did he get any businessmen in Chattanooga? Did he get any businessmen in Nashville? Did he get any businessmen from any part of the State? Did he get any farmers from Tennessee? They were all conspicuous by their absence. Did he get the head of the farm organizations of which Mr. O'Neal is the president? He got a telegram from O'Neal that means absolutely nothing. Did he get any lawyers for him? Did he get any doctors for him? Did he get any churchmen for him? Yes, he got two priests who were off-shoots of the Catholic Church, but were not orthodox Roman Catholics.

TESTIMONY OF DR. A. E. MORGAN

The nominee Lilienthal has taken strange positions throughout this hearing. One of the strangest of his many strange positions is his failure to in any way in the world to mention the testimony of Dr. A. E. Morgan. He treats it just as though it were not given at all, and yet Dr. Morgan served with him from May 1933 to 1938, on the Board of Directors of the Tennessee Valley Authority, and during that time, Dr. Morgan was chairman of the Board. Dr. Morgan said:

"The difficulty that I found in dealing with Mr. Lilienthal—the difficulties—were of two kinds. One arose out of his personal desire to be irresponsible in power. I think I could have gotten along, so far as that was concerned. But I was known to the world as Chairman of the TVA, and representations were made to the public by the TVA as the TVA, which I considered to be, to use a short word, 'dishonest'" (p. 802).

"And so far as the friction due to his personal ambitions was concerned, I might have gotten along with that, but there came times when it was impossible for me to be quiet while the TVA was making representations, and making me a part of those representations; and therefore I came to a point where I could no longer be quiet under these circumstances.

"There are those two kinds of difficulties I had, and I would like to keep them separate. One made my work very difficult. The other put an obligation on me that I couldn't avoid. Those are somewhat separable" (pp. 802–803).

I want the Senate to understand that Mrs. Meads Duncan Leitzell was not the only one in this record to declare Mr. Lilienthal a liar. Dr. Morgan, like Mrs. Leitzell, not only declared him a liar but furnished the proof when he said:

"I think it was in the latter part of 1936 that Mr. Lilienthal presented to myself and H. A. Morgan, and some others, H. A. Morgan being the third member of the Board, a letter he had written to Mr. Willkie. This letter started out: 'Confirming our recent conversation,' and then went on to say that, 'You do not agree to cooperate with us except on the basis that you have a monopoly of power distribution in all the vast area of the four States in which you operate.'

"From memory I can't quote the letter exactly, but this is the substance of it: That the only condition under which you will cooperate is that we do not compete with you in the great areas in the four States in which you operate, and you insist on maintaining a monopoly in that area."

And then Dr. Morgan continued:

"And he asked, on the basis of the conversation with Mr. Willkie, which was confirmed in that letter to Mr. Willkie, that the relationships of the TVA and the Commonwealth & Southern be canceled; that this exchange of power and agreement not to raid each other's territory, etc., be canceled.

"I took this position: That this was a very momentous action to take. By that time Mr. Lilienthal's word had become not to be final to me. I had had no contact with Mr. Willkie, or practically no contact, since May 1933. * * *

"* * * When Mr. Lilienthal asked the Board to discontinue the relationships, I said I thought that was a big step to take, and before it was taken I would like to have the whole Board with Mr. Willkie, so we could all hear him directly on that point" (p. 805).

The meeting took place.

"At the time of the meeting, Mr. Willkie told me that after sending that letter Mr. Lilienthal called him by telephone and told him that letter was a mistake and there was no meeting necessary. But Mr. Willkie told me that he had suspicions also, and he insisted on coming to the meeting.

"At that meeting I asked Mr. Willkie if this letter represented his views. He said it did not at all represent his views, and he told me that the conversation supposedly confirmed in that letter had never taken place" (p. 806).

Dr. Morgan further states:

"I might say that when Mr. Lilienthal handed us this letter saying, 'This is to confirm our conversation,' he told me that he sent copies to the President and to Senator La Follette and others saying, 'This confirms our conversation,' so that anybody receiving that letter would assume of course that it

was valid, because it was written to a man confirming a conversation.

"Mr. Willkie told me no such conversation took place, and that that did not represent his attitude in the least" (p. 806).

Dr. Morgan then quotes Mr. Willkie as saying:

"The Commonwealth & Southern will sell to the TVA its whole system, or the system in any State, or any part of any system in any State. It will sell part of it now, and part of it later. The fact that some is bought now doesn't prevent other parts being bought later" (p. 807)

Thus here were two other men, both Dr. A. E. Morgan and Mr. Wendell Willkie, testifying that Lilienthal is a common liar. Lilienthal's double-dealing and dishonesty is shown by the following statement of Dr. Morgan:

"I saw a letter written out of Mr. Lilienthal's office to, I think. Bessemer, Ala., to this effect:

" 'We are estopped from pushing the extension of power while this agreement with the Commonwealth & Southern is on, but we can accomplish the same purpose in another way. If you will write us and ask us for questions and ask us for help, we can't refuse those requests. And so long as the initiative comes from you, then we can get the same results without formally violating that agreement' (pp. 810–811).

"Later on in an investigation there was no such letter found in the files (p. 811).

"Another evidence of Lilienthal's double-dealing and dishonesty. And further, a Mr. Pierce had charge of the files and Mr. Pierce stated to Dr. Morgan, 'my material was there, but H. A. Morgan's communications and Lilienthal's communications were just not there. They weren't in the files when they were called for. They just didn't exist in the files' " (p. 812).

Lilienthal claims that he was never in politics. Notwithstanding that it was shown that he very actively engaged in politics when he was enjoying a place under Gov. Phil La Follette and another one under the utility companies at the same time. Dr. Morgan said this:

"The TVA Act provided that no political appointments should be made; that if any were made the Director involved should be dismissed.

"Mr. Lilienthal undertook to make such apointments. The head of our personnel department and his assistant undertook to refuse to make such appointments. They undertook, I think honestly and sincerely, to uphold the law.

"Various subterfuges were used by Mr. Lilienthal to secure such appointments.

"The CHAIRMAN. Now, will you differentiate and explain what you mean by 'patronage appointments,' just so we can get it straight? Do you mean appointments without regard to merit or particular qualifications for the job?

"Dr. MORGAN. I mean appointments that would not be made on the basis of merit; that were made because of political considerations. * * * Now, with respect to some of these things—those things are not done by record generally—I knew personally of some of them. In one case, there is a definite record. Mr. Floyd Reeves, who was then in charge of our personnel department, came in to me one day with a long communication written by his assistant, Mr. Clapp, who has recently been general manager. Mr. Reeves said, 'These political appointments have got to stop, or I am going to leave the TVA.'

"I asked him for evidence of it. He gave me a long letter written by Mr. Clapp, outlining case after case of political appointments."

Why, Lilienthal swore before the Appropriations Committee that I had never asked him for any appointment or patronage of any kind. Yet during all of these hearings he has been trying to show that the reason I was against him was because he had refused me patronage. This is nothing but a filthy falsehood, made by a double-dealing, dishonest, corrupt, falsifying individual, whose record is a disgrace to the public service and yet it is sought to appoint him to probably the most powerful office in the world. Here was Lilienthal's philosophy as stated by Dr. Morgan:

"The CHAIRMAN. Do I conclude from your testimony that you indicate that Mr. Lilienthal supported these political-pressure appointments without regard to merit, on occasions?

"Dr. MORGAN. Yes. But I would say this: That there was a certain maxim that I never heard him repeat, but it was carried out: Whatever will bring approval, do yourself; whatever may bring disapproval, do through another" (p. 818).

A better estimate of Lilienthal's actions could not be stated.

Dr. Morgan then testifies to a letter that he got from Mr. Arnold Kruckman, a TVA employee in the Washington office.

The letter said this: "Congressmen and Senators are displeased with you because you will not give them patronage appointments. Mr. Lilienthal is on good terms with them. They have decided to work through him and not through you. And as an arrangement, Senator Bachman's secretary is going to be taken to be Mr. Lilienthal's secretary, and the Congressmen will work through Mr. Robinson as Mr. Lilienthal's secretary, and you will have no contact with Congressmen. It will be Mr. Robinson as Mr. Lilienthal's secretary.

"That is the way contacts will be made in the future. And part of Mr. Robinson's job will be to discredit you" (pp. 829 and 830).

And this is the record of a purist on patronage.

Another characteristic of Mr. Lilienthal was stated by Dr. Morgan:

"I found that there were people very much interested in developing an independent source of aluminum. Will Mayo, who is Henry Ford's chief engineer, was one, and I think there was a Reynolds Co. that was interested, and I proposed the making of a study of the low-grade bauxites of Alabama.

"Mr. Lilienthal absolutely vetoed that. He said, 'The Aluminum Co. is too big and too powerful. We must not disturb them in any way' " (pp. 838 and 839).

And again:

"We had had a contract with the Aluminum Co., at very low rates, and I felt that this was a further reduction of price to the Aluminum Co. We were going to spend about a million dollars, not openly going to the Aluminum Co., but strengthening the line by going many miles around to them" (p. 839).

This was another evidence of Lilienthal's duplicity and slickness. Lilienthal was always on the side of the Aluminum Co. (pp. 841–842).

His lobbying at the Capitol is shown on page 842. He told Dr. Morgan that he would support a proposed amendment to the TVA Act to give the TVA the power to integrate the various power elements of the system, when as a matter of fact he had been here in Washington urging that the legislation not be passed (pp. 841–845).

I asked Dr. Morgan this question:

"From your knowledge of how Mr. Lilienthal conducted himself in the TVA while you were there, do you think that he would be a proper man or a safe man to put in as head of what may be probably the most important organization ever attempted by man?

"Dr. MORGAN. No" (pp. 857–858).

And again:

"Senator MCKELLAR. Well, let me ask you this: If you were a Senator here, knowing Mr. Lilienthal as you do, would you vote for his confirmation?

"Dr. MORGAN. No" (p. 858).

THE BERRY CASE

Dr. Morgan then testified about the Berry case:

"Dr. MORGAN. Mr. Berry acquired a considerable amount of mineral rights on lands that were to be condemned for the Clinch River Reservoir, the Norris Reservoir. He claimed very substantial damages on those.

"Senator MCKELLAR. More than a million dollars, was it not?

"Dr. MORGAN. I think so. I felt that those claims were improper. And I felt that there was a constant sort of sidestepping, not a facing of them directly but a side-stepping, something the same as what I had seen in the Aluminum Co. case. I had kept still in one case, and it seems to me that unless something were brought out in the open, I believed that was going to slip by, and he would just get what he asked for, or part of it, by default. So I testified against him in that matter" (pp. 859 and 860).

Berry, after he found out the TVA was going to condemn the land, had bought up the mineral claims on the lands that were to be condemned. And then he claimed more than a million dollars on account of it. Lilienthal wanted to pay him $25,000 or more. It was a dishonest and corrupt transaction.

DR. A. E. MORGAN'S TESTIMONY

Dr. A. E. Morgan, the man who built the dams, the chairman of the Tennessee Valley Authority from the beginning until Lilienthal pushed him out early in 1938. (P. 329 of the hearings.)

Dr. Morgan was the engineer who built the dams. Without his engineering ability no such work would have ever been done. Lilienthal knew nothing about engineering. He was a soldier of fortune. He had been educated as a lawyer but had never practiced actually. But Dr. A. E. Morgan had been an engineer all of his life and had been president of Antioch College in Ohio. He was strong-minded, self-willed, splendidly educated, a great engineer, a wonderful worker, and with the money that the Congress afforded him, he built the TVA dams. He built the organization of engineers under him.

In his testimony he said that Lilienthal had not been there 2 weeks after his appointment before he began to formulate plans to root him out after the dams were built. His first step in the rooting-out process was for Lilienthal to make friends with Dr. H. A. Morgan, who took practically no interest in the dams and probably held the place only to draw the salary. (That is the only reason I ever knew for his having been on the Authority.) Lilienthal also began to make arrangements with the aluminum company, a very powerful institution nearby, and from that time on until he rooted Dr. A. E. Morgan out he was constantly in some kind of scheme or undertaking to belittle or injure Dr. A. E. Morgan. All of this will be found in Dr. Morgan's testimony on pages 344 and following of the hearings.

Lilienthal was constantly running up to President Roosevelt telling him big stories about what he was doing and just as big stories about what Dr. Morgan was not doing (p. 356).

Dr. A. E. Morgan testified beginning on February 11. Lilienthal was there. All of his men under him were there. He heard all of Dr. Morgan's testimony. He even appeared on the stand after Dr. Morgan had testified, but he never remotely mentioned Dr. Morgan's testimony. Dr Morgan said things about Lilienthal that should forever disqualify him from holding any office under our Government or any other respectable Government.

He charged him with (p. 356):

"Inaccurate and misrepresentative reports to the President, the Congress, and the public.

"Mismanagement of the power program.

"Lack of candor in statements to Congress and the public concerning the power program.

"Improper and misleading accounting, reporting, and publicity in reference to the 'Yardstick' program."

Page 357:

"Collusion, conspiracy, and mismanagement in administration.

"Subservience to political and other special interests.

"Carrying on public relations so as to create definitely misleading impressions, with such skill and strategy that charges of direct and open falsehood was evident.

* * * * *

"If there were but occasional instances these could be dismissed * * * as lapses * * * unless there is understanding of this habit of * * * half truths, misrepresentations, and near falsehoods.

"* * * Lilienthal's lying claims to President Roosevelt * * * making out that his management had doubled the sale of electric power, when only a slight over-all average increase above pre-TVA sales could be shown

"* * * Lilienthal's lies when stating TVA power started from scratch."

And again:

"Trickery by Lilienthal's using revenue figures, which ignore the heavy capital cost of the installations."

Morgan here quotes the President's words: "There could be no more serious breach of their fiduciary duty than making willfully false reports"—and proves Lilienthal had been doing just that (p. 358).

"I have stated (such misrepresentations of Lilienthal) are not casual or incidental. They are habitual. Have stated they are made to the President and the Congress and the public."

Again:

"This is the Hamilton case—and none of the Insull men are accused or charged or suspected in any way. Lilienthal made detailed charges on this which enabled Chairman to make clear in detail the smears Lilienthal planted on him in public."

And again:

"On only one occasion in the entire life of TVA did Lilienthal or H. A. Morgan ever support Chairman Morgan in a divided vote. Dr. H. A. Morgan invariably voted with Lilienthal on power matters and Lilienthal invariably voted with Morgan on his fertilizer projects" (p. 359).

And again:

"I would like to just mention this thing that I came up against. At the time of Mr. Lilienthal's appointment for the second term, the President asked me to talk about it. I went to him. I told him I didn't approve of Mr. Lilienthal's reappointment. He agreed with me; said that he had come to the same impression himself, independently" (p. 360).

And again:

"Mr. Lilienthal * * * getting himself appointed sole negotiator, carried on confidential negotiations with Aluminum Co., for the sale of power * * * resulted in selling to Aluminum Co. almost one-third of the total power capacity then available. He used as his personal and confidential secretary the former personal and confidential secretary of the southern manager of the Aluminum Co." (p. 361).

Again:

"Since the first few weeks of the existence of TVA Mr. Lilienthal * * * has maintained a steady campaign of propaganda to discredit me * * * (he) has endeavored to create suspicion in the minds both of people in and out of TVA and Members of Congress that the Chairman was in secret collusion with the utility interests" (p. 361).

Again:

"This behavior of the other two directors of determining far-reaching and fundamental Board policies without informing the Chairman or reporting to the Board, has been so general that it will be dealt with in detail in another memorandum after access to records is available."

And again:

"Thus, Mr. Lilienthal maintained an attitude of antagonism and bitterness in the public mind, not by telling the truth * * * but by deliberate deception of the public."

Again:

"Chairman Morgan insisted on meetings with Wendell Willkie before final negotiations with Commonwealth & Southern Corp., and Lilienthal agreed by privately advising Willkie not to meet the Chairman.

"To make deliberately false statements [by Lilienthal] in such a letter and send copies to other persons without the knowledge of the person to whom the letter was [supposedly] addressed * * * would be discreditable strategy.

"In plain language Mr. Lilienthal * * * saying that I the Chairman of the TVA Board proposed to give some corporation a monopoly of TVA power * * * a violation of the act and my oath * * * I never considered or made any such proposal."

And again:

"Year after year Commonwealth & Southern Corp. showed its willingness to sell parts of its properties to TVA. Year after year Mr. Lilienthal had confused that issue in the public mind. (When there is no way out for Mr. Lilienthal he frequently excuses all as terminology)" (p. 362).

And again:

"The letter to Mr. Willkie [confirming understandings] with copies sent to the President and the news release of February 2, 1937, are not isolated falsifications. They are part of a program of misrepresentations running through the life of TVA.

"Thus it is not any single act of misrepresentation and deceit from which the TVA suffers but a conflicting habit of misrepresentation which is greatly in conflict with public interest."

And again:

"Then the No. 5 charge of collusion, conspiracy, and mismanagement in administration * * * that is one of the major difficulties * * * [also] there has been a disregard for the intent of Congress and a misrepresentation in reporting to Congress, to the appropriation committees."

And again:

"Describes how Lilienthal denies efforts to take electric business away from private companies * * * and yet does that very thing very systematically and thoroughly * * * misleading Congress and getting around the law" (p. 363).

"This case clearly shows the hypocrisy and insincerity of Mr. Lilienthal's methods * * * The difference between Mr. Lilienthal's statement and mine is striking."

And again:

"Here we find Mr. Lilienthal taking liberties for himself while he would deny a far more modest position to the Chairman * * * The thing he accuses me of doing is what he has done himself. That is the kind of moral conduct—

"That kind of attitude, with which, when you have to work with it, makes a clean-cut job very difficult."

And again:

"Cites long memo on allocation of costs. Quotes the President holding same ideas as chairman and also Manly, Chairman of Federal Power Commission—all opposed to Lilienthal's plan * * * shows Lilienthal's lies" (p. 365).

And again:

"The Berry case—detailed—showing how Chairman dismissed the whole thing for lack of bona fides, while Lilienthal contracted to adjudicate its equities, thus admitting values, and only Chairman's stout resistance prevented the robbery of millions of dollars" (p. 365).

This evidence is not contradicted in this record. If it had been untrue it could have been contradicted by Dr. H. A. Morgan; it could have been contradicted by Lilienthal himself. It might have been contradicted by the General Counsel. It could have been contradicted but he did not see fit to undertake to testify about it himself or to have anybody else testify about it. His various attorneys or solicitors could have testified; any number of others could have testified to the truth or untruth of the matter but not a line of testimony. I am sorry all the Senators could not have been present and could have looked Lilienthal in the face while Dr. Morgan was testifying. His head was hung down and his face was exceedingly red but he never mentioned Dr. Morgan or his evidence. Of course, he knew that every word that Dr. Morgan had said about him was true. He has been a slick one all of his life. He was "slick" in Chicago and Wisconsin and he has been "slick" all of the time he was with the TVA. In his failure in even attempting to disprove Dr. Morgan's statement he reminds me of the story of two Negro men I knew when I was a boy. Both of them were great friends of mine—Frank Mills and Sam Youngblood. They were brothers-in-law and had bought little homes on the same side of the hill not over a hundred yards apart. They had a fence between them. Frank was very scary. Sam was a brave man and a good fighter. Sam wanted to whip Frank for some "slick" conduct on Frank's part but he could not get Frank to come out of his house. So one morning Sam undertook to force Frank to come out. He began to tear down the line fence between Sam's house and Frank's house. He tore several panels off the fence but Frank would not come out. He then went around to the back yard and got his cows and steers and turned them in on Frank's corn, and the corn was fine corn, too. When he did that, Frank came to the door and yelled out at the top of his voice, "Ah, Sam, damn you Sam, I see you Sam, but I ain't going down there." Then, turning to his wife, who was Sam's sister, he said: "Sarah, Sam's steers are in my corn, but I ain't going down there." And he shut the door and let the steers eat the corn. That is Mr. Lilienthal's position about Dr. Morgan's testimony. He would not go in that "field." Every opportunity was given him to show he was not what Dr. Morgan said he was—a schemer, a falsifier, an untruthful man, a straight-out liar, ever scheming to get something for himself—but Mr. Lilienthal did not get in the field of Dr. Morgan's truthfulness.

LILIENTHAL AND COMMUNISM

Mr. President, I do not know whether Mr. Lilienthal is a Communist or not. He testified he was not, but after hearing Lilienthal testify before the Appropriations Committee innumerable times, after hearing him testify in this case, after learning all that I have about his history and record, I am frank to say I would not believe him on oath. I have never charged that he was a member of the Communist Party, but he is so slick, so double-dealing, so double-appearing, ever trying to agree with the opinions of anyone whom he wants to curry favor with, he might well be a member of that party. I believe one of the tenets of the party is for its members to deny being a member when charged with being a member. From all I have read that he wrote and from all the testimony I have heard him recite on this subject, I believe his every sympathy, his every real sentiment, his every real inclination, his every belief in government or the lack of government is communistic.

Since he has been with the TVA, that organization has become a nest of Communists, and there can be no doubt but what he has fostered communism or has closed his eyes to communism and that he was at heart delighted to see communism flourish in the TVA as well as everywhere else.

I have never heard of his denouncing communism in any manner, shape, or form in his speeches or in any of his writings.

He was a public sponsor of the Southern Conference for Human Welfare in 1940. He made a speech at the convention. There was not anything in the speech of any consequence, but his merely making a speech at the convention shows his interest in the Communist Party, for everybody knows now, and most people knew then, that the Southern Conference for Human Welfare was a well-known Communist-front organization. It was one of the most active Communist-front organizations in the country and everybody knows about it and Lilienthal was a sponsor for it. And however dense he may claim to be, even Lilienthal has sense enough to know it was a Communist-front organization.

On Wednesday, September 6, 1939, Earl R. Browder general secretary of the Communist Party of the United States, appeared at a public hearing before the Dies committee in Washington, D. C., and during his testimony Mr. Browder stated (p. 4482 of vol. 7 of the published hearings of the Dies committee), that the Southern Conference for Human Welfare was a "transmission belt formerly known as United Front Organization of the Communist Party" along with various other organizations which Mr. Browder specified by name (p. 4483 of this record) including the National Lawyers Guild.

He not only signed the call for the Southern Conference for Human Welfare convention but he had Clapp and Pope sign it.

Not only was he a working member and a sponsor for the Southern Conference for Human Welfare in 1940 but also he had been for years a member of the National Lawyers Guild of the CIO which is another Communist-controlled outfit from which Judge Nathan R. Margold, then Solicitor for the Department of the Interior, former Assistant Secretary of State Adolph Berle and Justice Ferdinand Pecora of the New York Supreme Court resigned, and in resigning Mr. Berle had this to say:

"The National Lawyers Guild was formed in the hope that expression might be given to the liberal sentiment in the American bar.

"It is now obvious that the present management of the Guild is not prepared to take any stand which conflicts with the Communist Party line. Under these circumstances, and in company, I think, with most progressive lawyers, I have no further interest in it." (Washington Times-Herald, June 5, 1940.)

So far as the record shows Lilienthal is still a member of the National Lawyers Guild, unless he has resigned recently.

[From the New York Times of June 6, 1940]

"BERLE DROPS OUT OF LAWYERS GUILD—SAYS GROUP IS NOT PREPARED TO TAKE STAND CONFLICTING WITH RED PARTY LINE—ORGANIZATION DEFENDED—VICE PRESIDENT HOLDS CHARGE BY ASSISTANT SECRETARY OF STATE IS UNJUSTIFIED

"WASHINGTON, June 5.—A. A. Berle, Jr., Assistant Secretary of State, has resigned from the National Lawyers Guild and from the District of Columbia chapter of the Guild because, he said, the Guild 'is not prepared to take any stand which conflicts with the Communist party line.'

"The resignation was submitted on June 3 to John Gutknecht, president of the National Lawyers Guild, of the Hotel Roosevelt, New York, and Merle D. Vincent, president of the District of Columbia chapter. Mr. Berle in his letter said:

" 'I hereby resign from the National Lawyers Guild and also from the District of Columbia chapter, resignation to take effect at once.

" 'The National Lawyers Guild was formed in the hope that expression might be given to the liberal sentiment in the American bar.

" 'It is now obvious that the present management of the guild is not prepared to take any stand which conflicts with the Communist Party line. Under these circumstances, and in company, I think, with most progressive American lawyers, I have no further interest in it.'

"JACKSON ALSO OUT

"WASHINGTON, June 5.—The resignation of A. A. Berle, Jr., from the National Lawyers Guild followed those of Attorney General Robert H. Jackson and Nathan Margold, solicitor of the Interior Department.

"Robert Kenney, recently elected president of the guild, said that Mr. Berle apparently had been prompted by a 'misapprehension' He added that the guild was 'essentially a professional, not a pressure, organization,' and asked that the organization be not condemned because of the actions of a small minority.

"SEES CHANGE UNJUSTIFIED

"Referring to Mr. Berle's resignation and his reason for doing so, Osmond K. Fraenkel, vice president of the National Lawyers Guild and president of its New York chapter, said yesterday:

" 'I know of no action of the guild which justifies any such statement. The guild has consistently adhered to the principles formulated when it was founded, to which Mr. Berle subscribed, and has championed democracy and all aspects of civil liberties.

" 'The guild has placed itself on record as opposed to dictatorships and aggression. Certainly the action of the national executive board of the guild, taken last December, in denouncing the Soviet invasion of Finland shows that there is no substance to Mr. Berle's position.

" 'The convention just held also recognized that the United States must be safeguarded in every possible way against invasion or aggression.' "

[From the New York Times of February 23, 1939]

"RED ISSUE SPLITS LAWYERS GUILD—PECORA LEADS ATTACK ON RADICALS—THREAT OF MASS RESIGNATIONS BACKS JUSTICE'S PLEA TO CURB COMMUNIST ELEMENT—GROUP BLOCKS CENSURE OF ISMS

"A threatened serious breach in the ranks of the National Lawyers Guild, which has a membership of 3,400 lawyers and judges representing nearly every State in the Union, was reported from Chicago yesterday. The rift was said to have developed on Lincoln's Birthday at the start of the 4-day convention of the guild in that city, in an unexpected speech against radicalism by the retiring president, Supreme Court Justice Ferdinand Pecora, of New York. Justice Pecora's term was for 1 year.

"As a result, it was said, a considerable part of the membership banded on the Sunday before the close of the convention to take open steps to end the charged Communist control, evidenced particularly, it was contended further by the protestants, in the control of the chapters in New York and Washington.

"It also was revealed that at a closed meeting of the executive committee of the guild earlier that night the attack on the Communist element was resumed with a cross-fire of accusations and recriminations. This followed the presentation of a resolution, it was said, along the lines of Justice Pecora's speech, blasting communism, nazism, fascism, 'and any other ism challenging American principles.'

"When a stand was taken by a majority of the executive committee against including Communists in the resolution, it was reported last night, those leading the antiradical fight abruptly left the meeting. They immediately held a conference, it was said, at which all agreed that unless the guild openly went on record against 'isms' of all kinds, the sponsors of the antiradical movement collectively would resign from membership.

"Despite the heated speeches in the executive committee meeting, according to the reports, the accusations of radical control in the guild were kept secret until late yesterday afternoon, when it developed that some of those at the head of the antiradical movement in Chicago had begun making arrangements for another meeting in this city within the next few weeks.

"Efforts to obtain from Justice Pecora a confirmation of the rift met with no success. It was learned that when Justice Pecora reached his home at 50 Riverside Drive from Chicago on the Monday after the executive committee meeting he immediately went to bed with a serious attack of influenza he had acquired during the guild convention. When his physician was called in, nurses were ordered to remain at the bedside.

"It was said at his home, however, that although he was still in bed, with only members of his family being permitted to visit him, it was possible that he would be able to return to court in about 10 days.

"The report from Chicago had it that Justice Pecora had announced his intention to lead a general resignation of members of the league if 'the Communists are not driven out of control,' but confirmation of this also was unobtainable.

"It was understood, however, that when he is sufficiently recovered, Justice Pecora will hold a conference with others in the guild opposed to the so-called controlling radical influence, with a view to formulating plans to carry out their aims."

From almost the beginning of the TVA there was a cell of Communists in the TVA practically all the time he was there. It is still there. Lilienthal could not have been in charge for more than 14 years and not know it. He did not have a great many witnesses in this recent hearing but two of his principal witnesses, Mr. Henry C. Hart and Mr. John M. Frantz, were both Communists. Hart was a self-admitted Communist and all the proof showed that Frantz was definitely one. When the Communist fight got hot in the TVA several years ago and it was being investigated by a House committee, Hart got out and went into the Army, and Frantz got out and was transferred to one and then another agency of the Government here in Washington, and is now getting more than $8,000 a year. David Stone Martin, another well-known Communist, left at the same time and came to Washington. He was in several Government agencies here. Lilienthal got him taken care of. While Communist activities were so powerful down in Knoxville, these and other Communists boasted that prior to their being run out they got rid of red-blooded, full-fledged, 100-percent Americans, James L. Smith and L. B. Bolt, Jr., both natives of Tennessee.

The Smith case is typical of the Communist control in the TVA under Lilienthal. Smith came in at a salary of $1,020 a year and he was promoted eight times, and then Lilienthal's Communists got after him. The self-admitted Communist, Mr. Hart, got up a petition in Mr. Smith's office to have him investigated and tried. Mr. Clapp was the head of that particular division and he agreed to have Smith prosecuted and tried and appointed Arthur S. Jandrey, a proved Communist, to try him. He appointed another proved Communist, Melvin Siegel, to prosecute him and the evidence shows he was allowed a whole month of official time to prepare the case, and still another Communist, Louis F. Krainock, was appointed to defend him. What chance had poor Smith with false charges brought against him and with a packed Communist court to try him? Clapp would not let Smith select someone to represent him from outside, but he gave Smith a Communist file clerk to defend him who was not even an attorney. Therefore, Smith received no defense. Smith had come

in at a small salary and was then getting $3,500 a year when outrageous fraud was practiced on him, out of which he was moved out of the TVA. Not only was Clapp privy to it, but, of course, Lilienthal knew all about it. Why did they put Smith out? Simply because he was a red-blooded American and these and their employers were Communists or Communist sympathizers.

These faked, trumped-up, dishonest and corruptly dishonest charges against Smith were not brought by Lilienthal himself. Of course, they were not brought by H. A. Morgan or by former Senator Pope, the other two Commissioners. They were not brought by Mr. Clapp, the General Manager at the time. They were not brought by John Franklin Pierce, Mr. Smith's immediate supervisor, or by any other official of the TVA but they were brought by some young clerks, all Communists, who were way down the list in salaries. These clerks were getting less than $2,000 a year. Smith's salary at that time was $3,500, he had been promoted eight times and had even been promoted on January 1, 1939 before he was dismissed on January 31, 1939. My recollection is that Lilienthal said he did not know anything about this Smith case or the Bolt case. If he did not know anything about it he did not have sense enough or information enough to be the head of the TVA. My own judgment is it was just another one of his slick tricks. I think he knew about it and that he gave them free rein. These charges were brought by these young Communists against Smith not as Communists, of course not. They were brought in the name of the UFW (CIO union), and the charges were so flimsy and ridiculous that even a good moot court lawyer could have successfully defended Smith. That was why the Communists were so insistent that Smith be denied outside counsel.

L. B. BOLT, JR.

The Bolt case was just as bad. L. B. Bolt was another 100-percent American. He had no time for Communist fallacies and falsehoods and double-dealing and dishonesty and corruption. It was about this time that communism was flourishing in the TVA. Mr. Bolt was put on the stand by me, and he testified as follows:

"Mr. BOLT. Now, in 1937, in the TVA legal department, of which I was a member, the situation was as follows: John M. Frantz was an avowed Communist. I knew John personally, and I can state that he was a fanatical type. I asked him on one occasion if he really believed in it enough that he would give his life, and he replied very seriously that he couldn't think of a more glorious death than to lead some worker revolution.

"Senator MCMAHON. Did you report that to your superior officer?

"Mr. BOLT. I think the explanation will come out, Senator."

Now, next to this group was Joseph C. Swidler, the present general counsel, Herbert S. Marks, recently appointed general counsel of the Atomic Energy Commission and Melvin Siegel. (Incidentally, Mr. Siegel is now an employee of the Atomic Energy Commission.)

"The CHAIRMAN. When you say 'next to this group,' what do you mean by the term?

"Mr. BOLT. I think I can clarify it. They never acknowledged openly or avowedly that they were Communists.

"Now, here is a factual situation: These three men in particular set themselves up as consultants and advisers to the known and avowed Communists within TVA. In other words, there was no effort to hide the activity whatsoever within the organization.

"Senator JOHNSON. Was that role of consultant official, or is that your term?

"Mr. BOLT. That is my term. In other words, they were always conferring; the known Communists from other departments were always coming up to the legal department and going into these conferences with these three men, Swidler, Marks, and Siegel.

"Now, their positive activity was this: They had a TVA union that was an AFL affiliate, and there was a small group of known Communists within the organization that sought to overturn the existing union and make it a CIO affiliate.

"Now, Joseph C. Swidler, Herbert S. Marks, and Melvin Siegel were actively propagandizing other members of the TVA legal department, particularly with reference to joining this CIO-affiliated union. The process they employed was this: I was extremely busy at the time, but they first sent this John Frantz around to try to convert you to communism and then insist that you join this CIO or support the CIO union" (p. 231).

* * * * *

"Senator KNOWLAND. Now, was one of them the head man in the legal department?

"Mr. BOLT. No; the general counsel of the legal department at that time was James Lawrence Fly. The solicitor, as I recall, was William C. Fitts, Jr.

* * * * *

"Senator MCMAHON. I think he is an adviser to Mr. Owen D. Young, that well-known Communist.

"Mr. BOLT. And his disciples were Gordon R. Clapp, Arthur S. Jandrey—and there were some others in the personnel department.

"Now, these three men, Swidler, Marks, and Siegel, were very close friends of David Lilienthal. They knew each other as Joe, Herb, Mel, and Dave, and they did nothing, in other words, without ascertaining how the wind blew from upstairs, and they made no secret of the fact—

"Senator MCKELLAR. What do you mean by 'upstairs'?

"Mr. BOLT. That was Lilienthal.

"Senator MCKELLAR. Lilienthal was 'upstairs'?

"Mr. BOLT. That is right. They made no secret of the fact. They threw their weight around to a considerable extent; in other words, just had the threat on their lips, if you don't do such and such, 'I will tell Dave.'

"And on one occasion I heard Marks pull: 'If you don't do such and such, I will tell Dave, and Dave will tell Felix, and Felix will tell Sam, and Sam will tell the Skipper.'

"Senator MCKELLAR. What did he mean by that?

"Mr. BOLT. Well, 'Dave' meant David Lilienthal, 'Felix' meant Felix Frankfurter, 'Sam' meant Sam Rosenman, and 'the Skipper' meant President Roosevelt" (p. 233).

Again Mr. Bolt: "Now, we get down, then, to some actual cases, and records exist. There was a man in the employ of TVA by the name of Bernard 'Buck' Borah. He was an avowed Communist. He spent most of his time out propagandizing and organizing on TVA time. His supervisor was T. Levron Howard.

"Now, the supervisor attempted to mark on his record either 'unsatisfactory' or to dismiss him, but, in any event, an issue was raised and Borah resisted. He was actively defended by Joseph C. Swidler, Herbert S. Marks, and Melvin Siegel." (Record, p. 234.)

Incidentally, Joseph Swidler is the so-called general counsel of the TVA. Herbert Marks and Melvin Siegel are now employed by Lilienthal on the Atomic Energy Commission, where he has not yet been confirmed.

And again I quote Mr. Bolt: "Now, there is another case, that of Henry C. Hart. He was an avowed Communist. From the record of the Dies committee and admitted testimony, I don't think there is any question about it, and the TVA officials, including Gordon R. Clapp and Mr. Lilienthal, either knew it or should have known it. But he was defeated; and no later than 2 weeks ago this man was eulogized on at least two different occasions before a Senate committee by Gordon R. Clapp.

"Senator MCKELLAR. What was done with Hart?

"Mr. BOLT. He was retained.

"Senator MCKELLAR. And promoted?

"Mr. BOLT. And promoted." (Record, pp. 234–235.)

Mr. Clapp testified that when Hart gets through with his education at the expense of the Government and comes back to the TVA, he will be reemployed. (Record, p. 235.)

John F. Pierce was also terminated because he was not a Communist. (Record, p. 235.)

Charges were brought against Joseph C. Swidler, the present counsel.

Mr. Bolt testified: "George P. Gant, who was director of personnel under Aubrey Williams, who has now been elevated to be general manager of TVA, heard the proceeding and admitted conferring many times in private with Swidler as to what should be done. And the whole effect—I can prove it by the record—was that Swidler was permitted to decide his own case. At the same time that was going on, Mr. Lilienthal was in Grand Rapids, Mich, making a speech, which most of the newspapers in the country published, as to what a wonderful merit system TVA had. I can produce the record." (Record, p. 237.)

Bolt testified there were 30 charges against Swidler, charging him with illegal actions, violations of policy matters, personal politics. (Record, p. 237.)

Bolt named Henry C. Hart, Bernard "Buck" Borah, John M. Frantz, Muriel S. Williams, Joseph C. Swidler, Herbert S. Marks, and Melvin Seigel and in discussing these several well-known Communists, he said: "And I think the conclusion is almost inescapable that Mr. Lilienthal condoned such activity, if not encouraged it." (Record, p. 238.)

Mr. Bolt said the following: "I want to give the names of those that were testified as having attended Communist meetings: John M. Frantz, Dr. Barry Casper, Dorothy Remine Frantz, Mabel Abercrombie, Bernard Borah, Howard Fazier, Harry F. Alber, Henry C. Hart, Jr., Milton Mandel, David Stone Martin, Ruth S. Martin, Harry T. Miller, Richard T. Mosher, Burton Zion, Rudolf Bertram, Bertha Klenova, Joseph Herman Daves, Kenneth Malcom, Kenneth Cameron, Donald Wheatcraft, Edward Glasek, and Kathleen R. Eakin." (Record, p. 240.)

There were 42 in this one list, and here are more: Mrs. Elizabeth Winston Todd, Frank D. Alexander, Nelson Travis Barr, R. O. Niehoff, F. Woods Beckman, Louis F. Krainock, Bernard Frank, Harry C. Bauer, V. V. Paul, Lucille Thornburgh, Muriel Borah, Katherine Frohmer and her husband, Burton J. Zion, Arthur S. Jandrey, E. B. Schultz, Elizabeth Allen, Roland Wank, Forrest Allen, and Hugh Urban. In all, 42. (Record, p. 240.)

Again, Mr. Bolt testified: "Now, when this news broke, that James L. Smith had been framed by the Communists—and it was in both newspapers—no effort was made on the part of the management of TVA to make restitution to James L. Smith. No apology was ever offered. They still say, and they say today, in other words, that they are satisfied with the Smith record. That record is before the other committee. They are perfectly willing, on the other hand, to take the word of an avowed Communist which they are now doing in the case of Henry C. Hart." (Record, p. 241.)

Again:

"Senator MCMAHON. Now, as for this John Frantz that said to you in 1935 that he was an avowed Communist and he would like nothing better than to die leading a revolt against the Government. He said that to you, did he?

"Mr. BOLT. Yes; that is right. He was fanatical. His eyes would light up when he would talk about it." (Record, p. 242.)

Now, Lilienthal brought both John M. Frantz and Henry C. Hart before the committee. Both of them were avowed Communists and both of them were interrogated

by those on both sides of this controversy, and from their cross-examinations it looked as if both of them were as guilty as it was possible for men to be.

In this connection, an interesting thing happened. When Hart came down here from Wisconsin, where he is attending school at Government expense, he went to the home of Frantz and put up there. Here is the testimony:

"Senator MCKELLAR. Have you seen Mr. Lilienthal since you have been here today?

"Mr. HART. Yes, sir; I saw him this morning.

"Senator MCKELLAR. When did you get here?

"Mr. HART. I got here on Monday evening, sir.

"Senator MCKELLAR. Monday morning. What hotel did you go to?

"Mr. HART. I did not go to a hotel, sir.

"Senator MCKELLAR. You have not been putting up at a hotel?

"Mr. HART. No, sir.

"Senator MCKELLAR. Where are you putting up?

"Mr. HART. I would rather not answer that, if it is not relevant, sir.

"Senator MCKELLAR. Well, it is very relevant to this hearing.

"Mr. HART. I will be glad to answer if the chairman will direct me, Senator.

"Senator MCKELLAR. I hope the chairman will direct him, because it is a part of the story."

The chairman so directed, and Mr. Hart testified as follows:

"I am staying with John Frantz in Arlington, Va."

This was the other Communist who appeared and testified after Hart got through.

"Senator MCKELLAR. Have you seen Mr. Lilienthal? I believe you stated you had. Where did you see him and under what circumstances?

"Mr. HART. Well, I saw him sitting in the Senate Chamber this morning, sir.

"Senator MCKELLAR. That is the only time you have seen him?

"Mr. HART. And then at noon recess he came up and shook my hand.

"Senator MCKELLAR. Now, whom else have you seen from the TVA?

"Mr. HART. That is all, sir.

"Senator MCKELLAR. Have you conferred with anybody about this matter since you got here?

"Mr. HART. Yes, sir. When I first reached town I phoned the TVA representative, Miss Marguerite Owen, and asked her two questions. One was who had testified in the Atomic Energy Committee to date, and the second was whether I would be permitted to see the record on the Smith hearings in the TVA offices.

"Senator MCKELLAR. And did she furnish it to you?

"Mr. HART. No, sir.

"Senator MCKELLAR. Who furnished them to you?

"Mr. HART. Nobody, sir. I did not read them.

"Senator MCKELLAR. So what you had to say about Mr. Smith was about reading what he had to say in the hearings?

"Mr. HART. No; the purpose of my inquiry was whether I should familiarize myself with the record in order to prepare myself to answer questions. I have not done so.

"Senator MCKELLAR. So you have been testifying about Mr. Smith this afternoon without familiarizing yourself with what he had testified to, have you not?

"Mr. HART. That is correct, sir. What I have testified this afternoon is based upon the knowledge that I recollect all employees got in February of 1939, at the time that his hearing was summarized in an announcement to the employees.

"Senator MCKELLAR. What did they get? You said 'what all employees got.' Was it a summary of the case.

"Mr. HART. I already said, sir, in the United Federal workers employees' paper——

"Senator MCKELLAR. So you made up your mind as to Mr. Smith's testimony, what you saw in the employees' paper of the TVA?

"Mr. HART. Yes, sir.

"Senator MCKELLAR. Have you got that with you?

"Mr. HART. No, sir.

"Senator MCKELLAR. Where is it?

"Mr. HART. I do not know, sir.

"Senator MCKELLAR. Where did you examine it?

"Mr. HART. I examined it when it was distributed.

"Senator MCKELLAR. Oh, you have not examined it since?

"Mr. HART. No, sir.

"Senator MCKELLAR. So the young lady at the TVA here, Miss Owen, did not show that to you?

"Mr. HART. No, sir."

The foregoing shows the nature of Mr. Hart's testimony. It was false in substance and in fact. It will be seen from other parts of his own testimony that he saw Miss Marguerite Owens and stayed with John M. Frantz, and he saw and talked with Mr. Lilienthal.

THE RATHER CELEBRATED ROBERT F. HALL COMMUNIST LETTER WRITTEN BY HART

At this point I want to read this letter:

POST OFFICE BOX 1604,
Knoxville, Tenn., January 31, 1939.

Mr. ROBERT F. HALL,
Secretary, Communist Party,
District No. 17, Birmingham, Ala.

DEAR COMRADE ROB: We have had signal success in our latest undertaking to purge the TVA of a reactionary-burgeois supervisor who stood in our way and prevented the expansion of the party control of the employees' organization. He was antilabor and his point of view was so repugnant to our ideals that we determined to get rid of him, as further argument seemed definitely hopeless.

We must explain that under the employee relationship policy of the TVA, we were confronted with certain definite obstacles. We presume, of course, that the oral reports to you from Comrade Laurent Frantz have covered this in detail.

The move was accomplished through the party fraction on the files-shop committee of the Knoxville Lodge of the UFW, it now having been 2 years since we were overwhelmingly victorious in throwing the AFGE bodily into the UFW in a clever maneuver in 1937, the details of which we assume you heard from Comrades Ted Wellman and Kenneth Malcolm at the time it occurred.

Comrade John Frantz was selected to bring the charges and was aided magnificently by Comrades Cameron, Miller, Urban, and another comrade whose name will not be mentioned here because of the high position he occupies, but you doubtless know of whom we speak. I, myself, did some work on the matter, but the credit goes to those named above and below.

The skunk, who was the object of our efforts, was James L. Smith, Chief of the Central Files. We took unusual precautions to insure that once we brought the charges, that we could make them stick, all along the line and this, of course, involved considerable ground work.

But Comrade Abercrombie, of the Norris branch, and Chairman Borah, of the Knoxville TVA branch, did a wonderful job of persuasion and were especially diligent and at the same time properly secretive, so as to accomplish the desired end, without disclosing the ultimate and basic objective, to all of whom they had to contact, in order to insure that Smith would receive only a cool reception and no encouragement in his fight against our charges.

Many meetings and conferences had to be held and it was also necessary to consult with Comrades Wellman and Crouch several times on matters of strategy and policy.

In the end we were successful, because today, the 31st, Gordon Clapp, director of personnel, signed a previously prepared finding that Smith must be and is removed as head of the Central Files. Smith is now expected to resign since he has made only a very feeble attempt to defend himself. It is, of course, highly gratifying to know that the party here is just beginning to realize the strength of organization and we should be able to expand the party and obtain additional recruits on the fine showing we have made in the Smith case.

All the comrades in the TVA and Norris branches send you and Comrade Taylor our best regards and wishes for future success.

HENRY C. HART,
Assistant Chairman.

P. S.—We received your urgent request regarding distribution of extra bundles of the Daily Worker in the TVA offices and this matter will receive immediate attention. The best means of distribution which we have employed so far, is to put the DW in another paper and deliver it with a nod to the member.

Concerning this letter about which so much has been said, the facts are very simple. Senators will notice that the letter is dated January 31, 1939. Hart admits that he was a Communist up until January 1939. The proof is that he was active as a Communist in the TVA up until April 1939, which is in this record undenied, as shown by the testimony of Mrs. Roxie Paris, who was also a Communist and who joined the Communist Party for the avowed purpose of exposing them. On page 700 of the record she tells about a Communist meeting in Knoxville at which Mr. Hart was present, as shown by the following:

"Senator MCKELLAR. Now, was Mr. Hart at that meeting? He was present when you gave that out?

"Mrs. PARIS. Yes; he was present. He gave it out. He gave it out on my telephone.

"Senator MCKELLAR. He gave it out over the telephone, and it was published? And that was on April 27?

"Mrs. PARIS. That was on Thursday, yes; I guess it was the 27th.

"Senator MCKELLAR. April 27, 1939?

"Mrs. PARIS. That is right.

"Senator MCKELLAR. And if Mr. Hart says he had left the Communist Party in January 1939, he is just mistaken about it?

"Mrs. PARIS. He is mistaken, or crazy, one; I don't know which.

"Senator MCKELLAR. I want to ask you if you got any other papers from Mr. Hart.

"Mrs. PARIS. I got a Daily Worker there that has a report in it about Lasser that he brought over for me to read" (p. 700, record).

Now the letter above referred to from Henry C. Hart has had a remarkable history. It was written January 31, 1939, as will be seen from examining it. That was the day James L. Smith was ordered removed as head of the Central Files of the TVA by Gordon R. Clapp, personnel manager. It will be recalled that Arthur Jandrey was assistant director of personnel and he heard the charges against Smith and also that Melvin Seigel of the legal department prosecuted Smith, assisted by this same John M. Frantz and Hugh Urban. They ganged up on this man Smith and they also appointed him a counsel, Louis Krainock, who was not a lawyer, but likewise a Communist as heretofore shown. It has already been shown beyond dispute that Hart was a Communist as late as April 1939. It has never been shown by Hart, or anyone else, that he ever resigned; he just claims to have quit the Communist Party. Now, that letter, remarkable to state, was written on the very day that the Communists got rid of the 100-percent American, James L. Smith. It was a grand event in the TVA Communist cell's history. The letter was written and mailed from Knoxville the day Smith was ordered removed, January 31, 1939. The letter was mailed from the private post-office box belonging to Mrs. Pauline

Crumley, a TVA employee, who said she and her roomate had the only keys to the box. All these facts were evidently in the mind of Henry Hart. Who knew more about Smith's conviction than anyone else? Of course it was his real prosecutor, Henry C. Hart. Who knew that Rob Hall was head of the Communist Party down in Birmingham? Of course he was the friend and fellow Communist, Rob Hall. It had to be somebody who knew the facts and Henry Hart more than any one person on God's earth knew the facts. He had gotten up the petition against Smith; he had prosecuted Smith; and had taken an active part until the order was issued removing Smith from the rolls of the TVA. Henry Hart in his testimony before the committee admitted that he had sent reports to Ted Wellman, State secretary of the Communist Party in Tennessee. How natural was it for him to send a report also to the district secretary, Mr. Hall. I quote from the hearings:

"Senator HAWKES. Will you tell us, and I think you want to be sincere, will you be good enough to tell us what you actually did as a member of the Communist Party, because I have been sitting here for a half hour and I still do not know.

"Mr. HART. I read the Daily Worker, paid my dues, and made regular reports to Wellman."

Now Wellman was the State secretary of the Communist Party. No one knew that better than Hart, because Wellman solicited Hart to join the party. In the foregoing letter to Hall, Hart said: "The move was accomplished through the party fraction on the files shop committee of the Knoxville lodge of the UFW, it now having been 2 years since we were overwhelmingly victorious in throwing the AFGE bodily into the UFW in a clever maneuver in 1937, the details of which we assume you heard from Comrades Ted Wellman and Kenneth Malcolm at the time it occurred."

So that Hart's own evidence shows that he was the only one in the TVA cell of Communists who had all this information, for he had been a Communist since 1937.

The letter itself was not published for about 3 years. It was published in the Knoxville Journal on June 27, 1943. Mr. Hart, Mr. Lilienthal, Mr. Clapp, were all in Knoxville and all read it. There can be no doubt that Mr. Hall knew about it. He is now right here in Washington but he was not put on the stand It was not denied by Hart, or Lilienthal, or Hall, or Clapp. Nobody answered it. On July 25, about a month later, it was again published under a Washington dateline, in the Knoxville News Sentinel. Still no one connected with the TVA or the Communist Party denied it. Nobody denied it even though Mr. Clapp and Mr. Hart had gotten together and prepared an affidavit and called it a forgery That answer was prepared on July 10, 1943, 15 or 16 days after the Knoxville Journal published it and about 15 days before the Knoxville News Sentinel published it. It had already been prepared when the News Sentinel published the letter and the details about it coming from Washington.

They never published the affidavit until Clapp got in hot water before the Committee on Public Works and then the old discarded affidavit that they did not have the nerve to publish when it was prepared, although both papers had published the letter, was brought forth. And it was not offered until it had been publicly announced that the Dies committee did not have either one of the photostatic copies of the letter that the affidavit was first offered in the other committee and Henry Hart was brought here to testify concerning it.

It was soon found that the affidavit could not stand the test and they then brought Communist Hart from his school in Wisconsin to add his testimony concerning it. He virtually admitted everything that was in it as shown by the record. Even now there is not a real fact in the letter that is disputed. No one else but a Communist could have written it, and he had to be an educated Communist to have written as good a letter.

Further about this letter, it was developed in the hearing that the Knoxville News Sentinel, a tremendously pro-Lilienthal paper, evidently having talked with Lilienthal and Clapp and Hart, sent a special representative to Washington to find out if the letter were correct—Daniel Kidney—to investigate and advise whether the Dies committee had such a letter in their files. Here is what Mr. Kidney telegraphed, on July 26, 1943, to his newspaper, the Knoxville News Sentinel, from Washington: "That the Dies committee did find 55 Communist Party members in the investigation in the TVA area was verified today by Robert Stripling, chief of the Dies staff. 'We did not make the names public, but certainly expected TVA to see that Communists were purged from its staff,' Mr. Stripling said. Instead the committee files contain a letter from Henry C. Hart, Jr., TVA personnel employee, claiming that the Communists were instrumental in getting James L. Smith, native Knoxvillian, fired from TVA." And thereupon the News Sentinel did publish the Hart letter in its entirety in bold-faced type and it had never been denied until this time.

If that photostatic copy of the letter had not been in the Dies committee files at that time when Daniel Kidney was sent to examine into this matter, he would have exposed the whole matter as a colossal fraud and so would have his paper, which is on the side of Lilienthal, but they verified the letter and thereupon published the letter.

THE LETTER ITSELF

Now let's take the letter itself. Remember that the real prosecutor of Smith was Hart. And he had been prosecuting him for at least 5 weeks. Remember that Hart was a graduate of Vanderbilt University. And look at the language of the letter in the first paragraph where he calls Smith "a reactionary burgeois supervisor." Remember that he was one of the young employees holding a place not paying over $2,000 a year in the TVA and that Smith was a long-time employee of the TVA who was getting $3,500 a year.

And then note in the third paragraph his close association with Ted Wellman and Kenneth Malcolm, which is in accord with the facts. In the fourth paragraph, note that Comrade John Frantz and Comrades Cameron, Miller, Urban were all members of the prosecuting party. And his statement about how much work he had done on the Smith case, and that was in accord with the facts. Then note what he said in the fifth paragraph, "We took unusual precautions to insure that once we brought the charges, that we could make them stick, all along the line and this, of course, involved considerable ground work."

And then note his reference in the seventh paragraph to Comrades Abercrombie and Borah, and in other paragraphs to Comrades Wellman and Crouch, and to Gordon Clapp and how intimately he spoke of these, and it is easily seen that nobody but Hart could have written the letter in the face of his own testimony, much less the testimony of all the others.

Another fact that I want to call out especially is shown in the fourth paragraph of the Hart letter: "* * * and another comrade whose name will not be mentioned here because of the high position he occupies, but you doubtless know of whom we speak."

There can be no doubt that this man was Lilienthal himself.

It will be remembered that the Communists were talking about the time would soon come and the revolution would soon take place and the Communists would reign supreme in the United States.

Lieutenant Detective Osborne, of the Birmingham Police Department, who made a splendid witness in the case, testified fully and freely and truly how the photostatic copy was obtained in Birmingham and Mr. Barker testified in like manner how the photostat copy was left with Mr. Dies, the chairman of the committee.

On page 395 of the record is to be found the testimony of Lieutenant Detective Osborne. He testified that on the day before Investigator Barker got to Birmingham, he had arrested Mr. Laurent Frantz, brother of John M. Frantz, in the headquarters of the Communist Party in Birmingham. At that time Communist Hall had his office in Birmingham and Frantz was found in Hall's office.

Hall disappeared before the detective got to the office with the deputy United States marshal to serve a subpena on them for the Dies committee. (Record, p. 396.)

"Senator MCKELLAR. Will you tell whom you found at the offices of the Communist Party in the Clarke Building?

"Mr. OSBORNE. At 2 p. m. April 9, 1940.

"Senator MCKELLAR. April 9, 1940?

"Mr. OSBORNE. Yes, sir.

"I returned to detective headquarters on my assignment at that time. I was in charge of the un-Americanism activity detail, Birmingham Police Department. On reaching my office, Chief E. L. Holland called me into his office and introduced me to a deputy marshal by the name of Ellis whom he said had a subpena for Robert F. Hall for the Dies committee and asked would I accompany Mr. Ellis over to the headquarters and effect the arrest or serve the subpena. Mr. Ellis and myself went to the headquarters, 235 Clarke Building, Birmingham, and the door was shut. I knocked several times. In response, a young man came to the door and when I made myself known to him he slammed the door in my face, I catching it with my foot to block the shut. I went inside and I asked for Robert F. Hall, and he said that he was not there, he did not know him, or had not seen him. I asked him was he employed at that office, he said he was not, that he was just doing some personal work on the typewriter. I asked him his name and he refused to give it to me. I searched him in the capacity of a city officer and I found in his possession some mail for Robert F. Hall and also a key to the office. He would not talk. I took him over to the police headquarters and questioned him, and about 4 or 5 o'clock on the same date, while I was questioning this subject, whom I found to be Laurent Frantz, Mr. Barker come in and introduced himself to me as being an investigator for the Dies committee." (Record, p. 397.)

"Senator MCKELLAR. You had already arrested Mr. Frantz?

"Mr. OSBORNE. Yes, sir. Mr. Frantz was arrested before Mr. Barker got over. Mr. Barker arrived at 4:05. I said, 'Well, I guess I have got one of these "Commies" here if you want to check on him.' He showed his credentials to Frantz and Frantz would not talk to him, so I finally put him in jail, and after getting the key off of him, Mr. Barker and myself went back over to the Communist headquarters late that afternoon and that night and looked around at certain documents, taking about 35 or 40 different documents, letters, from different parties, to have them photostated. This particular letter, which impressed me so at that time was for the fact that I had handled Hall, arrested Hall, also Frantz, Taylor, and was looking for Crouch.

"What struck my attention at that time was the fact of the Daily Worker being inserted inside of another paper to be distributed on the TVA property.

"Senator MCKELLAR. How was that? I did not get that.

"Mr. OSBORNE. I said what struck my attention was also the postscript of the letter where it says their method of distributing the Daily Worker would be to insert it in another newspaper and give it out to the TVA

project. I said, 'It looks like your TVA is infested down there, Barker.' He said, 'I do not know. We are checking on it up there.' So about 10 a. m. on the 10th Mr. Barker and myself went to the Electric Blue Printing Co., which at that time was located at 108½ North Twenty-first Street, to have the documents that we had photostated. We remained there with the gentleman who made them and after it was made he turned it over to me. Mr. Barker and I then went back to the hotel and read them over, then I turned them over to Mr. Barker. I did not keep a copy of any of them. Neither did the man who made the prints." (Record, pp. 397-398.)

Lieutenant Detective Osborne read into the record an affidavit from the Electric Blueprinting Co. stating that photostatic copies of the letter were made as Mr. Osborne had testified. (Record, p. 398.)

On February 17, Mr. Barker testified as to what he did with these letters, including the one written by Mr. Hart. Mr. Barker on pages 454 and 455 and 456 positively identified the letter.

"Senator McKELLAR. What did you do with the original of that letter?

"Mr. BARKER. Detective Osborne and I returned all of the original material to room 235 in the Clark Building, the Communist Party headquarters, and put it back where we had found it.

"Senator McKELLAR. What did you do with the photostats after you got here?

"Mr. BARKER. I delivered all that material to Congressman Martin Dies in his office in the New House Office Building.

"Senator McMAHON. Getting back to when you spoke to Mr. Dies about your material that you found down in Birmingham, did you call his attention to this particular letter?

"Mr. BARKER. Oh, yes; very definitely, and I am coming to that.

"Senator McMAHON. You considered this an important discovery?

"Mr. BARKER. I considered it an important piece of evidence because it showed Communist activities in the Tennessee Valley, if the letter was to be believed on its face.

"Senator McMAHON. You discussed that with Mr. Dies?

"Mr. BARKER. Oh, yes.

"Senator McMAHON. He read it?

"Mr. BARKER. He read it.

"Senator KNOWLAND. The photostat or the copy?

"Mr. BARKER. The photostat copy of the letter.

"Senator McKELLAR. I want to ask you if the letter that the chairman of the committee has just shown you as coming from Henry C. Hart, Jr., to an address to Robert F. Hall, secretary of the Communist Party, Post Office Box 1871, Birmingham, Ala., is that a true copy of the original that you found in that Communist office down there?

"Mr. BARKER. It appears to be. My best recollection is that it is." (Record, pp. 456 and 457.)

And again:

"Senator McKELLAR. In your judgment, and from your knowledge of the facts, is that an exact copy of the letter that you and Mr. OSBORNE found in the Communist headquarters at Birmingham?

"Mr. BARKER. Yes, sir." (Record, p. 460.)

The two photostatic copies of the Hart letter were left with the chairman of the Dies committee by Mr. Barker as they should have been. They were thrown out by Mr. Lilienthal or Mr. Hart or one of their Communist friends.

We are not responsible for it. There isn't a particle of doubt about that letter being written by the witness, Mr. Hart, because when he was brought here to testify, he testified with his head down for the most part and made one of the poorest witnesses that ever came before any committee. I don't believe there is a doubt in the mind of anybody who heard or knows the facts that he wrote that letter.

If there ever was any doubt about this letter, Senator JOHNSON of Colorado removed that doubt in the testimony of another excited, slow-witted, ridiculous Communist witness by the name of Kenneth Cameron.

On page 725 of the record Senator JOHNSON asked him this question: "Did you do anything officially, or anything in any way, to show that the letter was in error at the time it was called to your attention? Or did you wait until you found out that the Hart signature was no longer in existence before you raised any objection to the contents of the letter?

"Mr. CAMERON. I did not raise any objection, public objection to the contents of the letter; no, sir."

That shows just what happened about this letter. They did not publish an affidavit of denial of the letter, until they knew Hall had destroyed the letter itself and they had gotten somebody in the Dies committee to destroy the two photostatic copies.

That tells the whole story about this letter.

JACK COMER

Another witness against Mr. Lilienthal was Jack Comer. Mr. Comer went with the TVA in 1933 and remained until 1941. He resigned at that time and began to practice law. He had gone to night law school before that. He testified that Henry C. Hart was a proud and boastful Communist; and that John Frantz was an "avowed" Communist during his days at the University of Tennessee at Knoxville, and he preached communism to everyone while at the TVA"; and that he was thrown in jail in Knoxville several times for inciting riots. (Record, p. 356 of the Clapp hearing.)

He testified that those in charge of TVA constantly discriminated in favor of Communist unions. He, himself, was president of TVA's white-collar A. F. of L. union. The CIO Communist union took his records and bank accounts.

"Comer went into the justice of peace court of the late Squire J. Mack Moulden to replevin the records and was confronted by a battery of top TVA legal talent, Joe C. Swidler, now general counsel; Herbert Marks, (now a lawyer on the Atomic Energy Commission under Lilienthal); Melvin Siegal (now a lawyer on the Atomic Energy Commission under Lilienthal), and Richard T. Mosher."

These lawyers said the records were not to be found, but Comer obtained them. (Record, p. 357 of Clapp hearings; p. 359.)

He testified that Communists were preferred in this organization all during his testimony. He testified as follows concerning a visit of a Japanese delegation to the TVA about 1 or 2 years before they got into the war:

"I refer to the time when the TVA conducted a tour of its projects for a Japanese Commission. Not only were the Japs shown and flown all over the Tennessee Valley at Government expense, but any other visitors with foreign accents were shown the same courtesies." (Record, p. 361, Clapp hearings.)

Mr. Comer further states:

"It seems as though all you had to do to be shown the TVA is to be a foreigner." (Record, p. 361, Clapp hearings.)

Mr. Comer further stated:

"Last summer I was taking flying lessons out at the airport and the TVA has its own plane out there and on one occasion they came in from a flight over the Authority and two of the people I could not even understand their foreign accent. Any time you want to get a free trip over the TVA you have to have a foreign accent." (Record, p. 361, Clapp hearings.)

And again he further stated:

"These Japs visited TVA shortly before Pearl Harbor. If this is the type of security Lilienthal is going to use for the atomic bomb, we may find ourselves blasted to eternity by communistic Russian replicas of them." (Record, p. 361, Clapp hearings.)

All through Mr. Comer's testimony he shows how the communists were preferred by those in authority in the TVA over Americans.

"Senator McKELLAR. I believe you said that they were all either tinged or colored with communism?

"Mr. COMER. That is right.

"Senator McKELLAR. Among those did you include Mr. Marks and Swidler and Siegel?

"Mr COMER I do.

"Senator McKELLAR. Do you include Mr. Clapp and Mr. Lilienthal?

"Mr. COMER. I do." (Record, p. 368, Clapp hearings.)

Mr. Comer got his own legal education, became a lawyer and businessman and has made a great success in it as his testimony shows. He was for a long time the head of one of the labor unions and his every sympathy is with organized labor. He is a very fine man.

Mr. Comer was a straight-from-the-shoulder witness. Anyone on earth could tell that he was honest and fearless in giving his testimony.

How the members of the committee failed to accept it I do not know.

Likewise Mrs. Roxie J. Parris was a fearless, uncontrolled, out-spoken, honest witness. What she knew, she knew. And this Senate can take her testimony and Mr. Smith's testimony, Mr. Bolt's testimony and Mr. Comer's testimony with the absolute conviction that they were telling the truth, and that cannot be said for Mr. Lilienthal anywhere along the line.

Nobody heard Mr. O. C. Osborne, lieutenant of detectives at Birmingham, Ala., testify who did not know instinctively that he was telling the truth and the Senate can implicitly believe anything he said. Even Chairman HICKENLOOPER complimented the truthfulness of Lieutenant Osborne. (Record, p. 408.)

LILIENTHAL'S WITNESSES

Lilienthal's case is remarkable in the way of witnesses. It is remarkable because of the witnesses he did not put on the stand—witnesses who were compelled to have known the facts about the TVA. He put none of these on. Then it is remarkable as I shall hereafter explain because of the witnesses he did put on in his own behalf. We will take those he did not put on first.

1. He had been serving with Dr. H. A. Morgan, a member of the TVA from its beginning—now about 14 or 15 years—but he did not put Dr. Morgan on as a character witness or as a witness familiar with all the facts of the TVA and who could refute charges of communism in the TVA.

2. Again, he did not put on Dr. A. E. Morgan and he did not undertake to refute any of Dr. A. E. Morgan's statements. I put Dr. A. E. Morgan on the stand.

3. He did not put his associate, Senator James P. Pope, a former Member of this body, now a long-time member of the TVA, and who ought to have had some knowledge about it on the stand. He is conspicuous by his absence, and he certainly would know something about communism there or the lack of communism in the TVA, but he did not put him on.

4. Then there was his first general counsel an secretary of the corporation, Mr. James L. Fly, who must have known about there being communism in the TVA. He is not now with the TVA or the Government at all, and is practicing law in New York. Surely he could have put Mr. Fly on if it had been to his interest to do so.

5. His next general counsel was W. C. Fitts, successor to Mr. Fly, and who is a very excellent lawyer, and I doubt not that he is a very fine man. I knew his father, who was practicing law in Tuscaloosa, Ala., when I was a student at the university fifty-odd years ago, and surely Mr. Fitts knew about communism

in the TVA. Mr. Fitts is now a law partner on Mr. Fly in New York.

6. Joseph C. Swidler, the present general counsel. Mr. Swidler, it is true, started out in life with Mr. Lilienthal as a clerk at $71.75 a month when Mr. Lilienthal was working for the Commerce Clearing House, a utility-controlled corporation in Chicago which was working for the various utilities, and it was at the same time that Mr. Lilienthal was also working as a member of the railroad and utilities commission in the State of Wisconsin. So, surely, Mr. Swidler knew something about it. It is true that Mr. Swidler was never admitted to the Federal court until last July, and it is true that the testimony here shows that Mr Swidler was a Communist, but surely Mr Lilienthal would not object to a man being a witness because he happened to be a Communist. Lilienthal not only surrounded himself with Communists in TVA, but he is now busily engaged in surrounding himself with Communists like Marks, Ramey, Volpe, Siegel, and Niehoff, all of whom he has with him at the present moment on the Atomic Energy Commission.

7. There is another man who was associated with him in the TVA for a long, long time. His name was J. A. Krug, and he was Chief Engineer for awhile. Mr. Krug is now Secretary of the Interior. What possible reason could he have had for not calling Mr. Krug to testify for lack of communism in the TVA if there was a lack of communism there? Who could have made a better or stronger witness than Mr. Krug, and yet Mr. Krug was not invited by Mr. Lilienthal to testify in this case, and his testimony does not appear. I am informed it has not been a week ago that Secretary Krug made a radio speech and admitted there were Communists in the TVA.

8. Dr. Floyd Reeves is another man who was associated with him in the TVA for several years. Dr. A. E. Morgan, whose testimony is absolutely uncontradicted, although Lilienthal personally heard every word of it, testified that Lilienthal kicked Dr. Reeves out because he complained of Lilienthal's political appointments. Think a moment, Senators, the idea of Lilienthal, with all he has had to say about his lack of politics, getting into a controversy with Dr. Reeves about political appointments. And yet that is just exactly what happened, and he did not produce him, although Dr. Reeves is now working for the present Governor of the State of New York.

9. Here was Mr. Clapp whom he had appointed to succeed him and he did not dare to put Mr. Clapp on the stand and Clapp did not dare to put Mr. Lilienthal on the stand. Their affairs had been conducted in such a dishonest and corrupt way that neither one of them would testify for the other.

10. Not only that, the next four witnesses who did not appear for Lilienthal who it seems should have appeared for him were four Congressmen. Congressman ALBERT GORE, Congressman PERCY PRIEST, Congressman ESTES KEFAUVER and Congressman JOHN JENNINGS. They all testified for Mr. Clapp but they did not testify for Mr. Lilienthal.

11. Take the two Senators from Alabama—Senator LISTER HILL and Senator JOHN SPARKMAN. They both testified for Mr. Clapp but neither one of them testified for Lilienthal.

What caused the trouble? Why? How? What is the answer?

12. During Lilienthal's stay in Tennessee we have had four governors—Govs. Hill McAlister, Gordon Browning, Prentice Cooper, and Jim McCord. Not a one of them appeared, and no governor from any of the adjoining States appeared.

13. Not only that but as everybody familiar with politics knows, East Tennessee has Republican officials in some of the counties and Democrat officials in some of the counties, and not a single solitary official was called upon to testify for Mr. Lilienthal.

14. Since Mr. Lilienthal has been the chairman of the TVA probably no other corporation in Tennessee has been more active with the Legislature of that State than has the TVA and yet not a single member of the legislature was called here to testify as to the good character of Mr. Lilienthal.

15. And look at our judges. Probably a third of the judges in the State are in that part of Tennessee and not a single judge was called upon to testify to the good character of Lilienthal and yet Mr. Lilienthal had been down there for 14 or 15 years.

16. Nor did the mayor of Knoxville, nor the mayor of Chattanooga, nor any other mayor in the State or any official in the State testify for him or any of their predecessors in office.

17. Not a Protestant minister of the gospel came here to testify for him except two adherents of an offshoot of the Roman Catholic Church but they were not orthodox Catholics and were not priests of the Catholic Church. There are not any finer people on earth than the regular Catholic organization in Tennessee.

18. There were no rabbis brought here who testified for him. I doubt if he knows a rabbi.

19. Finally, not a college president in any of the States in which the TVA operates was called for any purpose by Lilienthal. Not even his old friend, Dr. Frank P. Graham, president of the University of North Carolina to whom both Clapp and Lilienthal referred in their testimony.

No former associate of Lilienthal in any business or in any profession anywhere in the United States was called as a witness by Mr. Lilienthal. Not even Gov. Phil La Follette who appointed him head of the public service commission in Wisconsin; and not even Ed A. O'Neal of the American Farm Bureau Federation who was supposed to be connected with him to the extent of giving certain farmers selected by O'Neal and Lilienthal about $2,000,000 of Government money per year without any authority whatsoever to give such money to this selected few, testified for him.

I want also to call the attention of the Senators to the fact that according to this testimony the closest friends that Lilienthal had down here were Herbert S. Marks, Joseph C. Swidler, Melvin H. Siegel, who together with Lilienthal were known in the TVA as the "four horsemen," the most intimate of friends, and all three of them were here in the committee room during the hearings, but not a one of them was called to testify for Lilienthal.

The very fact, Mr. President, that no disinterested man who was known outside his own precinct in Tennessee was called by Mr. Lilienthal to uphold his management of the TVA during the 14 or 15 years he has lived down there is in itself such a condemnation of him that this body ought not to confirm him.

MR. LILIENTHAL'S CHARACTER WITNESSES

1. John M. Hancock, industrial banker; partner of Lehman Bros., National Surety Corp., Sears, Roebuck & Co., Florsheim Shoe Co.; A. Stein & Co., S. H. Kress & Co., American Export Lines, Inc.; associate with B. M. Baruch in rubber survey. (Record, p. 75.)

"Mr. HANCOCK. As to Mr. Lilienthal, we have had very little work closely together. I have known of his work. I know only the general reputation he has had as administrator, and I cannot speak as to that generally, but only as to the field in which I have had occasion to contact him." (Record, p. 77.)

That was since the Lilienthal report was presented.

The Lilienthal report recommended all uranium ore should be owned by Lilienthal's organization and Mr. Hancock was not in accord with that. (Record, p. 77.)

2. Bernard M. Baruch, character witness, also differed with Lilienthal. (Record, p. 100.)

He thought Groves had not gotten his just deserts. (Record, p. 106.)

He implied that Lilienthal had undermined Groves. He was astounded that General Groves and General Farrell and others who had brought about the discovery of atomic energy were left out. (Record, p. 106–107.)

He (Baruch) gave General Groves the highest praise. (Record, p. 107).

He thought well of the Acheson-Lilienthal report but thought it ought to have been held up. (Record, p. 108).

He damned him with faint praise. (Record, p. 108 and following.)

This character witness really ruined Lilienthal, and I quote as follows:

"Senator MCKELLAR. Knowing that you are not a Communist, do you think we ought to select for this Commission a man who in his organization at home has had in the last 10 years somewhere between 40 and 55 Communists, and whose department had defended all Communists in his set-up down at the TVA? Do you think that at this time, with the world in the shape that it is in now, with the United States having the questions confronting it that it has now, do you think it is the time to appoint those friendly to the communistic cause?

"Mr. BARUCH. But I do not know to whom you refer.

"Senator MCKELLAR. I am talking of Mr. Lilienthal.

"Mr. BARUCH. I would not say that he was friendly to the Communist cause, Senator, from what I have seen of him.

"Senator MCKELLAR. But if you knew that from 30 to 40 or 55 Communists have been employed by him?

"Mr. BARUCH. And he knew it?

"Senator MCKELLAR. And he knew it. Men who were confessed Communists, men who joined the Communist Party while working for him, and admitted that they did. Would you think it would be a wise appointment at this time in our history, with the differences between us and Russia as they are—do you think it is a wise time to appoint such a man to office?

"Mr. BARUCH. I would not appoint a Communist to office at any time.

"Senator MCKELLAR. Shake hands. You are a great man. I have always had the greatest respect for you, and now I have more than ever. You would not appoint a Communist at any time. That is all." (Record, pp. 108–109.)

As a character witness, Mr. Baruch certainly did not do Mr. Lilienthal any good.

3. James Bryant Conant, president, Harvard University.

Dr. Conant was another witness who, while testifying to another's character (being called to testify about Mr. Wilson), made some interesting statements:

"Senator MCKELLAR. You would not be in favor of the confirmation of anyone about whom you had doubt as to what he felt more interested in Russian communism than he did in the American Constitution and Government, would you?

"Dr. CONANT. No.

"Senator MCKELLAR. I did not get that.

"Dr. CONANT I say 'no.'

"Senator MCKELLAR. I was confident you would say that.

"If you were a Senator, would you vote for the confirmation of any man to this particular office at this particular time, when the world is topsy-turvy in a way, and when there is so much feeling as between the Russian Government and the American Government and the American people and the Russian people—you would not think for a moment of confirming anyone about whom there was any doubt as to his Russian proclivities, would you?

"Dr. CONANT. I should certainly not want to confirm anyone, if I were a Senator, about whose loyalty I had any doubt.

"Senator MCKELLAR. America first; that is true, is it not?

"Dr. CONANT. The question is of his loyalty, isn't it?

"Senator MCKELLAR. Well, suppose he had surrounded himself with a large number of Communists, and promoted in his establishment only those who had Russian proclivities, Communist proclivities; would you feel like supporting a man of that kind?

"Dr. CONANT. When you speak of Communist proclivities, of course you refer to members of the Communist Party?

"Senator MCKELLAR. Yes, sir; one who had members of the Communist Party in his organization.

"Dr. CONANT. Oh, now, they might be there without his knowing it, sir?

"Senator MCKELLAR. Well, do you think they could, without his knowing it, exist there for 15 years, some of them joining the Communist Party while he was in charge? Do you think it is possible?

"Dr. CONANT. I don't know. I couldn't tell you.

"Senator MCKELLAR. Well, if you had any doubts about it, you would not vote for such a man, would you?

"Dr. CONANT. If I had any doubts about his loyalty, I certainly wouldn't.

"Senator MCKELLAR. That is all" (p. 116).

Dr. Conant had the pleasure of knowing Mr. Lilienthal for a short time, but quite intimately, in connection with the preparation of the so-called Acheson-Lilienthal report on atomic energy (p. 117).

Dr. Conant spoke very highly of General Groves and thought Groves still had a part in the matter (p. 118).

4. Dr. Vannevar Bush, president, Carnegie Institution, Washington, D. C.

Dr. Bush testified to the good character of Mr. Carroll L. Wilson (pp. 179–180).

Dr. Bush also testified for Mr. Lilienthal (pp. 183–184). He had known him about 15 years.

5. Mr. Joe Starnes, former Congressman, Guntersville, Ala.

Mr. Starnes had known Mr. Lilienthal from 1935 while Mr. Starnes was a Member of the House. He stated that in his judgment Lilienthal was a man of impeccable character and was an able administrator (pp. 186–187).

Mr. Starnes was one of the examiners who went down and spent 1 day at Chattanooga, I believe. Their hearing was executive. The only three they had any evidence about were Henry C. Hart, Muriel Spear, Borah Williams, and David Stone Martin. Also Henry Thornton and Francis J. Martin.

Mr. Starnes stated before this committee that they had found these three employees to be admitted members at one time or the other of the Communist Party and they felt that the responsibility for further action was on his shoulders. (That is, Mr. Clapp's.) (P. 189.)

The witness said he had only made a verbal report on Communists down there, but handed them a printed report and he identified it (pp. 192–193).

In his report Mr. Starnes contradicted himself by saying the following:

"Numerous witnesses who have appeared before our committee have given testimony indicating that the American Committee for the Protection of the Foreign-Born is a Communist-dominated front" (p. 193).

The witness also further stated: 'This chart makes clear the important fact that the Union for Democratic Action is composed chiefly of individuals who have been a significant part of the interlocking directorate of the Communist movement in the United States. As the leaders of the Union for Democratic Action would probably put it, this chart contains the evidence of their political conduct before Pearl Harbor" (p. 193).

Mr. Starnes also testified about the Conference for Human Welfare and other communistic organizations (p. 193).

Lilienthal and Clapp were both sponsors for the Communist organization which met at Chattanooga in 1940.

Testimony of Mr. Starnes:

"Senator MCKELLAR. Now, I want to read you from this report concerning the ideological background of the Communist attack:

"From the evidence which this report sets forth in later sections, it will be clear that the spearhead of the attack upon Congress as an institution stems from a group of men who have had long training and experience in the ideology of Karl Marx. It is pertinent, therefore, to draw attention to the official declarations of the Marxist movement which deals with the subject of the legislative or parliamentary branch of government.

"The theses and statutes of the Third (Communist) International, a document accepted as the basis of the program of the Communist Party of America, contains the following statement:

" 'Therefore, the deep hatred against all parliaments in the revolutionary proletariat is perfectly justified.'

"The same official document includes the following:

" 'Communism repudiates parliamentarism as the form of the future; its aim is to destroy parliamentarism.'

"It is true that Communists engage in political campaigns for the ostensible purpose of electing their friends and members to legislative bodies, but the official view of the Communist International on this matter is set forth in the following language:

" 'The Communist Party enters such institutions, not for the purpose of organization work but in order to blow up the whole bourgeois machinery and the parliament itself from within.'

"Communist literature is filled with declarations concerning parliamentary institutions similar to the foregoing citations. Further examples would be mere repetition. The Communist position sums up to the following: Discredit parliamentary institutions in every way possible, penetrate them for destructive purposes wherever possible, and wait for the emergency when they may be destroyed altogether.

"The current campaign against Congress, engineered by the Union for Democratic Action and its agents such as Lewis Corey, fits perfectly into the Marxist pattern reflected in the foregoing quotations.

"Now, the question I want to ask you is: Did it make no difference to you, as chairman of this committee, when you found, upon examination in Birmingham—and your agents seem to have found more, but just take these seven—seven Communists down there? Did you not think it was worth looking into?

"Mr. STARNES. Why Senator, of course; we were looking into it at the time.

"Senator MCKELLAR. You were looking into it. Well now, do you yourself remember examining in part Mrs. Muriel S. Williams?

"Mr. STARNES. Oh, yes.

"Senator MCKELLAR. You took part in that examination, did you not? Mr. Barker conducted it in your presence. You were the only Congressman there, were you not?

"Mr. STARNES. That is correct.

"Senator MCKELLAR. Mr. Clapp testified she was the only Communist dismissed.

"Mr. STARNES. Mr. Martin, he testified, resigned from the Authority.

"Senator MCKELLAR. Listen to this:

" 'The testimony of Mrs. Muriel S. Williams, of the TVA, whom Mr. Clapp testified was the only Communist dismissed by the TVA as result of the Dies committee investigation testified before the Dies Committee in Washington on July 26, 1940, admitting that she was a Communist and named the following persons as having attended meetings with her.'

"Now, I want to give you the names of the persons that she saw at Communist meetings as given me by Mr. Robert Barker, and I will read them to you (Dies committee hearings, July 26, 1940, pp. 1268, 1269, 1271, and 1277):

" 'John M. Frantz, Dr. Barry Casper, Dorothy Remine Frantz, Mabel Abercrombie, Bernard Borah, Howard Frazier, Harry F. Alber, Henry C. Hart, Jr., Milton Mandel, David Stone Martin, Ruth S. Martin, Harry T. Miller, Richard T. Mosher, Burton Zion, Rudolf Bertram, Bertha Klenova, Joseph Herman Daves, Kenneth Malcom, Kenneth Cameron, Donald Wheatcraft, Edward Glasek, Kathleen R. Eakin.'

"And you heard her testify to those names?

"Mr. STARNES. Oh, yes; I conducted the investigations, Senator" (p. 195).

6. Dr. Karl Taylor Compton, president, Massachusetts Institute of Technology, Cambridge, Mass.

Dr. Compton came to testify as a character witness for Mr. Wilson (p. 211).

He had this to say of Mr. Lilienthal:

"Mr. Lilienthal, I came to know slightly during the operation of the Science Advisory Board, back in 1933 and '34. I was very much impressed with his ability and energy, his efficiency. I didn't know enough about that organization and its problems to have any opinion other than that which I have stated.

"As far as I knew the situation, my opinion of Mr. Lilienthal was entirely favorable. And for a short time before his appointment as chairman of this Atomic Energy Commission, I have heard a good deal of discussion of Mr. Lilienthal. As you probably know, every little group of people interested in this thing over the country was busy selecting its own commission, and I saw a lot of those amateur selections, and Mr. Lilienthal was some place on every list that I saw.

"I have been very much impressed with the policies for the operation of this commission, as I have heard them briefly outlined on one occasion by Mr. Lilienthal.

"Senator MCKELLAR. Was Mr. Lilienthal one of the scientists who had to do with the discovery of atomic energy?

"Dr. COMPTON. No, sir (p. 221).

"Senator MCKELLAR. Did Mr. Lilienthal know anything about it?

"Dr. COMPTON. That, I don't know. I know there was a lot of work going on down in your territory, and Mr. Lilienthal knew something of it, but I don't know how much" (p. 222).

So, it is perfectly clear that Dr. Compton did not know much, if anything, about Mr. Lilienthal.

7. Dean Acheson, Under Secretary of State.

Mr. Acheson was called, but testified as to the good character of Mr. Marks and not of Lilienthal (pp. 276 to 284).

He had known Mr. Lilienthal only since the organization of the board of consultants last March (p. 284).

Mr. Acheson didn't know of the secret of the atomic bomb being imparted to other countries up to the present time. He thought certain parts of it had been imparted to Great Britain and Canada (p. 290).

He approved the Lilienthal report in the way it was published (p. 291).

8. John Lord O'Brian, counselor at law, Washington, D. C.

Mr. O'Brian testified as to the character of Marks (p. 310).

He also testified in behalf of Mr. Wilson (p. 315).

9. Col. Walker L. Ciser, chief engineer of power plants, Detroit Edison Co., Grosse Pointe, Mich.

Colonel Cisler testified in favor of Mr. Marks (p. 317).

Attorney Henry H. Fowler was a witness against Mr. Bolt, but a very weak one (p. 321).

10. Secretary Robert P. Patterson, Secretary of War.

Secretary Patterson was a character witness for Mr. Lilienthal.

"Secretary PATTERSON. Mr. Lilienthal, I should say, I have known about 5 years. My contacts with him haven't been in connection with the prosecution of the war, but occurred when I was Under Secretary of War and he was head of the TVA; they were all of them business contacts" (p. 323).

Secretary Patterson also was asked about the plan proposed by Mr. Lilienthal for the establishment of the Atomic Energy Commission and its powers and duties. He said he read it at the time but didn't have it present in his mind at that time (p. 325).

He said that the atomic-energy secret had not been imparted to other nations (p. 326).

He said he was in favor of international control of atomic energy (p. 327).

His testimony, of course, concerning Mr. Lilienthal amounted to very little.

11. Dr. John S. Dickey, president, Dartmouth College.

Dr. Dickey testified about the good character of Mr. Marks (p. 366).

As to Mr. Lilienthal, he said: "And I have just simply shaken hands with Mr. Lilienthal" (p. 367).

12. Chester I. Barnard, president, New Jersey Bell Telephone Co., Newark, N. J.

Mr. Barnard had known Mr. Lilienthal only since September 1945, about a year and a half. This was entirely in connection with the atomic-energy matter (p. 418).

He did not agree with Lilienthal at all about the atomic bomb (p. 419).

Mr. Barnard stated that Mr. Lilienthal said to him with the utmost vehemence: "If it requires a totalitarian regime to control atomic energy and the atomic bomb, I hope one drops on me and my family. I do not want to live, and I want no descendants of mine to live, n a totalitarian society (p. 419).

"Senator McKELLAR. You are a businessman?

"Mr. BARNARD. Yes, sir.

"Senator McKELLAR. And you have been in business a long time occupying a very prominent place?

"Mr. BARNARD. All my life.

"Senator McKELLAR. All your life. I want to ask you how you regard our Government. Do you not think the American Government is a very honest, upright Government?

"Mr. BARNARD. I would have to have a lot of definition, Senator McKellar, to answer that question.

"Senator McKELLAR. You do not think much of the American Government, then?

"Mr. BARNARD. Yes.

"Senator McKELLAR. I want to know how much you think of it.

"Mr. BARNARD. I think enough of it to have spent a lot of time here.

"Senator McKELLAR. I know, but that is a very general statement, Mr. Barnard, and we want to get something specific. Do you not believe in the splendid way in which your Government was founded? Do you not believe in the Constitution of the United States and the laws passed by the Congress and by the various States? Do you not like the American system of Government?

"Mr BARNARD. I do.

"Senator McKELLAR. I would think a man in your position would not hesitate to say that w had a good government. Do you know of any government anywhere else that is any better?

"Mr. BARNARD. No; I do not.

"Senator McKELLAR. Well, I am glad to hear it, because you rather gave me a wrong idea about it, and I am glad to hear you say that you think well of our Government.

"I want to be perfectly frank with you and tell you that I have that same notion about it. When it comes down to a test, all good Americans are and should be believers in the American Government.

"Now, the American Government now has the secret of the bomb, has it not?

"Mr. BARNARD. I do not know how secret it is.

"Senator McKELLAR. You do not know how secret it is?

"Mr. BARNARD. No, sir.

"Senator McKELLAR. Do you know anything about the bomb itself? Do you know what it is made from?

"Mr BARNARD. I know all about it.

"Senator McKELLAR. Have you got the formula?

"Mr. BARNARD. No, thank God; I have not.

"Senator McKELLAR. If you knew the formula by which this bomb was made; that is what I asked you.

"Mr. BARNARD. I know how the bomb is made, Senator. I could not describe the quantities, and so forth.

"Senator McKELLAR. You know it took the world a good long while to build this bomb, do you not?

"Mr. BARNARD. I think it was a pretty short time.

"Senator McKELLAR. I want to ask you this: You know from history that men of every age in the last 2,000 years or more have been trying to do what we call split the atom. Do you not know that from history?

"Mr. BARNARD. They had hopes of it.

"Senator McKELLAR. Alexander the Great had Macedonian scientists 2,300 years ago, trying to work out how to split the atom. You know that from history, do you not?

"Mr. BARNARD. Yes, sir.

"Senator McKELLAR. You know that a Latin poet wrote an ode to the atom, do you not?

"Mr. BARNARD. I do not remember that, sir.

"Senator McKELLAR. Well, it is a little too far from your personal memory, but I was speaking about history. I recall having studied in college this particular Latin author, and I remember that particular incident. And every age since that time, scientists have tried to bring that about.

"Now, the United States has accomplished it, and at a very big cost, too. Even those who want to make it appear to be as little as possible, admitted that it took $2,600,000,000, and many people say that it cost the Government five or six billions.

"Now, why, if that secret is still in our hands, as it has been testified before this committee and before the other committee, that that secret is still in the hands of the United States Government, should we give it away?

"Have you got any lack of confidence in your own Government to think that we will make war with the bomb on other people? Why do you want to give it to other nations who had very little to do with discovering that atomic bomb?

"Mr. BARNARD. You are asking me a question, and I am going to answer it, and there will be two or three parts to the answer.

"I want to give it in return for the nearest thing I can get to a guaranty that it will not be used in warfare. That is No. 1.

"2. I want to set up the arrangements, because I do not think it can be kept secret. It is not secret to the United States Government alone. We had three partners in this game, the Canadians and the British being in it with us.

"Professor Chadwick, who met with our committee, was here a great deal of the time. He is one of the leading atomic physicists in the world, and the man who discovered neutrons in 1932.

"It is not a United States secret, and a great deal of misunderstanding comes from assuming that it is.

"In addition to that, there are just too many people in this country who know these secrets, Senator, and there was just too much information gotten out of Canada for me, and I do not want anybody to be misled as to the dangers.

"Senator McKELLAR. Notwithstanding what you have heard about me, I think you will give me credit for not being offensive, and I do not want to be offensive. But how long have you known about this secret that you say is now in the hands of everybody?

"Mr. BARNARD. I did not say it was in the hands of everybody.

"Senator McKELLAR. Well, you said it was well known.

"Mr. BARNARD. I said we had three partners, three governmental partners in this, and a great many scientists have been involved in it.

"Senator McKELLAR. And you say that the people who have the secret now are Great Britain and Canada, as well as the United States?

"Mr. BARNARD. Yes" (pp. 423 to 425).

Mr. Barnard testified a long time and said exceedingly little. It is a matter of great astonishment to me that a man who talks like this is the president of a great institution like the Bell Telephone Co.

13. Rev. Thomas E. O'Connell, past president of the Catholic Committee of the South, also testified (p. 441 and following).

14. Bishop E. H. Hughes, 691 Rollingwood Drive, Chevy Chase, Md.

Bishop Hughes was at one time president of Depauw University, but his presidency terminated 12 years before Lilienthal received his diploma in 1920, but he is still a trustee of the university (p. 516).

He said he had met Lilienthal repeatedly; knew him back in 1928 in Chicago.

15. Charles A. Thomas, vice president in charge of research and development, Monsanto Chemical Co., 1700 Second Street, St. Louis, Mo.

Mr. Thomas had known Mr. Lilienthal since early January a year ago (p. 594).

Mr. Thomas helped prepare the Lilienthal-Acheson report. He thought Mr. Lilienthal "quite a catalyst." He explained that this was getting people to work with each other (p. 594).

He did not give as an illustration Mr. Lilienthal's disagreement with Dr. A. E. Morgan.

He thought the United States was short on uranium and thorium and said: "We get all of Russia's uranium under such a scheme, put in the international authority. In other words, all of the uranium and thorium of the world would be put under this authority, and the first step is that we would have a survey of geologists going into Russia and finding out continuously what their deposits of uranium are" (p. 598).

Mr. Thomas spoke in favor of the proposal to give the secret to other nations, especially Russia. But he knew nothing about Mr. Lilienthal.

16. Barrett C. Shelton, publisher, Decatur Daily News, Decatur, Ala.

Mr. Shelton was very much for Mr. Lilienthal (p. 609).

He knew nothing about when the dams were built, except the first one was built at nearby Muscle Shoals.

17. Mr. Robert Bishop, Guntersville, Ala.

Mr. Bishop said he had had a lot of dealings with the TVA and they had always been fair with him (p. 613).

If his testimony was of any value to anyone, the other side can have it.

He said the TVA was a good thing, and that I agree with, if it were properly run by honest people.

18. Mr. Louis A. Eckl, editor, Florence Times, Florence, Ala.

Mr. Ecky testified for Mr. Lilienthal.

He had seen Mr. Lilienthal occasionally when he came to Florence (p. 619).

19. Mr. H. E. Monroe, president, Chamber of Commerce, Huntsville, Ala., and head of the Business Equipment Co., Huntsville.

He wanted to concur in what the other gentlemen had to say. He had only met Mr.

Lilienthal on several occasions. He had talked with him on several occasions (p. 622).

20. Mr. Thomas McCroskey, Knoxville, Tenn., farmer.

Mr. McCroskey thought Mr. Lilienthal was eminently qualified for the job. He had never been to Mr. Lilienthal's home although he lived quite close to him. He had had business relations with the TVA, of course (p. 623).

WITNESSES THAT DID APPEAR

What is the value of these witnesses?

1. Mr. John M. Hancock's evidence was of no value whatsoever to Mr. Lilienthal.

2. Nor can Mr. Bernard M. Baruch's testimony be considered of any value. He damned Lilienthal with faint praise, and differed with him very much.

3. The next witness, Dr. Conant, president of Harvard University, said if he had a doubt about Lilienthal's loyalty he would not vote for him. Well, there are a thousand doubts about his loyalty shown in this record.

4. I was not present when Dr. Vannevar Bush testified for Mr. Lilienthal and he was the only man who had known him for any length of time. The best that can be said for Dr. Bush is that he is a good "claimer" for anything or anybody in whom he is interested. Primarily he seems to have been testifying for Carroll L. Wilson but he did endorse Mr. Lilienthal. (Record, p. 183.)

5. Mr. Starnes had known Mr. Lilienthal for some time, but Mr. Starnes held hearings only 1 day in Chattanooga and his memory concerning them was very, very bad. Mr. Starnes is a nice man but he seems to be one of the Lilienthal crowd.

6. Dr. Karl Taylor Compton, president of Massachusetts Institute of Technology, came as a witness for Dr. Compton, but he was asked about Mr. Lilienthal and he said that he knew him very slightly back in 1933 and 1934, and his testimony was of no value.

7. Dean Acheson was called to testify to the good character of David S. Marks and not for Lilienthal. He had only known Lilienthal since last March.

8. John Lord O'Brian was not called for Lilienthal but for Marks and he also testified for Wilson.

9. Col. Walker L. Cisler, chief engineer of power plants, Detroit Edison Co., testified for Mr. Marks and not for Lilienthal.

10. Secretary Patterson had known Lilienthal only during the last 5 years and had only known him officially.

11. Dr. John S. Dickey, president of Dartmouth College, testified to the good character of Mr. Marks and Mr. Lilienthal, he said, "And I have just simply shaken hands with Mr. Lilienthal."

12. Chester I. Barnard, president, New Jersey Bell Telephone Co., had known Lilienthal only since last September a year ago, about a year and a half.

13. Rev. Thomas E. O'Connell, past president of the Catholic Committee of the South, an offshoot of the Catholic Church testified but his testimony was of no value.

14. Bishop E. H. Hughes, of Chevy Chase, Md., was at one time president of Depauw University but his presidency terminated 12 years before Lilienthal was there and he knew very little about him.

15. Charles A. Thomas, Research Developer of Monsanto Chemical Co. That company had large business relations with Mr. Lilienthal.

16. Barrett C. Shelton, publisher, Decatur Daily News, Decatur, Ala.: He knew nothing about where the dams were built and his evidence was not of any particular value.

17. The same is true of Mr. Robert Bishop who had had dealings with the TVA and said it had always been fair with him.

18. Mr. Louis A. Eckl, editor of the Florence (Ala.) Times testified that he had seen Mr. Lilienthal occasionally when he came to Florence.

19. Mr. H. E. Monroe, president, Chamber of Commerce, Huntsville, Ala.: He just concurred with what the gentlemen who preceeded him had to say.

20. Mr. Thomas McCroskey put himself down as a farmer from Knoxville, Tenn. Mr. McCroskey had had business relations with Mr. Lilienthal and they were satisfactory.

The character evidence for Lilienthal practically amounted to nothing.

LILIENTHAL FOR LILIENTHAL

The proof in this record shows that since Mr. Lilienthal's graduation from law school that his one purpose in life has been to get the most benefits possible for Mr. Lilienthal. I will take this up under several headings:

1. He went into Mr. Donald Richberg's office in 1923, according to his biography, and immediately took away from Mr. Richberg his great law practice or claims credit for it. Of course, we all know that this statement is wholly incorrect. We know this claim of Mr. Lilienthal's is utterly without foundation. He probably saw Mr. Richberg collect some fees and he might have run an errand or two about it but Mr. Richberg nor any one connected with his firm does not testify, for his own biography states:

"From 1923 to 1926 the young lawyer was associated in the practice of law with Donald R. Richberg of Chicago and he participated in important cases involving the rights of labor."

2. "Practicing law alone after 1926 in his own right he became special counsel for the city of Chicago in the famous telephone rate controversy which ultimately resulted in the United States Supreme Court's ordering a refund of $20,000,000 overcharge to telephone subscribers."

He does not say how much money he got from the city of Chicago as special counsel in this case or what he did or whether he did anything. Lilienthal for Lilienthal!

3. In his laudatory biography he next says:

"From 1926 to 1931 he also edited the Public Utilities and Carriers Service for Chicago's Commerce Clearing House. Most of the customers of his legal service were members of the power trust or their attorneys, and the service gave them up-to-date digests of legislative and court decisions affecting their operations."

This is the celebrated situation that Mrs. Leitzell testified about. Of course, Mr. Lilienthal's date is wrong. Quoting further from his biography:

"Lilienthal's knowledge of the utilities led Governor La Follette to ask him to become a member of the Wisconsin Public Service Commission in 1931 In this capacity Lilienthal reorganized the commission and revised the public-utilities statutes of Wisconsin in such a way that they became the model for half a dozen other States"

What are the facts about these statements in Mr. Lilienthal's record? The facts all came out in the testimony of Mrs. Meads Duncan Leitzell, of Chicago, before the Senate committee on February 19, 1947 (vol. 16, pp. 1398-1409), heretofore discussed.

Mrs. Leitzell was not my witness. She was put on the stand by the committee. I had never heard anything about these facts concerning which she testified. I never saw or heard of her before. I was never more surprised than to hear her story. To my mind her testimony already discussed condemns Lilienthal and shows that he is wholly unfitted to hold any office of public trust, much less this office which may be the greatest office in the world.

LA FOLLETTE'S TELEGRAM

Now, Governor La Follette's telegram, put in the record by Mr. Lilienthal, states that it came to his knowledge that Mr. Lilienthal had canceled his contract and was winding up his business, and a copy of his canceled contract was filed with the State of Wisconsin while Mr. Lilienthal was commissioner but the copy of the contract cannot be found in the State's possession. Governor La Follette said it was locked up in a safe. I suppose the better to keep it secret, but the witness, Mrs. Leitzell, contradicts this. She testified thusly:

"After his appointment to the Wisconsin commission Mr. Lilienthal told me to tell anybody who asked for him that the office was no longer his. I followed the instructions." (Record, p. 590).

In addition to that, Mr. Lilienthtal admits he kept the secret in the publication of his biography in 1944-45 Who's Who when he put this in at that time:

"Contributor to local magazines; editor public utilities and carrier service 1926-1931."

Of course, we all know that Who's Who publishes only the statements of a man as he gives them.

In the next edition of Who's Who, 1946-48, evidently fearing that something might come out about this remarkable double-rating employee for the utilities and against them, he left that statement out, thus verifying what Mrs. Leitzell testified. Lilienthal for Lilienthal. Note well. Note especially well. He not only took other business in violation of the law but he was working for and against the same companies nearly all the time he was utility commissioner of Wisconsin. He got much more from the companies themselves than he did from his office under Governor La Follette. He served two masters and for a long time got by with it.

But Governor La Follette suggests that he gave him permission to violate the law. Well, of course, everybody knows that Governor La Follette had no more right to give a man permission to violate the law than the man himself had to violate it without permission. The truth is, Senators, that this is a transaction that is dishonest, corrupt, and unfits a man who would engage in such a practice for the holding of this or any other office under the Government of the United States. Lilienthal for Lilienthal.

(4) Lilienthal was appointed a member of the Tennessee Valley Authority by President Roosevelt in the Spring of 1933. Dr. A. E. Morgan, whose testimony is undenied, tells of his manipulations down there.

Lilienthal was still working for Lilienthal. He made an agreement with Dr. H. A. Morgan to act with him instead of acting with the Chairman of the Tennessee Valley Authority, Dr. A. E. Morgan, and from 1933 to 1941 he was continuously after Dr. A. E. Morgan. He bootlicked and honeyfugled President Roosevelt until he got the President to believe in him and finally got Dr. A. E. Morgan out and got himself appointed Chairman of the Tennessee Valley Authority. A more contemptible, a more dishonest, or a more corrupt course of conduct can hardly be imagined. Lilienthal for Lilienthal.

5. Dr. A. E. Morgan had planned all the dams or practically all of them. He had a fine engineering force. Lilienthal knew no more about engineering than a cat, but he saw what an opportunity it was for him to get money, and it was not long before he was getting it. He had one of his general counsel who did not know the law to give an opinion that he did not have to pay the receipts of the Tennessee Valley Authority into the Treasury of the United States, but he had a right to withhold them and do with them just as he pleased. Senators, as the older ones of you know, I got every dollar of the money from the Congress to build these twenty-odd dams in Tennessee, Alabama, and Kentucky. I got the dams by the hardest kind of a fight over the wishes of the House of Representatives and by only one majority in the Senate committee. When the appropriation bills came on I got the money, and

it takes money to build dams. When I learned that Mr. Lilienthal declined to pay his receipts into the Treasury of the United States I was never more astounded in my life. I did not believe it was the law then, and I do not believe it is the law now. It was just a dishonest and corrupt way that Lilienthal took and pursued in reference to the moneys coming into the TVA's till. He had flattered President Roosevelt to the extent that President Roosevelt agreed with him, and there I found myself in the attitude of a man who had worked night and day, faithfully and long, ever since I had been in Congress, to get the money to build these dams. I had succeeded. I knew they would be of the greatest value to Tennessee and to the country and would be a source of large income to the Government. When Lilienthal took this position of not paying the receipts into the Treasury I thereupon began to move in every way I could to pass a bill requiring the TVA to pay its receipts into the Treasury of the United States, like all other governmental institutions.

I got the bill passed in the Senate, but the House defeated it, and it did not become the law—and Lilienthal still claims that he is not required by law to pay his receipts into the Treasury of the United States. What his receipts are no Member of Congress knows. No member of the Government knows. I doubt if Mr. Lilienthal himself knows. He spends this money just as he pleases. Lilienthal for Lilienthal.

6. He has repealed the national civil-service law, the national retirement law, the national rivers and harbors and flood-control law, the general accounting and various other laws, and he placed the TVA over all and above all in that territory, and ever since the dams began to bring in income he has used that income as he saw fit. I here quote from what Mr. Lindsay Warren says about it (p. 4, hearings on H. R. 4961, June 18, 1941):

"We say the audit they rely on is merely in addition to the audit under the Budget and Accounting Act. Now, what kind of audit is this, that they say is all we can make and all that they will permit us to make: Well, it is nothing more than what is known as a commercial audit. Under that they can go ahead, if they please, and make every kind of illegal expenditure on the face of the earth, and there is nothing that we can do about it but report it. The horse is then out of the stable."

So that Mr. Lilienthal is the sole beneficiary of the financial value of this property of the United States. He spends it on any vagaries that he wishes. Lilienthal for Lilienthal.

7. A part of these expenditures he uses almost wholly for himself. He says he allots $150,000 to about 15 employees known as his publicity force. This publicity force he uses as he pleases. He gets all the favorable comments in the papers. He publishes what he pleases. He keeps out of the papers what he desires. It is noticeable that the most of the papers are for him. They are for him right or wrong. They do not investigate as to whether his publicity force is telling the truth or not. They go ahead and publish it. There is nothing like having unlimited use of Government money. He has one big $60,000 airplane which he uses as his private plane, as well as numerous other perquisites. He has an income of $35,000,000 a year. Of course, much of this he loses in his various vagaries. The records shows that he does not know whether he is making money or not. The Government has nearly $800,000,000 invested in those dams. No taxes are paid to the Federal Government. He sells fertilizers. He gives away over $2,000,000 a year to certain farmers who have the political ear of Mr. Lilienthal. It is very nice for those farmers to have a gentleman like Mr. Lilienthal so generous with the Government's money, but if benefits go out to the farmers they should go out equally to all. It is an infamous shame that a few selected farmers should get all the benefits of the Government's fertilizers free of charge. It is dishonest; it is unwise, and it is corrupt. That is one of Mr. Lilienthal's ways of handling the income of this great institution as he pleases and not as the Government pleases. Lilienthal for Lilienthal.

8. He says he is not in politics. A greater untruth was never told, probably. It is just as great an untruth as that uttered by him when he said recently that "he had done his damndest" to keep from being appointed to this position. That statement is as false as hades itself.

When his time came up for reappointment 2 or 3 years ago, let's see who got him reappointed: He was appointed with the endorsements of Henry A. Wallace, Sidney Hillman, who was then living, Walter White, and Mrs. Franklin Roosevelt, and perhaps others. I have been told that these same people, with the exception of Mr. Hillman, endorsed him this last time, although he said he had no endorsements at all to President Truman. I might remark here that President Truman never asked either one of the two Tennessee Senators for their endorsements of either Mr. Lilienthal as head of the Atomic Energy Commission or Mr. Clapp as head of the TVA. Our endorsements for residents of our State seem not to have been desired. We knew nothing about it until we saw these appointments in the papers. Lilinethal for Lilienthal.

9. Judging by the past financial transactions of Mr. Lilienthal, what may we expect if he is appointed to this position? His leading principle of Government often quoted is as follows:

"Our Government and every government is and must be a Government of men and not of laws."

In a recent publication in the Progressive Farmer of October 1945, when he was an active candidate for this position using the TVA's $60,000 airplane making speeches all over the country about something he knew nothing in the world about and probably never thought of until Hiroshima, he had much to say about this discovery and the people controlling it. I quote from him—bear this in mind:

"Those who control energy control people." Are we going to put this great discovery and this great power in the hands of a man who believes that "those who control energy control people?" Lilienthal for Lilienthal.

10. Of course, we all know the possibilities of this power to be put in the hands of a man who requires anyone in his way to get out like he did with Phil La Follette; like he did Dr. A. E. Morgan; and like he has but recently done with General Groves. Whoever gets in his way must get out. Lilienthal for Lilienthal.

He can be dishonest, as an individual, if he wants to but he must bear the burdens of being dishonest. He took a chance to attempt to regulate the power companies for the State of Wisconsin and at the same time receive pay from the power companies which it was his sworn duty to regulate. He can take a chance to be dishonest if he wants to. He can take a chance to get rid of anyone who is in his way. Are we going to confirm a man of this kind to this high and important office? It may probably be the greatest office ever created. He violated a law to collect two salaries. He might be dishonest again. Lilienthal for Lilienthal.

11. What are his qualifications? He is not an engineer—never has been one. He never heard of atomic power until the bomb dropped on Hiroshima. He saw that there might be better pickings than there were in the Wisconsin Utilities Commission; better pickings than there were in the utilities companies themselves; better pickings than those he found in the TVA, and he immediately set out to get the new place without regard to his lack of information concerning the new power. The world has been trying to discover this power for more than 2,000 years; and yet in less than 2 years after it was discovered Lilienthal was trying to leave his former favorable financial pickings and go into this new effort to make money. Who knows what he might do? He took the power companies' money and he took Wisconsin money both dishonestly. He served two masters. He took Dr. A. E. Morgan's place dishonestly. He undertook to take General Groves' place without any knowledge of the subject at all. If he did sell out his public duty to the power companies at about $1,100 a month who can say he would not sell out to those interests the various secrets controlling atomic energy? Lilienthal for Lilienthal.

He yielded to the temptation of making money and obtaining greater publicity in Wisconsin. Who can say he will not yield to a greater temptation in the large field?

On pages 3 and 4 of the record Lilienthal testified about his express qualifications but deliberately held back the information from the committee that he had worked for the Commerce Clearing House, his principal source of income. He told of his law practice and association with Donald Richberg and various magazines, but failed to mention his connection with the Commerce Clearing House.

On pages 33 and 34 he testified that he did not believe the military should sit in on meetings of the Commission and did not approve of the Atomic Energy Committee sitting in on the Commission meetings. In other words, he wanted it to be a one-man job, as his previous places had been.

LILIENTHAL'S RECORD IN TVA

On his record in TVA Lilienthal should not be confirmed to membership on the Atomic Energy Commission.

1. There are a number of reasons. The first is that ever since he has been Chairman of the Authority he has violated the laws of the United States (a) in disregarding the general civil-service laws; (b) in disregarding the general retirement laws in dealing with his employees; (c) in disregarding navigation and flood-control laws of the United States; (d) in disregarding the general-accounting laws of the United States and not having his accounts examined. The Congress does not know, the President does not know, and the people of the country do not know whether Mr. Lilienthal has used the enormous receipts from the TVA honestly and wisely or not, because he does not account for them except in such reports as he sees fit to make.

2. We have invested in the TVA about $800,000,000. Although we have a great income from these dams, amply able to pay a reasonable interest on this money, not a cent of it has been paid on this investment.

Further than that, not a cent of taxes is paid to the United States Government. This allows him to sell power to the private power companies and to the big corporations cheaper than they can produce power for themselves; but it does not lessen the price of power to the people. This Body passed a law several years ago requiring him to pay his money into the Treasury of the United States. By lobbying in the House Lilienthal got the measure defeated there. If he has been conducting his business honestly and fairly to the people he would not take these positions. Nobody knows whether he has conducted the TVA honestly or dishonestly. In my judgment, you Senators who vote for this man are going to feel tremendously humiliated whenever the affairs of the TVA under Lilienthal are investigated. We have never had an investigation of them

and as long as he controls them, and he will continue to control them if Clapp is made chairman of the Authority, it will be dishonestly run. No man who honestly handles the money of other people ever objects to being investigated or ever objects to furnishing the proof of the correctness of his books.

Senators, the best part of my legislative life was spent in obtaining these dams. It was through my efforts that every dollar of the money that went into these dams was obtained. But I say to you very solemnly that if I had known that after we had gotten the dams built we were going to turn it over to be used by Lilienthal as his private property, not accounting to the Congress, not accounting to the people for the returns coming from these dams, I say to you I never would have tried in the slightest way to have obtained these dams.

FIVE HUNDRED MILLION DOLLARS

I wonder do you Senators realize what this confirmation of Lilienthal means? Do you realize what it is going to cost the United States to have Lilienthal run this atom bomb operation for awhile until he can give the secret away to other nations? Do you know that Lilienthal has already recommended a $500,000,000 appropriation for the atom bomb this year? Two hundred and fifty millions of dollars cash and two hundred and fifty millions authorization—$500,000,000 in all the first year? What a modest little cost to give away the greatest discovery ever made by man. Five hundred millions for the first year. That is just a half billion, and what is a half billion dollars to the United States? It is such a teeny, weeny bit. And giving it away will make all the nations look to us for more. And what a delightful thing it will be to have other nations look to us for more, and getting more money from us.

Who are the Senators who know what is going to be done with this $500,000,000 thus put in the hands of Lilienthal? You have not been told and probably will not be told; but why need we bother with that when we have Lilienthal who has so recklessly spent the income from the TVA to look after it. If we give them five hundred million the first year, who can say the amount will not be greater the next year?

Suppose it takes Lilienthal 10 years to give it away. That is $5,000,000,000. But what is $5,000,000,000 to this ountry? We only owe about two hundred and sixty billion now, and we probably will not pay over two billion on this debt this year.

COMMUNISM IN GREECE AND TURKEY

The President has sent us a message asking for some $400,000,000 and the use of our Army and Navy and perhaps Air Corps to stop communism in Greece and Turkey. A few hundred millions has also been recommended by former President Hoover for Austria. And we will have to give money to China and probably to Bulgaria, Czechoslovakia, and Yugoslavia, and perhaps even India. Where are we going to stop? Iraq and Iran will no doubt be asking for several hundred millions; Arabia several hundred millions; and Palestine—of course that is a more difficult subject. Great Britain wants to continue to control Palestine and it may cost several hundred millions of dollars, and why should not we spend this money.

GREECE AND TURKEY

But let us confine ourselves for the present to the money required for preventing communism in Greece and Turkey. I am against communism anywhere and at any time, but why should we stop communism in Greece and Turkey and not do anything to stop it in America? We are taking the side of communism when we appoint this communistic commission. Mr. Lilienthal has been in charge of the TVA for some 8 or 10 years and during all that time communism has flourished down there.

He had 20 witnesses, including himself, to testify for him in this hearing. Three of them were well-known Communists—Kenneth Cameron, Jr., former TVA employee, a well-known Communist; John Marshall Frantz, a former TVA employee and a well-known Communist; and Henry C. Hart, a former TVA employee and a well-known Communist. The only testimony that he got from any of the officials or employees of the TVA was from these three well-known Communists. And yet he claims not to be a Communist.

ONLY A START

But the five hundred millions that Lilienthal asked for is only a start. I suppose it is a grave secret as to how he is going to spend it. Already he is going to take over all the private industries down there, according to the telegrams and letters from Mr. W. E. Badgett which were put in the record.

PREPARATION FAR IN ADVANCE

A great Commission with David E. Lilienthal as its Chairman, and asking the first year for only $500,000,000. Why, the idea is unthinkable. Just think of a great man like "Dave," who did not know where his own father and mother were born—just think of a great man like "Dave" not having but $500,000,000 to spend in a whole year. Why, he had thirty-five million at the TVA, and after giving him this high office, just to give him five hundred million a year—it is almost sacreligious to think about.

GEMS (?) FROM LILIENTHAL'S TESTIMONY

"Our Government and every government is and must be a government of men and not of laws." If that is not a definition of communism, then a definition cannot be made.

And again he says:

"Any forms of government, therefore, and any other institutions, which make men means rather than ends in themselves, which exalt the state or any other institutions above the importance of men, which place arbitrary power to this conception; and there I am deeply opposed to them."

1. His attitude toward General Groves

"Senator VANDENBERG. Has your Commission ever consulted with General Groves since the Commission was organized?

"Mr. LILIENTHAL. Yes; that was one of the very first things we did, and all during this period we have had the benefit of a good many consultations with General Groves and some of his associates on a great variety of matters. And Colonel Nichols, his deputy, has been of invaluable service to the Commission, as well.

"Senator VANDENBERG. You did consult with General Groves? Your answer was "Yes"?

"Mr. LILIENTHAL. Yes. On many occasions; yes, sir. And on many subjects.

"Senator KNOWLAND. Was that individually, or did the Commission call General Groves in?

"Mr. LILIENTHAL. It was chiefly between the Commission and General Groves, although I perhaps did see the general at times in addition to that.

"Senator JOHNSON. Was that since December 31 at midnight, or prior to December 31 at midnight?

"Mr. LILIENTHAL. Most of the consultations were prior to that. I am not sure whether there have been consultations with General Groves since the transfer or not.

"Senator JOHNSON. You haven't had any since December 31 at midnight with General Groves, have you?

"Mr. LILIENTHAL. I don't recall that there have been any; I think perhaps not." (Record, p. 11.)

This shows that on December 31 at midnight General Groves was thrown out and Lilienthal took over, and there has been no communication since; and from our experience with this man down in Tennessee, if the Army or the Navy think they are going to have anything to do with Lilienthal's show, they are mistaken, that is all, Secretary Patterson to the contrary notwithstanding.

2. The Military Liaison Committee

"Senator MILLIKIN. Are they in attendance at all sessions of the Commission?

"Mr. LILIENTHAL. No; and we do not contemplate that.

"Senator MILLIKIN. Why not?

"Mr. LILIENTHAL. I think there is a distinction between these two things. One is the responsibility which the Commissioners have, and the other is the responsibility of liaison with the Military Liaison Committee. There will be many joint sessions, and there will be a great deal of interchange of information. But it would be very difficult for the Commission to feel free to discuss many matters except within a Commission meeting.

"Senator MILLIKIN What would be the difficulty of that? I mean, how can the Military Liaison Committee know what is going on, unless they are actively participating in the discussions with the Commission as the Commission does its business?

"Mr. LILIENTHAL. I have difficulty in conceiving of that, Senator. But it would be comparable to the joint committee of the Congress, which has also a continuing responsibility, not simply by which they review matters, but by concurrent consideration of the problems before the Commission. There will be nothing withheld from the Military Liaison Committee.

"Senator MILLIKIN. But you are putting that as a matter within your own judgment and discretion as to what should be put out to the Military Liaison Committee." (Record, p. 13.)

As times goes on, if Lilienthal should be confirmed, everything will be under his direction and control.

Again:

"Senator MILLIKIN. * * * I do not mean that they shall vote, but I mean that they shall be present whenever the Commission is meeting. Are we in agreement or disagreement on that?

"Mr. LILIENTHAL. No; we are in disagreement on that, I am afraid, Senator. I think that would become very unwieldy." (Record, p. 14.)

Of course, the Military Liaison Committee, the Congress, or anyone else will not have anything to do with the matter if it is turned over to Lilienthal.

Later on Lilienthal gave assurances that there would be no trouble on that score, and evidently Senators MILLIKIN and VANDENBERG accepted these assurances from Lilienthal; but it will be found after Lilienthal takes charge that nobody else will have anything to do with it.

3. His selection of the majority of the Board

"Senator MILLIKIN. * * * Did you recommend any of the other members of the Commission?

"Mr. LILIENTHAL. Yes.

"Senator MILLIKIN. Who were they?

"Mr. LILIENTHAL. Well, I am proud to state the facts, but I am not sure of the propriety of doing so.

"Senator MILLIKIN. I do not ask the question in terms of disparagement. I just want the facts.

"Mr. LILIENTHAL. Dr. Bacher and Mr. Waymack." (Record, p. 30.)

He is doing in this just exactly what he did with poor Dr. H. A. Morgan in the TVA. I do not know that he recommended Dr. Morgan but as soon as he got in the Authority he made deals with Dr. H. A. Morgan and from that time on even to the present time Dr. H. A. Morgan is Lilienthal's man and is still known as Lilienthal's man. He votes

whichever way Lilienthal tells him to vote. Of course, he draws his own salary.

Lilienthal had much to say about security. I doubt if he is an expert on security except that there is no question about his being an expert on Lilienthal's security in Government places.

4. Lilienthal a Red in Wisconsin

I here quote the testimony of Judge Asa K. Owen of Price County, Wis., as shown in a letter dated January 27, 1947:

"I hear, over the radio, that you oppose the confirmation of the President's appointment of David Lilienthal to head the Atomic Energy Commission, or whatever it is called. I believe that you are absolutely sound on this. When we had him here in Wisconsin, I, for one, became convinced of his 'red' leanings. I never, never met him, and never had any dealings with him, but so frequently read of his views expressed in the State press, that I was convinced that he was unsound and unsafe. It was a relief to me when he was called to Washington, figuring we were well rid of him in this State and not expecting that he would assume any prominence nationally. I think if you will take the trouble to have your investigators come to Wisconsin and look back through the press, during the years of his State service, you will find plenty." (Record, p. 81.)

I was examining Mr. Lilienthal and he did not repudiate this statement.

He alone recommended Gordon Clapp.

LILIENTHAL'S REAL IDEAS ABOUT GOVERNMENT

Not long after Mr. Lilienthal got to Tennessee as Director in the TVA he began to give his real views about government in a very remarkable way.

He went about securing from the State of Tennessee a certificate of incorporation of the Tennessee Valley Associated Cooperatives, Inc., and here is what he proposed that this corporation should do:

"A. To promote, organize, establish, manage, finance, coordinate, and assist in any way whatsoever in the development of cooperative enterprises in the Tennessee Valley and contiguous areas; to hold and administer funds received from the Federal Emergency Relief Administration and other Government agencies for the cooperative enterprises to be fostered by this corporation; to set up, manage, develop, and finance a chain of cooperative enterprises throughout the above areas through the organization of subsidiary or related corporations whose ultimate members or shareholders will be the individuals engaged in the particular activity, agricultural, manufacturing, marketing, or otherwise, which the particular subsidiary or related corporation will control and operate, and which subsidiary or related corporations will ultimately organize their own central control and form an organization which will take over the assets and liabilities of this corporation; to receive and administer gifts or grants of money or property of any kind whatsoever.

"B. To produce, raise, manufacture, buy, sell, deal in, and to engage in, conduct, and carry on the business of producing, raising, manufacturing, buying, selling, and dealing in farm products, livestock, goods, wares, and merchandise of every class and description necessary or useful for the operations of the corporation.

"C. To lend or advance money to, extend financial assistance to, accept bills of exchange, endorse the notes and guarantee the obligations of, individuals, firms, corporations, and/or others with or without collateral security of any kind whatsoever and to buy, discount, sell, rediscount, and otherwise deal in, notes, warehouse receipts, pledges, bills of lading, freight receipts, open accounts, trust receipts, mortgages, and other similar evidences of debt or to loan money and to take notes, open accounts and other similar evidences of debt as collateral security therefor.

"D. To borrow money, and to make and issue notes, bonds, debentures, obligations, and evidences of indebtedness of all kinds, whether secured by mortgage, pledge, or otherwise, without limit as to amount, and to secure the same by mortgage, pledge, or otherwise; and generally to make and perform agreements and contracts of every kind and description.

"E. To improve, manage, develop, sell, assign, transfer, lease, mortgage, pledge, or otherwise dispose of or turn to account or deal with all or any part of the property of the Corporation and from time to time to vary any investment or employment of capital of the Corporation.

"F. To apply for, obtain, register, purchase, lease, or otherwise to acquire and to hold, own, use, develop, operate, and introduce, and to sell, assign, grant licenses or territorial rights in respect to, or otherwise to turn to account or dispose of, any copyrights, trade-marks, trade names, brands, labels, patent rights, letters patent of the United States or of any other country or government, inventions, improvements, and processes, whether used in connection with or secured under letters patent or otherwise.

"G. To the same extent as natural persons might or could do, to purchase or otherwise acquire, and to hold, own, maintain, work, develop, sell, lease, exchange, hire, convey, mortgage, or otherwise dispose of and deal in lands and leaseholds, and any interest, estate, and rights in real property, and any personal or mixed property, and any franchises, rights, licenses, or privileges necessary, convenient, or appropriate for any of the purposes herein expressed.

"H. To acquire by purchase, subscription, or otherwise, and to hold for investment or otherwise and to use, sell, assign, transfer, mortgage, pledge, or otherwise deal with or dispose of stocks, bonds, or any other obligations or securities of any corporation or corporations; to merge, or consolidate with any corporation in such manner as may be permitted by law; to aid in any manner any corporation whose stocks, bonds, or other obligations are held or in any manner guaranteed by the Corporation or in which the Corporation is in any way interested; and to do any other acts or things for the preservation, protection, improvement, or enhancement of the value of any such stocks, bonds, or other obligations, or to do any acts or things designed for any such purpose; and while owner of any such stocks, bonds, or other obligations to exercise all the rights, powers, and privileges of ownership thereof, and to exercise any and all voting powers thereof; to guarantee the payment of dividends upon any stocks, or the principal or interest or both, of any bonds or other obligations and the performance of any contracts.

"I. To do all and everything necessary, suitable, and proper for the accomplishment of any of the purposes or the attainment of any of the objects or the furtherance of any of the powers herein set forth, either alone or in association with other corporations, firms, or individuals, and to do every other act or acts, thing or things incidental or appurtenant to or growing out of or connected with the aforesaid business or powers or any part or parts thereof, provided the same be not inconsistent with the laws under which the Corporation is organized.

"J. The business or purpose of the corporation is from time to time to do any one or more of the acts and things hereinabove set forth and it shall have power to conduct and carry on its said business, or any part thereof, and to have one or more offices, and to exercise any or all of its corporate powers and rights, in the State of Tennessee, and in the various other States, Territories, colonies, and dependencies of the United States, in the District of Columbia, and in all or any foreign countries.

"K. The enumeration herein of the objects and purposes of this corporation shall be construed as powers as well as objects and purposes and shall not be deemed to exclude by inference any powers, objects, or purposes which this corporation is empowered to exercise, whether expressly by force of the laws of the State of Tennessee now or hereinafter in effect or impliedly by the reasonable construction of said laws.

"4. The maximum number of shares of stock which the corporation is authorized to have outstanding at any time is 100, all of which shall be without nominal or par value.

"This corporation is formed to receive a grant from the Federal Emergency Relief Corporation for use in financing cooperative enterprises in the Tennessee Valley area. The stock of the corporation is to be subscribed for by the incorporators and is to be issued and held in the name of the United States of America. All the rights and privileges of stockholders whatsoever, including voting rights, are to be exercised on behalf of the United States by the directors of the Tennessee Valley Authority, acting severally, or by such person or persons as the said directors of the Tennessee Valley Authority shall appoint as their agent or agents to the same extent as if they were the actual owners thereof. Each director of the Tennessee Valley Authority shall have the proportionate number of votes that the number of directors of the Tennessee Valley Authority bears to the number of shares standing in the name of the United States of America.

"5. The minimum amount of capital with which the corporation will commence business is $1,000.

"6. The name and place of residence of each of the incorporators is as follows: Arthur E. Morgan, Knoxville, Tenn.; Harcourt A. Morgan, Knoxville, Tenn.; David E. Lilienthal, Knoxville, Tenn.

"7. The corporation is to have perpetual existence.

"8. The private property of the stockholders shall not be subject to the payment of corporate debts to any extent whatever.

"9. The following provisions are inserted for the management of the business and the conduct of the affairs of the corporation:

"A. The number of directors of the corporation shall be three and directors need not be stockholders of the corporation. Election of directors need not be by ballot.

"B. The directors shall have the power, without the assent or vote of the stockholders, to make and alter bylaws of the corporation; to fix and vary the amount to be reserved as working capital; to authorize and cause to be executed mortgages and liens upon all the property of the corporation, or any part thereof; to determine the use and disposition of any surplus or net profits over and above the capital stock paid in, and in their discretion the directors may use and apply any such surplus or accumulated profits in purchasing or acquiring the bonds or other obligations or shares of capital stock of the corporation to such extent and in such manner and upon such terms as the directors shall deem expedient; but shares of such capital stock so purchased or acquired may be resold unless such shares shall have been retired for the purpose of decreasing the corporation's capital stock as provided by law.

"C. The directors shall have the power, with the consent in writing of the holders of the voting stock issued and outstanding, or upon the affirmative vote of the holders of the stock issued and outstanding having voting power, to sell, lease, or exchange all of its property and assets, including its good will and its corporate franchises, upon such terms and conditions as the board of directors deem expedient and for the best interests of the corporation.

"D. In addition to the powers and authorities hereinbefore or by statute expressly conferred upon them, the directors are hereby empowered to exercise all such powers and do all such acts and things as may be exercised or done by the corporation; subject, nevertheless, to the provisions of the statutes of Tennessee, of this certificate, and of any bylaws from time to time made by the stockholders; provided, however, that no bylaws so made shall invalidate any prior act of the directors which would have been valid if such bylaw had not been made.

"We, the undersigned, apply to the State of Tennessee, by virtue of the laws of the land, for a charter of incorporation for the purposes declared in the foregoing instrument.

"Witness our hands this the 23d day of January 1934.

"ARTHUR E. MORGAN.
"HARCOURT A. MORGAN.
"DAVID E. LILIENTHAL."

I cannot better close this speech than by referring again to Lilienthal's book, TVA—Democracy on the March. It will be recalled that I asked him if he was a Democrat and he said "No." How in the name of heavens can a man talk about democracy on the march when he is not a Democrat? I want to read first the endorsement by that Republican-born, Democrat-for-office-holding, and communistically inclined distinguished gentleman, former Vice President Henry A. Wallace:

"Of all the books which I have read during the past 12 months, Lilienthal's on the TVA is to me the most exciting. It is exciting because it describes the new democracy in terms as real as a juicy steak. Curiously enough, there is nothing in this book to offend 9 out of 10 businessmen. Lilienthal makes the TVA live as an example of how a Government-inspired project vastly increases the amount of free enterprise and prolongs it far into the future. The TVA not only enlarges the opportunity for free enterprise, but it is a model for decentralization, for true economic democracy, with the people participating in the decisions which affect their daily bread."

Next I want to quote what Charles A. Beard has to say:

"TVA—Democracy on the March is a book of living lines, historical and prophetic, on a great American experiment in the creative use of science and natural resources in the civilization of a vast region, written by David Lilienthal, who, in virtue of his public services in the Tennessee Valley Administration, has won a place for himself among the first citizens of the Republic."

The best thing that can be said for Mr. Beard is that he is a New Deal historian, a follower of former Vice President Wallace—at least he follows him as an endorser on democracy that is not democracy and was not written by a Democrat.

The next endorser is Stewart Chase:

"The book has a long-range importance and will be read by students all over the world for years to come. The TVA is one social invention where we clearly lead the world, and the Russians, the Chinese, Scandinavian, Indians and others are well aware of it. I met some of their representatives in the Valley who are studying the project at first hand. I know that the book will help them as well as ourselves to see the pattern of an exciting new method of public operation."

It is said of Mr. Chase, I do not know him and never read any of his articles, but it is said of him that he is a magazine writer and an uplifter and a "do-gooder" and frequently talks about matters that he does not know too much about. But I must say of Mr. Chase from his certificate that he seems to be more interested in the Russians and Chinese than he is in 100 percent Americanism.

The next endorser of Mr. Lilienthal's celebrated book on democracy when he is not a Democrat is Louis Bromfield. He says:

"This is an exciting book, to cheer any reader discouraged by the portents of the past 25 years. It is the record of a truly great achievement still in the process of healthy development."

Mr. Bromfield, I am told, is a farmer. I imagine he is the kind of a farmer that Mr. Lilienthal is a writer. Farming seems to be a hobby of his like writing a book is a hobby of Lilienthal's.

Lilienthal's next endorser is Floyd W. Reeves, who says:

"This book is a vivid and concrete account of decentralized grass-roots administration of government illustrated by the 10 years' experience of the TVA's many-sided activities and programs. But, unlike anything I have ever read, it is told in a way that should make this otherwise abstract issue understandable to many, many people.

"I know you are deeply interested in the importance of bringing the functions of government close to the people—on the farms, in the small towns, and in the cities. This book tells just how that can be and is being done through the work and democratic methods of the only regional Federal agency in the country. It describes by actual illustrations how the people of the Tennessee Valley have made the job of developing and using their resources—land, forests, minerals, and water—their own job. The story of the Tennessee Valley, as I know it from my own experience and observations, is the only substantial story of real democracy in the administration of a resource development program. Fortunately, it is now going to be told."

My recollection is that he was one of the first and foremost in getting communism started in TVA. He speaks of TVA's many-sided activities. I think its most decided activities under the Lilienthal rule has been the activities of Communism down there.

I got the money from the Congress, as everybody knows, who is informed about it, and it was Dr. A. E. Morgan who built the dams and Lilienthal seems to have looked after what he considered the personal advantages coming to Lilienthal in the matter just as he looked after Lilienthal in the Wisconsin and Illinois double service—when he got some $17,000 plus from the corporations while holding the office of regulating the corporations in Madison.

Next, comes G. Bromley Oxnam, put down here as "Methodist bishop, Boston area," known throughout the country as the "Red Bishop":

"This is more than government for the people; it is government by the people. Faith comes alive in works and a new spirit is born. I can think of no more significant service at this moment to the democratic way of life than to have the clergy and the church members of the Nation read this volume."

Well, of course, with Mr. Wallace recommending him first and Bishop Oxnam recommending him last he is a pretty well recommended Russian enthusiast. If he had not been an enthusiast for the Russian government, whether he belongs to the Communist Party or not, he would not have had the endorsement of the former red Vice President and the present "Red Bishop." I have been advised that the Lilienthals have entertained Bishop Oxnam, the "Red Bishop" at their home in Norris, which the Government pays for incidentally.

Is the American Press Free and Responsible?

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. SABATH. Mr. Speaker, I have from time to time pointed to the dangers to free enterprise arising, not from organized labor, but from organized monopoly—the ever-increasing concentration of economic power in an ever-decreasing number of companies and individuals, through trusts, monopolies, trade agreements, and international cartels.

Naturally, I have not been alone in calling the attention of the Nation to these dangers.

I have here an editorial from the Chicago Times, a fearless and independent newspaper owned and published in Chicago, which I am inserting in the CONGRESSIONAL RECORD, under leave, for the information of the Members and of the country at large. It follows:

I. FREE AND RESPONSIBLE

Three years ago the Luce publications (Time, Life, Fortune) appropriated $200,000, and Encyclopedia Britannica put up $15,000 more, to finance an independent and high-powered investigation into America's information agencies.

By that we mean the press, motion pictures, radio and book and magazine publishers.

The commission created under this grant was headed by Chancellor Robert M. Hutchins of the University of Chicago. Its other members were: Zechariah Chafee, Jr., professor of law, Harvard; John M. Clark, professor of economics, Columbia; John Dickinson, professor of law, Pennsylvania; William E. Hocking, professor of philosophy, emeritus, Harvard; Harold D. Lasswell, professor of law, Yale; Archibald MacLeish, former Assistant Secretary of State; Charles E. Merriam, professor of political science, emeritus, Chicago; Reinhold Niebuhr, professor of ethics and philosophy of religion, Union Theological; Robert Redfield, professor of anthropology, Chicago; Beardsley Ruml, Chairman, Federal Reserve Bank of New York; Arthur M. Schlesinger, professor of history, Harvard; and George N. Shuster, president, Hunter College.

We impose this list of distinguished names upon our readers simply to show the caliber of this body. It was, we might add, completely free from any Luce or Britannica influence. We also invite attention to the fact that with the exception of Beardsley Ruml and Archibald MacLeish, the commission consisted entirely of educators of the top strata.

The investigators found considerable fault with the Nation's disseminators of information. They found rich monopoly in great degree. They found inaccurate and inadequate reporting of the facts. They found distortion and misrepresentation. They found that there is a wide difference between present conditions and those which moved Jefferson so eloquently to plead the cause of a free press.

Their findings are published in a book released last deek by the University of Chicago Press called A Free and Responsible

Press. A reprint of this appears also in the current edition of Fortune magazine.

A good many of the findings of the commission are factual and indisputable. For example:

From 1909 to 1947, the number of daily newspapers in the United States has declined from 2,600 to 1,750.

There are now only 117 cities in the Nation in which there is more than one newspaper. That means that 92 percent of the communities in the country have only one newspaper.

In 1910 there were more than 16,000 weekly newspapers in the Nation. Today there are fewer than 10,000.

Nearly a third of American radio stations are owned or controlled by newspapers. In 100 cities both the single local newspaper and the local radio station are under single ownership.

Nearly all daily newspapers in the Nation obtain their national and international news from one or more of only three press associations—Associated Press, United Press or International News Service.

There are four major radio networks—National, Mutual, Columbia, and American—which provide a majority of our radio information.

There are eight major motion picture companies which almost completely dominate both the production and distribution of Hollywood's products.

This concentration of mass-communication power, the commission points out, is alarming.

A "czar" in any of these fields would possess enormous powers. He might sway the minds of millions of persons.

There is where the "responsible" comes into the title of the report of this commission.

On that we will have more to say in future editorials.

Rent Control

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of April 3, 1947:

CRITERION FOR RENT CONTROL

The necessity for continuing rent control while there is an acute shortage of houses has seemed to us self-evident. Without control extraordinary demand is certain to bring soaring rents and create a desperate situation for families who cannot pay them. High rents, in turn, will bring demands for still higher wages and prices, giving a lusty twirl to an inflationary spiral. We recognize that controls work hardship on some owners. We know that when New York City, for example, puts the major burden of a billion-dollar budget on real estate, that action increases pressure against rent ceilings. Nevertheless, weighing landlords' hardships against the hardships that uncontrolled rent rises will bring to millions, the case for control is clear.

President Truman in a formal message this week recommends a year's extension of present controls as a measure of protection for American families. Congress, meantime, is trying to find a middle road. The Senate Banking Committee would extend control over existing rental housing through next February, put enforcement in the hands of the Housing Expediter and provide for local advisory boards to consider rent adjustments or decontrols on a regional basis. The House Banking Committee, however, on Tuesday gave tentative approval to a 10-percent across-the-board rent rise. The House measure would, like the Senate proposal, lift controls on new housing. It would also remove all priorities on building materials and abolish the office of Housing Expediter, thus wiping out what remains of the veterans' housing program undertaken last year.

This proposal goes too fast and too far. We trust that when the committee returns to the problem after the Easter recess it will consider the more moderate Senate proposal. The flexible machinery that measure provides for adjustments to meet local conditions seems to us preferable to a flat percentage increase. Exempting new housing may be justified as an incentive to construction. What is required of rent-control extension is to prevent multiple hardship and avert an inflationary spiral for however many months may still be required to moderate an extraordinary demand for shelter.

Triple-A Reports

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. TRIMBLE. Mr. Speaker, the various Triple-A organizations in my district are doing a wonderful piece of work. They deserve the gratitude of the American people, and especially of the Congress. I ask unanimous consent to extend my remarks and to include the following reports from my district:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION, FIELD SERVICE BRANCH,
Yellville, Ark., March 25, 1947.

Mr. J. W. TRIMBLE,
House Office Building,
Washington, D. C.

DEAR MR. TRIMBLE: Since we wrote you a few weeks ago in the interest of the soil-conservation program, administered by the Field Service Branch of the PMA, we have learned that a proposal has been made recently by a congressional Committee on Agriculture, to reduce by $100,000,000 the already committed $300,000,000 for soil conservation payments to farmers. As no doubt you know the 1947 commitment has been tentatively approved and the entire 1947 program has been announced. Therefore we again feel that we are speaking for all the farmers of Marion County and the Third Congressional District in soliciting your support in using your influence in opposing this proposed reduction in funds to farmers in 1947.

In our recent letter we called your attention to the President's budget recommendations in which he asked that $100,000,000 be cut from the 1948 appropriations to assist farmers in carrying out needed conservation practices. We are of the opinion that neither the President nor the gentlemen of the congressional committee would have made their respective recommendations had they had all the information on this matter. We are convinced that the President did not have all the facts in the matter when he said that 60 percent of the soil conservation payments went to one-eighth of the Nation's farmers. He probably was not aware of the fact that this small percentage of farmers control more than 60 percent of the Nation's farm land and that the tenants are the chief beneficiaries on these farms. Records show that cotton production for example has been doubled, as a result of the landlord having carried out needed conservation practices. Consequently the tenants and share croppers incomes has been increased accordingly. Farm people are not the only ones who are benefited by our farm program. Increased production benefits all the people from every walk of life both economically and from a health standpoint.

Neither do we agree with those who say that a majority of farmers will carry out soil conservation practices without financial assistance from the Treasury. Now, when farmers are considered prosperous, the great majority of them do not have the necessary funds to buy fertilizer and seed and to hire the equipment needed for constructing stock ponds and terraces, etc. Naturally then we must conclude that conditions will get worse in normal times or in periods of depression. We are of the opinion that if the soil conservation payments were stopped that participation in carrying out conservation practices would drop to approximately 10 percent of what it is now.

Then there is the national problem of flood control about which a majority of all the people are concerned. It is a proven fact that water held on the fields and meadows will be prevented from moving down into the streams and thereby relieve the flood conditions in the rich valley lands to an enormous extent.

We again want to express our appreciation for your past efforts on behalf of the farmers of Marion County and your congressional district and we are convinced that your influence in the future will be directed in the interests of our national farm program.

M. C. CAMPBELL,
W. H. DOSHIER,
GUY MCCRACKEN,
Marion County PMA, Field Service Branch, Conservation Committee.

UNITED STATES DEPARTMENT OF AGRICULTURE, PRODUCTION AND MARKETING ADMINISTRATION, FIELD SERVICE BRANCH,
Clinton, Ark., March 24, 1947.

Hon. J. W. TRIMBLE,
House Office Building,
Washington, D. C.

DEAR SIR: It is inspiring indeed to know that you are using your energy to retain the appropriations for the Production and Marketing Administration program, which we all know is so necessary for the general welfare of our people.

We feel that the Government is only exercising its just duty in paying a part of the cost of maintaining the soil and restoring the necessary elements that make for a healthier people in our Nation. When a farmer pays a part of the cost of the material and furnishes all the labor he is contributing all that he can afford and all that he should contribute to the general welfare.

We are very much disturbed over the President's message, in which he recommended $100,000,000 reduction in the Production and Marketing Administration appropriations. We feel that he has been grossly misinformed. Too, we understand that the Committee on Appropriations has supported the President's recommendation. It is unfortunate that the President and the Committee on Appropriations are so unfamiliar with the good that has been done.

We know that you gentlemen who are working for the program need a lot of information that you can pass on to the other

Congressmen in order to keep the appropriations we now have. Therefore, we are enclosing, herewith, a tabulation of the 1946 practices of Van Buren County as well as a copy of an address by Fred J. Sievers, director of the Massachusetts Experiment Station, Amherst, Mass., to members of the National Agricultural Limestone Association at the annual convention January 15 and 16, 1947, at the Hotel Statler, Washington, D. C. This material will perhaps be of use to you in convincing other Congressmen of the need of the Production and Marketing Administration program.

The county committee has recently compiled some information showing that every dollar spent for conservation practices will give to the county and Nation $7 in value.

We certainly appreciate your efforts thus far and your and your staff's efforts in supplying us with materials. Any other materials that we can make available to you we will be glad to do so.

Yours very truly,

A. B. O'NEAL,
Chairman, Van Buren County PMA.
D. M. BAKER,
Vice Chairman.
RAY RATEN,
Member.

Summary of conservation practice data under the 1946 agricultural conservation program (source 46–SR–54)

County: Van Buren. State: Arkansas

SECTION I

Name of practice (1)	Practice designation (2)	Payment unit (3)	Extent (4)	Number of farms carrying out practice (5)	Estimated acres (6)	Payment rate (7)	Value column (4)×(7) (8)
Application of phosphate, 20 percent	1-a	Pounds	140,400	38		$0.0066	$926.40
Application of phosphate, 20 percent (CMS)	1-a X	do	809,625	267		.0066	5,343.52
Application of phosphate, 19 percent	1-b	do				.0064	
Application of phosphate, 19 percent (CMS)	1-b X	do				.0064	
Application of phosphate, 18 percent	1-c	do	6,000	2		.0062	37.20

[1] Total number constructed.

SECTION II. FARM AND CROPLAND PARTICIPATION

Item	Number of farms	Cropland
	A	B
1. Total	2,077	102,236.4 acres.
2. Participating farms	831	53,292.5 acres.
3. Percent participation, (2)÷(1)	40 percent	52 percent.

SECTION III. LIME AND PHOSPHATE MATERIALS

Estimated percent of the following materials applied under the 1946 program to—

	Pasture	Hay crops	Cultivated crops	Winter legumes
	Percent	*Percent*	*Percent*	*Percent*
(a) Liming materials	75	20	5	
(b) Phosphate materials	60	25		15
(c) Potash				

SECTION IV. SIGNATURES

Approved: HOOD S. LOUGH, *County Administrative Officer.*
Date: March 22, 1947.

Living Costs Continue To Skyrocket—Price of Bread Will Rise to 15 Cents

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. PRICE of Illinois. Mr. Speaker, when and where will it end?

Warnings went unheeded in the heat of the drive to abolish price controls—and the Nation's wage earners are now paying the excessive bill.

The following article from the Granite City (Ill.) Press-Record tells of the increase in the cost of bread:

PRICE OF BREAD TO BE INCREASED FROM 12 TO 15 CENTS IN THIS AREA

General increases in the price of bread are expected to occur within the next few days and of the two local bakeries which bake bread, one boosted the price from 12 cents to 15 cents today. The other is waiting for the St. Louis bakers to raise prices.

Bread prices in this area are the lowest in the United States at present, one of the bakers said, and 15-cent loaves are now being sold in most of the remaining sections of the country.

Reason for the price increase is due to the boost in the wholesale prices of shortening, flour, and other ingredients. Prices of other bakery goods will also be increased, the bakers said.

For the past few days bakers in the St. Louis area have been discussing whether to increase the price on the present loaf by 3 cents or reduce its size and increase the price 1 cent. Whatever the outcome of the discussion, the price of bread will be increased.

Retirement Benefits for FBI Personnel

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 24), 1947

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "In the National Interest," published in the Fall River Herald News, of Fall River, Mass., in the issue of March 27, 1947. The editorial strongly endorses the bill introduced by the Senator from North Dakota [Mr. LANGER] and myself, providing retirement benefits for the personnel of the FBI.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN THE NATIONAL INTEREST

The great Federal Bureau of Investigation, during the tenure of J. Edgar Hoover as Director, has risen to a high place in the esteem of the American people. This admiration has been earned by unusual and constant devotion of skill and courage to the protection of every man, woman, and child from outrage by kidnapers, vicious criminals, and enemy saboteurs.

Mere chance has not contributed to the remarkable record of achievement that has elevated the FBI to eminence as the outstanding protective organization of the world of all time. Only the utilization of the highest degree of intelligence and the exercise of extraordinary valor by an expertly trained personnel have produced such success.

To begin with, the Bureau accepts as candidates for appointment as agents only those with special talents. Then they are subjected to rigorous mental and physical tests and training. To win membership they indeed have to exhibit great worth. When they are enrolled in the service, they constantly must conform to a high standard of conduct and must persevere in the assignments entrusted to them to maintain their standing and to advance.

It is to be expected that men who are so well developed in loyal and skilled service will draw the attention of business and industry. Many of them are offered attractive positions with no hazards and much greater

financial return. Many agents have resigned to accept places of responsibility that command salaries from 5 to 10 times those of the most experienced FBI agents. This presents a problem to the Bureau, for it desires to retain in the service of the people those who have become so valuable. In the absence of higher salaries, some other form of security may lead many of them to refuse glittering offers.

Senator STYLES BRIDGES, of New Hampshire, and Senator WILLIAM LANGER, of North Dakota, have made a proposal that has substantial merit and would serve the best interests of the Federal Bureau of Investigation and of the country. The Senators suggest, through a bill they have filed in the Senate, that pensions shall become available to FBI agents when they shall have reached the age of 50, if they shall have served at least 20 years in the Bureau. It is a good suggestion. If it is adopted, FBI men will be less tempted to end their public careers and to seek more remunerative occupations elsewhere. They will feel that in giving their best years to an intensive effort to protect all Americans they also will be building some security for themselves and for their families.

The cost of such an arrangement would be inconsequential in comparison with the public good that would result. The expense of searching for capable recruits and of training them would be reduced because there would be fewer vacancies. Since the average age of FBI agents is 32, there could be no rush of applications for retirement. Thus, at little cost, the personnel of the investigating staff would become more stabilized and there could result an easier maintenance of the wonderful efficiency of the Bureau. Surely, the bill of Senators BRIDGES and LANGER will meet with enthusiastic approval in both branches of our National Legislature.

Comparative Industrial Military Potential of Different Countries

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 31 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Comparative Industrial Military Potential of Different Countries," prepared by Mr. Leifur Magnusson, assistant director of the Department of Research, Industrial College of the Armed Forces. Because of the general interest in the article and because of its timeliness, I make this request.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPARATIVE INDUSTRIAL MILITARY POTENTIAL OF DIFFERENT COUNTRIES [1]

(By Leifur Magnusson, Assistant Director, Department of Research, Industrial College of the Armed Forces)

INTRODUCTION

The economic potential of a country is determined by its natural resources, industrial facilities (capital equipment) and the health, skill and living standards of its inhabitants. A country greatly endowed in these respects can rapidly convert peacetime production into wartime production when an emergency arises. (This statement is made without consideration, but not without fear, of the atomic bomb.) Capital equipment and industrial workers are deployed from the civilian economy to the munitions factories and the military front. Young persons, over-age persons, and women—the unpaid workers of peacetime—take over the production lines while the males of military age, as well as women, it turns out, man the fighting lines. The state of the arts or technological development of the time, the structure of the economy, its management and organization, all combine to determine the efficiency with which these factors of strength are exploited.

It follows that, in order to measure the relative economic (war economic) position of countries, their relative strength in natural resources, productive capacity, and various human elements must be ascertained. The problem is one in the measurement of economic magnitudes, not of abstract elements of time and political conditions. The purpose of this paper, individually and in no way officially, is to make such a comparison of economic strength of the powers as they stood at the beginning of the Second World War. No acccunt has been taken of actual military strength as shown by sizes of the military establishments of the countries, their armies, navies and air forces, or their general expenditures for these services.

It may be noted in passing that in 1922 the International Labor Office called attention to the possibility of constructing an index similar in some respects to the one presented below. Inasmuch as the constitution of the ILO requires that the countries of chief industrial importance "shall have permanent representation on the governing body of the ILO," the statisticians of that organization worked on a device of this general nature.

FACTORS OF ECONOMIC POTENTIAL

The nine factors used in the construction of the series of index numbers here presented for different countries to determine their economic potential comprise (1) population, (2) the number of wage earners and employees in mining and industry, (3) the output of work (horsepower-hours), (4) food production in terms of calories, (5) gross weight of merchant tonnage, (6) length of railway mileage, (7) the value of industrial production, (8) the value of international trade, and (9) the national income. The figures are for prewar years of maximum attainment on the assumption that any height formerly reached can again be achieved.

The population year chosen was 1940, and earlier or later censuses, in a few instances, were adjusted to that year by use of the indicated ratio of growth shown for previous censuses of the country.

The number of wage earners and salaried employees in mining and industry was taken as one indication of the industrialization of the countries. The year 1940 was selected as the base. It would have been desirable to include employees in other branches of activity, had it not been for the fact that the comparability of the data became more questionable for the other economic classifications.

Another factor, the value of industrial production as a whole, however, gives a more inclusive statement of the industrialization of the countries and therefore supplements, if it does not supplant, the figure for number of employees. The data regarding industrial production are provided by the reports of the economic statisticians of the League of Nations Secretariat. The production of 24 countries, constituting in 1925 to 1929 90 percent of the world's industrial output, is given. The remaining 10 percent can then easily be distributed among the remaining countries. Statistics collected by the International Institute of Agriculture supply the necessary information on which to make value estimates of foodstuffs produced. The value of minerals was calculated from the quantities and international prices reported by the League economists. It is obvious that a great many averages and assumptions have been resorted to in arriving at such a general statement of the value of the productive output of the countries. But since the same assumptions are applied to all the data, the errors tend to counterbalance one another. Moreover, in the final outcome, the differences between the countries are generally so wide that errors in the basic data will not materially alter the final rank of the countries.

The volume of work output (horsepower-hours) is also an indication of industrialization of a country. This figure gives the horsepower equivalent of the four recognized sources of work or energy—coal, crude oil, water power and human labor. The inclusion of human labor gives undue weight to the countries of large population and minimizes the development of mechanical power in a country. In the final index, therefore, only the energy equivalents of coal, petroleum and water have been converted and utilized. The estimates are based on the consumption, and not the production of the materials involved. The use of the consumption figure as the basis of military potential tends to minimize the strength of great coal and petroleum exporting countries. Except in the case of Canada, no great amount of water-power energy is exported. On the other hand, to ascribe to the great petroleum exporters, Venezuela, Iran and Iraq, a military strength proportionate to such exporting capacity is to be quite unrealistic, since those countries have no facilities to turn that power into industrial strength for the support of military efforts. The actual consumption power of the different countries, therefore, measures their true capacity of utilization or ability to turn their power energy into either industrial or military channels.

Food production is expressed in caloric values of the volume of food produced annually. There are other important nutritional values, but the calorie is the only common denominator. Production, rather than consumption, has been chosen since it is the measure of the self-sufficiency of a country, an important element in military strength. When an emergency arises, the excess of labor in agriculture can readily be turned into industrial production.

The statistics of merchant tonnage and railway mileage, next to population, are the most accurate, as well as most familiar, for purposes of international comparison. Ton-mile capacity might indeed be a better yardstick than mileage, but the figures for such carrying capacity are not so generally given as for length of miles. Here the weakness of the index lies in the lack of data as respects other means of transportation.

National income is the most valuable and authoritative indication of the relative economic strength of the powers. The data are available, however, for only a few countries. Income statistics are recent additions to knowledge and not yet highly refined or perfected. The values here used are in American dollars.

USE OF INDEX NUMBERS

The method of comparison rests on the use of index numbers. The population of the countries, for example, is compared. If 100 is given to the country with the largest population, other countries are ranked in order below it. If China with 400,000,000 or more inhabitants is represented by 100, Canada with 10,000,000 is 2.5 percent thereof, which is the same as saying it has an index of 2.5. If Great Britain had 20,000,000 gross tons of shipping before the war at the height

[1] Partial reprint from Social Science (Menasha, Wis.), October 1946.

of its shipping preeminence and America had 17,000,000, they stand to each other in the relation of 100 to 85. If America had 237,000 miles of railways at its service and Norway 2,370, the countries are in a ratio of 100 to 1 with respect to railway-mileage potential.

It is necessary to use index numbers since population, production, railway, mileage, and income are unlike magnitudes and cannot be combined. They must be reduced to abstract numbers that can be added arithmetically. The reduction of the absolute magnitudes of population, income, etc., to index numbers also has the advantage of showing more clearly the range of differences between the countries as respects each characteristic of economic potential. The final step in the process is the addition of the various indexes and the arrangement of the countries in the order of size of the indexes. The population index is basic. Addition of the other measures, that is, relative numbers of industrial strength, is a kind of weighting of the population index or relative.

The indexes are based upon the actual magnitudes of economic potential. No attempt has been made to indicate the relative efficiency of the countries in the application of their available potential. Per capita or other ratios of comparison have not been taken into account in ranking the countries as respects their possible military strength. The indexes of relative efficiency, expressed in per capita or other rate, would be highly important in the determination of the level of welfare in different countries.

* * * * *

IMPORTANCE OF THE FACTORS OF ECONOMIC POTENTIAL

* * * * *

The question of weighting the factors included in these indexes requires an observation. In a certain sense, adding the indexes of specific power output, value of industrial production, transportation facilities, and others to that of population is a real weighting of the population strength of a country. In other words, it is assumed that the number and quality of population is equally important for all countries and counts for as much in one country as another. Capacity to do work is a universally valuable component of war potential. National income and value of industrial production are similarly useful symbols of economic importance for every country. Only one of the nine factors presents a possible question of relative importance as an element in war potential. The volume of international trade may conceivably represent actual economic weakness since it points to a certain lack of that self-sufficiency which is the basis of the military economy. In the case of Russia, essentially landlocked and without a fleet, a large dependence on imports would mean weakness. For Great Britain, with the largest merchant tonnage and a fleet second only to that of America, it spells strength. In quite another way, also, the international trade factor emphasizes the real political character of the war potential.

"Weighted" relative prewar military industrial power of 25 specified countries

Country	Population		Population "weighted" by—													
			Industrial strength		Transportation facilities		International trade		National income		All factors		All factors except national income			
													Amount		Relative

The question of military strength ultimately finds its answer in the alliances made and preserved among the countries. Any measurement of economic war potential, as here attempted, is bound to be subject to extraneous and shifting political forces. The measurement of the economic potential of the separate countries, however, has a value in showing what combinations of political power might eventuate in a world of dynamic change.

RESULTS OF THE TABULATIONS

The preeminent position of America is the outstanding result shown by the various indexes of economic potential. In five out of nine factors used in the compilation of the final indexes America is first. Only as respects population, food production—which is a function of population—shipping tonnage, and value of international trade was America excelled by any country. The consequence is that in combining the separate indexes into a general index, or any combination of indexes, America leads all the rest.

British potential was a little over one-half that of the United States, Germany's less than one-half, and Russia's less than two-fifths.

It need scarcely be added that the present indexes can only confirm what is probably common knowledge. All they purport to do is to give a concrete statistical answer to the question as to what was the relative standing of the powers of the world as respects their economic war potential at the beginning of the conflict.

TABLE I.—*Prewar position of countries named with respect to designated factors of military industrial power*

Country	Population (thousands)	Number of wage earners and employees (thousands)	Energy from coal, petroleum, water in horsepower hours daily (millions)	Value of industrial production (millions)	Gross merchant tonnage (millions)	Railway mileage (actual)	Food production in calories (billions)	Value of international trade (millions)	National income (millions)

Some of the Iron in That Curtain Is Stamped "Made in America"

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. ELLIS. Mr. Speaker, the following editorial from the Parkersburg (W. Va.) News directs attention to an article by Mr. Leland Stowe in the Liberty magazine. The statement is an interesting comment on communism and its operation in eastern Europe. The editorial follows:

ANTI-RED REVOLT?

"The Soviet Union is not nearly strong enough to choose isolation and try to go alone behind her iron curtain," writes Leland Stowe in the current issue of Liberty magazine, out tomorrow.

Just back from a 5-month tour of central and eastern Europe, Mr. Stowe declares in his Liberty article entitled "What Iron, Whose Curtain?" that much of the iron curtain is fabricated with cotton and gauze and that some of the iron in that curtain is stamped "made in America."

Mr. Stowe observes that the two main Russian programs in Hungary and Rumania are working against each other to the disadvantage of the Reds. Their economic program to drain as much national wealth out of the occupied zones as quickly as possible has thwarted their political program of furthering Marxism.

"The majority of Hungarians and Rumanians remain strongly opposed, predominantly aloof or hostile toward the Soviet system * * * because they feel for the most part that Soviet actions are radically reducing their country's wealth and diminishing its chances of recovery."

Correspondent Stowe predicts that since Communist prestige has suffered a terrible blow during this winter internal political pressures will increase, and there will be dramatic and violent developments. The Soviets must soon withdraw their occupation forces, leaving a weakened minority group of local Reds in doubtful control of the governments.

Free Enterprise

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of April 3, 1947:

NETS OF 2,900 FIRMS UP 28 PERCENT DURING YEAR

The National City Bank of New York reported yesterday in its April letter that 2,900 leading corporations showed combined net income after taxes in 1946 of $6,700,000,000, compared with $5,200,000,000 in 1945, a 28 percent increase.

The corporations had a combined capital and surplus of $70,800,000,000, making the average return 9.5 percent, compared with a net worth of $68,000,000,000 and a return of 7.7 percent in 1945, the bank noted.

"The year will go down in the records as one of the best from the standpoint of earnings of a majority of American companies," the bank reported.

Pronounced gains over 1945 were found by the bank in "most of the manufacturing industries" and "especially in wholesaling and retailing and the service industries," including amusements, hotels, and restaurants, which "benefited generously from the high national income and liberal spending."

Sales of 1,155 manufacturing companies showed gross income of $53,400,000,000 with net income of $3,200,000,000, an average net margin of 6 cents per dollar of sales, compared with 3.9 cents in 1945.

Sales of 145 retail and wholesale companies totaled $12,400,000,000, an increase of 31 percent over 1945 and an all-time high. The average margin was 4.5 cents per dollar of sales, against 2.7 cents in 1945.

Worried Wool Men

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 24), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Wall Street Journal, printed under date of April 3, entitled "Worried Wool Men."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORRIED WOOL MEN—BOSTON FLEECE DEALERS TREMBLE ON UNITED STATES THREAT TO CONTINUE MONOPOLY—SAY GOVERNMENT SUPPORT OF 1946 "SUPER PRICE" WOULD PUT THEM OUT OF BUSINESS—FLOOD OF IMPORTS DWINDLING

(By John O'Riley)

BOSTON.—The specter of Government wool monopoly is sending shudders up and down Summer Street.

The Bostonians, who censure more books and eat more fish cakes for breakfast than any other people in America, also handle more wool. And their Summer Street is to fleece what Wall Street is to money and San Antonio to hot tamales.

Summer Streeters are a venerable lot. And they do a big job. It's getting wool from the back of sheep to the Nation's seventh largest industry—woolen textile manufacturing. Buying wool from ranchers, they clean it, sort it, and distribute it to mills. They've done the job for over a century. Now they fear they may be headed straight for the ranks of the unemployed.

Their displacer: The United States Government.

EAGLE ON THE ROOST

Four years ago the Government, in the heat of war, started buying the total domestic production of wool. It's bought it all ever since. Private merchants, thus crowded out, haven't yet felt the shock too much. They've earned their "board and keep" by handling the huge imports of foreign wool pouring into the country since 1940.

The wool-consumption boom, however, has passed its peak. The import flood dwindles. The private merchants wing homeward to their normal roost of domestic wool merchandising. But the roost is occupied. The United States eagle is still there. He acts as if he may stay.

Evidence of his intent: The Senate Agriculture Committee this week approved a bill to require the Agriculture Department to support the price of wool paid producers during 1947 and 1948 at no lower than the Government support level of 1946. And that support level was about 42 cents a pound.

"FOR US: LIQUIDATION"

Government support of wool at the 1946 superprice of 42 cents, declare the wool merchants, will simply mean Government taking over the entire United States production—as in the past 4 years. With woolen textiles already at the saturation point and mills sharply cutting production, the merchants emphasize that they can't possibly buy wool at 42 cents and sell it to cloth makers without drowning themselves in red ink.

"For us," says a typical Summer Streeter, "the 42-cent support plan just about means liquidation."

Summer Streeters sympathize with western sheep ranchers who want protection from cheap foreign wool. Some of them, as buyers, spend so much of their lives in the West that they call you "podner" and wear Texas-brimmed hats even in Boston. They think wool could be supported at 90 percent of parity (prices giving growers 1909–14 buying power). But they gag at the 2-year 42-cent guarantee.

PROSPERITY BY DICTATE

And the price history of wool bears them out. In prewar 1939 the average price paid growers for wool was just over 22 cents per pound. During the intervening years between the two World Wars the yearly average price was 26 cents.

"For the Government to say," reflects one old-time wool dealer, "that the price of wool, come hell or high water, has got to stay at nearly double the normal peacetime level for the next 2 years is sort of like saying we are going to have perpetual prosperity by legislative dictate. You might call it sort of taking the 'aw of supply and demand by the horns."

And, the wool merchants emphasize, setting a support price at a fixed level (1946 level) is quite a different thing from tying it to parity. Parity prices change from month to month; they fall when prices of manufactured products fall.

GOLD-PLATED PRICE GUARANTY

The present parity price for wool is 41.9 cents a pound. Thus the Government support price of about 42 cents is about 100 percent of parity. But a year ago the parity price was 32.9 cents. Should the prices of manufactured products drop to last year's level, 42-cent wool would be 127 percent of parity.

Summer Street's question: Why should wool be singled out for such a gold-plated price guarantee when Congress has promised to support other basic farm commodities at only 90 percent of parity?

In the face of a prospective indefinite perpetuation of the Government wool monopoly, private wool merchants can cite eloquent figures in support of their claim that the sheep ranchers got fair prices for their product when it was bought and distributed to the textile industry by private business.

THE RECORD IS GOOD

During the two between-wars decades from 1921 to 1940, prices paid to wool producers averaged more than 96 percent of parity. In seven of these years the price was above 115 percent of parity. But prices paid for six basic farm commodities—cotton, corn, wheat, tobacco, rice, and peanuts—averaged only 77 percent of parity in the 1921–40 period.

Labeling Government buying and distribution of wool "a merchandising plan that doesn't merchandise," wool merchants call attention to the great mountain of wool which the Agriculture Department has bought and piled away unsold during the Nation's greatest wool-consuming spree on record. This wool mountain at the start of this year totaled 480 million pounds—nearly a full year's needs at the prewar consumption rate.

While the Government held onto its fleece, textile mills gobbled up well over 3 pounds of foreign wool for every pound of the home-grown product last year. In prewar years, 3 of every 4 pounds of wool consumed by United States mills came from American sheep.

The argument of sheep-State Senators that sheep ranchers can't operate profitably without the aid of such a Government buying program brings a wry smile to the face of the Summer Streeter. And he admits that however the ranchers might do "without it," some of them have certainly done all right "with it."

One Bostonian who spends most of his time in the West puts it this way:

"The biggest sheep town in the country is San Angelo, Tex. The four banks there had $12,000,000 deposits at the end of 1940. And at the end of 1946 they had $43,000,000. I reckon they didn't make that selling hay, podner."

Housing Legislation

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 24), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Philip Murray, president of the CIO, and R. J. Thomas, chairman of the CIO housing committee, addressed to the Senator from New Hampshire [Mr. TOBEY], dealing with the housing problem.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Senator CHARLES W. TOBEY,
Chairman, Senate Committee on Banking and Currency,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TOBEY: It is a matter of sincere regret that we are unable personally to give you the views of the Congress of Industrial Organizations on housing legislation. Word of the hearings reached us too recently to enable us to attend your hearings. We are writing to assure you that our organization is deeply concerned with the extreme gravity of the housing situation and to urge speedy enactment of comprehensive housing legislation.

The housing shortage today is a national disaster. Crowding and doubling up have grown worse during the past year. The worst sufferers are those who have had to seek new dwellings, notably war workers and veterans. Their plight is even more desperate than a year ago and the strongest measures are needed to cope with the situation.

The CIO pledges its support to the National Housing Commission Act, which is similar in most respects to the bill that passed the Senate by an overwhelming vote last year. The CIO urges your committee, however, to add the following necessary provisions in order to reflect the increased need and soaring prices: (1) to include the

Douglas-Taylor bill as an amendment to S. 866 in order to fill part of the gap which high construction costs have created between public housing and private housing; (2) to provide 100 percent insurance of loans for private rental projects and mutual or cooperative projects, at interest of 3 percent, and advance loans of 1 percent to assist cooperative groups to get started; (3) to invest the Administrator of housing activities with directive powers, on the ground that a strong, central agency will act economically and effectively; (4) to establish a technical director for housing with authority to use funds, previously appropriated for housing, to finance the pioneer developmental and experimental work on factory-built housing in order to reduce costs; and (5) to provide that development funds and 100 percent loans be available to new producers of factory-built housing in order to speed up the modernization of the building industry.

These improvements in S. 866, we are confident, will contribute decisively to reducing housing costs and will hasten the fulfillment of the national goal of a decent home for every family in a suitable environment.

We again urge prompt and courageous action to solve the Nation's foremost social and economic problem.

Sincerely yours,

PHILIP MURRAY,
President, CIO.
R. J. THOMAS,
Chairman, CIO Housing Committee.

The Greatest Robbery in the World

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am pleased to quote the following article, printed in the Palm Beach Times on Thursday, March 27, 1947, written by Mr. E. F. Hutton, of Westbury, Long Island, N. Y.:

I OFFER THE "GREATEST ROBBERY IN THE WORLD"

Joseph Pulitzer stated: "Our Republic and its press will rise or fall together."

The press is the guardian of free speech and liberty.

You of the press of the United States of America should review your purpose and your reason for existence. You are, "we, the people" in action every day. It is your task to protect by every means the Constitution and the Bill of Rights of this country—by pitiless publicity—by logic.

We, the people, pay out our pennies, nickels, dimes, quarters, and 50-cent pieces for daily papers and weekly magazines.

You are patronized every day by the commercial, industrial, and service institutions of America. We, the people, pay you to carry messages for us.

We, the people, and our business system—those who advertise—keep you going and pay your bills.

Yes—"The Republic and its press will rise or fall together." Without advertisers, you, the press, must be subsidized. Only Government can subsidize you. That means that we, the people, are subsidized too. There would remain only Government. Who wants that?

Communists can make news. Of course, you should print that news. But rapists, thieves, and murderers also make news. The maker of the news is just as important as the news.

When Joe Doaks states that our Constitution is a dud, the reader merely laughs. But if Joe Doaks is a leader of a group, the reader does not laugh. He reads and wonders. I agree that the statement of Joe Doaks as a group leader is news, but I insist that the identity of Joe Doaks, his associations, and his purposes are equally news. Print the whole story. Do not leave half impressions. That is your sacred duty.

Someone has said, "There are three sides to every story: your side, my side, and the truth." When individuals or groups assault our system it should follow that our system has given to our people more of life's good things than is enjoyed by people of any other Nation on earth.

Keep your eyes on the state of our money. Get down to cases as to why our money is worth less than it used to be. Explain money. Explain how the Government has cut itself in as a partner of every working man and woman of the United States of America—and a partner in every free and private enterprise—which means legalized stealing from those who work and sweat and try to save something for their old age. Tell the people how by thrift and savings they have become the owners of the free enterprise system in this country. Tell them we all have a stake in the business that is the United States of America. Tell them why we have so few idle people here—because we have fewer idle dollars. Hold up to scrutiny the ideologists who want to change this system of ours in order to grab it and own it—and the people.

You, the press of America, are as important as our Congress because you form public opinion—and one's judgment is no better than his information.

Tell them that no real American has been opposed to the rights of man, the rights of minorities, the rights of those who save their money and place it in the business enterprise of our country or the rights of labor. These rights are clearly stated under the Constitution and its amendments. You, the press, should use those rights in exposing those who would change them into special privileges under the guise of doing good for the majority. The press of our country should have once or twice a week a well written editorial—a down to earth statement on the front page of the paper in defense of liberty as you are the enlightened trustees and guardians of the rights of mankind. Progress is a change of attitude. Bring well stated editorials to your front pages and write them so that the people can understand.

Expose the totalitarians—collectivists—those who always exercise the Bill of Rights because under it they have free speech to discredit the American system. They want those rights vested in them to take over. Do you imagine they would ever give them back?

You should be telling us that business doesn't grab a dollar for itself everytime it pays out a dollar in wages. You should be telling us that business distributes seven to eight dollars in wages for every dollar it pays to those whose money is in the business. You are experts in publicity. You can reduce the facts to the least denominator and state them clearly, quickly, and effectively. Keep us informed as to not just what the law gives, but also that which the law takes away from us. You are the trustees of liberty.

This, actually, is your big job today.

The press can save America. "Our Republic and its press will rise or fall together." You don't run a single comic strip, no matter how wild and fantastic it is, that is as wild and fantastic as the plans and the dreams of the plotters who want to take this country over. There is nothing comic about the way they are planning it. There is nothing comic in it for you or for us. If they accomplish their purposes you will not be a newspaper. One hundred and forty millions of people will then be in a closed shop—a Government closed shop. Then you and we, the people, will be but slaves.

Start selling your own, and our, country to us, the people, and make it worth 100 cents on the dollar. Citizenship in the United States of America is the most envied privilege in the world today. Tell us it is because we, the United States of America, have been the most successful in developing popular government, common wealth, and real freedom and liberty. Tell this kind of news to us, the people, who are, with our pennies, nickels, and dimes, supporting the press. Tell it to the advertisers and encourage them to speak of the romance of American business. Americans want to hear it. Dig for the facts. Expose useless spending. Expose the real meaning of Government ownership. Expose the whittling away of our charter of liberty. Expose monopolistic despotism, whether in Government, business, or labor. Expose representative government when it fails to uphold, defend, and protect constitutional liberties.

We, the people, with our pennies, nickels, and dimes, who help support the press, want you to encourage the enterprise system, which built this country from 13 weak Colonies into the No. 1 world power.

If robberies are sensational news, if murder is the meat of newsprint, what could be more worthy of publicity than exposing the looting of liberty and the murder of freedom? I offer the theft of freedom as "The greatest robbery in the world." You should help prevent it.

Your success in this effort will justify the faith of our founding fathers. Your failure may mark the collapse of the last citadel of a free people anywhere on this globe.

E. F. HUTTON.
WESTBURY, LONG ISLAND.

Bring "Mac" Back

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. VAN ZANDT. Mr. Speaker, on March 25 I introduced House Concurrent Resolution No. 38 requesting the President in the name of the American people to invite General of the Army Douglas A. MacArthur, United States Commander in Chief, Far East, to return to the United States for a period of at least 30 days. It is desired that during General MacArthur's visit home he may have the opportunity to address a joint meeting of the Senate and House of Representatives to give his views on matters affecting the security of the United States.

It is hoped that favorable consideration will be given my proposal, since it is apparent from the approval of the idea in many newspaper editorials that General MacArthur's return will be welcomed by an overwhelming majority of the American people.

The following editorial in the April 1 issue of the Washington Times-Herald is

evidence of the sentiment in the hearts of the American people regarding General MacArthur's stature as a military genius and a great American.

The editorial is as follows:

BRING "MAC" BACK

Representative JAMES E. VAN ZANDT, Republican, of Pennsylvania, has offered a resolution that both House and Senate join in asking President Truman to bring Gen. Douglas MacArthur home for at least 30 days to address Congress on national security from here on.

We heartily agree with all that and hope the proposition is carried through right away.

MacArthur is one of the proven great men of our time. Not only has he proved his brains and wisdom but he has also had the most unusual and valuable range of experience of any American public figure.

Just consider briefly his record of recent years. In 1935 he retired from the United States Army after a brilliant career climaxed as chief of staff. He then went to the Philippines to help the islanders prepare for their independence, then scheduled for 1946.

The Filipinos had never had an army nor anything that could be called a national system of government or policy. MacArthur began to build for them from the ground up.

He had barely reached the halfway stage when the Japs struck. The story from there on is so well known we won't even outline it. The big fact is that MacArthur went on from war to another tremendous assignment of organization and redirecting of a whole people—this time the Japanese.

His success is a miracle of our chaotic and disorganized times.

A word from MacArthur to America right now could be a tonic beyond all others. Not to mention the fact that we'd all like to look at a real, sure-enough hero again and pay him the tribute he deserves while he's around to enjoy it.

Statement of Pressed Metal Institute

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a letter from Mr. S. Morrison, executive vice president of the Morrison Steel Products, Inc., of Buffalo, N. Y., together with a statement from the Pressed Metal Institute, of Cleveland, Ohio. This bottleneck in the scrap-steel industry, like in many other industries, can be straightened out if it is recognized and some action taken to alleviate the condition, and thus release the material for the small industries. In my opinion the statement of the Pressed Metal Institute contains a great deal of merit, and in the belief that this might be of interest to others, I am glad to have an opportunity to include it in the RECORD. The letter and statement are as follows:

MORRISON STEEL PRODUCTS, INC.,
Buffalo, N. Y., March 27, 1947.

The Honorable JOHN C. BUTLER,
House Office Building,
Washington, D. C.

DEAR SIR: You will undoubtedly be interested in an analysis of the information contained in the attached copy of Bulletin No. 793, issued by the Pressed Metal Institute.

To an economy-minded Congress, it appears very clear that there is an extremely large potential to be gained from an active follow-up of the plan suggested therein. Assuming that 10,000,000 tons of scrap steel are available (every indication points to the fact that this figure is readily available) and assuming further that the $10 per ton figure is equitable, it may be readily computed that a gross income of $100,000,000 is available to be applied against the needed expenditures currently being considered for foreign application.

A review of the domestic scrap situation shows that the established price of $19 per gross ton which was obtained during the war years, has now doubled on current quotations. This situation is extremely unhealthy for the entire economy and will undoubtedly have a serious effect on the possibilities of reducing the present high level of steel prices. It would appear that an adaptation of the plan would therefore have manifold benefits and should be activated. Your interest in furthering that purpose will undoubtedly carry the full support of the American people.

Yours very truly,

S. MORRISON,
Executive Vice President.

LET US GET SOMETHING TANGIBLE IN EXCHANGE FOR OUR EXPANDING LARGESS

To the Pressed Metal Industry:

President Truman appeared before a joint meeting of both Houses of Congress seeking $400,000,000 to underwrite some incomplete commitments of the sagging British Government in Greece and Turkey.

The fact that Henry Agard Wallace is opposed to Mr. Truman's position should be significant.

It is to be doubted if anyone in the administrative branch of the Government, and few in Congress, actually know in detail how extensive are our shipments of fuel, food, and other materials on the cuff to both our impoverished allies and our beaten foes around the world, but it is tremendous, and is engaging huge fleets of ships.

As a stamping manufacturer you are concerned about our dwindling scrap stock pile, why, if we are to continue bolstering up a decadent monarchy in Greece and a questionable republic in Turkey in addition to the other commitments around the world, don't we get something tangible in return for this ever-widening largess of ours aside from the hypocritical thanks of the recipients?

Suggest to your representatives in Congress, the majority of whom are now leaning on those Bender brooms in dazed immobility, that the mighty fleet of ships now carrying huge quantities of things we could well use here to every quarter of the globe, that these bottoms bring back something more essential than Scotch whisky from England, Irish whisky from Ireland, champagne from France.

It is no secret to you that the scrap market here is urgently in need of replenishment. Now, in the days when Mr. Roosevelt was President and Mr. Cordell Hull was Secretary of State, we generously shipped scrap to Japan practically up to Pearl Harbor, December 7, 1941. Some of that scrap should come back to us from Japan. There should be, in Europe, great accumulations of metal scrap and the needy in these areas could be successfully put to work accumulating scrap and thus, in part, earning the donations we so generously provide.

Our occupational forces around the world might very profitably enlarge their far from onerous occupational activities by supervising the collection of, and even transporting, the scrap to appropriate dockage where the incoming bottoms might pick it up for a return trip.

Certainly with our present huge bureaucracy and the armed forces combined there is ample manpower to get this alien scrap rolling. Ten million tons of scrap would depreciate the stocks of our gallant allies of but a small portion of the existing scrap metal abroad. If this metal could be brought to America, sold by the Government at $10 a ton to those mills who had agreed to provide long terms and secondly to reduce their prices, it would not take more than a few token shipments of such alien scrap to break the present indefensible scrap market.

You remember that in the Grant administration President Grant had the fortitude to sell Treasury gold and break the gold combine. Some such action is indicated in the steel industry

Henry Ford, Jr., has already met the situation by reducing his prices, Fowler McCormick, chairman of the board of International Harvester Co., has also cut the prices of tractors, trucks and farm machinery with the explanation that he had decided to give the benefit of high earnings to customers rather than stockholders or employees because the time is here to recognize customers as an integral part of business. He said, "Our present wage-price-profit mechanism is out of date. All industry finds itself in the same situation. We have done something for our stockholders—we have done plenty for our employees. Now we must try to be equitable in our treatment of the third group—our customers."

Write your views on the subject to your representative in both Houses of Congress and encourage them to do something constructive promptly.

Faithfully yours,

PRESSED METAL INSTITUTE,
TOM J. SMITH, Jr.,
Executive Vice President.

Mr. Vandenberg's Proposal

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of April 1, 1947:

MR. VANDENBERG'S PROPOSAL

Up to now, on all issues of consequence, the overwhelming majority of the Security Council and the General Assembly has seen eye to eye with the United States. There is every reason to assume, moreover, that this majority favors our projected aid to Greece and Turkey. Given a United Nations vote on the subject at this time, the result would be almost certain. The sole dissenters would be a relatively tiny minority made up of Russia, Poland, and one or two other Soviet satellites.

Accordingly, if adopted, Senator VANDENBERG's proposal to subject our Greco-Turkish program to a majority veto of the United Nations would involve virtually no present risk of our being voted down. At first glance, therefore, the proposal may seem to be little more than an empty gesture. But actually, in its implications, it is far more than that. It represents a concrete move by the chairman of our Senate Foreign Relations Committee to make clear that the United States

LAW LIBRARY
FEDERAL WORKS AGENCY

is prepared—in both principle and practice—to be governed in this matter by the overriding sentiment of the world. In effect, what Mr. VANDENBERG suggests would commit us in advance to yield to any future decision the UN may make regarding our aid to Greece and Turkey.

There may be some question about whether Mr. VANDENBERG's proposal could be reconciled with the terms of the UN Charter. On its face, however, with technicalities to one side, it seems to be designed mainly to emphasize to the world that the United States attachés the greatest importance to the ultimate authority of the United Nations—so much so, in fact, that we stand ready to surrender the veto power we could conceivably use in some future dispute over our role in Greece and Turkey. That role, under the suggested amendment, would be subject to the majority will of either the Security Council or the General Assembly—an arrangement that would shatter loose charges accusing us of unwarranted unilateral action and imperialism.

In principle and aim at least, Mr. VANDENBERG's idea thus appears sound and pertinent enough to be embodied in the proposed Greco-Turkish legislation, which the President had hoped would be enacted by now. The legislation is urgently needed. Also needed is a clear understanding everywhere that it is not meant to undermine the United Nations but to meet an emergency beyond the UN's present capabilities. The amendment offered by Senator VANDENBERG, who is, incidentally, a firm supporter of the President's program, seems admirably suited to that end.

Armenia and the Turkish Loan

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. GEARHART. Mr. Speaker, as we proceed to the consideration of the proposal of the President of the United States of an American Turkish loan, I offer for inclusion in the CONGRESSIONAL RECORD the text of a letter which was recently dispatched to the President of the United States by the Armenian National Council of America, a letter in which the consummation of the loan is vigorously protested. The communication is well worthy of the careful and painstaking consideration of the membership of the Congress and the people of the country.

Mr. Speaker, the communication to which I have referred is the following:

President HARRY S. TRUMAN,
The White House,
Washington, D. C.:

In the name of the millions of our Armenian brethren who were massacred by the Turks, in the name of justice, and in the interests of world peace, the Armenian National Council of America protests the proposed loan to Turkey.

Turkish rule is neither democratic nor representative. Turkey practices a domestic policy of decimation and deportation of the national minorities within its borders.

Underwriting the Turkish Government, therefore, would imply American endorsement of tyranny and despotism, contrary to our American traditions and would tend to lower our prestige in the eyes of humanity.

Any support of Turkey, whether military or financial or moral; any alliance with Turkey, whatever its guise or form, might serve to give the world a push down the road to World War III.

In World War I, Turkey was on the side of Germany. In World War II, Turkey pursued a policy of crafty neutrality, by means of which she battened on the allies and Germany, in turn, by offering her services and goods to the highest bidder.

The Armenian people, on the other hand, served the allies unselfishly, devotedly, and to the utmost of their capacities. Almost 2,000,000 Armenians sacrificed their lives in defense of the Allied cause in both World Wars.

In recognition of the Armenian contribution towards an Allied victory in World War I, the Allies promised to restore the Armenian homeland.

This promise was solemnized by the Treaty of Sevres in 1920, which Turkey signed, and, in accordance with treaty terms, President Wilson was designated to define the boundaries of the new nation.

President Wilson's arbitral award was made public in December of 1920 but it was never honored. The Treaty of Sevres was torn up by the Turks, as being a worthless scrap of paper.

Today, 27 years after the sacred promise of the Treaty of Sevres, the major portions of the Armenian homeland are under the iron boot of Turkey, and the Armenian is still a homeless wanderer over the earth.

Therefore, to the end that justice, so long delayed, be done to the Armenian people; to the end that American traditions of justice and freedom for all be maintained; to the end that the world be freed from the fear of another war; the Armenian National Council of America urges the complete rejection of the proposed loan to Turkey.

Respectfully,
ARMENIAN NATIONAL COUNCIL OF AMERICA,
MARK J. SHAHINIAN, *Chairman,*
MARTIC T. MARTENTZ, *Vice Chairman,*
SETH SHAHEN, *Secretary,*
MESROB BAJAKIAN, *Treasurer.*

Labor Conditions in Argentina

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. O'KONSKI. Mr. Speaker, a few days ago an American delegation of workers returned from Argentina. These delegates made a study of labor conditions in Argentina. Their report to the press of America was not a favorable one.

It is curious to compare the report of this labor delegation to the press of the United States with the report made by the president of the delegation, Arnold Zander, to the Argentinian Government. I wish to place in the RECORD at this time a photostat copy of a statement signed by Arnold Zander on February 7, 1947, just before the delegation left Argentina. Here is the signed statement by the president of the delegation:

Please tell President Peron that the North American Workers Delegation deeply appreciates the opportunity he afforded us to come to Argentina to meet this great people. It is an unusual idea to which President Peron gave expression when he thought of inviting representatives of the organized workers of America to visit the workers of Argentina. Such unusual and constructive ideas should be commended by everyone and we feel that because of the opportunity afforded us lasting contacts have been developed which will improve the understanding and friendship between the people of our two countries. Another exceptional device which we have been told will be employed is the assignment of labor attachés to the Argentine embassies in the various countries of the world and we look forward to receiving and collaborating with those who are coming to the United States.

We have been given every opportunity to see Argentina and to visit with the workers as well as with the syndicates and public officials. Our contacts have been constructive. We have learned a great deal and hope that we have been able to contribute at least a little to the understanding of Argentinians, of their problems and our mutual aspirations. We believe firmly in the need for solidarity of working people everywhere and it is inconceivable that a proper program of collaboration of the working people of the Western Hemisphere could be put in motion without including both the working people of the United States and Argentina.

We are satisfied that our visit here will have lasting benefits. It is for this reason we send to President Peron our thanks. We also express our gratitude to those with whom we have worked and assisted us and made our visit as constructive and enjoyable as it has been.

We were privileged to see the mountains and lakes, the Pampas and some of the villages of Argentina. We are impressed by the grandeur of the country and of the tremendous opportunities that are in Argentina for developing full and free living. We are sure the aspirations of the people of Argentina are like our own and we look forward to cooperating with the people of your country in realizing our mutual aspirations.

On leaving Argentina our hearts go out to our new friends and to all of the people of this great land with whom we now feel acquainted.

It would be impossible for me to enumerate fully or to mention by name all those who have been specially kind, cooperative, and helpful during our visit. On the other hand I would like President Peron to know that we have been well provided for and expertly conducted. To begin with our trip to Argentina was most pleasant and special commendation should be given to the crew of our plane and to those who made all the arrangements along the way. I must mention my experience in riding to and from Mar del Plata with members of the Argentine Delegation who contributed greatly to my understanding of Argentina and the labor situation. Our visit to the Labor Court was constructive and helpful. We learned a great deal about procedures employed there and we were able to compare them with our own.

Every member of our delegation has expressed the hope that he may return to Argentina to enjoy the beauties of the country and to become better acquainted with those we have been privileged to meet and with many others from whom we know we could get more of the spirit of the country. We want to develop the closest possible friendship with Argentina and are happy to have heard the same wish expressed by many of your people.

In conclusion I might refer to the remarks about Argentina recently made by Mr. Felix Knight in the sense that the people of Argentina are pushing forward toward a fuller life. Those with whom we have met and worked are aiding them in this endeavor. We extend every good wish to the officers and agents of the government who are giving support and aid toward this end.

ARNOLD S. ZANDER.

FEBRUARY 8, 1947.

Mr. Speaker, this report to the Argentine Government does not square with the report given to the press of America. It is easy to see the hand of that muddling jughead, Spruille Braden, in the report given the press of America. As long as Spruille Braden has anything to say, nothing good will ever be said about Argentina in America.

Members of Congress should read the statement given in Argentina and signed by the President of the delegation. Then compare this statement with the report given by this same group to the press of the United States.

It is easy to reach a conclusion. The report in Argentina was an honest report. The report in the United States was doctored up to fit in with Spruille Braden's smear Argentina policy. It is time this Congress took a hand and forced the dismissal of the muddling jughead who has set Latin-American relations back 50 years.

Statement of Fact Refuted

EXTENSION OF REMARKS
OF
HON. FRANK A. MATHEWS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. MATHEWS. Mr. Speaker, the American Legion, through the director of its national legislative committee, has refuted a statement in the CONGRESSIONAL RECORD, which said that "all outstanding religious and veterans' organizations have recommended favorable action" on the proposal of President Truman in his message of January 6, 1947, for legislation regarding displaced persons in Europe, by means of a letter under date of April 2 from Col. John Thomas Taylor, the director, to Hon. ADOLPH J. SABATH, who made the statement.

I do not think anyone can dispute the fact that the American Legion is an outstanding veterans' organization.

The text of Colonel Taylor's letter is as follows:

APRIL 2, 1947.

Hon. ADOLPH J. SABATH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SABATH: In an extension of your remarks on displaced persons in Europe, appearing on page A1407 of the Appendix of the CONGRESSIONAL RECORD for April 1, 1947, the following statement appears:

"President Truman, in his message of January 6, 1947, urged legislation to relieve the unfortunate suffering of these people, but, so far, no action has been taken, notwithstanding that all outstanding religious and veterans' organizations have recommended favorable action. Besides these organizations, many outstanding gentlemen who have studied the existing conditions in the displaced-persons camps all strongly urge and recommend that we permit a fair share of these unfortunate people, as provided in my bill (H. R. 464), be admitted."

The American Legion, a veterans' organization of more than 3,600,000 members and an Auxiliary of nearly 1,000,000 members, has never urged favorable action on any proposed legislation to relax immigration quotas or to assign any unused quotas for the use of displaced persons or anyone else. On the contrary, the American Legion, by mandates adopted by our national conventions, is not only unalterably opposed to liberalizing immigration quotas but advocates further restrictions, including the barring of all immigration into the United States until such time as (1) unemployment shall be less than 1,000,000; (2) all veterans shall have been afforded the opportunity of gainful employment; and (3) all members of imported foreign-labor battalions, refugees, war prisoners, and those who have been given temporary sanctuary shall have been returned to the lands of their origin, which should be accomplished without delay.

In view of the foregoing, your statement as to veterans' organizations could not possibly apply to the American Legion.

Sincerely yours,

JOHN THOMAS TAYLOR,
Director, National Legislative Committee.

Reply to Mr. Forrestal

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. POULSON. Mr. Speaker, yesterday there was inserted in the RECORD a letter addressed to the gentleman from California, the Honorable RICHARD J. WELCH, in which the Honorable James Forrestal, Secretary of the Navy, took occasion to deny personal responsibility for the failure of certain petitions from Guam and Samoa to reach the Congress of the United States. I am hereby introducing a copy of that letter into the RECORD for reference at this time. As may be noted, Mr. Forrestal states that a petition for citizenship and an organic act contained in Joint Resolution 1 of the Eighth Guam Congress, dated January 4, 1947, is in the possession of his naval subordinates and gives assurances that it will now reach the Congress. He also acknowledges the adoption by the General Fono of American Samoa in November of 1946 of a resolution requesting American citizenship and an organic act and gives assurances that that resolution will also reach the Congress.

The Secretary of the Navy is an honorable gentleman, and I hereby publicly absolve him of personal knowledge of the existence of the petitions to which I referred and I withdraw my statement that he deliberately withheld them from the Congress. Since Mr. Forrestal now has knowledge of the existence of the petitions to which I referred and since has made public his assurance that the petitions will come to the Congress, I am completely satisfied in that respect. Mr. Forrestal is an honorable man and I am sure he will keep his word. Gentlemen, I accept his word.

In thus retracting my charge that Mr. Forrestal has deliberately withheld these petitions from Congress, I want to make it plain, however, that I am not withdrawing from the position I have taken in calling for an end to naval autocracy in Guam and American Samoa. I stand fully and publicly committed to the proposition that there must be civil governments for civil populations under the American flag in time of peace. To that end I call upon Mr. Forrestal—and I call on the head of the administration which he represents—to put an end to the undemocratic and un-American forms of government which exist in Guam and American Samoa by executive fiat.

I feel somewhat like the little boy who surprised himself by actually hitting his teacher with the pea he had aimed in her direction—"Goodness, that was such a little pea. Why did she jump so high?" What is it that has aroused the gold braid department of our Government and has prompted the Secretary of the Navy to have this letter placed in the RECORD of the Congress? What is it that has brought out the Navy lobby and has aroused the wrath of the administration? Was it my statement that Mr. Forrestal has withheld a petition from the Congress of the United States? Gentlemen, I do not think so. The thing that brought out the hatchetmen is the Poulson bill, H. R. 2753. Gentlemen, that bill, which is in reality nothing more than a proposed organic act for Guam proposes a complete reformation of the naval government of Guam which has existed for almost 50 years under the jurisdiction and control of various Secretaries of the Navy. The rub is, that by providing for a new form of government my bill in reality points out the evils of the existing form of government in Guam. That is the real reason why a Secretary of the Navy finds it necessary to reply to me and enter into controversy with me—a lowly little Republican Congressman from California.

The Poulson bill, H. R. 2753, is designed to give the people of Guam many basic liberties and rights which they have never enjoyed under the United States naval government of Guam. My organic act for Guam extends to the people of Guam by act of Congress the following rights and basic liberties:

Representation in the United States Congress—section 13.

A civilian governor appointed by the President of the United States with the advice and consent of the United States Senate—section 14.

Participation by the people of Guam in the choice of local government officials who perform the functions of local government and judges of their local courts—section 17.

Universal suffrage with voting qualifications as prescribed by the Guam Congress—section 10.

A share in the Federal grants of funds for vocational education—section 26a; soil conservation—section 26b; school lunches—section 4.

Extension to Guam of the facilities of the United States Public Health Service with respect to hospital construction—section 26c—and the programs of the Federal Security Agency, the United States Office of Education, the United States Civil Service Commission, and so forth.

Lawmaking on local affairs by the Guam Congress—sections 6 through 9.

Pay for members of the Guam Congress—section 7c.

Elimination of the Governor's power of absolute veto—section 9a.

Establishment of the jurisdiction of the Federal courts over cases arising in Guam with the right of appeal through the Federal courts to the Supreme Court of the United States—section 21.

Extension of all of the civil liberty guarantees of the Constitution—section 4.

Political equality for the people of Guam under the American system.

The end of discriminatory labor laws and regulations—section 4

Freedom from naval control over local affairs not directly concerned with island and national defense—sections 31 and 32.

Removal of the requirement that Guamanians have the permission of the United States Navy before they can leave or return to the island of Guam.

American citizenship for the people of Guam—section 3.

Social equality and the end of segregation and discrimination—section 4.

A free economy in which the people of Guam will have control over the issuance of business licenses and permits and the issuance of price and trade regulations—section 6.

The establishment of private commercial banking facilities in lieu of the United States naval owned and operated Bank of Guam—section 5a.

Elimination of the Governor's power to prescribe local customs duties and the integration of Guam into the United States customs and tariff system—sections 28 and 29.

The end of taxation without representation through the extension of the power of local taxation to the people of Guam through the Guam Congress—section 28b.

Extension to the Guam Congress of the power to create and establish local courts to replace those now existing by order of the naval governor—section 19.

Extension of the right of trial by jury—section 21c.

There it is. There are just 23 of the liberties and rights which the people of Guam should have but which on the whole they do not have under naval government. One might almost say, gentlemen, that those 23 points amount to 23 counts in an indictment.

THE SECRETARY OF THE NAVY,
Washington, April 1, 1947.

Hon. RICHARD J. WELCH,
Chairman, Committee on Public Lands, House of Representatives.

MY DEAR MR. CHAIRMAN: Yesterday Congressman NORRIS POULSON, of California, charged that I had deliberately withheld from the Congress knowledge of a petition addressed to the Congress of the United States by the Eighth Guam Congress, requesting full citizenship and the enactment of an organic act for the government of the island.

I understand that such a petition was adopted by the Guam Congress on January 4, 1947, but the Guam Congress took no further action to implement this resolution nor did it forward any copies thereof to the Governor of Guam or to me. Late in February, the Governor of Guam directed the Attorney General to request action on the part of the Guam Congress in order that the resolutions might be forwarded. Copies of the resolution were prepared by the Attorney General and, at his request, signed by the presiding officers of the Congress. I understand that they were not delivered to the Governor of Guam for forwarding until March 15. They have not yet reached this department and I do not have, and never have had this petition.

Congressman POULSON also referred to an enactment of the 1945 General Fono of all the leading chiefs of American Samoa, petitioning the Congress of the United States for an organic act for government of American Samoa. It is inferred that I likewise withheld this from the Congress. In April of 1945, an assembly of Samoans adopted a resolution requesting citizenship, and transmitted it to the Governor of American Samoa, who forwarded the papers to Washington. These resolutions were submitted to the Fono of Samoa at its annual meeting in November of 1945, but no action on an organic act was taken by the Fono because the members themselves were not prepared to submit a proposed act.

In November of 1946 the matter was again introduced in the Fono and a resolution adopted requesting citizenship and an organic act. The records of the proceedings of the Fono were transmitted to the Hopkins committee, which had been appointed by me to study and make recommendations concerning the governments of Guam and American Samoa. This Hopkins committee returned to Washington from its visits to Guam and American Samoa on Friday, March 28. The resolution of the Samoan Fono, I understand, is embodied in the report of the Hopkins committee which has not yet been submitted to me but which should reach my desk sometime this week.

Be assured that I have not deliberately withheld either of these matters from the Congress of the United States and that immediately upon their receipt I shall transmit them expeditiously.

Sincerely yours,

JAMES FORRESTAL.

Housing and Rent Control

EXTENSION OF REMARKS
OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. CARROLL. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a statement by Chat Patterson, national legislative representative of the American Veterans' Committee.

This statement sets forth the testimony of Mr. Patterson had he been given the opportunity to appear before the House Banking and Currency Committee. It is a well-considered statement and should command the respect and attention of every Member who is seriously concerned with the problems of the veteran.

The statement follows:

Mr. Chairman and members of the committee. I appreciate the opportunity to appear before this committee to present the views of the American Veterans Committee (AVC) on H. R. 2549. The AVC as a World War II veterans' organization with members in almost 1,000 chapters from coast to coast is deeply interested in the retention of present rent and housing controls because we believe any curtailment in these controls would drastically affect all veterans and their families as well as the majority of citizens in obtaining or retaining adequate housing.

Veterans, as well as others, have been hard hit by the inflation in the cost of such basic items as food and clothing. We believe that the present high cost of living indicates that controls over such basic items were taken off too soon. But the feeling has been that the removal of controls would stimulate the placing of supplies of food and clothing on the market. Buyers, it has been argued, would have some margin of protection in refusing to buy when prices went too high. This can work to a limited extent since consumers can delay purchases of clothing and can eliminate luxury items from their food purchases. But we insist that a similar philosophy cannot justify the removal of rent controls. You can't produce in a matter of months the millions of homes and rental units which are urgently needed. The housing shortage can only be regarded as an acute situation which will remain of emergency proportions for at least another year.

There has been recently a wave of astounding statements to the effect that there really is no housing shortage. To the person who is satisfactorily housed this may be encouraging news. But it is difficult to persuade the person who has spent the last 6 months vainly seeking a place to live that this assertion is anything more than brazen propaganda.

The Bureau of the Census announced on March 18, 1947, the results of a veterans' housing survey which it made between July 1946 and September 1946. The surveys were made in 70 selected cities and reveal some of the facts about the veteran's housing desires and his income which must be taken into account in considering any housing legislation. I sincerely hope that every member of this committee will have occasion to study this survey as it pertains to his own particular area.

The survey concretely presents the housing problem when it shows that from 30 to 40 percent of married veterans are living in rented rooms or doubled up with in-laws. In Los Angeles County, Calif., for example, fully 50 percent of the married veterans in that area are without desirable living quarters. In the New York City area some 44 percent of the married veterans fall into this category. For the New Orleans area in Louisiana, the Detroit area in Michigan, and the Philadelphia area of Pennsylvania the figures are respectively 32, 51, and 43 percent.

The survey also vividly demonstrates that veterans cannot afford either the rental or purchase cost of new housing. The median weekly income of veterans is shown to be between $40 and $50. In the majority of cases they cannot afford to pay more than $40 a month rent, and they cannot afford housing costing over $6,000.

These figures present in the cold language of statistics the crushing problem which is facing the veteran. Even under the Wyatt program new housing often costs $80 a month in rentals and $10,000 in purchase price. These figures, as we now know, are rapidly becoming minimums. The Wall Street Journal reported in a survey printed February 17, 1947, that over-all building costs are up 86 percent over 1939 and have reached an all-time peak. Builders are curtailing their program up to 90 to 95 percent because of the current record high costs, according to the same source.

I am sure there is not a member of this committee who does not want to alleviate the desperate and critical situation described above. I am also certain that you gentlemen want to do everything in your power to hold down the present soaring costs. Do you not agree that the first consideration in discussing current housing legislation should be: "Will this legislation create more housing units at a lower price?"

The first and most obvious way of avoiding an immediate crisis in the field of rental housing is to continue present rent controls without change. We know that a marked majority of the American people feel that rent controls should be retained. The National Opinion Research Center in a poll made last spring reported that 85 percent of the people thought it would be necessary to continue rent controls during the next year. Fifty-two percent of this group wanted rent control continued beyond June, 1947.

Even more significant is the poll released in December, 1946, by Dr. George Gallup which reported that 64 percent of United States voters thought their present rents were about right. Only 11 percent said their rents were too low and 24 percent felt that the rents were too high.

The chairman of this committee has issued several encouraging statements indicating the necessity for continuing rent controls. If such a necessity exists then why not pass a simple bill extending the existing rent provisions of the Emergency Price Control Act? H. R. 2549, as it pertains to rent controls is confusing and may well prove unworkable and ineffective.

The bill makes no provision for enforcement of rent control other than court action. And if the average veteran can't even pay the present rent costs then how can he afford court action? Also with the present scarcity of average rental units it is unlikely that a tenant will haul his landlord into court.

It is my understanding that for the past 5 years the Government's rent-control laws have provided a means for questioning the validity of certain maximum rents. If we want to continue effective rent control then let's use the machinery and methods which have controlled rents so far. This is no time to change horses in the middle of the swelling stream of inflation. Rent controls also should be continued as is for at least another year—until June 1948.

It is necessary to emphasize that during the present housing crisis no accommodations which are currently being used as rental units should be exempted from rent controls. We all know that transient hotels and motor courts are at present serving as permanent accommodations for tremendous numbers of homeless veterans and other citizens. These accommodations should be kept under rent control during the present emergency and not exempted as is provided in section 202 (c) (1).

In regard to title I of H. R. 2549, AVC believes that in the face of the continuing housing emergency all controls which aid in the construction of housing at minimum price levels must be retained. We feel that the following controls fall into this category:

1. The construction order limiting nonessential construction: It is generally well known that there just are not enough building materials to go around. Until there are, it makes sense to most veterans that homes of the kind they can afford should not be sacrificed for night clubs or a smaller number of luxury type dwellings. It is for this reason that we believe it is essential to continue the order which limits nonessential construction. Without that order, all sorts of unnecessary construction would spring up which would drain building materials away from new homes for veterans. This is especially true since persons engaging in commercial and luxury types of construction are generally in a better position to pay higher prices for building materials than veterans and other people constructing homes for veterans. Until there is a better supply of building materials there must be a limitation on nonessential construction.

2. Allocation of a few basic raw materials: For similar reasons, the allocation of a few basic raw materials to producers of critical building products must be continued. Allocation of this type appears to have been an important reason for the increases in the production of these building products during the past year. Of course, it is very important that this increased production be maintained.

3. Special assistance to building materials producers in securing bottleneck equipment and machinery: Continuation of the authority to render spot assistance to building material producers in securing bottleneck equipment and machinery should also continue. We understand that this has permitted production to continue in many cases where it otherwise would have been stopped or curtailed because of break-downs or shortages.

4. One thousand five hundred square foot limitation, one completed bathroom limitation, and year-round occupancy limitation: Of special importance to veterans is the requirement that houses must have a floor area of not more than 1,500 square feet and use no more bathroom fixtures than are necessary for one bathroom. This means that scarce materials will be available for more houses, and that more of the houses built will be the kind veterans can afford. The requirement that houses be built for year-round occupancy means that veterans houses will be built in place of beach houses and the like.

5. Rent ceilings on new construction: I cannot overemphasize the importance of continuing rent ceilings on new houses. While the present $80 average rental ceiling is within the reach of some veterans, it is unfortunately beyond the means of many others. The removal of these ceilings would result in exorbitant rents and therefore far less rental housing which veterans can afford. This would be disastrous at this time when it is so hard for veterans to find homes.

We do not believe that removal of rent control would result in any substantial number of existing houses being brought on the market for veterans. We believe stories to this effect are mostly propaganda for removal of rent control.

We feel that the rents approved by FHA on new houses are not a deterrent to the construction of new houses which veterans can afford. In approving these rentals FHA considers all of the present high construction cost and permits rents which allow a reasonable return on the builders' investment. I understand that in fixing these rents, a 7-percent allowance for vacancies is made, which is certainly more than adequate under present conditions.

6. Veterans' preference: We are happy to note that the bill before this committee would not abolish veterans' preference. However, it is our considered opinion that such preferences would be meaningless to a large extent if the bill is enacted into law. It would be small consolation to veterans to have preference in the rental or purchase of dwellings that they cannot afford to rent or buy.

7. Sales prices and rent ceilings on HH priority constructed houses: We feel that sales prices and rent ceilings on HH priority constructed houses should be continued. The priorities assistance which the Government extended to builders in the interest of providing homes for veterans, was based upon the agreement of the builders to abide by these ceilings. We believe that the abandonment of these ceilings would serve to disappoint the reasonable expectations of veterans.

8. Guaranteed markets: We see no reason why the Government should not continue to assume part of the risks involved in getting the production of prefabricated homes started. Veterans are particularly interested in these houses being built because they are less expensive than most others.

The American Veterans Committee, therefore respectfully urges that rent control be extended with adequate enforcement provisions and that existing housing controls be retained.

United States of Western Europe

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and newspaper articles:

WASHINGTON, D. C., *March 26, 1947.*
Hon. HALE BOGGS,
House of Representatives,
Washington, D. C.

DEAR MR. BOGGS: Any American who has traveled in Europe in peacetime has been dismayed and distressed by the division of that Continent into a number of small states—each with separate passport regulations, separate tariffs, and separate regulations of all kinds, calculated to interfere with the happiness and prosperity of its people. Divided, these people have fallen time and time again as a result of national jealousies and wars. Although I have no longer an active connection with the New Orleans Item, I was delighted to read in a recent issue a powerful editorial putting forward the idea of a United States of Western Europe, and I was further gratified to see you take the initiative in the House in introducing for its consideration a resolution on this subject. I understand that Senator FULBRIGHT, of Arkansas, has introduced a similar resolution in the Senate.

To my mind there are a thousand good reasons favoring the formation of a United States of Western Europe, and none against it. Switzerland is the classic example of a nation able to peacefully govern Europeans of different languages and nationalities. The United States contains in its citizenship millions of European immigrants and descendants of immigrants from all European nations, and these people can tell their European nationals the benefit which comes here from a government of united states. It is of undoubted value to our own prosperity and safety that the civilized nations of western Europe should be free, united, and prosperous.

You and Senator FULBRIGHT are identified with a cause of immense importance. Others, like myself, who believe in it, want to wish you Godspeed and to help in its promotion in every way possible.

Sincerely yours,

JAMES W. THOMSON.

[From the Washington Daily News]

EUROPE'S UNITY

(By William Philip Simms)

WASHINGTON, March 24.—"That the Congress hereby favors the creation of a United States of Europe within the framework of the United Nations," was the text of a resolution introduced yesterday in the House by Representative HALE BOGGS (Democrat, Louisiana).

Shorter by 26 words than the 46-word Fulbright resolution of 1943 favoring a United Nations, the Boggs proposal is certain to stir considerable debate on both sides of the Atlantic. Most people will be for it, outside the Soviet bloc at any rate, but Moscow and its satellites will see in it just another plot of "encirclement."

A United States of Europe long has been the hope and dream of some of the foremost statesmen of the Old World and the New.

All agree that European peace never can be truly stabilized as long as it remains Balkanized as at present. Nor can the European

standard of living ever reach a permanently high level unless and until some sort of customs union permits a freer exchange of commodities.

Mr. Boggs holds that the Moscow Conference, our aid to Greece and Turkey, and similar steps are in the right direction, but that these are not enough.

"Europe must be reconstituted," he says, "and reconstituted as a unit if the world is to have peace."

Many agree with Mr. Boggs. Just before he left for Moscow, John Foster Dulles said the Big Four would deal with Germany, but Germany was the central problem of Europe and Europe was the world's worst fire hazard. After each past conflagration, the structure has been rebuilt substantially as before.

"Statesmanship," Mr. Dulles went on to say, "can do better than go on repeating that folly." Last September, in Zurich, Winston Churchill said "we must build a kind of United States of Europe."

Here as elsewhere, Soviet Russia is blocking the way. She wants no combinations anywhere that are not controlled from Moscow. She strongly favors a federalized Balkans with a Tito in every capital, but opposes a friendship treaty between France and Britain. Austria, Italy, and Hungary would be incalculably better off for an economic understanding, but Russia will not allow it.

Finland and her Scandinavian neighbors, especially Sweden, could make life more worthwhile for all concerned, but Moscow has put thumbs down on an Entente. Britain, France, and the Low Countries have toyed with a similar idea only to be accused of attempting to form a bloc against Russia.

If Russia were merely seeking peace and prosperity for herself and Europe, nothing could advance the cause more than a federalization of western Europe within the framework of the United Nations.

If she aims to pick off the smaller European countries, one by one, and add them to her string of satellites, federalization might interfere with her plans.

[From the Wall Street Journal of March 12, 1947]

FOR A UNITED STATES OF EUROPE

EDITOR, THE WALL STREET JOURNAL:

If I were Secretary of State Marshall addressing the Peace Conference at Moscow I would say:

"Gentlemen, I must speak in absolute frankness to you. Twice in one generation my country has been obliged to sacrifice its manhood and spend its treasure in efforts to prevent conflagrations from spreading to my homeland that were started on this Continent. Not only have these conflagrations been of stupendous cost to my people during the actual hostilities, but the financing and aid which we gave in the First World War caused such dislocations in our economy that it took us nearly two decades to recover.

"The Second World War cost us well over $200,000,000,000 in addition to the lives sacrificed and we are not yet in a position to evaluate the economic damage that has resulted.

"I am therefore venturing what I believe to be the basic causes of these conflagrations and suggest remedies.

"First. The geography and natural resources of continental Europe are such that only a United States of Europe, with no trade or tariff barriers, can produce and sustain an economy of plenty.

"Second. The dismissal of the idea that socialism, be it of the type as expounded by Karl Marx, Lenin, Hitler, Mussolini, Quisling, or Attlee, can offer you a solution to your political or economic troubles.

"I will now elaborate on the preceding suggestions using my country as an example which will show the similarity of the United States of America geography and the proposed United States of Europe.

"I shall also try to outline the ideology or economy that prevails in my country and try to correct certain false impressions that have been propagandized.

"Geography: The British Isles compare to my country's New England States, both industrially and physically; France and Germany to our Midwest; Russia to our States like Texas, Nebraska, and Missouri.

"Ideology or economy: The term 'capitalistic' is misapplied in describing the economy of the United States. 'Capitalism' such as has prevailed in Europe has been a very negligible factor in the prosperity of the American people. The term 'American industrialism' is more appropriate. This is typified by the fact that:

"1. There are millions of individual stockholders in American corporations;

"2. The American economy is based on the production of large quantities of the necessities and comforts of life produced at a price that nearly all the people can pay. This is exemplified by slogans commonly used by manufacturers, such as 'More and Better Things for More People (General Motors), 'Better Things for Better Living Through Chemistry' (du Pont).

"3. The millions of American farmers are prosperous and self-sustaining in contrast to the former large landowners of Europe and resultant peasant class.

"4. There is a vast prosperous middle class of shopkeepers and professional men and women.

"5. The men and women who work in our industries have the highest standard of living in the world.

"Gentlemen, I should like to have you visit the United States of America again and make both a study and examination of our Government, institutions, and industry. I sincerely believe that once you follow the pattern we have set, my Government will make available to you the necessary financial assistance and guidance.

"Such matters as wars and atomic bombs will then cease to be subjects of importance for our generation and the generations to come."

EDWARD I. BLEE.

CLEVELAND, OHIO.

[From the Louisville Courier-Journal of March 29, 1947]

SUGGESTIONS FOR FORMING A EUROPEAN FEDERATION ARE STUDIED AGAIN

(By Robert L. Riggs)

WASHINGTON.—The proposal that the United States take action to help Greece and Turkey maintain their independence has caused three Members of Congress to give new impetus to another proposal which is at least 400 years old. The older proposal is that there be formed a United States of Europe.

To forward the idea of uniting the numerous states of Europe into one federation two Senators and a Member of the House have introduced a resolution which, if adopted, would make it part of the foreign policy of this Nation to favor creation of a United States of Europe.

The two Senators are WILLIAM J. FULBRIGHT, of Arkansas, and ELBERT D. THOMAS of Utah. The Representative is HALE BOGGS, 33-year-old war veteran of New Orleans. The three Democrats say they don't propose that this country impose upon Europe the idea of federation—in fact, it couldn't do so if it wanted to do it. The resolution is intended, they say, merely to let those Europeans interested in the idea know that it has the sympathetic interest of the people here.

Here is the complete text of the 19-word resolution: "Resolved, the Congress favors the creation of a United States of Europe, within the framework of the United Nations."

Although the legislators don't expect the United States of America to take positive action to bring about the European federation, there are two things they would expect this country to do to help it along if it ever got to the organization stage. The first would be to guarantee the emerging federation from military interference by Russia. The second would be to give it financial assistance to generate economic strength.

UNDER WHOSE DOMINATION?

The Russian angle is a new twist to the Federation idea which was toyed with as long ago as the seventeenth century. Russia, of course, has her own ideas about what should be done to unify Europe, namely, that it come under the sway of Communist governments owing their loyalty to Moscow. If the United States is going into the business of stopping the spread of totalitarian governments, as proposed in the Greek-Turk assistance program, the supporters of the Federation plan contend their idea presents the best way to do so.

The way to prevent the spread of communism, they say, is to bring about a peaceful, prosperous Europe. This cannot happen, they argue, so long as every little language has a nation of its own; so long as national boundaries create economic barriers within so small an area. Already, they point out, Russia controls Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Bessarabia, Latvia, Estonia, and Lithuania. Democracy and free enterprise will not survive in the rest of Europe, they say, unless its economic problems are solved. We would face a similar situation in this country, they say, if, in order to ship crude oil from Texas to New York, it were necessary to pay tariff fees and effect international currency exchange across several boundaries.

THE IDEA IS PRACTICAL

As an illustration that a United States of Europe could succeed, they point to the Swiss federation of 25 independent cantons, with 4 separate languages, and with vast differences in race, religion, and culture. Despite these differences, they say, Switzerland has been welded into a federation with a common economic, foreign, and military policy.

As long ago as the seventeenth century Henry the Fourth, of France, was advocating a "great design" of federated states. This country was just over its birth pangs when George Washington wrote to Lafayette: "One day, taking its pattern from the United States, there will be founded the United States of Europe."

Victor Hugo supported the idea. Aristide Briand, of France, worked for it between two world wars. Winston Churchill, Clement Attlee, Jan Smuts, and John Foster Dulles are among its present-day advocates.

[From the Christian Science Monitor of March 21, 1947]

CONGRESSIONAL MEMBERS URGE FEDERATED EUROPE

(By William H. Stringer)

WASHINGTON, March 21.—Members of Congress today joined the company of Winston Churchill, Walter Lippmann, Jan Christiaan Smuts, et al., in proposing a "United States of Europe."

The Fulbright-Thomas-Boggs resolution, urging that a federated Europe become a cardinal objective of United States foreign policy, reveals a new tack which congressional and Capital thinking is taking as it contemplates the vast burdens the Nation is proposing to assume as leader and rehabilitator of the nontotalitarian world.

To its advocates, the proposal for a United States of Europe looms as nothing less than an objective which would permit this Nation to coordinate and channel its diverse foreign lending and spending policies toward the setting up of a powerful and

economically healthy state in the cradle of western civilization.

And this state would be stalwart enough to transform the big two into the big three, establishing a new checkmate to Communist and Russian efforts to dominate Europe.

NOT EXACTLY NEW

Democratic Senators J. W. FULBRIGHT, of Arkansas, and ELBERT THOMAS, of Utah, two of the most scholarly Members of the Upper House, and Democratic Representative HALE BOGGS, of Louisiana, the three sponsors of the resolution introduced this noon, concede that their idea is not exactly new.

They know, furthermore, that Soviet Russia has denounced the proposal each and every time it has been previously advanced, and that the Communist Parties in France, Italy, and elsewhere could be expected to campaign strenuously against the inclusion of their countries in the contemplated federation.

But, to advocates here, the plan assumes new urgency at a moment in history when President Truman has announced an American intention to bolster nontotalitarian regimes wherever situated against encroachment, and when it is proposed to spend $400,000,000 to shore up nations on Russia's Middle East periphery—and more money, undoubtedly, elsewhere—with the United States already having expended some $20,000,000,000 in the restoration and stabilization of the postwar world.

Senator FULBRIGHT declared that the American people have had enough of wars which for centuries "have been generated by the conflicts that inhere in the fragmented sovereignties of Europe."

Mr. BOGGS observed that the rehabilitation of Europe cannot be done with American dollars and relief alone, nor is "the negative policy of opposing Russia and international Communism, as vital as that is, enough. The peoples of western Europe must be enabled to help themselves."

UNITED STATES BACKING

The resolution does not mean that the United States would seek to "impose" federation upon Europe. Rather would it have the United States give encouragement and support to the European forces working for it.

The proposal, it is agreed here, is of tremendous scope, although the precise definition of "European federation" is not clear in the Fulbright-Thomas-Boggs resolution.

To many advocates, the federation would of necessity include Germany and its Ruhr, the economic heart of western Europe. It would embrace Belgium and the Netherlands, France, and Italy. Conceivably it could include the Scandinavian bloc. Possibly it should be an "open end" federation, prepared to admit Czechoslovakia, Rumania, and other nations now within the Soviet orbit, when they are able and willing.

As for the inclusion of Britain, many Britons feel that with the empire shrunken, London no longer can play a balance-of-power role but must cast its lot with western Europe.

The sponsors of the resolution would encourage the formation of the federation "within the framework of the United Nations."

European sponsors see the federation as preventing western Europe from becoming a battleground between the United States and Russia. Conversely, should the United States and Russia compose their differences, they see the federation preventing western Europe from being reduced to impotence between two giants.

In the United States the "world government" people like Clarence K. Streit are urging a "union of all the democracies around the Atlantic Ocean in a great union of the free."

Those most immediately concerned, in Congress and out, see in the federation a blueprint and formula under which the United States could bend its rehabilitation and loans not merely to restore Germany and Greece, bolster Turkey, or fend off communism in Italy, but to work toward a general European settlement and reestablishment.

World Phonetic Alphabet

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted and signed by all the members of the Oklahoma congressional delegation endorsing a world phonetic alphabet prepared by the Honorable Robert L. Owen. I personally commend this great achievement to the Congress and the country. So often, even in this enlightened age, language is a barrier between man and man, which precludes the kind of understanding necessary to a peaceful world. Senator Owen, by his Global Alphabet Guide Book, has given mankind the opportunity to remove this obstacle for all time to come.

The resolution follows:

Whereas the Honorable Robert L. Owen, one of Oklahoma's first and most distinguished United States Senators, did, between the years 1907 and 1925, honor our State and Nation with courageous, constructive, and enduring service in the upper Chamber of our National Congress; and

Whereas with a firm and determined resolution to strike at the roots of ignorance and illiteracy and the consequent corollaries of international misunderstanding, strife, and war, this distinguished son of Oklahoma did voluntarily retire from his seat in the United States Senate to foster a global alphabet, thereby opening the door to a world language as one of the main avenues to world brotherhood; and

Whereas after more than a quarter of a century of devoted attention to this ideal, which involved a tremendous expenditure of personal effort and personal funds on his part, Senator Owen has produced a global alphabet which by reason of its completeness, its simplicity, and its perfection constitutes one of the greatest contributions of all time to the science of language; and

Whereas Senator Owen has demonstrated that with this alphabet any language in the world can be taught within a very short period of time and all languages of the world can be reduced to writing either by hand or machine at speeds far in excess of those accomplished with any other existing alphabet; and

Whereas on March 26, 1947, in an inspiring address delivered to the Oklahoma Congressional delegation, a copy of which appears in the Appendix of the CONGRESSIONAL RECORD at page A1290, Senator Owen explained the possibilities of his global alphabet as a basis for the use of English as a world language and as a potentially powerful instrument in shaping the destiny of the United Nations Organization and the future of mankind; and

Whereas the Oklahoma congressional delegation is convinced of the tremendous importance to our own Nation and to the world of the handiwork of this great Oklahoman: Now, therefore, be it

Resolved, That the world phonetic alphabet set forth in the Global Alphabet Guide Book by the Honorable Robert L. Owen should be adopted as an auxiliary alphabet for purposes of instruction in all languages.

GEORGE B. SCHWABE, Member of Congress, First District; WILLIAM G. STIGLER, Member of Congress, Second District; CARL ALBERT, Member of Congress, Third District; GLEN D. JOHNSON, Member of Congress, Fourth District; MIKE MONRONEY, Member of Congress, Fifth District; TOBY MORRIS, Member of Congress, Sixth District; PRESTON E. PEDEN, Member of Congress, Seventh District; ROSS RIZLEY, Member of Congress, Eighth District.

Mr. Speaker, I am pleased also to insert herewith the following statement by the Honorable Robert L. Owen entitled "What the Global Alphabet Is Not":

The global alphabet is not a language. It does not interfere with any language. It does not interfere with any alphabet. It is of importance to understand what the global alphabet is not. This alphabet does not interfere with any languages in the world, but leaves them as they are.

It does not propose to change the methods of spelling as they now exist, but would leave them alone. This alphabet does not change the spelling in any book in any library in the world. It does not propose to simplify spelling as currently used.

The global alphabet does not interfere in the slightest degree with the linotype nor the monotype machines as they exist.

What it does do is to interpret sounds of the voice with an alphabet that cannot be misunderstood.

It is an auxiliary, a phonetic key, to all languages.

The Hawaiians would need only 12 global letters to write their language; the Moros, 16; the Hebrews, 23; the Spanish, Portuguese, and Italians would only need 30 letters; the Russians only 33. The letters could be written with a pen at more than twice the speed used with the existing phonetic alphabets, and could be written with the global typewriter twice as fast.

Old-Age Insurance

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. KEATING. Mr. Speaker, under existing law one who is receiving the benefits of old-age insurance is deprived of his monthly stipend in any month when he earns $15 or more. Although I agree that there should be some restriction in the law, it does not seem to me reasonable or fair, at least with the cost of living what it is today, to deny an older person his insurance payments simply because he has earned this almost insignificant amount.

Furthermore, because of the difficulty which a person has in getting back on the rolls to receive the benefit of this

insurance, I find that two things are happening: One, people over 65 who have the desire, ambition, and ability to supplement their meager income by working part time, are refraining from doing so; and, two, in some cases they are earning more than $15 a month but because they feel the law is unfair are not revealing that fact to the Government agency charged with the administration of this law.

Accordingly, I have today introduced a bill which would permit a person over 65 to earn up to $40 a month without being deprived of insurance benefits. It is my hope and my firm belief, based upon the study I have made of the question, that this will not cost the Government anything substantially more than the amount it is now paying out for this insurance. What it will do, is to give these older people some greater latitude in supplementing their insurance income from outside sources. This desire on their part to continue their contribution to the economy of our country should not, in my opinion, be discouraged as is happening under the present law.

This amendment will only result, as I see it, in improving the standard of living for these older people who have worked hard all their lives, paid into this insurance fund, and now want to taper off gradually from their hard working days without giving up entirely.

OPA Employees Expect Increased Salaries Under New Rent-Control Proposals

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, we have heard so much recently about doing away with this or that bureau and the transferring of the personnel to some new bureau, and in some instances with perhaps increased salaries.

The sugar rationing has been transferred to the Secretary of Agriculture and current rumor has it that the OPA Sugar Control Division will likely take charge of the program under its new set-up.

Now it is being suggested that the OPA rent-control personnel be transferred to the Office of Temporary Controls with an increase in salaries.

It does not seem to do any good to get rid of a bureau if it is to operate under a new name and with increased salaries and with the same personnel. That simply does not make sense. It does not fool the people as much as some of the New Dealers imagine. This has been done in many instances and it looks as if it is now becoming a fixed policy.

I am just in receipt of a letter from a man in Tulsa, Okla., who owns a few small apartments. He explains that one of the OPA employees, in the rent control division, recently tried to tell him how he could circumvent the regulations and collect more rents than he was permitted to collect. The evening of the same day, the OPA employee appeared at one of my constituent's apartments and was investigating with an idea of trying to ascertain if my constituent was charging more rent than his permit allowed.

But the worst part of it all is that this OPA employee, being a stranger to my constituent, who met my constituent on the bus by mere accident, told the apartment owner that if the proposed transfer of the rent-control division was made to the new bureau, it would simply mean that "they will have to take us over to run the thing for them, and we will probably get better salaries than we now get."

The letter, which is dated March 28, 1947, follows:

Some time ago I wrote you a letter with regard to the OPA business, and since that time I have made up my income-tax report on my apartment showing a good-sized loss to us, something over $200, as I remember it, on a five-apartment affair, and that after having spent last fall $700 sanding the floors and papering and painting.

Well, anyway, they won't leave me alone, and on my way to work the other morning I got on the bus and sat right across from a nice looking fellow who, from his clothes, would appear to be "doing good," and I spoke to him, then went across to sit down with him, and asked if he was with the Frates bunch yet, and he said "OPA." "Well," I said, "you won't be long, will you?" He said, "Hell, if they put in this new department it will mean just this: They will have to take us over to run the thing for them, and we will probably get better salaries than we now get." I told him of my loss on my income report, and he asked me why we didn't charge more, and I said, "Not me, I'm not going to get the OPA after me in court." "Well," he said, "you don't have to give receipts, etc." I got this thing off my mind all day but on arrival back at what we call home, the tenant in apartment two, who has been there but a short time, answered the doorbell, and there was apparently the same party waiting to see her, and he asked if she had been charged more than our regular rate for the apartment and some other questions, and then he left. Why go to Russia to live?

Soviet and New Deal Bridgeheads

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an editorial which appeared on the front page of the Chicago Sunday Tribune on March 30, 1947:

SOVIET AND NEW DEAL BRIDGEHEADS

Since Mr. Truman discovered a Communist menace in Greece, his short-range vision has noticeably improved. He and the rest of the New Dealers now suddenly profess to have learned that there are Communists crawling around in their administration.

Mr. Truman has therefore decreed that "reds" be fired from the bureaucracy. Secretary of Labor Schwellenbach has called upon Congress to outlaw the Communist Party in the United States. The Supreme Court, getting in step, has approved dismissal of Communist sympathizers from Government posts.

This flurry of New Deal activity would be more convincing if the administration's illumination did not follow so far in the wake of general awareness that Communists had become a formidable force in the Government, in labor unions, in the schools, in the press, films, and radio, and among foreign-language groups. None of this is new. It was to be discovered at almost any time after the advent of the New Deal if anyone in the executive branch had been interested.

Indeed, the complete information was in the possession of J. Edgar Hoover, Director of the Federal Bureau of Investigation, long before he was permitted to testify publicly to his knowledge a few days ago. Mr. Hoover and his staff over the years had compiled detailed reports about Communist infiltration. Time after time they tried to break through the iron curtain which the administration imposed upon them.

Mr. Roosevelt's patronage was carried to the length of granting Earl Browder, then head of the Communist Party, a Presidential pardon from a Federal prison sentence, ostensibly in the interests of national unity. Browder was liberated in time to organize the Communist forces for Roosevelt in the 1944 campaign. Later on he boasted, "Our own policies and work contributed essentially to the victory of November 7."

Not until Hoover was called before the new House Committee on Un-American Activities, now organized under Republican control, was he able to obtain an official audience.

He then described the Communist Party as dedicated to the overthrow of the United States Government. "The Communists," he said, "have been, still are, and always will be a menace to freedom, to democratic ideals, to the worship of God, and to America's way of life."

Readers of the Tribune know that this is so true as to be obvious. We have said the same thing repeatedly. It is the only honest estimate that could ever be given of communism.

In view of this history, Mr. Truman's talk of preventing communism in Greece and his belated uproar over Communists at home must be regarded as diversionary tactics. The New Dealers have their own subversive conspiracy against America. At times they have been quite willing to employ Communists to advance it, but they are capable themselves of carrying it on. By now dumping the Communists from the New Deal droshky, they hope to divert notice from the fact that they are headed the same way as the Communists.

All this talk of stopping communism in Greece is a delicate falsehood. It is plain from the testimony of Paul Porter, the late OPA commissar, now blossomed out as an expert on Greece, that Truman intends to establish the New Deal variant of American communism in Greece, manned by his own nominees, directed by himself, but financed by the people's money, in order to keep his subversive organization together in the hope of bringing it back to this country afterwards.

"Trust the President," says Porter, clamorously denying that Congress should have any power to review what is done by Truman's agents in Greece if Congress should authorize the venture. But it is impossible to trust him when all of the facts show that the New Dealers, utterly undeterred by their November defeat, are carrying on their subversive activities on all fronts and even seeking a refuge abroad where their experiments and techniques may be improved with practice.

Deficiency Appropriation Bill H. R. 2849 as Affecting the Veterans' Administration Program and the School-Lunch Program in an Interview With Mr. Robert J. Coar, Director of Radio at the Capitol, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. HAMILTON C. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1947

Mr. JONES of North Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interview given by me by a transcription at 11 a. m. on Tuesday, April 1, in Washington, D. C., and broadcast over a number of stations in North Carolina through the capitol at Raleigh, N. C., at 9 p. m. on the same day:

INTERVIEWER. Congressman JONES, are there any provisions of House bill 2849 making available funds to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1947, with which you fundamentally disagree?

Congressman JONES. There are two provisions with which I violently disagree.

INTERVIEWER. What are these provisions?

Congressman JONES. First, the radical cutting of $550,000,000 from the Veterans' Administration program. I am especially interested in this because as a member of the Veterans' Affairs Committee of the House I am familiar with the over-all program of this splendid agency—the Veterans' Administration. A cut of this size and character would be ruinous to the program. This $550,000,000 cut represents a cut of $200,000,000 from the allowance for pensions and compensation benefits and a cut of $350,000,000 from the allowance for readjustment benefits, including many of the benefits under the GI bill of rights—on-the-job training, schooling, unemployment pay, loans for veterans' housing, business loans, farm loans, and reemployment rights. This further disturbs General Bradley in his very stupendous job of carrying out the over-all plan of the Veterans' Administration.

In my opinion, the Government is very fortunate to have a soldier of this type and a man of this character to administer this important agency at the present time. The Government is already under obligation to him for his splendid military service and patriotic contribution to this country and it is a great sacrifice to him to administer this comprehensive program of the Veterans' Administration. There has been some intimation that General Bradley might resign and this cut is one of the best ways to encourage this—that is, by withdrawing from him certain funds necessary to carry forward the program of the Veterans' Administration. I hope that the House will restore this $550,000,000 to the veterans' program before the bill is finally passed in the House.

The second provision with which I disagree is that which removes any allowance for the continuation of the school-lunch program at the very time when it was expected to be a permanent set-up and a great advancement in promoting not only the education but the health of the children of our Nation. It is a disappointment to everyone concerned in this splendid program because it was expected that the program would be expanded rather than abandoned.

We have not time to enumerate the many advantages of the school-lunch program or the benefit that the children of the Nation derived from the program. These are demonstrated by the expansion and growing popularity of the program.

The declaration of the policy contained in the act of the Seventy-ninth Congress is as follows: "It is hereby declared to be the policy of the Congress as a measure of national security to safeguard the health and well-being of the Nation's children and to encourage domestic consumption of nutritious agricultural products and other food, by assisting the States through grants in aid and other means in providing an adequate supply of food and other facilities for the establishment, maintenance and operation and expansion of nonprofit school-lunch programs." In initiating, supporting, and maintaining the national school-lunch program, the Government of the United States has rendered invaluable aid to the cause of public education and to public health in all of the States of the Union and it seems a tragedy to cut it out when it probably is just entering upon a period of its greatest use to public education.

The very able and progressive Superintendent of Public Instruction in North Carolina, Dr. Clyde Erwin, has urged me and the other members of the North Carolina delegation in Congress to support the program and to urgently request the Appropriations Committee of the House not to desert this important needed legislation which contributes so immeasurably to the health and education of the children of the United States. I sincerely hope that when this deficiency bill is finally adopted, the item for the school-lunch program will be restored by amendment so that the school leaders throughout the United States may further develop the school-lunch program which means so much to the education and health of the youth of our Nation.

Union Members Under Compulsion To Write Objections to Their Senators and Representatives

EXTENSION OF REMARKS
OF
HON. SAMUEL K. McCONNELL, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent to the members of local No. 90, an Iowa local of the teamsters' union, by its executive board:

THE VOICE OF LABOR MUST BE HEARD!

JANUARY 23, 1947.

DEAR MEMBER OF LOCAL UNION No. 90: A Nation-wide letter-writing program has been recommended by the American Federation of Labor, and organized labor must act promptly and effectively if the gains of the last century are to be preserved.

This means we are talking about our future bread and butter.

The new Congress will take up the notorious Case antilabor bill and possibly other of the many such bills that were introduced in the House of Representatives in the first few hours of the opening session of Congress.

The officers of local union No. 90 heartily recommend that you adhere to the recommendation of the American Federation of Labor and that each member write in his own way a letter to the Representatives of Congress in his district, to vote against any antilabor legislation that may come before the Congress, and to stand by labor, to make sure that those who represent us follow our orders, so we can earn our living as is our constitutional right.

In order that this program be a success, each one of you must write letters to your representatives in the House and Senate immediately. Make your letters brief, in your own handwriting, and demand a reply in such a way that you personally will know he received your letter; and further, state that you will be watching the report of his voting on bills in the public press with a great deal of interest.

Your local union in regular meeting has acted on a program to see who of its members writes as above recommended. We know the good members will write without further communication from this office.

It is recommended that you give your letters to your steward or bring them to the union office and have your name checked off our list as one who has complied. We will gladly pay postage and mail these letters directly from the union office.

It is also recommended that those members who do not follow through with the above program be called in before the executive board of local union No. 90 to explain why they did not comply with the above recommendation. You will save time by writing a short letter that takes only a few minutes, rather than make an appearance before the executive board to explain why you did not do so.

For your information, the following are the representatives in your district, including their Washington addresses:

Senator GEORGE A. WILSON, Senate Office Building, Washington, D. C.

Senator BOURKE B. HICKENLOOPER, Senate Office Building, Washington, D. C.

Representative PAUL CUNNINGHAM, House Office Building, Washington, D. C.

Hoping you will give this matter as serious attention as the officers of your union are doing, we remain.

Fraternally yours,
LOCAL UNION No. 90,
Executive Board.

Housing and Rent Control

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. CARROLL. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a letter written by Lloyd F. Oleson, national commander of the Disabled American Veterans, addressed to the chairman of the House Committee on Banking and Currency.

The national commander of the DAV has written in such clear and concise terms that no intelligent person can possibly misunderstand the importance of the subject discussed. I am pleased, therefore, to introduce this letter into the RECORD in the hope that other Members will receive the benefit of this most excellent statement.

MARCH 20, 1947.

The Honorable JESSE P. WOLCOTT,
Chairman of the House Committee on Banking and Currency, New House Office Building, Washington, D. C.

DEAR SIR: Relative to the necessity for continued control or further relaxation of Government housing controls, the Disabled

American Veterans is motivated primarily by the pressing needs of service handicapped veterans, and other veterans, for decent housing.

It is apparent that open limited conditions would preclude scores of thousands of service disabled veterans, and other veterans, from procuring suitable housing, either on a purchase or a rental basis.

Because of several critical material shortages, it appears imperative to continue several of the more important housing controls until after emergency conditions shall have been surmounted.

The Disabled American Veterans, therefore, concurs with the position of the housing expediter, Mr. Frank R. Creedon, in believing that it will continue to be necessary for the Government to maintain at least the controls indicated as follows:

1. Nonresidential construction should be rigidly restricted so as to prevent needed housing materials from being diverted into nonresidential constructions not urgently needed for the economy of our country.

2. Critical basic raw materials, needed in housing construction, should be allocated by the Government for acquisition by manufacturers according to their relative needs and the needs of the processed materials for housing-construction purposes.

3. Building-material producers should be extended assistance in procuring machinery and equipment needed to process raw materials into needed housing-construction materials.

4. In view of the very critical limited supply of bathroom fixtures, such bathroom fixtures should be so allocated as to permit the completion of only one bathroom in each new house, until the supply shall more nearly meet the demand.

5. Because of the very limited volume of housing materials, the size of new houses should continue to be limited, until such supply becomes sufficient to meet the demand, to 1,500 square feet per housing unit.

6. Seasonal houses should be prohibited until such time as a sufficient number of year-round-occupancy houses shall first have been constructed.

7. Rent ceilings on new housing units should continue to be controlled on a fair investment return basis until the supply has more nearly caught up with the demand for housing units.

8. Preference priority should be extended to service-disabled war veterans, and then to other war veterans, in that order as to rentals of all new housing units and as to the sale of all new housing units.

9. Ceilings on the sales prices and rentals on all HH priority-constructed houses, and other houses and housing units should continue to be maintained, with better arrangements for veteran and public inspection of such ceilings of sales prices and rentals.

Government controls as to materials for, construction of, and sale and rental of housing units should continue to be maintained only until the supply has begun to approximate the demand. Indefinitely continued controls by Government as to materials for, construction of, and sales and rentals of housing units is definitely not desirable, but complete removal of such controls too soon might well prove to be disastrous. The early relaxation of such controls immediately after VJ-day has probably been largely responsible, and too long delayed resumption of needed controls has probably considerably delayed the time for the complete relaxation of all such controls, beyond the time that would have been necessary had they not originally been relaxed too much too soon.

Sincerely yours,

LLOYD F. OLESON,
National Commander.

Example of Pressure-Group Activity

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. BOGGS of Delaware. Mr. Speaker, I think the following correspondence is very significant. I believe it shows conclusively that much of the pressure which is being placed on this Congress and its Members in opposition to appropriation reductions which have been and are being made in order to eliminate overstaffing, waste, and inefficiency in governmental agencies is not only insincere but fraudulent, if not actually dishonest.

The other day I received a mimeographed letter bearing the name and address of one of my constituents. That letter read as follows:

MARCH 26, 1947.

DEAR SIR: As a citizen I feel that the House of Representatives has failed to safeguard the best interests of the public by failing to provide adequate funds to finance the customs service—the one bulwark we possess against low-priced foreign-trade encroachments, illicit narcotics, and unbridled smuggling.

I feel that an increase in the budget for personnel would be money well spent in the public interest.

Respectfully yours.

Even though this letter was mimeographed and evidently an indication of the efforts of a pressure group to discourage the working of this Congress toward reestablishing economy in Government, I sent the following reply:

MARCH 28, 1947.

DEAR MR. ———: I have just received your message of March 26, saying that as a citizen you feel that the House of Representatives has failed to safeguard the best interests of the public by failing to provide adequate funds to finance the customs service.

It is quite true that the customs service is a bulwark against foreign trade encroachments and smuggling.

I believe you will find that it is true that the House of Representatives, in reducing the appropriation to which you refer, did not have as its purpose the reduction of the efficiency of the customs' officials. I am sure that it was the intent of the Congress in reducing this particular appropriation (as it will be when other appropriations are reduced) to eliminate waste in Government operation, to create greater efficiency in the various departments and agencies, and to reduce the cost of Government so that tax rates and the Federal debt may be decreased. It is to be hoped that a proper allocation of the appropriations may be made to the various departments to produce these desirable results.

Sincerely.

To my considerable surprise, I then received the letter which is quoted below:

MARCH 31, 1947.

Thank you for the enclosed letter. I am favorably impressed by your direct stand upon this issue, which by the way is of no particular personal interest to me. It probably should be, but inasmuch as I was away on vacation and was trying to lose contact with work for a few days, I failed to read about the proposed bill and certainly did not request any action. I am sure that someone used my name to bolster a pressure group's campaign for funds for continuing certain obsolescent jobs. In view of the above facts, I feel that you should be informed that probably a large portion of your mail is padded for selfish interests.

Just to complete the record, Congressman, you may be certain that when I have something to say to my Congressman, I'll say it directly, on my stationery, or in person if sufficiently urgent, and I'll not bother to sign petitions, form letters or circulars. That day will probably come, for I have been known to "speak out" before this. In the meantime, keep up the good Republican work. I like it.

By way of relieving the overburdened secretaries in your office, I do not feel that this letter requires an answer.

Sincerely.

I reiterate that this series of correspondence is of great significance. This is so not only because it discloses the unethical activities of a pressure group but because it further emphasizes the fact that our fair-minded citizens are giving whole-hearted support to the economy steps being taken by the Congress.

What Kind of Business Is This?

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of positive information which has caused me to wonder if the New Dealers are up to the old tricks which they played in the thirties. We all know of many instances where payments were made out of the Federal Treasury in the form of checks issued and distributed rathe. indiscriminately, without rhyme or reason. I personally saw many checks issued to farmers and landowners during the thirties where no application for the same was ever made by the farmer or landowner, and where he did not know the purpose for which the check was issued to him. Many of these made voluntary statements publicly to that effect. It was a subject of much radio and newspaper comment at the time.

The information which I have just received is to the effect that an income-tax return was filed on or shortly before March 15, 1947, in which the taxpayer used Form W–2. The taxpayer is on the Government pay roll and a substantial withholding tax was withheld. A check was drawn and issued on the Treasury of the United States and mailed from one of its disbursing offices for the full amount of the withheld tax. The check was received by the taxpayer April 1, 1947, about 2 weeks after the return was filed. The check had endorsed on the bottom left-hand corner "1946 tax refund."

This taxpayer made no application for a refund. What kind of business is this?

Perhaps the House Subcommittee on Appropriations in charge of the appropriations for the Treasury Department wrought better than it knew. It reported its bill appropriating $800,000,000 less under the item "Refunding internal revenue collections," than the amount recommended by the Bureau of the Budget, which is the left hand of the President and appointed by the President. It is conceivable that if public funds are to be thus distributed, the full additional $800,000,000 approved by the Bureau of the Budget might be needed to distribute public funds to people who never asked for them, to refund their entire 1946 income tax, which had already been withheld by the Government, or substantial portions thereof.

The least that can be said, and the most charitable view that can be taken of this is that it was a colossal blunder resulting from dire incompetency. Yet the howl has gone up from a lot of the bureaucrats in the Bureau of Internal Revenue, that their forces have been too drastically reduced for the fiscal year beginning July 1, 1947. But remember that the force that handled this item was appropriated for by the Seventy-ninth Congress and is being paid out of funds over which the present Congress has no jurisdiction.

The New Dealers in the House have complained that we should not have passed the bill cutting the appropriation for refund of taxes collected by $800,000,000. If this monkey business, or incompetency, is general, I am delighted that the Republican House of Representatives in Congress was wise enough to effect such a substantial savings for the taxpayers. If the practice is general, the entire force handling such matters, and those responsible for such procedure should be removed from the pay rolls of the Government. Perhaps it is fair to say that at least more competent help should be employed.

Who can imagine Treasury Department officials, employees of the Bureau of Internal Revenue, being so careless that they will indiscriminately, or otherwise, issue "1946 tax refund" checks to the taxpayers for the full amount of money that has been withheld by the Government from the monthly salary of the Government employees, without application therefor? Just what kind of business is this?

The Bureaucrats Always Will Kick at Cutting Costs and Taxes

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a timely editorial from the pen of Mr. Robert W. Boyer, managing editor of the Altoona Tribune, and which appeared in the March 28 issue.

The editorial is as follows:

THE BUREAUCRATS ALWAYS WILL KICK AT CUTTING COSTS AND TAXES

This opinion of ours might be quite wrong, but we feel justified in expressing our doubts of the efforts from Government officials to convince the Congress that vital functions of Government are going to be lost by reducing expenditures, and, of course, taxes.

Secretary of the Treasury Snyder has been most concerned about efforts to reduce Government spending, and taxes.

The latest furor of this kind comes from the customs office, under the Treasury Department, which announced that it was laying off border patrolmen and antismuggling port agents because of a lack of funds from Congress.

W. R. Johnson, customs commissioner, said beginning today, the Bureau will be compelled to lay off 210 men in the Canadian border patrol service, and 1,200 waterfront patrol officers in 22 ports. Not enough funds, says Mr. Johnson.

He said the work could be resumed, and the men could have their jobs back if Congress restores a $3,500,000 reduction in Customs Bureau funds.

Said Chairman TABER of the House committee, "The facts are that this service was given $3,500,000 more than it had for the current fiscal year. It sought $6,500,000. It can hire at least 400 more employees than it has now and yet it is announcing large reductions in force with the deliberate object of deceiving the people."

Mr. TABER said he believed officials are trying to pressure the Senate into restoring cuts voted by the House.

We are inclined to believe there is enough substance in Mr. TABER's suspicions to merit close examination by the Senate before it grants the funds asked by the various bureaus.

What bureaucrat ever would stand still for a reduction of funds?

In 1940 the Treasury Department budget was $2,125,092,033. In 1948 the estimated expenditures are $9,141,861,717. Has the increased cost of living raised Treasury salaries that much?

It is a peculiar thing that as soon as the House Appropriations Committee started to cut expenses in the Government the cry at once went up that we should be endangering our security. Fingers were pointed at the Army and Navy, and, strangely enough, with all the multitude of offices that could cut expenses, page after page of them in the Government Directory, the Army, Navy, and Air Force seem to be getting it heaviest. Now comes the customs service, with its border and port patrols, another appeal to the people from the security angle.

What the people want to know, as they clamor for reduced burden of Federal taxes, is why Government costs have risen so steadily, with no increase in the proportion of services?

The appropriation for independent offices has more than doubled since 1940. The Department of Commerce wants over three times as much. The Department of Labor has gone up from $18,570,698 in 1940 to $106,242,917 in 1948. Even the Post Office Department has gone from $45,953,822 to $356,679,250, and it is the only one with even a claim to partial self-support.

Every Congressman who inquires in his home district will find his constituents want to know more than ever before where their tax dollars are going, they want to know because they haven't bothered too much for years, and suddenly they are awake to the fact that every year, Government costs are going right up.

They are becoming alarmed, and rightfully so. There are calls from the Government for economic balance. Mr. Truman calls for lower prices. Mr. Snyder cries out about inflation, yet none seem to think that the Government, the greatest spender in all the world, sets the pace for inflation by its careless use of the people's dollars, and the tremendous burden of taxes it expects them to labor along under.

The people who are paying the bill want to know. Why, they ask, does the Interior Department need $292,019,818 more than it needed in 1940?

It is the same story all through the Government—rising expenditures. How then do Mr. Truman and Mr. Snyder expect lower prices, steadier wages, increased production, and leveling off of the inflationary spiral?

The House and Senate have a clear duty to slash expenditures and costs ruthlessly, and then let the various bureau officials account to the people for loss of necessary services, if there are any to be lost.

The Proposed Turkish Loan

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. GEARHART. Mr. Speaker, as I am quite sure that the membership would be interested in the views of Mr. Arshag Mahdesian, for many years the editor of the highly influential New Armenia, upon the recent proposal of the President of the United States of an American-Turkish loan, I offer for inclusion in the CONGRESSIONAL RECORD a copy of a letter which this distinguished author and commentator wrote to the Foreign Relations Committee of the United States Senate.

As Mr. Mahdesian is one of the greatest living experts on Near East problems, that which he has to say on the subject has a timely importance which none who know him would question.

Mr. Speaker, the document to which I have just referred is the following:

MARCH 14, 1947.

To the Senate Foreign Relations Committee,
Washington, D. C.

GENTLEMEN: Obviously Mr. Winston Churchill, who during the World War I saved the dismemberment of the Turkish Empire by withdrawing the British warships from the Dardanelles just as the Turks were ready to capitulate, has succeeded in beguiling the Truman administration into underwriting the bankrupt philo-Turk policy, which Great Britain has been pursuing since the nineteenth century.

In the World War I, Turkey was the ally of the Central Powers and she perpetrated such atrocities on the Armenians and the Greeks as to arouse world-wide indignation. President Woodrow Wilson called the Turks "Apaches," and former President Theodore Roosevelt, damning the Turks vehemently, criticized President Wilson for not declaring war against Turkey. He said, as quoted in the New York Times, December 8, 1921, as follows:

"He has stood by without a single throb of his cold heart, without the least quickening of his tepid pulse, while the Turk inflicted on the Armenian and the Syrian Christians wrongs which would have blasted the memory

of Attila, and he has claimed credit for his neutral indifference to their sufferings."

William Howard Taft, Charles Evans Hughes, Elihu Root, Henry Cabot Lodge, William Borah, William Jennings Bryan, Nicholas Murray Butler, Charles W. Eliot, Bishop William T. Manning, Stephen S. Wise, and many other prominent Americans excoriated the Turkish Government for its barbarities.

In an eloquent speech, which Senator Lodge delivered in the Senate, on December 7, 1917, he said:

"My feeling for Turkey goes much further than the practical question. The Ottoman Turks have been in Europe since the fifteenth century. In the days of their success they were a scourge to Europe and Christendom. In the long centuries of their decay they have been the pest and the curse of Europe, the source of innumerable wars, the executioners in countless massacres. There is not one word to be said in defense of the Turks as governors or rulers. When they came into the region that is now called the Balkans they found there large and prosperous cities, built up during the early Middle Ages on the ruins of the Roman civilization. They found a fertile and cultivated country. The cities which they captured sank into deserted villages. Wherever they have trodden trade, industry, commerce, the arts, and civilization have withered away. They have preyed upon the jealousies and controversy of the other nations of Europe, and in this way have sustained themselves at Constantinople. They have been the cause of many wars. The massacres of which they have been guilty, which stretch back to the day of their arrival and which have been worse than during the entire nineteenth century, almost surpass belief and imagination."

Senator William E. Borah, who also was advocating the declaration of war against Turkey—branded by him as "the persecutor of Christians, the foe of civilization, the incarnation of massacres, and the enemy of every principle of humanity"—wrote to me, after the speech of Senator Lodge, as follows:

"I had intended to speak upon it but Senator Lodge spoke upon the subject and his views were so thoroughly in harmony with mine and so much better expressed that I did not assume to discuss the matter further. I should have been glad, in fact I presume it is not improper for me to say that I urged very earnestly in the Foreign Relations Committee a declaration of war against Turkey. I heard the reasons why the declaration of war was not to be made, but more of them seemed controlling to me while there were overwhelming and what seemed unanswerable reasons for declaring war against this nation, or I would hardly call it a nation, rather, this conglomerate mass of incarnate fiends."

Former President William Howard Taft, later Chief Justice of the United States Supreme Court, in an article contributed to my magazine in 1918, defined Turkism or Ottomanism as follows:

"Ottomanism represents the very antithesis of Americanism. Eastern diplomacy is outwardly bland and exuberant. It is secretly adamant and utterly indifferent to performance. It is opportunist. It says one thing and does another, or leaves its promise unfulfilled, and all with equal equanimity. Those who practice it are like those mentioned by Macbeth: 'That palter with us in a double sense; that keep the word of promise to our ear, and break it to our hope.' Its rule is to evade, revoke, and delay at all costs, promise the best and do the worst."

Chief Justice Taft's definition of Ottomanism—shall we say his verdict against Turkey?—still retains its incontrovertible force.

It is not only the prominent Americans and Europeans who have anathemized the Turks. After World War I, Sultan Ibn-Saud, King of the Wahabis, declared:

"The Turks, from time immemorial until the present, have been a race of cruel barbarians. Many subject nations under Turkish rule were persecuted to extirpation. The Turk has no civilization. He creates nothing, for he is too lazy to work. His only trade is to levy tribute, and to live, like a parasite, on the production of his subjects. Whenever the Turk is obliged to eat his bread in the sweat of his brow he becomes a beast of prey and devours the people that have fed him. It is a disgrace that the Turkish domination was not destroyed at the end of the World War. Instead, the European powers, animated by selfishness, greed, and chicanery, gave a new lease of life to the Turkish barbarians. Under the leadership of a few half-civilized atheists, the Turks are today a worse menace than they were formerly."

During World War II Turkey assisted Germany with her false neutrality. European and American diplomats assert that if Turkey had sided with the Allies, even at the end of 1943, the military collapse of Germany would have been hastened. Without Turkish chromium Germany could not continue her high-grade-steel industry.

The Turkish press was proud of the assistance Turkey rendered to Germany. Anatolu wrote, on May 7, 1944: "We have demonstrated our friendship for the Germans all through this war, and have done so in their moment of greatest need;" and Son Posta avowed unabashed, on April 22, 1944: "We shall remain friends of Germany to the last."

Even after the Teheran Conference, Turkey, ignoring her treaty of alliance with Great Britain and material assistance she had received from England and the United States, maintained her neutrality on puerile pretexts. Winston Churchill, while addressing the House of Commons in 1944, remarked bitterly: "The hopes we cherished of Turkey boldly entering the war in February or March or of at least according us the necessary bases for air action—these hopes have faded."

After Turkey's belated formal rupture of diplomatic relations with Germany, it took 6 months before the Turkish Government could resolve to declare a psuedo-war on Germany.

How often must the United States Government be deceived by the wily Turk? The Arab used to pray: "O Allah! If a person fools me for the first time, please punish him; if he fools me for the second time, please punish me."

Respectfully yours,

ARSHAG MAHDESIAN.

FRESNO, CALIF.

Czechoslovakia

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. O'KONSKI. Mr. Speaker, Czechoslovakia, byproduct of the First World War, was supposed to be a democracy, patterned after Switzerland or the United States. The Czechs and the Slovaks, at long last, were to realize the dreams of generations, the right to govern themselves as free men and be masters of their own destinies in a common political state on the basis of equality.

Thomas G. Masaryk, one of the founders and the first president of the Czechoslovak Republic, promised the Slovaks that they would have their own parliament, courts, and schools, and the official language of Slovakia would be Slovak. The Pittsburgh Pact of May 30, 1918, written and signed by Masaryk, contained these promises and was in fact the basis of Slovak cooperation with the Czechs during World War I.

Neither Masaryk nor his successor, Dr. Edward Benes, kept that promise and the Slovaks did not realize their ancient dream of being masters of their own household within the framework of Czechoslovakia. The Slovaks clamored for recognition and demanded the realization of their inherent, God-given rights to their own national existence. Masaryk and Benes, however, did not heed their pleas. They told the world that, as far as they were concerned, there was no Slovak Nation and the Slovak language was but a dialect of the Czech tongue.

Twenty years of the Republic were not enough to teach the centralistic regimes of Prague the lesson of old Austria-Hungary. They insisted on becoming a bad copy of it. Czechoslovak propaganda continuously promoted the fictitious ideology of an ethnically unified Czechoslovak Nation. The Slovaks, however, were determined to fight for their rights. They refused to be but a Czech colony exploited at will by the centralistic and imperialistic regimes of Prague.

1938 AND MUNICH

Came Munich, Dr. Benes' complete capitulation to Hitler, and the collapse of Czechoslovakia. Dr. Edward Benes and the promoters of the Czechoslovak Nation ideology excoriated and cursed the western democracies for deserting them. Shortly thereafter, Dr. Edward Benes resigned from the highest position of trust, the Presidency, and abandoned Czechoslovakia to the tender mercies of the Nazi beasts of Berlin. Not only the Slovaks, but even the Czechs still remember that.

It is well to note that Dr. Edward Benes knew well at that time that Hitler would take over the whole of Czechoslovakia, the Czech and Moravian armament plants and ammunition dumps. Why did he not order them destroyed or render them useless? We know today that Hitler's war machine used these plants effectively against the United Nations. Of course, we are supposed to forget that for Dr. Benes' benefit.

INDEPENDENT SLOVAKIA

In 1939 Hitler took over Bohemia and Moravia, declared these territories "protectorates" of the German Reich, and the Slovaks declared their independence. It is well to note here that Dr. Joseph Tiso, president of the Slovak Republic, was not responsible for the independence proclamation. After his conference with Hitler in March 1939, Tiso returned home to report to the Slovak Parliament. It was only after a lengthy deliberation that the Slovak Parliament decided that under the given circumstances there was nothing else for it to do but declare the independence of Slovakia. And that it did on March 14, 1939.

Slovakia was recognized as an independent state by some 29 countries, including the Vatican, Great Britain, and Soviet Russia. No country at that time protested against the independence of

Slovakia. Neither did Dr. Edward Benes himself.

Events moved at a terrific pace. Hitler's Nazi hordes struck at Poland, partitioned it with Soviet Russia, conquered demoralized France, swept through the whole of Europe, and finally struck at their partner in aggression and conquest, Russia. It took just about everything that Russia and the United Nations had and about 4 years to annihilate Hitler's war machine and liberate the nations of Europe.

BACK IN THE SADDLE AGAIN

In the meantime Dr. Edward Benes was not idle either. He had himself and his political entourage recognized as the Czechoslovak government-in-exile by London, Washington, and Moscow. Dr. Benes also discovered that he was still President of Czechoslovakia, but that his term was up in 1942. So to make things legal and constitutional, he had the people he named as ministers and members of the provisional Czechoslovak Government in London reelect him President of Czechoslovakia.

According to Dr. Benes and his propaganda machine, everything contrary to the pre-Munich constitution and order of Czechoslovakia was illegal and, therefore, null and void. The old boundaries were to be restored, independent Slovakia forgotten, and Carpatho-Russia—Ruthenia—was indeed still a part of Czechoslovakia, Dr. Benes said. Well, that Czechoslovak constitution has been mutilated and violated so badly by the very people that swore to uphold it that it is hardly recognizable today. As Al Smith would say, "Let's look at the record."

Dr. Benes donated Carpatho-Russia to the USSR; he has issued decrees and signed treaties without regard to any constitution or the will of the people of so-called Czechoslovakia. All prewar political parties, except the Communist Party, were outlawed, and the new parties that were formed were established only with the sanction of Dr. Benes and his Government. The Government controls not only all political parties, but also the whole press and radio. Shades of democracy and the Czechoslovak Constitution.

The national and people's courts are functioning full time: sentencing, dispossessing, and disfranchising thousands of citizens arbitrarily on the charges of collaboration, fascism, nazism, and being antistate and enemies of the people. And the people of Czechoslovakia, especially Slovakia, are weary of all this. They want to know how they stand so that they might get down to the pressing business of reconstructing their respective countries. They insist that Dr. Edward Benes and his political adventurers must quit using the victory of the United Nations to liquidate all political opposition under the guise of administering justice and serving the cause of the people.

HOW DOES BENES GET AWAY WITH IT?

No one has yet explained how Dr. Edward Benes ever got away with what he did. He capitulated to Hitler, handed over the industrial assets of Czechoslovakia to the Nazi war machine, and deserted his country in its most critical hour. During the war he wormed his way into favor with the Great Powers and now is riding roughshod over everybody and everything that stands in his way politically.

The people of Slovakia ask: Why didn't Benes stay with us? What would he have done under the given circumstances, if he were in Tiso's place? Did we not suffer enough under the Nazis and the "liberation" armies? Why can't we be free like other nations are? Why can't we have an independent Slovakia if we so will it?

In the light of the events that have transpired from 1939 to 1945, the justifiability and legality for the existence of Czechoslovakia, it seems to me, may be questioned seriously. Czechoslovakia in fact was done for with Benes' capitulation—in Munich, and she ceased to exist completely as a sovereign state after March 14, 1939. There was no Czechoslovakia for 6 years. Those are facts.

THE SLOVAKS DO NOT WANT BENES AND HIS BRAND OF DEMOCRACY

We are told that Czechoslovakia has been reborn, reestablished, in fact that legally it never ceased to exist. Dr. Edward Benes has said so, and he is backed up by the United Nations. But the vast majority of Slovaks still believe that they have a moral and legal right to their own national existence, to their own state, and to their own government, anything that Dr. Benes and his political followers might say to the contrary notwithstanding.

I have it from several very reliable sources that the prevailing majority of Slovaks do not want Benes and his brand of Czechoslovak democracy. Dr. Edward Benes and Czechoslovakia have outlived their usefulness. The Slovaks have been glutted with Czechoslovak this and Czechoslovak that for twenty long years, and what has happened since the return of Dr. Benes and Czechoslovakia only further confirms the fear of most Slovaks that Benes and his Czechoslovakia mean a continued "Calvary" for the Slovak Nation.

The Slovaks have had their fill of Dr. Benes and Czechoslovakian democracy. They tell us that if they were free today to choose between Dr. Tiso and Dr. Benes they would choose Dr. Joseph Tiso; if they were free to choose between the independent Slovakia under Tiso and the present people's democracy under Benes they would choose the former. They protest being ruled by a foreigner.

But the Slovaks are not free to voice themselves. Any citizen voicing himself for a free Slovakia is ipso facto a Nazi, a Fascist, a collaborator, an enemy of the state and the people, and subject to prosecution. And that means persecution. Fear and terror, concentration camps and tyranny are breaking the Slovaks physically and morally.

BENES WARNS: UNCLE JOE WILL FENCE YOU IN

On February 16, 1947, Dr. Edward Benes warned the Slovaks that if Slovakia ever again broke with the Czechs, she would become a part of Russia. He said among other things:

"Today all plans concerning some central European federation are finished. * * * The Czechoslovak state could not endure another crisis, for after a further crisis there would be no Czechoslovak Republic. After such a further crisis Slovakia would not be an independent state in any case, but would become probably part of Russia. * * * I look, above all, at the preparation of the constitution and add only that an independent Slovakia in the future would not be acceptable to Czechs under any circumstances. The Czechs, having on one side 70,000,000 Germans, must have Russia as a neighbor. They could not, consequently, acccept an independent Slovakia. That is a vital problem for the existence of the Czechs as a nation and a state and it also is the lesson of Munich." (New York Times, February 17, 1947.)

Dr. Benes evidently is not concerned with what is acceptable and vitally important to the Slovaks. He may be determined that the Slovaks never again shall be strong enough politically or economically to cause any trouble to the Czech nation, but the Slovaks are even more determined to survive. The Slovaks have withstood Magyarization and they are determined to withstand Czechization and communism as well. They proved it in the May 1946 parliamentary elections. The Communist Party polled some 40 percent of the total Czech vote in Bohemia and Moravia, therefore, more than any single Czech party, but it was soundly trounced in Slovakia, where the Democratic Party polled some 62 percent of the total vote cast. But Dr. Benes ought to explain how the Czechs would lose Russia as a neighbor if Slovakia became a part of Russia.

Transferring hundreds of thousands of Slovaks to the Sudetenland, Bohemia and Moravia, may be expedient for Dr. Benes and the Czech people today, but it may boomerang later on. The Slovaks insist that the best possible solution of the whole Czechoslovak question rests on a free Czech state and a free Slovak state. The interests of both nations can be served best only by such a solution. The Slovaks must first have their own state, as must the Czechs, before any political alliances, such as Czechoslovakia, can be established on the basis of equals with equals. No other solution will fully satisfy the Slovak people or justify the lofty aims and ideals of the United Nations. The Slovaks too have a right to freedom.

I suggest a free Czech state and a free Slovak state first, then let the people of the respective countries decide freely whether they want another Czechoslovakia or not.

WHY IS TISO BEING TRIED?

Benes and his lackeys prepared for the trial of Tiso long before the war was concluded. They had plenty of time on their hands to invent the charges that would convict him. They contrived a total of 113 charges, the two main charges being: First, that he broke up the Czechoslovak Republic; and, second, that he collaborated with the Germans.

Let us look a little deeper into these accusations and ponder over them. In the first place the Czechoslovak Republic was broken up in Munich, where the British and the French had the main say. They maimed the Republic to such an extent that it was quite helpless to defend itself.

In October 1938 autonomy was attained for Slovakia by all the political

parties. At that time Hacha was in the President's chair. Since that time Czechoslovakia was always written with a hyphen, and Hacha personally attended the first session of the Slovak Parliament.

However, the Czechs doubted that the Slovaks were governing themselves and wanted to abolish their autonomy in March 1939. They sent the army to Slovakia so that they could be in power in Slovakia again. This angered the Slovaks and led to rioting. It was then that Hitler told Tiso that if Slovakia does not secede from Bohemia, he will subdivide it.

The fact of the matter is that the Slovaks would have been satisfied with autonomy within the framework of a joint republic, but when they received such an ultimatum, the Slovak Parliament approved separation. Can Tiso be held responsible for that? That happened in time of peace and not a single country in the world protested against it. Not even Benes himself.

Now let us look at this so-called collaboration. If by collaboration we mean that negotiations were carried on and agreements were made with Hitler, then such collaborationists were even the British and the French. Did they not negotiate the Munich pact? The Soviet Union also negotiated and made agreements with Hitler. And that was the main reason why the war came about. It is altogether questionable whether Hitler would have dared to attack Poland, if he had not become friendly with Stalin.

Those are the reasons why it seems strange to us that Tiso is being tried. Benes should be on the bench of the accused because he capitulated to Munich. And on the same bench should be Stalin himself, because he too collaborated with Hitler and partitioned Poland with him.

These important facts are somehow forgotten today. Why? To distract attention from themselves, the greatest transgressors are placing the blame on others and are trying them to conceal their own dirty deals. How long will the world tolerate such injustices?

DR. TISO TO BE SHOT—ALEXANDER MACH TO HANG; DRAGNET OUT FOR DR. DURCANSKY

We received an authentic report from Slovakia that Dr. Tiso's trial will be concluded, and the former President of Slovakia will be hanged.

Alexander Mach will be hung. Dr. Durcansky is being sought over the whole world and there is a large reward for his head, for his capture dead or alive.

At first it was reported that Tiso would be pardoned by Benes, but now Benes is determined that he be sentenced to death, because, as a result of Tiso's trial, he has been labeled the world over as a servant of Moscow. After a conference with the Communists Benes made up his mind that Tiso be executed. Dr. Lettrich visited Benes in regards to Tiso too and told him how American Slovaks felt about Tiso; they are 95 percent for him. But Benes convinced Lettrich that Tiso must be executed, and it was decided there and then that he be hanged.

This report comes from an altogether reliable source and is wet with tears.

Our Sacred Heritage

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following is an address delivered by Rembert Gilman Smith, of Tulsa, Okla., and Denver, Colo., before the Denver Chamber of Commerce, March 28, 1947, which contains some very excellent food for thought, as well as conclusions pertaining to our Constitution and the American way of life:

OUR SACRED HERITAGE

(By Rembert Gilman Smith, Tulsa and Denver)

Gladstone declared, "The Constitution of the United States is the greatest charter for the freedom of man ever struck off in a stated time by the mind and purpose of man." The proof of this has been the unequaled material and moral prosperity of our people, since it was adopted in 1787. It was not and is not now perfect, but the great principles which it formulated are of abiding value, and the preservation of them is a sacred duty of every generation of American citizens.

It has dangerous foes, at home and abroad, who plan, plot, and work to destroy it.

Benjamin Franklin said, when it was completed, "We have now written a great charter for the preservation of human welfare; the question now and in the future will be, 'Can we keep it?' "

Abraham Lincoln, both saint and seer, said, "We will nobly save or basely lose the last, best hope of earth."

Since 1932 it has suffered the assaults of ignorant, stupid, or selfish men, so that it now is badly wounded and imperatively needs healing and defense.

The enterprisers of the New Deal and their followers are responsible for its present distress.

The so-called relief, under the New Deal, has lowered the spirit of our people. It has relieved the worthy poor of their pride; the unworthy poor of incentives for industry; the families, fraternal orders, and churches of their duties to care for their needy members; the frugal and industrious of their savings by heavy taxes; the politicians of political insecurity. They think they can safely rely on the votes of the millions to whom they have passed out doles and jobs.

Paternalism is a plague worse for the souls of the people than pellagra for their bodies. The great Grover Cleveland said, "It is not the duty of the Government to support the people, but the duty of the people to support the Government." Under the New Deal, the self-respect and dignity of our people have suffered as never before. Should they die, how unspeakable the tragedy. The New Deal is the new degeneration.

Ordinary beggars occasionally reform and go to work. New Deal beggars will never do so. They will form an inverted aristocracy; their coat of alms will be a well-worn tin cup, indelibly inscribed on it, in words of brass, the legend:

"MEND-I-CAN'T"

Their willingness to work will be exhausted when they vote for the New Deal demagogs, described by Harry Hopkins as "their friends." The demagogs are far more to be blamed than are the destitute.

The New Deal has done much to intensify class consciousness, and to create suspicion and hatred between the classes. This has caused dangerous disunity, from which we had been free.

What can you and I do to heal the wounds in the body of the Constitution of 1787?

Let me suggest the following answers:

1. We can keep informed about governmental affairs, city, State, and national. Both Alexander Hamilton and Thomas Jefferson believed that an educated and informed citizenry is necessary for the preservation of our Government. Voluntary ignorance of governmental affairs is nothing other than negative treason.

2. We can keep in touch with our elected servants, from the President to the sheriff, from the Senator to the city councilman. They need our help, and they deserve our continual scrutiny of their acts. It is dangerous to leave everything to them. Aristotle said "Democracies will die unless citizens continually distrust their elected leaders." This was not cynicism but realism. John Wesley, the great founder of Methodism directed the lay officers of his societies to tell the preachers what they thought wrong in them. You can tell the officers of Government, high or low, what you think wrong in them.

They are not your masters, but your servants. If you vote for them and let them alone, they will likely lessen your freedoms and increase your taxes, until you will go to jail, or to the poorhouse. There are few greater perils now than that from the insatiable appetites of politicians for the earnings of the people, which they take from them by exorbitant and cruel taxes.

3. You can urge the members of your family, your associates in business, and your friends to the discharge of their duties to the Government.

4. You can call meetings in your community, like those of the Town Hall of the early days, for the discussion of governmental problems.

5. You can pray daily to the God of our fathers, whose help alone made possible the Constitution of 1787, to save this Republic from the dangers of these times.

If we will do these things, we will preserve the heritage of political freedom and material welfare which our fathers handed down to us and transmit it to our posterity.

MARCH 28, 1947.

Uniform Marriage and Divorce Legislation

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent that there be printed in the Appendix of the RECORD a recent radio program given over Station WQQW, of Washington, D. C., on the subject of uniform marriage and divorce legislation, such as could be considered by the Congress, after adoption of Senate Joint Resolution 28, which was introduced by me and which is now in the hands of the Senate Committee on the Judiciary.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Mrs. HOTTON. Senator CAPPER, won't you explain, first of all, why you feel there is a need for a uniform marriage and divorce law?

Senator CAPPER. Before I answer that question, Mrs. Hotton, I would like to tell you and the radio audience that I am quite interested and pleased to have a part in your program over this new station, which is endeavoring to formulate its programs in keeping with some of the principles set forth in the now-famous Blue Book put out by the Federal Communications Commission.

Now, back to your question. I think perhaps the best way to explain the need for uniform marriage and divorce legislation is to cite some statistics:

The Nation was properly shocked last September when the Federal Security Agency released provisional figures on marriages and divorces in 1945. Frankly speaking, the figures are startling. The Federal Security Agency recorded these provisional statistics: One million six hundred and eighteen thousand three hundred and thirty-three marriages and 502,000 divorces in 1945. In other words, for every three couples that marched to the altar, one wedding ended in the divorce courts.

Look at the figures for this year. The Census Bureau estimates that in 1947 there will be nearly 40 percent as many divorces as there are marriages. Are we going to allow this problem to wreck our homes, the very core of civilization and human progress? I am convinced it is one of the greatest dangers confronting the American people today—and we must do something about it.

Mrs. HOTTON. Well, Senator CAPPER, when you propose a uniform marriage and divorce law, you imply that our existing State laws are different. How are they different?

Senator CAPPER. It would not be quite correct to say there are as many different laws on marriage and divorce as there are States in the Union, but the divergence is extreme. Most of the State legislatures, however, have been or still are in session, and changes are currently taking place in many of these States. I believe it is still true, though, to say that Nevada and Florida are commonly referred to as "States where divorce is extremely easy." South Carolina recognizes hardly any grounds for divorce action, but I learned that at least one body of their State legislature has adopted a bill which would recognize two or three grounds for divorce action.

Similar variation exists as concerns requirements for marriage. In some States a few days' notice is required, and in other places various kinds of physical examinations are necessary, while in still other States in the Union "quicky" marriages are quite in order under the law of that commonwealth.

I feel that our fundamental institution of the family is seriously threatened by our 49 different and conflicting laws on the subject of marriage and divorce.

A man and woman living together in a community may be law-abiding citizens in that community; their children are legitimate and entitled to the rights of legitimate children in that community.

But if they move even a few miles and cross a State line into another community, the man may become—in law—a bigamist, the woman an adulteress, and the children have neither the right to bear their father's name nor to inherit their parents' property.

Whenever society is compelled in equity to ignore or flout statutory law, there you have engendered a disrespect for law that leads toward break-down of law and order.

Society today in the United States, attempting to live under 49 different and conflicting codes on marriage and divorce, can only make the best of an impossible situation by ignoring the laws. That is bad for society; bad for the individual.

Mrs. HOTTON. What solutions are there which might remedy this situation?

Senator CAPPER. Under our Constitution there are two ways to remedy this situation. We can strive to persuade the 48 State legislatures and the Congress (for the District of Columbia) to enact uniform laws on marriage and divorce and property rights relating to the married and divorced status; or we can amend the Constitution to permit Congress to enact national laws on these subjects.

The first course is just plainly impossible of accomplishment.

I am aware of the objections raised against Federal statutes governing marriage and divorce. They are real. They are serious.

But the danger to our social structure from the threatened destruction of the family in the United States seems to me just as serious, just as real, and in my judgment even more certain.

I have recently introduced a resolution in the Senate which reads as follows:

"The Congress shall have the power to make laws, which shall be uniform throughout the United States, on marriage and divorce, the legitimation of children, and the care and custody of children affected by annulment of marriage or by divorce."

Mrs. HOTTON. If this resolution you have introduced is accepted then what is your proposal?

Senator CAPPER. Believing as I do that major changes in our national program should come by amendments to the Constitution, and not by simple enactment of law, I am pressing for the adoption of the resolution which I have just read, so that the Congress would then have authority to legislate on the subject. As you, of course, know, any constitutional amendment requires the vote of two-thirds of the Congress and ratification by three-fourths of the States.

If, and when, this constitutional amendment is adopted, I have introduced a bill known in the present Congress as S. 198 which could be used as a basis for legislative consideration. Some of the points mentioned for marriage requirements are:

1. Minimum age of 18 years for men and 16 years for women.
2. A notice of 2 weeks.
3. Certain mental and physical requirements.
4. No proxy marriages.

The following grounds for divorce would be recognized:

1. Adultery.
2. Cruel and inhuman treatment.
3. Abandonment or failure to provide for 1 year or more.
4. Habitual drunkenness.
5. Incurable insanity.
6. Conviction of an infamous crime.

The provisions of this bill would, of course, be subject to debate and amendment.

Mrs. HOTTON. Is such an amendment to our Constitution something new, or does similar legislation exist in other countries?

Senator CAPPER. I am not prepared to give a full and complete answer to that question. In passing, however, I would like to cite you to a statement made by Justice Frankfurter in commenting on the Williams case, back in the October term of 1942. The Justice said:

"The Parliament of Canada has exclusive legislative authority to deal with marriage and divorce. Similarly, the Australia Constitution empowers the Commonwealth Parliament to make laws with respect to marriage and divorce. The Constitution of the United States, however, reserves authority over marriage and divorce to each of the 48 States. Now, that is our starting point. In a country like ours where each State has the constitutional power to translate into law its own notions of policy concerning the family institution, and where citizens pass freely from one State to another, tangled marital situations, like the one immediately before us, inevitably arise."

Mrs. HOTTON. What has happened to your resolution at this time? What action is being taken?

Senator CAPPER. My resolution, Senate Joint Resolution 28, is currently in the hands of the Senate Committee on the Judiciary.

During World War II it was understood that no action on constitutional amendments would be taken until most of our veterans returned to their homes. The time has now come for such action, and I firmly believe this matter should be given prompt consideration and—I trust—early approval.

Mrs. HOTTON. Have you had any indication of interest in your proposal? Are women's groups actively supporting it?

Senator CAPPER. Yes; several national organizations have, from time to time, declared themselves favorable to the principle, but the recent war period, as I said before, has prevented their giving attention to any specific proposal on the subject. I do, however, find in my mail a widespread and deep-seated interest among individuals throughout the land in something of this nature. After careful study of the problem over a number of years, it is my conclusion that uniform Federal regulation of marriage and divorce laws through a constitutional amendment such as I have introduced is absolutely necessary to correct the situation.

Keeping in mind our responsibility of preserving the institution of the home, I take this opportunity to urge you individually and as members of various groups to which you no doubt belong, to actively press for congressional consideration of the proposal and support my resolution.

Antics of a President

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. TWYMAN. Mr. Speaker, the leading editorial of the Washington Times-Herald of April 4 is timely and interesting, and I submit it herewith. I recommend the reading of this to all of the Members of Congress.

It follows:

ANTICS OF A PRESIDENT

Some interesting recent incidents on the life of President Harry S. Truman:

On February 26, 1947, ex-Governor George H. Earle, of Pennsylvania, wrote Mr. Truman that he, Earle, had resigned as head of the American Anti-Communist Association. Earle did this only because the association wanted to take a political stand on the nomination of David E. Lilienthal as head of the United States Atomic Energy Commission. Earle himself remained a fierce and vocal foe of both American and Russian communism.

On February 28 President Truman wrote Mr. Earle the following letter:

"DEAR GOVERNOR: I appreciate very much your note of February 26, and I am very happy to be informed of your decision with regard to the American Anti-Communist Association.

"People are very much wrought up about the Communist 'bugaboo,' but I am of the opinion that the country is perfectly safe so far as communism is concerned—we have too many sane people. Our Government is made for the welfare of the people, and I don't believe there will come a time when anyone will really want to overturn it.

"HARRY TRUMAN."

On March 12 Mr. Truman appeared before Congress and asked for loans totaling $400,000,000 to Greece and Turkey. These nations, he said, were menaced by totalitarianism—meaning Russian communism, though the President did not use that term—and—

"Should we fail to aid Greece and Turkey in this fateful hour, the effect will be far-reaching to the west as well as to the east."

On March 22 Mr. Truman issued an Executive order that Communists and Communist sympathizers be thoroughly and swiftly screened out of Government jobs. The explanation given was that "the presence within the Government service of any disloyal and subversive person constitutes a threat to our democratic processes."

To cap all this hocus-pocus, there is the fact that Mr. Truman staged his sensational secret conference with congressional leaders, in which he outlined the Communist menace to Greece and Turkey, just 24 hours before he dictated the Earle letter saying he saw no Communist menace in the United States.

And there we have a picture of a President of the United States cutting some very fancy didoes indeed.

One day he whispers to congressional leaders that Russia is breathing down the necks of our Greek and Turkish friends; the next, he commits to paper his feeling that communism is no threat in this country.

BLOWING HOT, BLOWING COLD

A couple of weeks later, he sounds a $400,000,000 fire alarm against Russia. Ten days after that, he finds Communists in Government jobs to be a menace to that same Government, and orders them booted out of those jobs as fast as loyalty examining boards can run them down.

What's the answer? Or is there an answer?

Did Mr. Truman stir up the Greek-Turkish excitement because he believed those countries were in danger; or because he thought it was politically smart to cut loose on the Reds everywhere? Was the Red-purge order issued out of sincere conviction, or out of political expediency? Does the last man who gets to Mr. Truman sell him the bill of goods; or does Mr. Truman have a yearning to be everybody's sweetheart all the time?

Here's another consideration: It is notorious that the New Dealers a year ago were playing ball with the Reds all over the map of the United States, and that Mr. Truman was doing nothing to stop that game. What guarantee have we that Mr. Truman, if allowed to continue in office after next year, won't take to playing ball with the Reds again, whenever he thinks it politically smart to do so?

If Mr. Truman can explain this episode in his career, and make the explanation sound convincing, it will be the neatest trick of this or any other week.

Government Purchase of Office Buildings

REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. BELL. Mr. Speaker, I was very much interested in the remarks of my colleague, the gentleman from Missouri [Mr. REEVES]. He discussed a matter with which I have long been familiar. I have not had an opportunity to read his bill as yet, but, as I say, I do know about that situation. This is, I think, the largest office building in Kansas City, in the heart of the downtown business area. For a number of years there has been very great congestion down in that area. There is not an office to be rented in Kansas City anywhere within range of the business district. When it was learned a few months ago that the Federal Government had bought that building and was preparing to oust many hundreds of the best firms and business and professional men in Kansas City, it created consternation all over the city. It meant not only that the tenants of that particular building are doing business under conditions of the greatest uncertainty, but it means that every other business firm and every professional man in Kansas City in the business district does not know where he is going to land because of the great scramble for office space that has been created. There are many things I would like to say in connection with this situation. Unfortunately, I have only 1 minute allotted to me at this time. However, I expect to discuss this problem further when Mr. REEVES' bill reaches the floor of the House.

Your Land and Mine

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I wish to submit the following copy of a broadcast entitled "Your Land and Mine" by Henry J. Taylor, which was given on March 14, 1947:

President Truman proposes that America spend $400,000,000 to stop the Communists in Greece and Turkey. I've been to both Greece and Turkey and have seen Communists operate there at first hand. Therefore I have some idea about what President Truman is warning us against.

But if America has that much at stake in stopping Communists over there, how about stopping the Communists right here in the United States? If we're going to throw them out of Greece and Turkey, how about throwing them out of America—out of our schools, our labor unions, our universities, and out of our own Government?

How often we see troubles elsewhere while we are blind to the same troubles here at home. Communists are exactly as much of a threat to America inside America as they are to America in Greece, Turkey, and elsewhere. Surely that should be plain.

If we haven't sense enough or courage enough to throw them out of America, you may be sure we cannot succeed in throwing them out of Greece.

COMMUNISTS HAVE NO PLACE HERE

It's like running up and down the block with a broom, cleaning your neighbors' houses while you set a bad example by leaving your own home full of dirt—rats in the basement, termites in the floor, snakes around the place distributing poison—soiling your own home all the while.

When St. Patrick drove the snakes out of Ireland, the snakes probably protested and there must have been a lot of hissing going on. What we need to do now is to drive the snakes out of America and let them hiss. We should not pay any attention to the hissing.

Foreign agents plotting our downfall have no place in this country. Their operations, reaching into the American labor movement, American unions, schools, colleges, newspapers, radio, and the American Government itself—high in the ranks of American planners—produce a poison we should not be called upon to absorb at home while we try to stamp out the same kind of thing abroad.

COMMUNISM AN ECONOMIC FAILURE

Communism, my friends, is a moral question as well as an economic question and a question of national defense. Let's spell it out on those grounds. Let's try to be simple and to the point.

The economic failure of communism is well known. Even Communists and their innocent, bewildered fellow travelers among us admit that communism only comes where people are in despair or where the Red Army stands on the border—that's why a technique of confusion and despair such as strikes or any kind of demoralization is valuable to Communists everywhere.

So, instead, let's look at the morals involved and ask any school teacher or college professor, youth leader, writer, or anyone how he can apologize for communism and still remain a good American citizen. It cannot be done. Let's be fair, but let's call a spade a spade and a snake a snake.

COMMUNISM A MORAL FAILURE

For numerous innocent people in our land, especially in our schools, don't seem to understand the damage they do to themselves and to our great country in being hazy about the moral side of communism.

The underlying evil in the Communist philosophy, by which Communists try to undermine a life based on private property and free enterprise and individual merit, is its rejection of man's free will in discriminating between right and wrong, good and evil.

Evil, then, imply, is not personal but social; not a matter of you or me but of the social order. If you or I do anything wrong, it's not our fault. The fault lies in the fact that we live in a democracy.

Evil is blamed on a system or institution, never on a person. Evil is explained away in terms of physical environment. In short, Communists suggest that evil is physical and organizational and political, not moral.

Thus, according to the Communist philosophy, capitalism is falsely blamed for the ills of mankind. Democracy as we know it is blamed for the evils of the world. That's why the Communist ideology is utterly impersonal.

Stripped of its trappings, the principle is simply the principle of the ambitious tyrant and the ruling political class who have hit on a political racket. Summed up, the principle is this—no heaven, no hell—no hell, no evil—no evil, no judge—no judge, no God.

THE SYSTEM EVERYTHING—MAN NOTHING

Man, devoid of free will, is not responsible. Only a system is responsible. Agitate for the system, lie for the system, die for the system. That is why communism's respect for human life is so low. That is why Russian concentration camps, secret police, and terrorism are not shocking to the Communists and fellow travelers in our country.

The system over there means everything—the individual man or woman means nothing.

Much of this false philosophy has crept into our schools today and into the American labor movement too. The idea that a system of organization means so much and the individual man so little.

WE UNDERESTIMATE THE ENEMY

Further, as FBI Chief J. Edgar Hoover has said, we sadly underestimate the degree and methods by which we are attacked by an actual Communist fifth column operating in our country, just as it is operating in Tur-

key, in Greece, and in so many places elsewhere.

Wrote the FBI chief in a recent issue of the American magazine, and I quote him:

"The disloyalty to America of American Communists is no longer a matter of conjecture. The Communist seeks to infiltrate the ranks of labor for the purpose of using labor for the revolutionary purposes of the Communist Party.

"A Communist, steeped in stealth, trickery, and deceit, cannot long survive the truth.

"The healing rays of public opinion," concludes Mr. Hoover, "focused on communism will have the same curative effects that X-rays have upon cancerous growths, if applied in time."

THEY ARE BORING FROM WITHIN

Yes, kind friends, when once we realize that the Communists in our midst are enemies of the United States, we will then make some progress toward understanding their significance in America as well as we understand their significance in Greece and Turey. Like typhus germs in a community, it isn't the great number of germs that's important—it's what each germ does that counts.

According to the British Empire Communist Congress meeting in London in March, there are at present 12,500,000 Communists operating in 57 countries outside Russia. This means, my friends, that there are two Communist Party members operating outside Russia for every party member inside Russia, that country having 6,000,000 members at home.

It is their basic purpose to see that there shall be no strong country in the world outside the U. S. S. R. It is their intention to see that the United States shall be unable to defend itself in a pinch. The strategy of "boring from within" is, of course, as old as history.

Through giant coast-to-coast interlocking union combines into which they attempt to bore, and through the device of industry-wide bargaining to which they have attached themselves, Communist fifth-column members cast their eyes on the possibility of a general strike in our country, just as they do in England and France, India, everywhere.

And, remember, so far have we gone down the road of lopsided legislation that a general strike is not only possible in America today, but it would be legal. I'm not predicting such a strike, but that is the fact.

THEY WISH TO BREAK OUR CONFIDENCE

With all this, they wish to break our confidence in American ways of doing things, American institutions, American competitive enterprise, the determination of plain, progressive folks and good companies to stand on their own feet and get ahead.

Defeatism about our individual future under American conditions is distributed systematically along with other poisons.

As working people we have our problems. I know that as well as the next man. Life is hard for most of us in one way or another. But knowing the value of our life in America, regardless of our individual lot, and comparing it with any place else in the world, it simply is not safe for us to take what we have for granted.

Great effort and great vigilance are needed to keep this country free and strong. If European-minded experimenters among us prefer communism or socialism, let them operate elsewhere. There is plenty of room for them in Russia. If they like it there so much; if they like treating people as guinea pigs; and if they are interested in agitating for a political caste system, lying for it, dying for it, let them swing their weight around in Russia. That's where their thoughts belong.

It is in this respect that many innocent people who really think they are liberals become badly confused.

They cannot see that communism, and even socialism, in practice means tyranny; means less and less freedom, and less and less of the good things of life for ordinary people.

OUR NATION WILL BE WHAT WE ARE

They overlook the moral degradation in communism entirely. No heaven, no hell—no evil, no judge—no judge, no God. The fact remains that the "big brain" attitude toward ordinary people is essentially a guinea-pig attitude, regardless of good intentions. This attitude regards people as specimens to be told what to do and what not to do.

The Government through excessive taxation is to spend the working people's money for them through Government bureaus instead of leaving more for working people to spend for themselves. People are to be dealt with in half truths on the theory that plain folks are too dumb to understand the whole truth and act wisely on it.

The fact is that our country is no better than the individual people in it. In the long run, our Nation will be precisely what we are—strong if we are individually strong, weak if we are weak, productive if we are productive, stagnant if we are lazy and idle. President Truman has defined world conditions. Our home conditions we can see for ourselves.

The place which Communists and fellow-travelers have in our domestic difficulties has been made crystal-clear by J. Edgar Hoover. So what are we waiting for? Why doesn't the State Department, Congress, and the whole Government turn J. Edgar Hoover lose to rid us of these snakes? He'd make the best St. Patrick I can think of.

STAMP OUT COMMUNISM HERE

Home conditions and world affairs are just too dangerous to allow Communists any longer to attack us here with their poison and their plans. The Communist Party should be ruled off the election ballot in every State in America.

Communists on whom the FBI has a file should be forced to register as alien agents. No Communist should be eligible for office in any American organization, school, university, or in any capacity whatever in the United States Government.

While we interest ourselves in Greece and Turkey, if our own Government doesn't protect us against these same planning and plotting people here at home, who will? America's future must remain in truly American hands. American school minds must learn American lessons, not Russian lessons, or even British lessons.

America must remain free and open to the individual, open and available to people on the way up—young Americans coming forward on the sunny side of life in the greatest country on the face of the earth.

The coming generation must be free to walk in this green pasture without being bitten by snakes or caught in political coils. The Communist attack on the free world, the things President Truman says we must stamp out elsewhere, we must stamp out here in your land and mine.

Aid for Greece and Turkey

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. ROBERTSON. Mr. Speaker, soon the Congress will be confronted with the question of the President's recommendation of the loan to Greece and Turkey. This proposed loan can hardly be viewed in the same light as the loan to Great Britain. Rather it is an effort to stop the forward march of the Communist Party headed by Marshal Stalin into the southern part of Europe to gain control of the Mediterranean Sea.

One of the interesting things about this proposed loan is that many of the sympathizers in this country who were for the loan to Britain, in many instances now are against any proposed loan to Greece and Turkey. There are a great many people in the United States who would become very indignant if you intimated they possessed communistic tendencies. Still they are against doing anything to stop the forward movement of communism in any part of Europe, and they are very prone to talk about civil liberties in the United States.

I should not suggest for a moment that these people are Communists. I am interested in their idea of liberalism to which they tie their kites. It might be interesting to see what might happen to some of these people, if and when the Stalin Communists move in.

Under unanimous consent, I include herewith the following editorial from the Washington Times-Herald of April 7 entitled "If I was the Politburo":

"IF I WAS THE POLITBURO"

We have a friend, who shall be nameless here, and who comes up now and then with a notion which we find interesting in a grisly, spine-wrinkling sort of way.

The other day, for instance, sitting in a restaurant after lunch with a cigar jitterbugging in his mouth and ashes falling like snowflakes on his vest this friend of ours held forth approximately as follows:

"You know, I got to thinking what I would do if I was the Politburo, and Russia had moved in and conquered the United States.

"The Politburo, of course, is those 14 guys in Moscow who kick the Russian bear around and he has to pretend he likes it.

"Well, I was thinking, suppose I was the Politburo, and suppose us Russians had come over the top of the world with a flock of bombers, followed up by a flock of air-borne infantry, and had caught Uncle Sam in a bigger and better Pearl Harbor, because he hadn't had sense enough to keep his guard up and smack down us Russians' fifth column of Communists and fellow travelers in America, or because he'd spread himself too thin combatting communism in other countries.

"Anyway, say us Russians are now sitting pretty in control of this whole ex-great and ex-glorious ex-nation, and say I'm the Politburo. What do I do first?

"Well, everywhere else that I've gone—Poland, Baltic states, and all—I've begun by killing off a lot of people. Only I don't call it killing. I put it more refined-like. My name for it is liquidating 'em for the good of the great new classless society which I'm setting up.

"Of course, the real reason I liquidate 'em is that I'm afraid of 'em, but naturally I can't admit that out loud."

Our friend paused to gulp a drink of water, then went on:

"Now, who would I be most afraid of? The President, Congress, governors, legislatures, mayors? I don't think so. After all, most of those guys are politicians, and once I'd liquidate a few of them with plenty of fanfare the rest would probably go to work for me.

"Nope—I think the first two bunches of Americans I'd get after in a big, wholesale way would be nobody but the American Communists themselves, and those of their fellow

travelers who had been sincere believers in communism and actively disloyal to Uncle Sam. Yep; first off, I'd liquidate a big piece of my own former fifth column.

"LIQUIDATION PRIORITIES

"You see, these local Reds, and the fellow travelers who really hope to blast our Government down some day, are mostly natural-born soreheads, haters of everybody in authority, or they got that way early in childhood's unhappy days. So, no sooner am I—the Politburo—in authority in this country than most of them take to hating me, just because I'm the new boss.

"So I'd get on their trail first. I'd have at least half of the United States Communist Party members murdered in cold blood, just to show the other half that the Communist Party all along had meant what it said about absolute obedience to its ruling clique. And any fellow travelers who tried to exercise their old traditional American freedom by arguing with me about anything—anything at all—why, I'd mow 'em down with machine guns.

"Next, I think I'd turn on the big shots in the labor unions, and bump them off without even any mock trials like they have in Russia. Likewise, all the really active, sincere guys in the unions' rank and file.

"These babies, you see, have been telling the workingman for generations now that he's entitled to a living wage and then some, and decent working conditions and all. Not with me in charge he isn't. His job in my Communist set-up is to work like a slave, live off the leavings, let my little Communist master class take all the gravy, and never question my wisdom.

"Then, I'd knock off a lot of clergymen of all the churches, and several thousand outstanding teachers and professors, and maybe 90 percent of all the newspaper and magazine and radio and movie people I could catch. All these rascals, you see, are forever putting ideas into people's heads—helping 'em think—and if there's one thing a Communist government can't stand for it's a bunch of the slaves running around thinking. Got to make robots of 'em all, or after a while they'll make blood sausage meat of you.

"It would be quite a massacre," our friend wound up with a sardonic grin; "but I bet if I was the Politburo and handled things that way, it would be one long, weary time before the American people wriggled out of my trap."

Profit Records of 2,900 Corporations

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the House to the story incorporated herein from the New York Times of April 6, relative to the profit showing by most of the leading corporations of the Nation.

The news item from the New York Times is as follows:

REPORTS OF 2,900 CORPORATIONS SHOW EARNINGS MORE THAN DOUBLED IN SOME CASES IN 1946

Annual reports of 2,900 leading corporations showed that 1946 earnings in many lines more than doubled the previous year's net, according to a tabulation appearing in the April letter of the National City Bank issued last week. The profits of the entire trade group were all over the 100 percent level, the compilation showed. In commenting on the table, which is presented below, the bank letter said:

"Analysis of the sales figures where given shows that the high earnings were in most cases the result of greatly expanded volume of business, rather than of abnormally wide profit margins, which for most groups were actually below the average of active prewar years.

"Moreover, in considering gains in net income compared with 1945, allowance should be made for reduction in taxes, including elimination of excess profits tax, which in many cases more than offset a decline in operating earnings. The fact that 1945 statements of many companies included heavy charge-offs of war plants and facilities, which did not recur in 1946, also contributed in boosting the comparative net earnings.

"Need for discrimination in drawing conclusions about earnings is further emphasized by the fact that approximately one-fourth of the manufacturing corporations so far reporting—including some of the largest and most successful in the country—experienced lower earnings than in 1945.

"This reflected cancellation of war contracts, strikes, reconversion difficulties, shortages of materials, increased costs and unprofitable Office of Price Administration ceilings, most of these factors applying chiefly to companies in the heavy industries and to operations during the early part of the year.

"Other outstanding exceptions to the upward trend were railroads and air transport companies."

Net income of leading corporations for the years 1945 and 1946

[Net income is shown as reported—after depreciation, interest, taxes, and other charges and reserves, but before dividends. Net worth includes book value of outstanding preferred and common stock and surplus account at beginning of each year]

Number of companies	Industrial groups	Net income after taxes		Percent change [1]	Percent return on net worth	
		1945	1946		1945	1946
23	Baking	$29,093,000	$60,872,000		10.2	21.8
16	Dairy products	38,989,000	65,454,000	+67.9	12.0	18.9
17	Meat packing	34,825,000	70,461,000		5.4	10.8
26	Sugar	28,015,000	39,154,000	+39.8	7.0	9.5
59	Other food products	110,453,000	182,712,000	+65.4	11.5	18.1
16	Soft drinks	36,661,000	39,111,000	+6.7	19.4	19.5
34	Brewing	22,587,000	39,632,000	+75.5	14.5	23.4
12	Distilling	65,362,000	164,001,000		19.7	41.1
23	Tobacco products	76,634,000	100,690,000	+31.4	9.4	11.4
46	Cotton goods	28,760,000	102,896,000		7.8	27.1
13	Silk and rayon	14,280,000	42,419,000		9.5	24.5
7	Woolen goods	11,986,000	30,328,000		10.3	25.2
20	Hosiery, knitted goods	7,990,000	21,779,000		11.1	28.2
41	Other textile products	36,113,000	83,828,000		9.5	20.8
31	Clothing and apparel	14,000,000	35,430,000		9.8	23.3
9	Leather tanning	3,623,000	5,030,000	+38.8	8.8	10.8
21	Shoes, leather products	17,262,000	26,757,000	+55.0	8.2	12.7
27	Tires, rubber products	66,152,000	126,759,000		10.7	20.6
24	Lumber	20,165,000	43,764,000		6.8	14.1
14	Furniture, wood products	6,316,000	11,915,000	+88.6	6.5	10.8
70	Pulp and paper products	61,254,000	140,163,000		6.5	14.4
28	Printing and publishing	17,467,000	31,478,000	+80.2	10.4	17.9
59	Chemical products	216,701,000	321,830,000	+48.5	10.2	14.7
26	Drugs, soap, etc	74,312,000	121,963,000	+64.1	15.5	23.6
17	Paint and varnish	20,675,000	36,682,000	+77.4	8.2	13.8
40	Petroleum products	596,662,000	760,592,000	+27.5	8.8	10.7
23	Cement	4,634,000	17,186,000		2.6	9.7
11	Glass products	33,513,000	52,136,000	+55.6	10.2	14.8
37	Other stone, clay products	29,047,000	61,819,000		6.8	13.4
51	Iron and steel	183,531,000	273,336,000	+48.9	5.1	7.5
12	Agricultural implements	54,671,000	45,520,000	−16.7	7.1	5.7
64	Building, heating, plumbing equipment	42,359,000	62,051,000	+46.5	8.5	11.4
71	Electrical equipment and radio	149,958,000	114,547,000	−23.6	12.4	8.9
55	Hardware and tools	40,155,000	56,239,000	+40.1	10.3	14.0
39	Household equipment	16,927,000	32,618,000	+92.7	10.6	18.4
135	Machinery	91,240,000	106,237,000	+16.4	10.1	11.3
24	Office equipment	33,052,000	58,173,000	+76.0	11.3	18.9
26	Nonferrous metals	110,710,000	136,685,000	+23.5	5.8	7.1

[1] Increases or decreases of over 100 percent not computed.
[2] Before depletion charges in some cases.
[3] Due to the large proportion of capital investment in the form of funded debt, rate of return on total property investment would be lower than that shown on net worth only.
[4] Figures represent in most cases operating earnings only, and do not include profits or losses on investments.
[5] Deficit.

Mocking Strike

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include the following editorial which appeared in the Washington Post, Monday, April 7, 1947:

MOCKING STRIKE

Nobody has been really deceived by the transparent subterfuge by which Mr. Lewis has sought to camouflage his defiance of the antistrike order upheld by the Supreme Court. The clause in the Lewis-Krug contract permitting the UMW to designate memorial periods was never intended to cover a 6-day suspension of work throughout the coal fields. It differed in no respect from a strike. If the losses resulting from this mocking strike should be followed by another indefinite period of idleness on the specious ground that only two coal mines have been properly certificated as safe, any public condonation of Mr. Lewis' mourning strike there may have been will, we feel sure, give place to indignant condemnation of his latest move.

Of course, it remains to be seen whether Mr. Lewis' request that the coal mines, with two exceptions, be closed until they have passed Federal inspection will be interpreted by his followers as a command to prolong the present strike. If so, the Government's only recourse will be an appeal to the courts for another injunction. Referring to the call for a 6-day memorial period, we said that John L. Lewis had "gone as far as he possibly could toward thumbing his nose at the administration and the Supreme Court without incurring the additional fine of $2,800,000 which the Court had prescribed in case of another UMW strike against the Government while the injunction granted last November remains in effect." But it appears we were wrong. We failed to do justice to Mr. Lewis' unexcelled ingenuity in evading legal restraints by distorted interpretations of law and arbitrary definitions of the terms of his contract with the Government. We also failed to make adequate allowance for the implacability of his determination to get even with his arch enemy, Secretary Krug.

As Captain Collisson has pointed out, it is necessary to follow the rule of reason in determining whether mines are sufficiently safe to permit of their reopening. The procedure suggested by Mr. Lewis is obviously designed to achieve by indirection the mine shutdown that he has been prevented from decreeing openly as the result of the Supreme Court decision. If he is not stopped, the Government will be forced to admit its impotence to deal with organized minorities that threaten to paralyze the Nation's industry to gain their ends. That way lies political disintegration, and this is more to be feared than the economic losses that would result from a prolonged suspension of coal mining.

Missouri Legislature Endorses H. R. 1759

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. REEVES. Mr. Speaker, the bill, H. R. 1759, to eliminate the discriminatory application of the Federal income tax laws against citizens of the 39 noncommunity-property States, which I introduced in the House on February 6, 1947, has received widespread support and approval throughout the country. Many Members of the House have expressed their concurrence with the proposal, and I am satisfied that the bill will pass the House by a large majority when it is brought to the floor. Thus far I have heard of no opposition to the measure.

The legislature of my home State, Missouri, has adopted a resolution memorializing the Congress that H. R. 1759, or equivalent legislation, be enacted. Under leave heretofore granted I include in my remarks the text of the resolution:

"Senate Concurrent Resolution 5

"Whereas an inequality exists between citizens and residents of the several States of the United States, in that residents of nine States having community property laws are privileged to divide incomes between husband and wife for income tax purposes, thereby reducing the income taxes required to be paid by said residents, which privilege is being denied to the residents of 39 States not having community property laws; and

"Whereas by reason of the premises legal privileges are enjoyed by a minority of the citizens of the United States of America, solely determined by residence, which are not permitted to all the citizens of the United States; and

"Whereas it is within the power of the Congress of the United States of America to correct such inequality by adopting suitable and appropriate legislation therefor: Now, therefore, be it

"*Resolved by the Senate (the House of Representatives concurring therein)*, That the General Assembly of the State of Missouri, in its sixty-fourth regular session assembled, respectfully memorialize the Congress of the United States of America that H. R. 1759, introduced by Representative REEVES, of Missouri, or any other suitable and appropriate legislation be enacted permitting division of income between husband and wife for income tax purposes by the citizens and residents of all of the States of the United States; be it further

"*Resolved*, That a copy of this resolution be dispatched to the United States Senators and Congressmen from Missouri."

I hereby certify that the above senate concurrent resolution was adopted by the Missouri Senate on March 4, 1947, and concurred in by the Missouri House of Representatives on March 28, 1947.

[SEAL] ROY D. MILLER,
Secretary of the Senate, State of Missouri.

Golden Gate Bridge

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the California Legislature, fifty-seventh general session:

Assembly Joint Resolution 33

Assembly joint resolution relative to accepting amendments to permits from the Government of the United States for the construction of approach roads and toll-collection areas over certain rights-of-way leading to the Golden Gate Bridge, and relating to the retrocession by the Congress of the United States of jurisdiction over said rights-of-way as relocated and said toll areas, bridge ends, and bridge

Whereas on February 13, 1931, the Secretary of War, pursuant to the authority vested in him by the laws of the United States, granted to the Golden Gate Bridge and Highway District certain rights-of-way upon which are located the approach roads, toll areas, and bridge ends of the Golden Gate Bridge; and

Whereas the said grant has been accepted by the Golden Gate Bridge and Highway District, and also by the Legislature of the State of California; and

Whereas it has become advisable to use additional land for widening of the north entrance to the toll plaza located on the Presidio of San Francisco Military Reservation; and

Whereas on the 15th day of August 1946, and the 6th day of March 1947, the Secretary of War did grant to the Golden Gate Bridge

and Highway District amended permits granting the use of said additional land as set forth in red on the map attached to and made a part of said amended permits of August 15, 1946, and March 6, 1947; and

Whereas it was provided in said amended permits that the amendments should not become effective and the original permit shall remain unchanged thereby unless and until the State of California shall have, with respect to such amendments, taken the same similar action which it was required to take with respect to the original permit and which is set forth in paragraph 11 and subparagraphs 11a, 11b, and 11c of that instrument as a condition precedent to the taking effect thereof: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California (jointly), That said amendments, dated August 15, 1946, and March 6, 1947, to said permit, dated February 13, 1931, granted by the Secretary of War to the Golden Gate Bridge and Highway District, be and the same hereby are, together with each, all, every, and singular, the terms, conditions, limitations, reservations, and requirements therein contained, accepted by and on behalf of the State of California; and be it further

Resolved, That the State of California does hereby make application to Congress for a retrocession of jurisdiction over the rights-of-way as relocated and amended by said amended permits of August 15, 1946, and March 6, 1947; and be it further

Resolved, That the State of California will, in case such retrocession of jurisdiction is granted by Congress, accept such retrocession of jurisdiction, and will assume the responsibility for managing, controlling, policing, and regulating traffic thereon, all subject to the following limitations and to such other limitations as Congress may prescribe;

(a) That nothing in said permits contained shall be construed to give to the State of California or any of its agents, authority at any time to regulate traffic of military personnel or vehicles upon the said bridge or roads. All traffic upon said roads and upon said bridge shall be free from any tolls, charges, or any form of obstruction by State or other agencies, against military and naval personnel and their dependents, civilians of the Army and Navy traveling on Government business under military authority, and Government traffic.

(b) That whenever in the judgment of the Secretary of War or his authorized representatives any emergency exists which justifies it, he may assume exclusive control and management of said bridge and roads and may then in his discretion prohibit, limit or regulate traffic thereon.

(c) That nothing in said permits contained shall be construed to confer upon the State courts the right to try persons subject to military law for crimes or offenses committed on said roads, or upon said bridge within the boundaries of the respective military reservations involved, but the courts of the United States or military tribunals as now or hereafter provided by law, shall retain exclusive jurisdiction to try such persons for such offenses; and be it further

Resolved, That the State of California does hereby agree to make the additional right-of-way granted by said amended permits of August 15, 1946, and March 6, 1947, a part of the system of public highways of the State; and be it further

Resolved, That by the acceptance of such amended permits the State of California expressly agrees that the additional land covered thereby shall be used for road or highway purposes only in relation to the approaches to the Golden Gate Bridge and that no structure will be erected thereon that will interfere with the use of the combined Army-Navy signal station located on the top of the traverse at the left of Emplacement No. 3, and that the use of such land for the widening of the bridge roadway or approach will not interfere with the use of the War Department rooms in Emplacement No. 3 or the access by means of tunnel to same or the extension of said tunnel which may be necessary in relation to the new limits of the Golden Gate Bridge and highway district right-of-way; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the Secretary of War, to each House of Congress, and to the Senators and Representatives from California in the Congress of the United States.

Nazi Party Membership Records

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. BENDER. Mr. Speaker, a few days ago before the House, I called attention to the fact that there were several hundred known Nazi Party members in Turkey, and I asked what does the State Department intend to do in regard to known Nazis in Turkey as a condition for the loan which that dictatorial Government has requested from the American taxpayers. I mentioned also that the Turks have hundreds of millions of dollars of concealed Nazi assets and $75,000,000 of looted Nazi gold. My remarks seemed to have disturbed some of the Members of the House. I wish to suggest for those who are interested that they consult the 800-page document submitted to the Senate Military Affairs Committee by the War Department of the United States this last December, which lists the Nazi Party membership of people throughout the world—lists which were found in Berlin itself by United States military officers. This list gives the party number, the membership numbers of the persons, the date they entered the Nazi Party, the date of birth and birthplace, the last recorded address and occupation. The Nazis were nothing if not thorough. We now have a list from Berlin itself of the Nazi Party members resident throughout the war in Turkey. Here is the list of Nazi Party members resident in Turkey:

Nazi Party membership records

TURKEY

Membership No.	Name	Date entered	Birth date	Birthplace	Last address recorded	Occupation
8182263	Ahlhorn, Wiltrudis	Oct. 1, 1940	Mar. 29, 1917	Elsfleth	Istanbul	Foreign-language clerk.

3744723	Wilmsdorff, Else von (2)	May 19, 1936	Nov. 5, 1888	Berlin	Ankara, German Embassy	Housewife.

Mr. Speaker, I trust that the Members of the House will note that a number of these Nazi Party members are merchants, teachers, engineers, bank officials, and professors. These people, so far as is known, are still in Turkey.

For other Members of the House who are interested particularly in Greece, I wish to submit also for the RECORD the list of Nazi Party members who lived throughout the war in Greece. Again, the full data—name, occupation, birthplace, last recorded address, and so forth—is included. There are approximately 300 known Nazi Party members in Greece:

Nazi Party membership records—Continued

GREECE

Membership No.	Name	Date entered	Birth date	Birthplace	Last address recorded	Occupation

Mr. Speaker, what does our State Department propose about the known Nazi Party members in Greece and Turkey? What does our State Department know about the present relationships between these Nazis and the present Turkish and Greek Governments? Does our State Department know whether or not any of these men are deliberately stirring up trouble in those countries? Do they know whether or not the great Communist "bugaboo," to use President Truman's word in his letter to Mr. Earle of 2 weeks ago, is being propagated by these Nazi Party members in the accepted Hitler manner? What, Mr. Speaker, are these Nazis doing in Turkey and Greece today? The American people want to know.

I include an item from the Washington Post of April 3 as a part of my remarks:

TRUMAN CALLS REDS IN UNITED STATES JUST "BUGABOO"

PHILADELPHIA, April 2.—George H. Earle, former Minister to Bulgaria and Austria, revealed tonight that President Truman wrote him that communism was a "bugaboo" just 2 weeks before the Chief Executive launched his Greco-Turkish aid program to block Russian infiltrations.

The letter was dated February 28.

Mr. Truman's letter was a reply to one Earle had written to the President informing him that he had decided to resign as head of the American Anti-Communist Association.

The President's letter said:

"I appreciate very much your note of February 26 and I am very happy to be informed of your decision with regard to the American Anti-Communist Association.

"People are very much wrought up about the Communist 'bugaboo,' but I am of the opinion that the country is perfectly safe as far as communism is concerned—we have too many sane people.

"Our Government is made for the welfare of the people and I don't believe there will ever come a time when anyone will really want to overturn it."

Mr. Speaker, sometimes the American people think that our officials in Washington are busy and sometimes I think the American people are right—particularly in regard to the State Department.

Truman's Standard

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, there is no mystery behind President Truman's magnificent handling of the most difficult job in the world—the Presidency of the United States. His courage, his common sense, and his ability to solve problems as they arise is becoming well known to the American people. His greatest asset is just being himself—a man of the people, interested in the people, and working always in their behalf. There is no doubt in my mind that he is growing with his responsibilities. As a people we should be proud that we have such a man as Harry Truman to head our Government in these troublous and difficult times.

It is with a great deal of pleasure that I insert in the RECORD with unanimous consent, an article from the United States News of March 21, 1947, and the Washington Post of April 7, 1947. These articles indicate not only that the American people are soundly behind the President but also that the standards which he has set indicate a sense of responsibility to his office and that the test which he has faced, he has met and successfully overcome. The straightforwardness, the statesmanship, and the honesty of his approach to our problems are factors which have endeared him to the American people and which will cause our esteem for him to rise still more in the perilous days ahead.

[From the United States News]

THE UPSWING FOR MR. TRUMAN—FORCES BEHIND HIS COMEBACK FROM 32 PERCENT POPULARITY TO 51—ASSURANCE IN MEETING CRISIS—SHIFT FROM PERSONAL ADVISERS TO A CABINET GOVERNMENT

The Nation's greatest mystery lies behind the question: What is happening to Presi-

dent Truman? Old doubts and uncertainties are disappearing. The President is moving with assurance and aplomb into all sorts of grave problems. He is assuming a role of positive leadership. And his popularity is rising steadily.

In spite of an election which gave Congress to the Republicans, Mr. Truman is growing in stature. Many Republicans are praising the frankness with which he put the Greek and Turkish problem before Congress. His relations with Congress often are friendly and cooperative; they lack bitterness even on party matters. And, as a mark of congressional esteem, Mr. Truman is being excepted from the proposed ban against third terms.

A new Truman is emerging, a man entirely different from the fumbling and inept person who was depicted in the campaign speeches of 1946. Watching him in action now, the Democrats are picking up new courage and the Republicans are deciding that he will be no pushover in the next Presidential campaign.

In the disputes of last summer and under the campaign battering of autumn, Mr. Truman's popularity shrank to a point at which only 32 percent of the voters approved of the way he was running the Presidency. Since then, he has climbed steadily, as the chart on page 16 indicates.

Most of his gains have been made since the Republican Congress took over. Between the low point of October and the time Congress convened in January, Mr. Truman picked up only three points on the Gallup polls. He gained 13 more points in January for approval of the job he was doing, and, by March, had brought 51 percent of the voters to the point of saying they would vote for a Democrat for President if the election were held then. For Presidential-election purposes, the strength of Mr. Truman is indistinguishable from that of his party.

During the period in which his popularity was rising Mr. Truman was engaged in a series of works of prime importance. He slugged it out with John L. Lewis, made a bid for cooperation with the Republican Congress, got rid of some of his advisers, discarded most of the war controls, presented a budget which Republicans are finding hard to cut, and chose General of the Army George C. Marshall to be Secretary of State.

Behind this rise in popular esteem lies a story of a changing approach to national problems. Mr. Truman fell heir to a governmental method created to fit the working habits of his predecessor, Franklin D. Roosevelt. It did not fit Mr. Truman. That system has been discarded. A new one is taking its place.

Mr. Roosevelt had developed a highly personalized form of government. He had, from the days of the first brain trust in the 1932 campaign, a group of intimate advisers that often stood closer to him than any Cabinet officer. Numerous jealousies and disputes arose from this operation. Some of them overlapped into the Truman administration. Mr. Truman found that he could not work that way.

A Cabinet Government is being installed to fit Mr. Truman's manner of working. Unofficial advisers play nothing like as important a part in his operations as do members of his Cabinet. His personal inclinations lead him toward a regularity of procedure into which this method fits.

Before the President called in Republicans and the leaders of his own party in Congress for a talk about the Greek and Turkish situation, he held a full-dress Cabinet meeting at which every phase of the problem was thrashed out Methods of handling it were thoroughly discussed. The main course of action was agreed upon at this meeting.

With his course decided, the President began his negotiations with Congress. After discussions with congressional leaders, he took the problem to Capitol Hill in a personal speech to a joint session.

With some variations this is the typical Truman approach to a big problem. This does not mean that Mr. Truman does not consult with experts outside his Cabinet. He does. He collects all the information he can and then makes his decision. His closest friends say that no one person or group of persons can be said to make up Mr. Truman's mind for him.

Full authority is given to each Cabinet officer to deal with the problems inside his own bailiwick. The relationship between Mr. Truman and the Cabinet resembles that between the head of a big corporation and its department chiefs.

When a problem overspreads one department, or affects the policy of the entire Government, it is thrashed out at a full-dress Cabinet meeting, and often the decision of the Cabinet becomes the course the President follows. This is what happened when the meat controls were thrown off last autumn, when the decision was made to fight it out with John L. Lewis, and again in the Greek-Turkish crisis.

Two points of view are represented in the Cabinet: One is nonpartisan and nonpolitical. The other is that of experienced politicians. The Cabinet members are finding that the President gives the greatest weight to purely nonpolitical opinions.

The nonpolitical group includes Secretaries Marshall; Averell Harriman, of Commerce; James V. Forrestal, of Navy; Julius A. Krug, of Interior; and Robert P. Patterson, War. All are experienced in public service and none has a political background.

Secretary John W. Snyder, of Treasury, falls into the same general grouping, but his long and close friendship with the President somewhat sets him apart from the others. His political ambitions are chiefly for the President.

Four members of the Cabinet have a strong Democratic Party background. They are Postmaster General Robert E. Hannegan, Attorney General Tom C. Clark, and Secretaries Clinton P. Anderson, of Agriculture, and Lewis B. Schwellenbach, of Labor.

Time and again, however, when questions of what would be the political thing to do are raised, the President tells his advisers that he is not interested in what is the right thing to do politically. Cabinet officers insist that he is putting emphasis solely upon what is the right thing to do as a matter of principle.

Teamwork, thus, is developing in the Cabinet. Close friends of the President say that the Cabinet's members are pulling together as a harmonious group and that the alterations Mr. Truman has made in its membership since he took over have removed the dissenting elements.

One by one, the men who drew criticism upon Mr. Truman have disappeared from the White House group. The two fireballs of the Roosevelt administration, Henry A. Wallace and Harold Ickes, went out of the Cabinet. James K. Vardaman, Jr., and George Allen no longer attract attention. They are busy with other jobs that keep them away from the White House scene.

When the President first took over, and throughout the early days of his administration, his advisers were divided into two groups. One wanted to keep some part of the war controls for a peacetime economy. The other wanted to get rid of them. Mr. Truman never varied from his intention to get rid of them as soon as he could. But there was turmoil inside the administration until, one by one, the dissenters were eased off the stage.

The Truman secret lies in this changed atmosphere. Some argue that Mr. Truman is turning to the right. Polls show a shift in the source of his strength. Where Mr. Roosevelt was strongest among the youngest voters, Mr. Truman is strongest among the oldest group. And where Mr. Roosevelt rated highest with manual workers, Mr. Truman gets most support from farmers.

But the opinion is growing among Democrats that, by insisting upon playing no politics at all, Mr. Truman is playing the smartest kind of politics. They think the national mood is one of cooperation for the common welfare. And therein may lie the secret of the new Truman.

[From the Washington Post of April 7, 1947]

TRUMAN'S STANDARD

The recovery of Mr. Truman's standing from the depths of last October is one of the phenomena of our times. To what is it due? There are those who say that Mr. Truman has merely profited from the fractious divisions in the Republican Party. It is said he is simply the beneficiary of public condemnation of his influential left wing. The explanation in our opinion is not so simple. Mr. Truman has made his remarkable headway, in the people's estimation by his own contribution. He took the defeat of his party last November in a spirit of sportsmanship that won instant recognition. His head was bloody, but quite unbowed. He demonstrated a quality that could be revealed only by adversity. Some men thrive on adversity, and Mr. Truman proved he is one of them. He refused to stop being the people's President simply because the country had elected a Republican Congress. Those who swore there would be no vetoes during the Republican tenure—and how many there were?—quickly realized their mistake. Saturday night he showed his mettle when he virtually served notice to the GOP that he would veto any of the tax relief plans at present under discussion on Capitol Hill.

It is this sense of responsibility to his office that has marked his conduct of affairs since November. The tests have come fast and furiously. John L. Lewis provided the first issue when he staged his holdup of the Nation. The people, accustomed to see Mr. Lewis pull the strings of government, rejoiced when the President wrested them out of Mr. Lewis' hands, and returned them to the people. The struggle, alas, is not yet over, but in this affair the President scored a victory for our democracy against the "mobocracy" that the miners' leader was trying to install in its place. Not a single issue has he ducked, and some issues he has anticipated; as, for instance, when he headed off the witch hunt for Communists in administrative offices that sadistic Congressmen were itching to lead. Evidently his organization is on a par with his inspiration. No longer is he the victim of the hunches of office-hunting cronies. Everything he does nowadays—whether in appointments or in affairs—betrays, on the whole, good staff work.

The problem of soaring prices is the latest domestic issue to engage his constant attention. In the Jefferson Day speech Mr. Truman dealt with it. What he said on a subject that concerns everybody individually and collectively was to the point. In our system of free enterprise, price decisions are individual—at least personal. There are those who would saddle do-nothingness about prices on the workings of some mysterious and impersonal "system." The President cut through this kind of abracadabra with a plain reminder to the price makers that in their hands rests the fate of our economic system. Theirs is "the responsibility of playing fair, of not going whole hog for profits." They wanted decontrol. Now let us see them use their freedom, not abuse it. In hammering away at high prices the President is showing a timely leadership which testifies to his concept of his position as the President of all the people.

The straightforwardness and statesmanship of his approach to our domestic problems is matched in the President's attitude to world problems. The Truman doctrine summed up our duty no less than our policy. To aggressors abroad he is opposing precisely the same treatment that he meted out to John L. Lewis at home. The doctrine, far from being novel and irresponsible, is in the grand American tradition. It was appropriate that in a Jefferson Day speech the President should attest to the roots of his own doctrine in American history. He saw the doctrine as a logical extension of the Monroe Doctrine, now the Chapultepec doctrine, which bands the American nations together against any aggression in this continent. In the words that Mr. Truman quoted, Thomas Jefferson, even in those nursling days of the Republic, came close to advocating global application of the Monroe Doctrine. Madison, with amazing prescience, would have so applied it. Latane's history of American foreign policy says that "Monroe, it appears, was strongly inclined to act on Madison's suggestion, but his Cabinet took a different view of the situation." Thus Mr. Truman has simply realized the pioneer and nascent ideas of the founding fathers. Who, in the light of Mr. Truman's quotations, would say that the founding fathers would not have done as he has done, even before he did it?

It is his great good fortune and the country's that the President has in Senator VANDENBERG a man who shares his sense of American destiny. To be sure, they belong to different parties. But both of them, while playing the great political game which will be run off in 1948, will, we believe, play it within the limits marked by a primary concern for our national security. These are times for greatness. Polybius contrasted the splendid heights to which the people of Athens rose when they had to face a war with the waste of their strength in internal quarrels when no such stimulus offered. If this is not to be said of modern America, it will be due in greatest part to Truman and VANDENBERG.

Irish Contribution to America

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. LODGE. Mr. President, at a meeting in Boston in January His Excellency Richard J. Cushing, archbishop of Boston, delivered an address on the Irish contribution to America, which interested and inspired all those who heard it. It contains so many well thought out views, is so full of originality, force, and high principle, that I feel sure it will be read with interest and benefit by the Members of Congress, who will be inspired, as I was, by its idealism and its vision. I ask unanimous consent, therefore, that the address be printed in the Appendix of the RECORD.

I have an estimate from the Public Printer that the address will make two and one-third pages of the RECORD, and that the cost of printing will be $167.67.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to address this important meeting. It is the fiftieth anniversary dinner of the American Irish Historical Society and it is also the charter meeting of the Massachusetts branch of that same illustrious organization. The double observance provides an appropriate opportunity for the Society to honor a distinguished Irish-American Bostonian, Mr. P. A. O'Connell.

Sentimental considerations apart, there are important reasons why the Irish contribution to America should be constantly recalled, especially here in Boston. Every racial group has made its contribution to the established greatness of America and to the potential harmony of united humanity. We are entitled to recall with pride the contributions of our own racial families only in proportion as we are prepared to acknowledge the contributions made by other races than our own. Any prejudiced preoccupation with the excellence of our people to the exclusion of the just recognition due others would be a blemish on our own greatness; it would be ungenerous and uninformed.

The eventual historians of America's greatness will find it impossible to decide which peoples made the greatest contribution to the building of America and the formation of her spirit. It would be impossible to discuss the foundations of American greatness without reference to the early and continuing influence on our national spirit of Spanish chivalry, of French vision, of English practical genius, of German integrity and of Dutch sobriety. Each of these has made itself felt in the formation of America and all of these are blended in the unique character of the American spirit. Other nations came here later than the sons and daughters of Spain, France, England, Germany, Holland, and the others, yet again it would be impossible to understand the epic of America without reference to the contribution to American greatness that they also have made. Surely the American character would be very different from what it now is were it not for the piety and industry of the Polish people, the Lithuanians, the Russians, and the other peoples of the Christian East. America needed and has been grateful for the spiritual and physical energies released into the life stream of our history by the Mediterranean peoples of Greece, Italy, Portugal and the Nordic peoples of Scandinavia and Denmark. Our land has been made better because of the contributions of Latin Americans, African Negroes, the Jew and the Oriental, and all other Americans have been profoundly influenced by the presence within our shores of these and other great racial and cultural groups. In the very diversity of our racial strains and in the harmony of their blend lies the secret of America's greatness.

From this fact it follows that either of two possible alternatives would be unfortunate. It would be unfortunte continually to isolate one racial strain from all the others and persistently to dwell upon its characteristics, whether good or bad. At the same time, it would be unfortunate to accept the "melting pot" theory of American life and to suppose that the individual characteristics of the races which comprise America have been lost by their indiscriminate fusion into a completely neutral and homogeneous American character. America is not a "melting pot"; the races which have come here have gladly blended in the harmonious whole that is America their several characteristics but they have not on that account entirely lost them. It is the glory and the strength of America that she enjoys the united loyalty of the members of many racial families. It is no less her glory and her strength that she permits racial and cultural differences to survive in those who are legitimately attached to these traditions. As distinguished from all Fascist national unities and all Communist classless societies, America has never pretended nor attempted to be a monolithic society. America is a land where the things which make for personality, for variety, for individual values have always been encouraged. America seeks in her national life a more perfect union, but she expects this to be a union of people and forces worth uniting and she knows that in personal worth differences matter. In the house of America, as in that of heaven, there are many mansions.

For these reasons we who belong to the Irish racial and cultural tradition, gladly paying tribute to the genius and the heritage of other traditions among our neighbors, make no apology for occasional meetings of this kind to recall at once the things that make us different and the things that as a people we have tried to contribute to the life we hold in common with our fellow Americans.

The contribution of Ireland to the rest of the world has been essentially spiritual. Her friends and her enemies alike have dealt too much on the supposed predilection of her sons for political, military, and commercial careers. The Irish have attained a great preeminence in these fields, not merely here in America but elsewhere throughout the world. The names of Irishmen are among the most illustrious in the political history of the Western Hemisphere, North and South America alike. The military prowess of Irish names is written in the history of these lands and also in the history of France, of Hungary, and of England herself. The commercial genius of the Irish people has brought them distinction in the fields equally far flung.

Here in America these gifts of the Irish people have made their contribution to our national greatness particularly prominent. Nearly half of the Presidents of the United States were of Celtic blood, and the Irish were the foremost in the American struggle for liberty. Custis, the adopted son of Washington, wrote: "The aid we received from Irish Catholics in the struggle for independence was essential to our ultimate success. In the war of independence Ireland furnished one hundred men for every single man furnished by any other foreign nation; let America bear eternal gratitude to Irishmen."

President Theodore Roosevelt paid tribute to the Irish influence in America when he said:

"In every walk of life men of Irish blood have stood and now stand preeminent as statesmen and soldiers, on the bench, at the bar, and in business. They have done their full share toward the artistic and literary development of the country."

Ireland is proud of the part her sons have taken in building up the greatest democracy on earth, but she is prouder still of the fact that this devotion to the city of man has always been inspired among Irishmen by fidelity to the Kingdom of God. A great Yankee, Dr. Orestes Brownson, called the Irish and their descendants by all odds and under every point of view the purest, the best, and the most trustworthy of the American people. The Irish may well feel that Dr. Brownson's tribute was excessively generous, but its essential point is true. The political, military, and business ability of the Irish people, their worldly success, is not the most accurate gage by which to measure either their greatness or the greatness of their contribution to American life. The triumph of the Irish, when they are faithful to the highest traditions of their own people, has always consisted in this: While making their way in the world, while displaying such rare patriotic energy, they have vivified all by their faith, and measured all success by the light of faith. Maguire shows this very clearly in his book Irish in America, where he observes:

"What Ireland has done for the American church every bishop and priest can tell.

Throughout the vast extent of the Union, there is scarcely a church, a college, an academy, a school, a religious or charitable institution, an asylum, a hospital, or a refuge, in which the piety, the learning, the zeal, the self-sacrifice of the Irish, of the priest or the professor, of the sisters of every order and congregation, are not to be traced. There is scarcely an ecclesiastical seminary for English-speaking students in which the great majority of those now preparing for the service of the sanctuary do not belong, if not by birth, at least by blood, to that historic land to which the grateful church of past ages accorded the proud title—'Insula Sanctorum'!"

Forty years ago an American writer could say:

"This vast continent affords a most striking proof of what religion means to the Irish people. Count the colleges, schools, academies, hospitals, and asylums of charity that have sprung up as if by magic all over the land, and tell me is there anything that speaks more eloquently to the heart than the faith that inspired such unselfish devotion. Religion as a name is useless; it is only precious for what it enables us to be and to do. It is religion that has made the Irish people what they are. It has made them just toward others, lovers of order and progress, firm in the support of just authority, and courageous in resistance to lawless tyranny. No state can thrive without such virtuous citizens, and no country can be hopelessly lost that has the happiness of possessing them."

This will always be the secret of Ireland's essential contribution to the life and the greatness of America. It might be feared that a people so deeply religious might, precisely because of their religious attachments, be slow in assimilating themselves to the broader, more general patterns of the community life. Yet no less competent an interpreter of the American scene than President William H. Taft found it possible to say:

"There has been an easy amalgamation of the Irish with our American life. They have added much to the composite American, made from various European stocks. They have softened the American wit. They have added to American tenderness. They have increased the spirit of good fellowship, added to our social graces, increased our poetical imagination, made us more optimistic, and added to our sunny philosophy. Socialism and anarchy have found no lodgment among Irishmen. They believe in institutions of modern society. They believe in upholding our National and our State Governments. They are not full of diatribes against the existing order. They struggle for equality of opportunity, and recognize the value of liberty ordered by law. They are not seeking to invent a new society and turn the present one topsy-turvy. They are cooperating with the good fortune, the prosperity, and the happiness that is possible under our Government. They are grateful for all this, they value it, and they will fight to preserve it."

I have often thought that these words of President Taft were touched with prophecy. The institutions of modern society were never so much in jeopardy as they now are. Our National and State Governments were never so cynically criticized and so unsparingly challenged. Equality of opportunity is now a matter of legislation rather than something which is taken for granted; this means that its reality is in doubt or under attack. American traditions, the American way of life itself, certainly its Christian roots need men who, like the Irish according to President Taft, are grateful for these, value them with passionate devotion, and will fight to preserve them.

In this connection I recall another prophetic word uttered with regard to the Irish people. Nearly 300 years ago a papal nuncio sent to Ireland by the Pope wrote back to Rome these words: "Ireland may yet become an outwork of the faith to Europe and its herald to America." Ladies and gentlemen, you are living in days which have seen this prophecy on the verge of fulfillment. Ireland has become an outwork of the faith to Europe, has been and is its herald to America. The Irish people, wherever they may be, are the champions of Christianity in a world menaced by Asiatic communism; they are foremost among those who, in the Old World and the New, are unswervingly committed to the traditions of humanism, Western civilization, and Christianity which once gave origin, meaning, and purpose to our Democracy and which can once again guarantee Democracy's survival.

But if Ireland has been so great a force in America and in the world she has been no less powerful an influence in our immediate area of interest and loyalty. Despite the efforts of the unfriendly to discredit the Irish contribution to our local history, the consoling fact is that Ireland in Boston has no reason to be ashamed. For one thing, we were not as latecomers here in Boston as our critics like to pretend. Those who sometimes suggest that Boston was a land of promise until the Irish came forget or never knew that the Irish were here from the beginning. Later the brain and the brawn of tens of thousands of Irish immigrants were to play a major part in the development of the commerce and the industries which brought power and prestige to Massachusetts and to all New England. But here in Boston the Irish gave our city many of the principal firsts in its history. Honoring as we do this evening a merchant and philanthropist, it is appropriate to recall that the first Bostonian to open a store in our city was an Irishman, John Cogan. Mr. Cogan opened his establishment at the corner of State and Washington Streets and at its opening he became Boston's first merchant. He came here directly from Ireland a very few years after the Massachusetts Bay Colony got under way and from the very beginning he made his presence felt. The Englishmen in the colony deeply respected him; together with Governor Winthrop, Mr. Ballingham, and Mr. Coddington he planned the original city. He was a member of the first board of selectmen elected in Boston; he was a charter member of the Ancients and Honorables; he served Governor Winthrop as an adviser on agricultural matters; his home, near the corner of Beacon and Tremont Streets, was a center of the social life of the time. Mr. Cogan's store prospered; he became an extremely wealthy man, owning mills in Charlestown and Malden and purchasing great landholdings in what is now Woburn. At his death, having no place else to which to will it, John Cogan left his money to Harvard College. He was the first Boston merchant of prosperity and prestige, the first of a long line of Irishmen in the business life of this city, a line of which Mr. O'Connell, our distinguished guest this evening, is a contemporary and a worthy representative.

The records of early Boston reveal another merchant of Irish birth and Boston success in the person of Mr. David Kelly who appears among the principal landowners of the area in 1679. A generation or so later there arrived in Boston an Irish merchant named Joseph St. Lawrence. By this time Boston had begun to require that gentlemen planning to establish in business here show capital in amount sufficient to guarantee their solvency. Mr. St. Lawrence was able to produce 50 pounds sterling, and the then equivalent of the Better Business Bureau was duly impressed. Some of the Irish obviously arrived here with money on their persons.

The shipbuilding industry in these parts originated with an Irishman from Galway, one Capt. Thomas Hawkins. Hawkins was building boats in the Bay Colony before the end of the seventeenth century. At about this same time another Irishman was probably the local pioneer in the meat business. His name was Florence McCarthy and he established a slaughterhouse somewhere around 1686. He died a wealthy man and left to his two sons, Thaddeus and Thomas, the means to set themselves up in other and more pretentious business.

William Freeland, another Irishman, was one of Boston's first cabinetmakers; he set up his business in the city in the latter part of 1730 and appears to have prospered. The first paper-manufacturing plant in this part of the world was built in 1728; an Irishman was its first superintendent, Jeremiah Smith, and two Irishmen were prominent in its development, Hugh McLean and James Boies. The latter became an influential figure in the Revolution and rendered Washington material aid at the time of the siege of Boston. The chocolate industry in America began here in Boston and its founder was an Irishman by the name of John Hannon. He opened his chocolate mill in 1764; its site was on the banks of the Neponset River at Dorchester Lower Mills where the chocolate industry has flourished ever since.

To start his venture, John Hannon borrowed from another Irishman here in the city, the James Boies to whom I have already referred. In that same neighborhood the piano-making industry began in this country and again an Irishman was identified with it. Benjamin Crehore, who lived in Milton, manufactured pianos there as early as 1800. Peter Pelham, another Irishman, was the first conspicuous cultivator of the fine arts in New England. He was a painter and a teacher of art; he married the widow of Richard Copley, herself an Irishwoman from Limerick, and thus he became the stepfather of John Singleton Copley, the celebrated artist, whose name is recalled by Copley Square and by other place names in Boston. John Singleton Copley took his middle name from his mother's Irish family; his Irish stepfather taught him painting and engraving.

The Boston records of the eighteenth century reveal Irishmen well established here in a variety of posts. Several coppersmiths of Irish birth were then at work here in Boston; at least one roofer and slater was taking town of Boston contracts in 1768 when John McLean charged us $82 for repairs done by him on Faneuil Hall. The most popular inn hereabouts in the middle 1700's was kept by Thomas Lawlor, and Patrick Conner ran a fine boarding house in the same period at 53 Marlboro Street. The Irish responded with great good will to the call to arms for the American Revolution and the Charitable Irish Society of the times suspended all its meetings until the war was over and the British were driven forth. I need not tell you that the fire department was in the early days well staffed by men with such good Irish names as those which appear on the same rosters to this day—Mortimer, Barry, Collins, Healy, Hay, Kelly, Kenney, McLaughlin, Murphy, Mulligan, O'Connell, Riley, and Shannon. We never lost our hold on the fire department.

In the last century Irish influence grew steadily. Irish names like those of John Boyle O'Reilly and James Jeffrey Roche took their places among the wielders of the pen in literary and journalistic Boston. Patrick A. Collins brought the Irish genius for political leadership to the running of municipal affairs. Philanthropy found Irishmen still in the fore: Andrew Carney, founder of the Carney Hospital, an Irishman, was one of the originators of the Safety Fund Bank which eventually became the First National Bank of Boston. He was also identified with the origins of the John Hancock Insurance Co., and since his day every big Boston bank and business house has managed to find one or two Irishmen somewhere among all the Irish-Americans of our city to hold a place or two on the boards and directorates of the Boston banking establishments. Since

the early days we have grown by the hundreds of thousands, but we still live under a quota so far as the banks' directorates are concerned. Sometime the quota seems to have been set in 1630 and never revised.

But despite the exclusions and the petty persecutions which the Irish have encountered ever since their numbers began to swell, it still remains true that there is not one industry, profession, trade, or business in Boston which does not bear witness to the influence of the Irish, old and young, and which is not indebted to the Irish for the vitality and the vision which have given them their growth here. All this makes the more unfortunate an observation sometimes heard in criticism which should be a challenge to an organization such as your own, bringing together as it does so many leaders in every walk of life. I am not personally sure of how justified this criticism is, but I have heard it so often now that I cannot ignore it and I feel bound to pass it on to you. I have heard it offered as one of the explanations of the departure from this region of many ambitious young Irish-Americans who are determined to seek their fortunes and who no longer believe that they are to be found here at home in Boston. I have heard it offered as one of the reasons for the unhealthy flocking of young Irish-Americans into civil service and into the machinery of party politics. For what it is worth, I pass it on to you, confident that among your number are many men who can discover whether or not it is true and, if it is true, can do something about it.

I am told by young men that many of our established Irish-American business and professional men of the older generation are not too anxious to bring younger Irish-Americans into their respective walks of life. I hear stories of an indifference on their part to the natural ambition of younger men to gain a foothold in the professions or the pursuits where they themselves have found prosperity. I sometimes hear these complaints together with contrasts to the "family feeling" that exists between the older and the younger generations of other racial and national groups within the business houses, the professions, and the trades. I have even heard it said that in some of the professions—some of the professions calling for the longest and the most exact training—our young men find themselves blocked and bypassed by the very men from whom they would reasonably expect patronage and encouragement; in these professions, it would seem, some of our successful men proceed on the nervous principle of oriental despots; permit none of the young men of the tribe to work too near the throne.

I cannot believe that any of our business or professional men so fear the competition of their younger brethren that they will not gladly and generously give them place, as they come along as graduates from our schools and colleges. I cannot believe that any of our successful men are so forgetful of the road they themselves traveled that they would not be willing even to make sacrifices in order to help the younger men "arrive" in the professional and business world without the necessity of leaving home and entering into unequal competition with strangers in strange places. If there is—or has been—any tendency of that kind, I know it is sufficient to mention it thus publicly in order to start the thinking and the action that will end it. No Irishman, mindful of the story of his own people in these parts, could possibly be guilty of refusing every aid and encouragement within his power to those who seek to establish themselves among their own people and in their own city as prosperous and useful citizens.

So, charter members of the Irish Historical Society, you have a great work to do. On the national level you must continue to foster the study of the Irish contribution to American life, that you may encourage its continuance and yourselves perpetuate it. Here, locally, you must make those who will come after you proud of what you have done and grateful for the opportunities that you have opened up to them. May God prosper all your plans. God bless you all.

Checks and Balances

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a text of an article which was published in the April 5, 1947, edition of the Christian Science Monitor. The subject of the article is our American system of checks and balances, our land's greatest contribution to the progress of mankind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHECKS AND BALANCES—OPPOSING FORCES HELD VITAL TO CHECK INDIVIDUAL OR BUSINESS MONOPOLY

(By ALEXANDER WILEY, United States Senator from Wisconsin)

"Do you know the greatest contribution America can make now or has ever made to mankind?" asked a foreign observer.

"No," said an American friend.

"Well, it is your concept of checks and balances. It is this concept which makes you the strongest, freest, most prosperous nation on earth. Teach that concept to the world. Have the world learn it, too, by your example, by your applying your own concept more and more, instead of abusing it yourself, and you will have struck the greatest possible blow for mankind's progress."

The foreign observer was right, I believe. Checks and balances is, of course, the concept that no power—economic, political, social, or any other form—should exist as a monopoly, but, rather, that there must be limits upon it through other power.

This concept is by far the leading factor needed today by the nations of the earth, struggling from the disastrous effects of war and, in many places, from the long-time chains of bondage. It is also needed by Americans, because we need to learn and relearn that monopoly in business or in labor or in any other sphere is the antithesis to checks and balances. At every hand, there are indications of constant trends toward monopoly in human relations; these trends must be halted.

In America, in contrast with the situation in many other lands, we have not one church but many churches, not one political party but two major parties and many minor ones, not one all-powerful branch of Government but three separate, independent, and coequal branches—legislative, executive, and judicial; not one state-controlled newspaper network but many independent newspapers and chains of newspapers.

Each of these institutions exercises some check or balance on the other. If any one of these institutions became a monopoly, it might tend to grow despotic.

Power, even in the hands of human "angels," corrupts. Absolute power corrupts absolutely. That is true whether absolute power is in the hands of a dictator president or a dictator businessman or a dictator labor leader or a dictator press baron. Checks and balances must universally obtain. There must be not sterile uniformity but productive variety everywhere.

The foundation of our whole checks and balances system is, of course, the United States Constitution. In writing this wondrous document, the founding fathers remembered their experiences with foreign tyranny. They devised, therefore, our tripartite government—with no one branch so supreme that it could bend the other branches completely to its will nor, most important, so supreme that it could make the people its slave.

Congress, for example, was empowered to pass the laws of the land, but the President was empowered to veto them, if he were so inclined; in turn, the Congress could override the veto; the Supreme Court could then defeat Congress' will by declaring the law unconstitutional, and then Congress could begin the process of enacting a constitutional amendment which could nullify the Supreme Court's decision.

Thus, each step in this process serves as a check and balance against the arbitrary use of power.

Our own Congress is an illustration of checks and balances. We have not one chamber, but two chambers, and within both the Senate and the House no two Members are alike from the standpoint of geographical background, or racial or religious or economic or political or social or vocational background. Every man is an individualist, every man serves to contribute some varied approach to the legislative whole. That is why Congress can do its job better than Hitler's puppet Reichstag.

Each new discovery of astronomy, chemistry, of physics, of biology proves that ours is a universe of checks and balances.

A sense of humor can ably balance anyone's tending to moodiness or despondency. Our daily activities—work and play and sleep—thrive on a successful equilibrium, with the individual neither working nor playing nor sleeping to excess. "Everything in moderation, nothing in excess," said the Greeks, and they were right. Excesses do not lead to successes.

In every successful human relation there are checks and balances. A husband and wife may have opposing and varied qualities, for example, habits of spending and economy, which mutually balance. Friends of different temperaments, business partners with different aptitudes—each of these relationships symbolizes this principle. Let them be monopoly created, let some form of power, however good at the outset, develop completely unchecked, and trouble looms ahead.

It may seem like a long way from success in the life of the individual to success in the life of the Nation, but they are guided by the same universal factors.

Developing checks and balances in the body politics of the nations of earth is important. It is up to America and the American people to show the way with its checks and balances. Let us combat monopolistic power however it exists and supplant it with the concept that is America's greatest contribution to mankind.

Atomic Energy Commission—Nomination of David E. Lilienthal

EXTENSION OF REMARKS
OF
HON. KENNETH McKELLAR
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 24), 1947

Crisis in Foreign Policy

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Crisis in Foreign Policy," delivered by me over the National Broadcasting Co. network on Friday night, April 4, 1947.

There being no objection, the address was ordered to be printed in the RECORD as follows:

The world that emerged from this last war—hungry, impoverished, and devastated—was sustained by one great hope, the hope that the victory won at the cost of so much blood and heartache would be followed by a lasting peace.

Just about 2 years ago that hope gave promise of fulfilment. We can all remember the feeling of optimism that swept the world when the United Nations came into being, thanks to the inspiration and guidance of Franklin D. Roosevelt. Reason and justice would replace force and violence as the wartime allies learned to live together and strengthen their friendship in our one world. Here was Roosevelt's great American foreign policy for world peace and democracy, an American policy around which all the peace-loving peoples of the world could rally.

Now we have before us a proposal which, in the name of aid to Greece and Turkey, would turn us away from that policy of peace and democracy, a proposal which would take us back to the world of power struggles where might makes right, where every nation is a law unto itself, and where military force is the only international language.

Before we take that precedent-shattering step, let us look closely at just what that proposal provides.

We are asked to appropriate a sum of $400,000,000 of which only one-fourth will be used to supply relief to the Greek people. $150,000,000 goes to supply and train the Turkish Army. $150,000,000 goes to supply and train the Greek Army. In other words, $300,000,000 goes for arms, $100,000,000 for bread. And the entire program is to be administered by the United States alone, without so much as a by-your-leave to the United Nations.

Let me say right now that I feel that no people are more entitled to American aid and support than the gallant people of Greece. But obviously relief for the Greek people is not the real issue raised by the administration proposal. If it were the bulk of the money requested should go to the Greek people instead of going to strengthen the Government and military cliques. If it were the United States would have adopted the proposal of former Mayor LaGuardia. You recall that last fall LaGuardia as head of UNRRA proposed the continuation of international relief through the United Nations, with the United States paying only 70 percent instead of all the cost. But our representatives in the United Nations fought and defeated that proposal. Yes, if relief for the Greek people were the real issue the proposal would have my wholehearted support and the support of the always generous American people.

The real issue tonight is whether we shall continue to support the United Nations or whether we shall play the lone wolf in a game of imperialist-power politics. I am opposed to that, and the American people, as the Gallup poll shows, share that opposition. The real issue is whether we should furnish military aid to the Greek monarchy and the Fascist government of Turkey—two tyrant governments as ruthless and arbitrary as any in the world. I am opposed to that, and the American people, as the Gallup poll shows, overwhelmingly share that opposition. And the American people will not be satisfied by the Vandenberg amendment which merely permits the United Nations to come into the picture but does nothing to assure that the United Nations will do so.

We know that the Greek monarchy was virtually forced on the people in a sham election. That election was held on a day when the Greek Prime Minister Sophoulis warned that "conditions do not exist for a free election." Thousands of the prodemocratic leaders had just been assassinated or exiled or were held in jail without trial and on trumped-up charges. Their only offense was that, true to the traditions of ancient Greece, they loved freedom and hated tyranny. Armed bands of terrorists working with the royalist police roamed the countryside beating and intimidating the opponents of the King. True, when the actual voting took place under the eyes of American observers, there was little violence or fraud. Why should there have been? Violence and fraud had already done their work in the preceding weeks.

What is this Greek monarchy which American taxpayers are asked to prop up? King Paul, like his late brother George, does not have one drop of Greek blood in his veins. His family name is Schleswig-Holstein-Sonderburg-Glucksburg. He comes from one of Central Europe's perennial royal families which made a business of farming out rulers for the Balkan countries—which presumably were too benighted to govern themselves. His family was foisted on the Greek people in one of the characteristic intrigues of nineteenth century diplomacy.

It is tragic indeed that we, who established our government by overthrowing the tyranny of kings, should now be engaged in the business of propping up tottering thrones throughout the world.

But we are told that this monarchy with all its admitted faults—its incompetence, its corruption, its brutality—must be supported to stem the tide of communism that flows in from across the borders. I do not know how many of the Greek guerrillas are Communists and how many are just plain citizens who hate corruption and love freedom. But this I do know. For every Greek Communist who has been converted by Russian propaganda, a hundred Greek Communists and insurgents have been made by the Fascist brutality and corruption of the present Greek Government and the intervention of foreigners who keep it in power.

It is the grim fact, attested by dozens of American witnesses, that the insurgents in the Greek mountains dare not lay down their arms for they will be butchered in cold blood, as were their comrades who tried it. It is a grim fact, attested by the official report just issued by the Food and Agriculture Mission of the United Nations, that the Greek ruling clique is supported by taxes drawn from the poor, while the rich are permitted to shirk their fair share of responsibility. Listen to the words of that report: "In every part of the country, the great majority of farmers are poverty-stricken and destitute. City factory workers or public employees are not in much better shape. At the same time that this widespread poverty exists, the stores are full of all kinds of goods at high prices, and the restaurants are thronged with well-dressed people, enjoying the good food and wine, who live very comfortably despite the poverty all around them."

Let us be clear about this. American military aid to Greece is not a crusade to aid democracy, for there is no democracy in the Greek Government.

And surely we are not crusading for democracy in supporting the Turkish Army. For the Turkish police state and its persecution of those who read the wrong books, hold the wrong ideas, and vote the wrong way, will only be strengthened by our aid. And Turkey has absolutely no relief needs. Not a

single bomb dropped on Turkey during the war. Instead Turkey enjoyed one long, uninterrupted war boom. It sold supplies to Germany and to the Allies with a vast indifference to anything but the profits. Both sides paid Turkey and paid very well.

It becomes unmistakably clear that the objective is not so much food for the Greek people as oil for the American monopolies—the oil that lies in the great underground reservoirs in the lands just east of Greece and Turkey. And the objective is not a fair allocation of those oil resources, worked out by mutual consultation of the interested countries, as required by the Atlantic Charter, but all the oil that the power of our arms and money can command. This then is not a relief plan, it is an oil-grab plan.

And it is unmistakably clear that another objective is a new American imperialism. It is a step in the direction of the grandiose scheme for a Pax Americana based not upon moral leadership, but upon dollars and atom bombs.

I submit that America's goal should not be the domination of a resentful world. We should have more worthy ambitions than to become receiver in bankruptcy of the British Empire.

And it is unmistakably clear finally that the result will be not to set a stop light against Communist expansion, but only to give a green light to the discredited and corrupt reactionaries throughout the world. What praise we earned in the controlled press of Franco for our support to the Greek monarchy! What an inspiration for Peron in Argentina to see us take the side of Fascist Turkey! What new determination has gripped the feudal warlords in the Chinese Government! But what despair and disillusion have already struck the hearts of the oppressed and downtrodden!

My friends, that is not America's historic mission. America's mission is not to govern the world, but to teach the world that men can g. ern themselves.

In our country we can see how the administration plan has won the support of those who always opposed our entry into the United Nations; of those who fear the noble ends for which we said the war was fought—liberty, equality, brotherhood; of those who would perpetuate the rotten status quo in the Balkans and the Middle East; of those who hate Russia so pathologically that they cannot make an honest effort to reach agreement with her.

Now, I do not want to minimize the difficulties of settling our differences with Russia. Those differences are real and complicated—like some of our differences with Britain or France—but they are soluble. Roosevelt solved many of them. And I believe we can solve more of them by a real effort to sit down and sweat it out with Russia. That's what we do about our conflicts with Britain. Why, then, should we sound the war alarms when differences develop with Russia? Why should our newspaper write scare headlines about every minor difference with Russia—differences of the sort that would rate small articles on page 20 if another country were involved?

But we are told that further consultation is futile; that the United Nations is too weak to handle the problems of Greece and Turkey. Then our duty must be to strengthen it. And we know that we cannot strengthen an arm except through exercising it, using it. We remember that the League of Nations was destroyed by those who refused to use it to stop Mussolin and Hitler, claiming the League was too weak. Again, we are told the United Nations is still untested. But the United Nations faced two great tests more than a year ago—the complaints that Soviet troops were on Iran's soil in violation of treaty and the complaint that the British and French troops were in the Levantine. And the United Nations, without deploying a single soldier, without firing a single shot, met those tests. By mobilizing the opinion of the countries of the world, by invoking the conscience of mankind, the United Nations secured the withdrawal of the foreign troops.

The United Nations has had its baptism of fire. The United Nations has been tested and found strong. Let us not withdraw our crucial support. Let not the country which did the most to build the United Nations become the country that did the most to crumble it.

Senator PEPPER and I have introduced an alternative resolution—Senate Joint Resolution 93—to deal with this great problem. We believe it meets the needs of the Greek people and at same time it conforms to the faith and aspirations of the American people. Briefly, our resolution would (1) appropriate funds for relief and rebuilding of Greece; (2) provide for the administration of that relief by the United Nations; (3) request the General Assembly of the United Nations to institute a full-scale investigation with a view to resolving not only the Greek crisis but the underlying Middle East problems—Palestine, the Dardanelles, and Middle East oil. I should like to point out that our bill provides for immediate assistance to the Greek people through a stopgap advance of $100,000,000 by the RFC. It does not delay this assistance until after the meeting of the United Nations General Assembly. The UN could use the trained personnel of UNRRA who are still in the field to distribute this relief.

Our resolution is equally important for the things which it does not do: It does not provide any funds for military intervention in Turkey; it does not provide for the sending of American military forces into Greece; it does not provide for unilateral action by the United States nor for bypassing the United Nations.

A momentous decision lies ahead of us. Upon it hangs the future of the great idea of permanent peace through international organization. Let us not abandon that great hope so soon after its birth; let us not condemn it without a trial; let us not sacrifice it on the altar of power politics.

The Forces Patterning Tomorrow's Economic Life

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. REED of New York. Mr. Speaker, it can be said with emphasis that Anglo-Saxon liberty has been fought out on the battlefield of taxation, and that fight is in progress right now. What Congress does during the months to come with the problem of taxation will determine whether individual liberty and private enterprise can be preserved.

Taxation should not be a subject of partisan politics, and those who reduce it to the level of demagogery are trifling with the security of our Republic.

Under leave to extend, I am inserting an article by Bradford B. Smith which appeared in the February issue of Dun's Review:

THE FORCES PATTERNING TOMORROW'S ECONOMIC LIFE

(By Bradford B. Smith, economist, United States Steel Corp.)

Among students of economic affairs for whose wisdom and insight I have respect I find a considerable amount of agreement on certain things. They agree, for example, on the presence of a backlog of demand for durable goods—a backlog resulting from wartime curtailment of peacetime production and from the presence of an overabundance of money, due, in turn, to long continued inflationary monetary policies. They agree on the presence of increased productive capacity. They agree, also, that strikes and continuation into peacetime of wartime controls, particularly price control, have definitely interfered with production of the most wanted goods.

But they observe, also, that prices and wages have been playing leap-frog up the ladder of inflation and that we have thus been in some phase of an inflationary boom. Finally, they agree that inflationary boom must sooner or later be followed by some sort of depression, depending upon the promptness with which corrective action is taken. This is established by sound economic reasoning and verified by historical record. Inflationary boom can be likened to the pleasant excitement of sailing through the air when you jump off the roof. Depression is the thud when you hit the ground. But it is the jump, not the ground, that causes the concussion. The ground is harmless if you will only keep your feet on it.

So much for the current situation. Beyond that point prospects are dimmer, but the problems are bigger. What puzzles the thoughtful and worries the conscientious is what is going to happen when the bloom is off the boom and f-ar of depression becomes rampant. At the root of the problem is the question of whether the American system of voluntary markets and individual freedom is going to b- replaced by one or another form of statism such as has been sweeping across the world. If we should arrive at the onset of serious depression, it will be after having been habituated for more than a decade to a step-by-step, but everincreasing, assumption by government of paternalistic authority.

In the light of our habituation to this long evolution of coercive intervention into how much of what is to be produced and how much who is to get—or not get—for producing it, is it not probable, should depression come, for the evolution to be speeded rather than retarded—that is, for pressure to be exerted upon the Government then in power to start large-scale public works, try to support prices and wages, step up spending, increase incentive-destroying taxation, multiply bureaucracy anew, and compound its regulatory restrictions?

Perhaps the kind of country which would result from such measures is the kind that some people think they would prefer to one in which production is free of direct or delegated government coercion. That is a judgment which each man must make for himself as a matter of philosophical conviction or moral faith. But it is an economist's job to point out, as best he can, the economic consequences of adhering to each attitude so that judgment between they may be as broadly based and intelligent as possible.

The fundamentally conflicting attitudes at the very root of the matter are as follows: You either believe in a framework of law in which your neighbor is entitled to the possession of his property and the fruits of his productive exertions, to consume or to dispose of as he sees fit in voluntary exchange for the fruits of others' efforts; or else you believe that you have a right through the government to take from your neighbor what

he produces without his consent because you or somebody else needs it or wants it, or because he produces more than you do. In one case the warrant for having something is working to produce it or its equivalent. In the other, the warrant for having something is wanting it, plus the power to take it.

VOLUNTARY SOCIETY

The first concept is expressed in the commandment, "Thou shalt not steal." It is the one upon which the American system of voluntary markets and free individuals was founded. The other concept lies at the roots of the collectivistic societies and their recent war making. Let us take the first concept and explore the body of its meaning, its corollaries, and economic consequences.

If exchanges of goods and services are voluntary, then he who would sell is free to choose among all buyers, and he who would buy is free to choose among all sellers. No seller can command the buyers; no buyer can command the sellers. Voluntary markets are necessarily competitive markets. They are also the only known way of achieving fair prices. It is unfair to compel a seller to take less than competing buyers are voluntarily willing to pay. Similarly, it is unfair to compel a buyer to pay more than competing sellers are voluntarily willing to accept.

Since none in a voluntary society can secure what others produce without their consent, then fear of not having compels each man to produce for himself. The voluntary society provides the maximum possible stimulus to each individual's productive capacity without undermining a similar stimulus to other individuals. Break that principle—as collectivistic societies do—so that some can take without paying for it what others produce, and individuals tend to be diverted from the pursuit of individual productivity to the competitive practice of getting something for nothing with the aid of the state—that is, from exploitation of natural resources and processes to despoliation of each other.

Note next that in the voluntary society human exertion is constantly guided into the most efficient production of the most wanted goods. That means maximum human happiness in a material sense in terms of the very wanting to have and not wanting to work with which we are born. As the Nation's wants shift from horse and buggy to Detroit-made automobiles, for example, the production of automobiles is automatically encouraged while buggy sales disappear. It becomes more profitable to produce automobiles than buggies; horsepower than horses.

Under voluntary markets, production is thus continuously guided into the hands of the most efficient, and people are continuously guided into pursuits in which they find the greatest rewards, while total effort is continuously apportioned to producing the most wanted goods in terms of their cost. It is a beautiful and awe-inspiring piece of three-way, automatic, miracle-producing machinery.

Price and production regulations prevent that machinery from performing its vital functions. Of this there has recently been spectacular illustration. When buyers are prevented from paying what they are willing to pay then the incentive to produce what is most wanted is denied expression. Production is kept out of balance with true demands. At the present time, moreover, the price fixers have nothing substantial to go on except the wartime or the prewar prices. But the wartime pattern of production, and the prices to evoke it, represent an unwanted, rather than the now-wanted pattern. The prewar pattern is irrelevant by reason of the wartime wrenching of the economy which has intervened.

COERCIVE WARTIME POWERS

The exercise in peacetime of wartime powers must thus inevtiably hamper and prevent rather than aid and encourage the great economic readjustments called for by return to peace. Their exercise must inevitably degenerate into a bureaucratic taking from some for the supposed benefit of others, instead of taking from all to win the war for everybody. Such wartime powers, untied from the win-the-war purpose, become the politician's paradise—of whatever party—for power means patronage. But, to pursue the metaphor to the end, they simultaneously constitute the Nation's economic perdition. Eliminating coercive emergency powers once the emergency is over should assume the character of a religious habit if a people desires to be prosperous and free. All can regard with gratification the widening perception and official recognition of this truth.

Strict adherence to the conviction that each is individually entitled to the fruits of his exertion and to their voluntary exchange is the very essence of individual freedom. You just cannot have one without the other in any meaningful sense. Abolish one and you have abolished the other. How, for example, can you compel anyone to do or not to do anything, in the last analysis, unless, aside from physically injuring or confining him, you have power to deprive him of something against his will? Is there not a saying to the effect that control a man's bread and he is your slave?

In this connection a frequent, but fallacious, contention is that you can refuse to buy a man's goods or services, and so exert so-called economic coercion upon him. But such refusal to buy is practicing, not rejecting, the voluntary society. In fact, to suppose otherwise is to deny its voluntary nature. Remember, instead, that each who would sell is free to choose among all buyers. Attempted coercion through nonbuying thus becomes the buyer's own voluntary self-denial, while the attempted coercion merely diverts rather than prevents the sale. No competing producer—or seller for that matter—can exert coercion in voluntary markets.

It is simple economics rooted in human nature, as I have attempted to show, that voluntary markets mean the maximum of production, justice, progress, and freedom. There is only one entity which can destroy those markets. It is government. In other times and places it always has. The coercive or collectivistic, rather than the voluntary, society is the typical one in history. It is the one toward which all others tend to revert.

There are many roads by which we have been traveling toward controlled economy and the omnipotent state. In some respects the broadest are the least perceived. I tag them with the names, "taxation," "money," "monopoly," and "regulation." I have already dealt with regulation as exemplified in price control.

Take taxation. He who would adhere to the voluntary exchange of goods and services must answer this question: How can each man have what he produces, or its equivalent, if something must be taken from him to support the Government? The answer to that question was discovered and written into the Constitution by our forefathers; it was forgotten and written out of the Constitution by their descendants. Our forefathers understood it so well they even had a slogan. It was, "No taxation without representation." But how many people today grasp the full body of meaning for which that phrase stood? It meant, of course, that taxes were to be determined by the voluntary consent of taxpayers expressed through their elected representatives—and that is what taxation must always mean in a voluntary society if such a society is to endure.

But that raised another technical question with which statisticians, but not too many others, are thoroughly familiar. It is the question of the representativeness of the sample selected. In this case the question was how to assure that elected representatives do, in fact, constitute a truly representative sample of taxpayers. Our forefathers found the answer to that also, and wrote it into the Constitution.

UNEQUAL TAX BURDENS

The principle can be simply stated: In a society of free men, taxation must always equally burden the members of the electorate. In voting taxes, the representative must know that he distresses those of the majority which elected him as much as those in the minority opposing him.

Break that principle, as we did in the fourteenth amendment, which gave majorities in Congress unlimited power to despoil minorities, and see what the economic results must inevitably be. At times great pressure will be brought to bear upon the legislature relatively to concentrate taxes upon the more productive minority to the supposed relief of the majority. This was feared by Madison when the Constitution was written, and it was prophesied by Lord Macaulay in 1857. It has now happened.

The levying of taxes on minorities by those elected by majorities has certain ominous moral aspects which are very important. But I am now seeking, instead, to point out the cold economic consequences to American productivity. Those economic consequences are almost shockingly simple and direct. They may be cast, for example, in terms of the creation of productive jobs.

Think as one will, but there is no other way in which a self-sustaining productive job can come into existence except for someone, in the hope of profit, to save and invest his money in providing the tools of production. But if the majority decides to tax away large amounts of that hoped-for profit either directly or by progressive taxation of individual income, then the incentive and ability to save and invest in the job-creating tools of production is diminished. The creation of new jobs fails to keep pace with the release of workers from existing jobs as efficiency increases and with the normal additions to the working force. So chronic unemployment as in the thirties is obviously invited.

The second economic consequence is to injure the mechanism for adjusting production to the changing patterns of demand. Consider, for example, how shifting production from buggies to automobiles would have been hampered if the profit in producing automobiles had been taken in taxes for subsidizing, in effect, the lesser profits or losses of buggy makers. The inducements and the pressures to make production conform to demand would have been diminished. Maladjustment would have remained, and that, again, means less production. In short, by traveling one hidden road to collectivism, we seemingly must next set our feet upon another broad but even more hidden road, and so double the speed of our progress without knowing where we are going. That brings me to the matter of money.

The economics of money is obscure to most people. That is one reason for believing that political manipulation of the money supply is the most deceptive and devastating of all the means for transforming the highly productive voluntary society into the sterile authoritarian state, while at the same time it is the most popular and seemingly plausible means for preserving private enterprise by supposedly stabilizing over-all production. That only makes it the more dangerous.

There are certain things we must understand. The stuff we use to pay bills—that is, money—consists, first, of the coins and printed currency we carry in our pockets; and secondly, of bank deposits subject to check, the deposits being about four-fifths of the total. Most of us can only get this money by

ourselves concurrently selling something, whether it be our property or our labor. If that were always true for everybody, there would be no problem. No one could go into markets and purchase something out of them except by having equivalently contributed something to them. The money one had, as a command over other peoples' products, would match one's own products made available to others. The money claims against goods would match the goods to be claimed. Money would truly be then a stable medium of exchange.

THE NATURE OF INFLATION

But our money isn't that way. It can be printed instead of earned. The first step is for the Government to print bonds—promises to pay. The next step is to take those bonds to the commercial banks. There these Government promises to pay in the future are swapped for the bank's promise to pay on demand—that is, for a bank deposit. That is what a bank deposit is: It is the bank's liability to pay in gold if called upon to do so. Since everyone expects that the bank would pay if called upon and allowed by law to do so, these liabilities or deposits are themselves used as money. We transfer them to each other by writing checks in exchange for the goods and services we get from each other.

The significant thing is that simply by making entries in their books banks can create deposits for use as money. The process is the monetary equivalent of the paper money printing press, and in fact it actually starts with a printing press—the one which prints the Government's promises to pay some time in the future. This is something that people must understand because the process has been employed to multiply the supply of money sixfold since 1933, and three times since 1939, while the right of people themselves to police the inflation by converting their money into gold has been denied them.

The new money to spend in markets is obtained without concurrently contributing goods or services to the markets. The balance between money going to market and goods going to market is thus destroyed. The extra money competing for goods bids prices up. That is inflation, and that is the only possible way it can occur. Then the inflation becomes the excuse for jumping over onto another road to statism—the road of price control, rationing, allocation, production directives, priorities, and so on, all of which directly destroy the voluntary market, and undermine the maximum production of the most wanted goods it otherwise promotes. Just to close the spiral for an instant at this point, it may be noted that the resulting unemployment in turn becomes the excuse for printing and spending more money, while the increased spending and rising debt become the excuse for increasing incentive-destroying taxes. The spiral becomes self-stimulating.

The fact that printing money adds money to markets but not goods to match it means that the money is more of a tax receipt for goods taken away than it is a command over goods to be had. Subsequent spenders of the money find this out in two ways: By price control and rationing they find themselves with money left over which they can't spend to buy what they want. Money you can't spend is relatively worthless. Or in the absence of those controls, the prices go up and each dollar buys less. There is no reliable way that printed money, once issued, can ever be redeemed in goods equivalent to those taken when it was issued. Printing of money is not the creation of purchasing power. It is, instead, the cruelest and most deceptive form of taxation with the longest lasting evil aftermaths. The burden always falls most heavily upon those with pensions, bequests, or otherwise fixed income, and often least able to bear the burden.

There is one final, truly vicious aspect of printing press money that should be noted. When the money enters the market, the market responds. It shifts capital, manpower, and materials toward greater production of the particular goods taken. The market does not know the demand is false. The demand is not the expression of competitive expenditure by those whose income derives from producing for each other what they want most in exchange. The demand is, instead, the result of someone getting something for nothing without having to measure his getting with giving of goods competitively acceptable in markets.

Production is diverted to synthetic demand instead of being governed by exchange for equivalent values. In short, the boom financed by inflating the money is the relative wastage of scarce manpower, capital, and resources. In wartime, this is readily apparent: Printed money is exchanged for goods which are then destroyed under compulsion. In peacetime, the process is similar though less readily apparent.

But buying with printed money must eventually end. It ends either when check deposit expansion reaches the limit under the gold standard, if we have a gold standard, or when the Federal Reserve Board otherwise decides to call a halt, or eventually when so much money is printed that it becomes substantially unacceptable as a medium of exchange. When it ends, the maladjustment between production and demand is exposed. Unwanted production accumulates in inventories, liquidation sets in, and spirals of recession are inaugurated. That is why bust follows boom.

The starting of a boom by printing-press techniques is the guaranty of the bust to follow. We had a taste of that in the we-planned-it-that-way boom of 1936 and the bust in 1937. We shall, I fear, have bigger and better examples in the days to come unless more people learn that Government monkeying with money is playing with dynamite which on explosion can extinguish the voluntary society.

MONOPOLY

I come now to the monopoly road to statism. There is one type of monopoly that is currently a serious threat—it is labor monopoly. The laborer is not a commodity, but the service he renders cannot escape economic law. That means quite simply that if the service is made artificially costly, then, just like anything else, customers will buy less of it than otherwise. Labor, like anything else, can price itself out of its market, if given monopoly status. It has achieved monopoly status. In actual practice this means that in determining the price paid for labor—the wage rate—many employers are permitted to deal with but one entity, subjected to neither individual nor group competition.

This is monopoly obscured but monopoly price control nonetheless. It is tantamount to saying to each person that the price they must pay for bread from whomever purchased is nevertheless to be set by one baker, no other being permitted to offer a lesser price in the hope of getting their business. It is the exercise of great power, and like all power it tends to feed upon itself and to be abused to the injury of the innocent.

The same is true in labor. The only and everlasting protection of the worker's independence and economic freedom is the presence of competing buyers for his service, that is, competing employers, just as competing sellers are his protection when he spends his wage as a buyer. As workers form monopoly groups against particular employers, they may be shutting off each employer from other sources of supply to the monopoly group's own seeming benefit; but by that very act they are also shutting off other workers from access to these employers. Thus, step-by-step, the workers are shutting each other out and so losing the very roots of their independence. They become the prisoners of the monopolies they create.

As labor monopolies employ their coercive power to obtain above-market-price wages, then some of the workers are priced out of jobs and find themselves with nowhere to go—except to charity. They are shut out from other employment by reason either of the same overpricing elsewhere that is responsible for their own disemployment, or by the presence of seniority and other rules designed to protect these monopolies against worker competition. Such monopolies operate most brutally against competition of the nonworking with those working. They tend to create unemployment and render it chronic.

WAGE COST RIGIDITY

With this understood, the nature of monopoly as one of the great roads to statism becomes readily apparent. Thus when recession comes these monopolies will certainly strive with all their power to maintain existing wages. Wage cost is at least three-quarters of all costs. This cost rigidity will hamper and hinder the realinement of employment and production to meet the changing pattern of demand as the war-born shortages are made good. It will act as a destroyer of the profit incentive to create new jobs. It means that we may have to take our licking in pronounced and prolonged unemployment instead of in swift-moving, flexible price, profit, and wage adjustments that will keep most people working most of the time. That, in turn, permits those who wish to do so, however untruthfully, to scream out that private enterprise has failed, and that Government must step in—with multiplied bureaucracy and a bigger printing press, together with their unlimited capacity to perpetuate, rather than cure, maladjustments in production, employment, prices, and costs.

THE WHY OF IT

Often I have asked myself why some people who profess to believe in individual freedom and voluntary markets, nevertheless often subscribe to measures which mean statism. I think a good deal of the reason is just plain, good-hearted thoughtlessness which takes the form of let's give the other fellow a break, not realizing that this is the giving of power to undermine free institutions. I think some more of the reason is just untrammeled strife for personal or group power without regard to the cost to the community. Still more of it is ignorance of the inconsistency and danger involved. And there may be some who, knowing better, have not the courage to act and speak on their convictions.

Perhaps underlying all of these is something inherent itself in the marvelous mechanism of production and distribution which has arisen from the practice of individual freedom in America. I refer to the extreme division of labor, the high degree of productive specialization, the singleness of each person's source of income, and the ever-widening area covered by his expenditures. I think that this has resulted in tremendous bias in economic perception and political judgment.

For example, ask anyone which he would prefer, a 10-percent raise in salary, or a 10-percent decrease in living cost. He will usually choose the first, figuring if he can get his single-source income up, he can somehow manipulate his multipurpose expenditures to come out with a net advantage. He is deeply concerned about changes in his income; but changes of much greater proportions in items of his expenditure often fail even to get over the threshold of his perception. Yet accumulations of such unnoticed changes can mount up to far greater consequence than changes in the single item on the other side of the book to which he is

so perceptively allergic. And so it is for the economy as a whole: Our economy operates under a double-entry system. For any advantage here, there is a cost there. But the trouble is that the costs can be widely dispersed in time and space and so go unperceived and untotaled in balancing the books for net gain or loss; whereas the advantages can be appealingly single and apparent.

Let's look next at another consequence of high-level, specialized production. Let's look right into the heart of the family where children grow up. More and more of these children fail to see their fathers at work. The father goes away in the morning to come back at night. Children are kept out of contact with the competitive struggle where the rule is that the warrant for having something is working. Instead, they are confined to the equality phases of family life. When the candy is passed everyone takes one apiece. If the children need something, the parents provide it within their ability to pay for it—not because the children have earned it. We are a rich Nation because of our specialization in productive occupation. So we keep our children at home and in school, longer and longer. The academically proficient often go on to college and to graduate work and then become teachers in jobs financed by the State or by charity.

For many of them their whole experience in formative years drives home the theory that the warrant for having something is needing it or wanting it to the extent of somebody else's ability to pay for it. They have had no real contact, as in farm life, with working as the warrant for having. Is it any wonder that many of them should, in all sincerity, think and teach the children that we ought all to be one great big family under a benign, paternal Government, clothed with authority to redistribute production according to need and with responsibility for keeping everyone happy?

THE PRINCIPLE OF IT

To the cynical these considerations mean that we should fold our hands and accept with resignation the departure of individual freedom from earth. I am not ready to do that. Instead, I remember being spanked as a child for having swiped a piece of chalk from the schoolroom. I realize now that no one cared particularly about the chalk and no one was greatly inconvenienced by its removal—except myself. It was the principle of the thing that was at stake. The stealing of the chalk represented a small leak in the dike of moral conviction behind which we live. And leaks must be quickly plugged lest they become torrents.

So it is also with the principles of a free society. I think that there is some chance that apathy toward small leaks in the dike can be overcome before they become torrents by identifying them as violations of those principles that should be regarded as something sacred—principles derived from having countered all the costs, however dispersed—principles derived from having read and learned the lessons of history—principles that in their derivation cover not only economic well-being, but also individual rights and moral convictions. Then I hope the small leak, instead of going neglected, will automatically bring to bear upon itself the corrective force of accepted principle—just as such a corrective force came rather disconcertingly to bear on the chalk stealer's anatomy.

FIVE SUGGESTED PRINCIPLES

Such principles, and adherence in word and deed to them, have to come out of each man's own conscience. So it is with some diffidence that I suggest a few principles:

1. Government is the superior instrument to coerce. The economic purpose of government in a free America must, therefore, always be exclusively and solely to employ its superior compulsion to prevent fraud, predation, coercion, and monopoly abuse among those governed.

2. To that end, determination of the kind and amount of whatever nonharmful goods are to be produced, where, when, by whom, and at what price or wage, must ever be left to the voluntary and competitive decisions of those concerned. For government to dictate in these matters is for government itself to engage in the very coercion or monopoly abuse which it is government's function to prevent. For the same reason, government itself should never engage in or subsidize production for competitive sale.

3. It is the function of government to keep honest the Nation's money. This means it should not in peacetime tolerate, or itself ever practice, the alternate expansion and contraction of the money supply.

4. Taxation by representation means that taxation must equally burden the members of the electorate. It means that government should grant no tax-offsetting gifts or subsidies. It means government should not seek to lay tax burdens on minority groups which majorities escape.

5. My final principle is not really a principle—it is merely a personal definition of what freedom means in America. To me it means not only that no man must physically injure another or take property from him, without his consent; but also and most especially it means that not even government must do these things except to punish those who do them to others.

Freedom is definable only as the absence of coercion between men. It is obtainable when government's superior power to coerce is employed to cancel out coercion between men. The ever-present and awful temptation of government is to employ or delegate its coercive power beyond that point for seemingly benevolent purposes. But government can give nothing to some without taking something from others. But taking without paying replaces freedom with despoliation and invites the predatory to entrench themselves in the enjoyment of the spoils. That is where serfdom to the state begins. That is where it has begun in America. That is where it must be stopped if America is to remain productive and free.

Role of America as World Leader

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. GREEN. Mr. President, about a week ago the Women's Action Committee for Lasting Peace held its annual convention here in Washington. This outstanding organization, of which 14 other national organizations are members, represents about 10,000,000 American women. The convention was a notable one, and one of its outstanding features was an able address by Mrs. Anne O'Hare McCormick, in which she discussed with clarity and eloquence America's new role as a world leader. I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It's hard to be an American these days. We used to think the lot of the American was easy and fortunate. We looked out on the world in the mood of the pharisee, thanking God we were not as the rest of men, and taking considerable credit to ourselves for our immunity from the ills that beset poorer, more troubled, or more backward nations. This feeling reached its peak in the late war when a whole generation of young Americans went abroad and came home blessing the luck that made them citizens of "God's country."

Now we know that being an American is not easy. It's a back-breaking, brain-wracking job. It imposes terrible choices—terrible compulsions, rather, for we are pursued by a destiny we cannot escape.

Just now we are making decisions we cannot retract. The question at issue is not Greece. It is not a $400,000,000 relief program. It is not what kind of government Greece has, or Turkey has, and whether we can improve it by directing how and for what our money shall be spent. It is not a question of making the world safe for democracy, although anyone who compares President Truman's message to Congress with the speech of Woodrow Wilson as we entered the First World War must be struck with the similarity of the arguments.

All these questions come into the debate, but only as they bear on the new position of the United States in the world. We are weighing our awful responsibility as a, as the, great power, the great democracy and the founder of the United Nations. There is nothing else to talk about today because this issue overrides all others. No matter on what terms we go into Greece, we are taking a fateful step on a new course. We are, indeed, adopting a doctrine of intervention which staggers the internationalist who thought our whole international duty was to participate in a collective-security system.

The crisis that hangs over our heads isn't a Greek crisis. It's an American crisis. In the confusion and agony of judging between risks, of balancing one obligation against another, of seeing ourselves for the first time as making the historic motions instead of seconding them, we have at last grown up. I don't recall another instance, in our history or in the history of any other country, where a whole people were consciously deciding policy.

We are not balking at taking over a task Britain failed in even before she gave it up for lack of means to carry on. Britain has already spent more in Greece than we are asked to give. The United States, itself, through UNRRA and direct grants, has spent nearly twice as much as the sum proposed now. All this economic aid has not availed to save the situation.

My own hope is that Britain will stay with us in Greece until the United Nations relieves us both. But this is not what troubles us most. It is characteristic of Americans to believe that we can succeed where the other fellow fails. We don't want to prop up the ruins of empire or governments in bankruptcy, but our reluctance is not due to an inferiority complex. No; the reason the President's message shocked us is that it suddenly showed us exactly where we stand, with nothing between us and whatever danger there is. Wherever the front line is, there are we, exposed and responsible.

It's hard to be an American, and it's hard for an American to take over world leadership. Throughout the war we kept repeating that the struggle for peace would be more difficult than the military battle, but we did not really believe it. Since the fighting ceased we have preened ourselves on having learned from experience. In proof of our final conversion from isolationism to internationalism we took the lead in sponsoring and organizing the United Nations. We outdid every other nation in supporting it. We gave it a home. We have treated it more

or less as an American institution, and that's what it looks like, don't forget, from Europe, Asia, or South America. We told ourselves and everybody else that we meant to base our policy on it.

This was and is our firm intention. It is our first and over-all commitment to ourselves and the world. If the United Nations cannot be built up to take the place of national armies; if an international mind cannot be slowly shaped out of the clash and conflict of national minds; if on this little, brittle globe, in its envelope of danger-infested air, a sense of community cannot be developed out of the knowledge that no man is safe unless all men are safe, then there is no sense in anything and no hope of peace or human progress. Certainly there is no work for the Women's Action Committee.

No American is pessimistic enough to accept the alternative to the United Nations, which is chaos, war, or death. No American dare accept it, and neither, I should judge, does Russia, for of all the member states, the United States and the Soviet Union should be the most concerned to strengthen it. Small nations might possibly take shelter behind the great, especially if the world is divided into two rival constellations. But the solar bodies have no shield. If there is war, they will bear the brunt and cost of it. Both would be immeasurably weakened and one irretrievably defeated.

This country cannot afford to assume international obligations except in some sort of association with the United Nations. This is important for the United States and even more important for the United Nations, because the world organization can never achieve authority to take over all international obligations, as eventually it must if it is to fulfill its mission, unless it draws authority from powers that are at present stronger than itself. It can only be strong, in other words, as it is made strong by its members.

It can be argued that it is more desirable for this Government to strengthen the United Nations than to strengthen Greece. In the long-range view that is beyond question, and all of us would be opposed to strengthening Greece at the expense of the United Nations.

But I do not think that is the choice we face. The choice is between shrugging off or shouldering our responsibility as a great democratic power. Certainly it would be easier to turn the question over to the United Nations. Some of those who protest againt bypassing the United Nations really want to bypass the question itself. They want an alibi for inaction, an excuse to do nothing.

Nothing is the one thing we cannot do. We are caught in a tremolo passage in the grand concerto of history, a movement of transition in which old institutions are in process, we hope, of giving place to new. But the movement is as slow and painful to listen to as the practice hour of a child who keeps on playing the first bars of an étude over and over. The United Nations can be invoked, as it should be; it can be associated in action, as it should be; but it does not yet command the funds, the means, the speed, and above all, the unity, to enable it to act in an emergency.

And that means that it isn't enough for us to belong to the United Nations. The Greek issue is a turning point precisely because it shows how easily the United Nations, just because it is still young and weak, can become a way of escape—the new refuge of the isolationist, or the refuge of the new isolationist.

The American dilemma is that we stand as the leader of the democratic forces of the world, and also as the chief architect of an international structure in which opposing systems, democratic, totalitarian, and their in-between variants, are supposed to work together. This opposition is the chief source of weakness in the United Nations; if you doubt it, look at the line-ups and the votes and observe how easy it is for the democracies on one side and the Soviet group on the other to reach agreement among themselves.

The first question is: What is the duty of the United States as a democracy? To my mind our paramount obligation is to work for a free world, for one world without freedom would be just one big prison. Surely we have to work to enlarge or at least to prevent the progressive narrowing of the area of freedom. To the extent of our power we have to see that as many countries as we can reach, and we can reach Greece and Turkey, are left free to choose their own form of government.

The next question is: What do we mean by democracy? Three Americans have lately offered resounding definitions—the President in enunciating a new policy to support free people to resist attempted subjugation; Secretary Marshall in laying down Jeffersonian doctrine before his colleagues at the Moscow Conference; David Lilienthal in reminding Congress of the fundamental principles of the Constitution and the Bill of Rights. Despite their different application, the definitions echced, they prove that Americans have no doubt of the meaning they attach to a word that others use to express something entirely different. But the important thing about these credos is that the speakers felt impelled to make them. No longer can we take for granted, as we did for a long time, that the world accepts our definitions, or believes we have the best form of government. We cannot take for granted that anyone else will take a stand for the democratic system unless we do.

Here, I think, we reach the point of decision. We live in a hungry world, a world of want and fear, a world of lost homes, lost values, lost souls. We Americans inhabit a kind of plateau of our own, above the poverty and gloom in which our allies and our former enemies share a common misery. The upper level isn't very safe in these circumstances and I need not tell you that we aren't greatly loved by the people down below.

We are in danger, moreover, of being left alone on our plateau with the freedoms we consider essential to our national existence. When I was in Europe this winter what worried me more than the physical suffering was the sagging spirit of the democracies. People have to have a minimum ration of bread and work and hope before they begin to care for freedom, and even those who do care are getting tired. Almost everywhere democratic parties are under attack by a Communist minority that never tires and brings to the political battle the discipline and elan of a well-trained army.

The danger is democratic defeatism, the discouragement of Democrats, the feeling that the democratic system is somehow obsolete and that the cards are stacked against it in a world too bankrupt to maintain economic freedoms. The many-sided pressures to give up the fight for individual freedom and national independence are almost irresistible. You may be sure that if the leading democracy does not take a stand for democracy, this defeatism will deepen and spread. And that spells disaster for us. Strong as it is, our system cannot function, politically or economically, in splendid isolation, and it may well be isolated unless we help democratic government to survive, not only where it is directly threatened, as in Greece, but where it is weakening, as in France.

If we agree that the United States cannot let democracy wither in the world, the third question is: What is our duty to the United Nations? I see no way out of the American dilemma except to seize both horns at once. We have to use our power to the utmost to support the United Nations and democracy at the same time. It's a job for both hands—and this is one case where the right hand must always see what the left hand doeth—and a job for both lobes of the brain, for so far in the world affairs we have used all our powers more effectively than our brain power. Senator Austin clarified the question when he said yesterday that it is by combining national and international action of both immediate and long-range character and aimed both at the security and economic aspects of the problem that the members of the United Nations can advance the cause of collective security.

We have to play the dual role and we have to play it spectacularly so that no man anywhere can doubt that we believe as ardently in an organized world community, limiting national sovereignty by international law, as we believe in defending and extending human freedom. Surely there is no contradiction there. The more free governments and free men we have the more quickly the United Nations will develop into the bulwark of freedom and justice it must be if it is to become the bulwark of peace. We are trying to create a security system, but at the same time we are creating the world order which that system has to maintain, and if the order is not sound, if it fails to satisfy the conscience and aspirations of mankind, all the ivory towers on the East River cannot make the system endure.

I know no other way to strike out for the long and rocky road to peace except to take the risks and follow the direction we believe will lead to peace. There is risk in any positive policy. My guess is that the President made a major issue of the Greek crisis to warn the Soviet leaders that they were running into the danger of war. Whether the alarm signal will cause them to stop, look, and listen is somebody else's guess. I believe it will buck up democratic forces in Europe and silence doubts as to whether we are going to stay in the war and the world to the end.

But to prevent those doubts from turning into fears that America comes as "protectors" have come before, as imperialists, it is important to carry out simultaneously a whole complex of other international policies, such as making room for displaced persons, supplying materials and opening markets for the projects of other countries, renewing and extending reciprocal trade agreements, insisting on a German settlement that will give hope and the means of self-support to Germany and speed the economic revival of Europe. Helping Greece and Turkey as strategic points of defense puts our motives under suspicion unless this help is part of a great program of general reconstruction.

All Europe is more or less under the same pressure and shaken by the same fears we act to allay in the eastern Mediterranean. Now that we have started being bold, why not be bold in a big way and set in motion a master plan for the resurrection of Europe? Not alone, of course, not as Santa Claus, but as a great country with faith in the future and audacity enough to invest our substance in building it. If we do not gamble greatly on the human race, who shall save it? If we do not gamble greatly on the human race, how shall we be saved?

We are too much afraid. We are too much afraid of communism. It is troublesome as an instrument of Russian expansion, but as a doctrine and way of life it takes only among the impoverished, the dispossessed and the frustrated. Remember that not a nation in the world outside of Russia has ever cast a majority vote for this system.

We are too much afraid of Russia. Russia is the biggest and most undeveloped of empires. Victory has weakened it as it has weakened every victor except the United States. The iron curtain is not opaque enough to hide the signs of its postwar crisis.

Russia is not ready to fight, has no will to fight and will back down before any threat of a first-class scrap.

We are too much afraid of war. We are in a period of profound struggle—a contest of ideas, of incompatible systems, of clashing worlds that have never met before, of words that don't mean the same thing and clocks that don't tell the same time. If we once convinced ourselves that this is the only kind of war we're going to fight for years to come, we'd take it in our stride and buckle down to the works of peace.

We are too much afraid of the cost of peace. We don't realize that if wars can be made by words, as Germany taught us, then peace can be made by words, thoughts, processes of education. When I looked at the rubble of Berlin, I shivered at the power of words. For surely that ruin is less the work of bombs than of the bombardment of words that pulverized the reason and moral sense of a people before it pulverized their cities. I saw then that the atom bomb will not destroy us unless we first destroy ourselves. And when I looked at the Germans, the living ghosts in that awful limbo, I saw that you can never kill your enemy. At the end of all wars you can only live with him. Our problem is to find the way, and surely for Americans, who are part of all the enemies they have fought, that isn't an insoluble problem.

Our problem is to get through to people, to find words that mean the same things in all languages. Peace is one of the words nobody mistakes. But how say it loud enough, so that the Russian people can hear us, for example? The power of the uncommunicated word is nil. Communication is about the most difficult of all our problems. Yet this country has the power to make itself heard and felt. No American dare underestimate that power, for we alone, at this particular moment of history, have the strength, the energy, and the means to swing the balance of the world.

No one else has the power to make peace. And there, members of the Women's Action Committee, is where we come in. To sum up what I have been trying to say, I think Americans have no choice but to fight for a civilization that guarantees individual liberty under the reign of law. There can be no peace unless the human being feels secure in his inalienable right to life and liberty. There can be no peace without the economic policies this organization sponsors. The way to peace is by opening doors—to trade, to people, to communication, to the spread of truth and light, which is the function of UNESCO, and of compassion and justice, which is the function of humanity.

Don't let's mark down or limit our aims. If we need a whole world, we need whole men and women to make it, men and women to whom nothing human is alien, and to whom no man-made problem seems beyond the capacity of man to solve. And don't let's underestimate our power as citizens. It was never so clear as now that public opinion makes policy in this country, and never so clear that this country makes policy for the world.

Housing for Veterans

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, Mrs. HELEN GAHAGAN DOUGLAS, Member of Congress from California, and I have jointly introduced a bill to provide housing for veterans. The bill is known as S. 701 and H. R. 1750. In a statement made before the Senate Banking and Currency Committee on Thursday, March 20, Mrs. DOUGLAS very ably described the great need for the speedy construction of veterans' housing and the method which our bill provides for its solution. Her statement was so cogent a presentation of the problem that I ask unanimous consent to insert it in the Appendix of the RECORD, and I urgently request my colleagues to give it close attention.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. HELEN GAHAGAN DOUGLAS, REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Representative DOUGLAS. Housing today, gentlemen, is not a problem, it is a crisis—a crisis which must be realistically met if we are to protect the American home, the foundation of our democracy.

Congress cannot sit idly by and permit millions of families to live in tents, garages, stores, cabins, trailers, hotel rooms, or shamefully doubled up in one-family dwellings without inviting social disorder.

This committee has before it a comprehensive housing bill which is designed to meet this crisis on a permanent, long-term basis. I heartily support the Taft-Ellender-Wagner bill and commend its authors. It is long overdue.

The Taft-Ellender-Wagner bill is designed to provide low-rent public housing for the low-income groups and moderate rental private housing for the middle-income groups, and to extend financial assistance to communities for the clearance of slums for redevelopment.

Despite the magnificence of this bill, we must face one hard, cold fact—that building costs today have been caught in an inflationary spiral.

The most tragic and helpless victim of this spiral is the veteran, for whom I am pleading today.

Despite all the incentives and encouragement which this bill gives to private enterprise by reducing substantially the cost and risk of financing private building, nevertheless the present inflated level of construction costs will make it next to impossible over the next 2 years to build any volume of reasonably decent homes for rent which will be within the reach of the average veteran.

Even with the additional aids which would be provided by the Taft-Ellender-Wagner bill, few if any homes can be built at present costs to rent between $30 and $50 a month, and it is in this range the average veteran finds himself. A survey of veterans' housing needs, conducted last summer by the Bureau of the Census, showed that 36 percent of the veterans requiring rental housing can only afford rents in the $30 to $50 range on the basis of their current earnings.

In other words, most of the veterans are caught between the limitations in the public-housing portion of this bill which in effect would restrict occupancy of public housing to families of not over $2,000 income even in the largest metropolitan areas, and the inflationary costs under which private enterprise must operate today.

You have been presented and will be presented with the general housing needs of this country, in support of the Taft-Ellender-Wagner bill, and they are very great.

I want to present you specifically with the plight of the veteran.

Let me quote from the testimony of the chairman of the veterans' advisory committee of the Housing Authority of the City of Los Angeles before a joint legislative committee of the California Legislature held in Los Angeles, February 24, 1947. This advisory committee is made up of all veterans' organizations in the State, and just prior to its report to this legislative committee had completed a comprehensive survey of veterans' needs in Los Angeles.

"It is this committee which actually contacts the veteran and his family who need housing. And from those personal contacts the committee has formulated its opinions and ideas regarding the immediate need for action.

"Interviewing about 100 veterans a day, these committeemen hear the pleading stories of young Americans beating a path to this public agency for help. Here is where the story of desperation is revealed.

"In the privacy of a small office the veteran, in most cases accompanied by his wife, and in many interviews small children tag along, unfolds his pitiful story of postwar housing. It is not uncommon to learn of 12 people of mixed sexes sleeping in one bedroom. Nor is it uncommon to hear of parents occupying one bed with an adult son and daughter. Newspaper reports of young American veterans and their families living in chicken coops and rabbit hutches are not exaggerated one iota.

"It is ironically fortunate for public morals that newspapermen are not present at these daily interviews.

"The majority of veterans applying for housing assistance at the local public housing offices have made tiresome search for rental accommodations long before calling upon the agency for help. The failure of private enterprise to provide adequate rental units within the price range of the average veteran family will force more of these veterans to appeal for shelter to Government agencies.

"More than 59 percent of the veterans who have applied for public housing have incomes of less than $40 weekly. Incomes in some of the families surveyed are often supplemented by other employable persons in the group.

"The hard, cold facts are simple to understand. Limited incomes, lack of adequate rental opportunities at prices these veterans can afford to pay are creating tremendous hardship. Hundreds of veteran families have been forced to crowd in with relatives and friends. The health authorities have expressed much concern in the matter. Disease is on the upgrade. Juvenile delinquency and adult uneasiness because of housing problems are now fomenting added social disorders. Separated families in this area are increasing; divorces are more frequently mentioned among our young veteran families as a means to an end of family responsibility."

This is the condition in which we find our veterans in one important community in the United States. Multiply it hundreds of times and you have the condition of veterans in the Nation.

According to figures supplied by the Veterans' Administration and the National Housing Agency based on Bureau of Census statistics, we find that in the Nation more than half the veterans are married, and that 30 percent of those married veterans are living abnormally, as the veterans I just described are living in California—namely, in trailers, tourist cabins, rented rooms, in stores, or doubled up with parents in single unit dwellings—or, even worse, housing conditions are actually forcing husbands and wives to live separately.

Again, according to the survey made by the Bureau of Census in the summer of 1946 for the National Housing Agency, the average income of the married veteran in the United States needing rental housing was $47 a week.

According to this same survey, 14 percent of the married veterans requiring rental

housing must pay less than $30 a month, and 56 percent can only afford to pay rents between $30 to $50 a month.

Private enterprise cannot produce and is not producing new housing at the rents needed to serve veterans and their families in these lower-income ranges.

The number of permits issued by Federal Housing Agency for construction of new houses from December 24, 1946, through March 7, 1947, was 130,615.

Of those, 16,615 were for rental housing.

Of the 16,615 for rent in the entire country, only 3,403 were to rent for less than $50 per month.

Our young men gave up their homes to defend this Nation. They have returned and find themselves homeless, caught in the worst housing emergency in the history of this country.

Surely our defenders have a right, now, to settle down peacefully and establish their own families.

Surely it is the direct responsibility of Congress to act in this matter.

Senator TAYLOR and I have introduced a bill to provide houses for veterans. Our bill is no substitute for the Taft-Ellender-Wagner bill, which fills a critical long-term need.

It has nothing to do with the urgency of continuing rent controls. The deficiency appropriation to finish uncompleted units of veterans' temporary emergency housing is still vital.

We must continue to recognize that it is more important for people to have roofs over their heads than for night clubs, race tracks, and show places to be built. We, therefore, must continue a rigid limitation on nonresidential construction.

Allocations and materials controls should be continued and vigorously enforced with respect to any materials still in short supply.

All of these essential measures are supplementary to the need for basic housing legislation such as the Taft-Ellender-Wagner bill. However, even with the enactment of this Taft-Ellender-Wagner bill, under present high levels of construction costs, you will have a no-man's land in housing for the family that must rent between $30 to $50 a month, and it is this no-man's land which creates an emergency for the veteran which our bill is designed to meet.

This committee must decide whether it is the responsibility of Government to provide decent homes for its defenders in those fields in which private enterprise cannot make such provisions. It it does so decide, then it must recognize the emergency with which the veteran is confronted.

In brief, what our bill does is to authorize the Federal Government to make loans of up to a total of $1,000,000,000 to local public housing agencies at a 2½-percent interest rate and for terms extending up to 60 years.

To bridge the gap between the $30 to $50 rents we are seeking and the costs of operation and debt service due to inflated construction costs, the Federal Government would make annual contributions up to 2 percent of the project's development cost. This would mean that with a building program of $1,000,000,000 worth of veterans' housing, there will be a maximum annual cost of the Government of $2,000,000. This cost cannot continue over a longer period than 10 years. If we relieve our acute housing shortage quickly the contributions may be needed for only a few years.

Here is what the bill would do:

1. It would provide housing of a permanent nature, immediately, for a large number of veterans requiring moderate-rental housing—which is the largest group of veterans.

2. It would be applicable only where the President and the locality involved finds that an acute shortage of housing exists which cannot be provided in sufficient quantities by private enterprise.

3. It would confine its benefits to servicemen, veterans and their families, and the families of deceased persons who served in the armed forces.

4. It would be restricted to rental housing.

5. It would use the existing instrumentalities of public housing agencies which, over the past few years, have demonstrated, by their competence, experience, and talent, their capacity to undertake such a program.

6. Because of the low interest rate on the loans and the long amortization period, it would make necessary only small annual contributions to achieve the moderate rents desired.

7. It calls for the utilization of the Federal agency which is accustomed and experienced in this type of Federal aid to localities and therefore one which is geared in personnel and techniques to move immediately.

8. When the President determines that the acute shortage of housing no longer exists, it would require that local public housing agencies dispose of any housing project constructed under this bill at its fair market value.

There is a very definite precedent for such an approach. In the months prior to the declaration of war on December 7, 1941, a large number of permanent well-constructed housing projects were developed and constructed to rent at economic values, with a specific provision in the law that these projects shall be disposed of as soon after the emergency as possible. The Government is now in the process of disposing of these projects to tenants and to private operators; the same thing would be done with the program herein outlined.

It will be charged that this is notihng more than public housing going into a field which was never contemplated, and which if continued as a basic policy of Government would result in Government-owned housing for a tremendous segment of our society. There would be merit to such criticism if it were to become a basic policy. Therefore, our bill is based on the philosophy that this is an emergency and that Government control and ownership will cease when the emergency is over.

It is the direct responsibility of Congress to provide decent housing for our young men who gave up their homes to defend this Nation and who have now returned to this country, and are seeking, fruitlessly, to find new homes where they can begin their familiy life.

There are millions of these veterans today who are homeless, gentlemen.

A Mississippi Statesman

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Mississippi Statesman," which appeared in the April 1947 issue of the Southern Agriculturist.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MISSISSIPPI STATESMAN

One of the hardest working statesmen on the current American scene who is rendering conspicuous service to the South and to the Nation as a whole is Congressman WILLIAM M. COLMER, of Mississippi.

Born in Moss Point, Miss., educated at Millsaps College in Jackson, 1910–14, in World War I as a private in the United States Army, promoted to regimental sergeant major before his discharge—this young Mississippian began his career as a school teacher in 1914.

In 1917, Mr. COLMER was admitted to the Mississippi Bar. From 1921 to 1927 he served as county attorney for Jackson County, from 1928 to 1933 as district attorney for the second district, and since then has represented the Sixth Mississippi District as one of the most able and conscientious Members of Congress.

While a member of the all-important House Rules Committee and a member of the National Forest Reservation Commission, Congressman COLMER'S most distinguished service has been rendered in recent years as chairman of the Special House Committee on Postwar Economic Policy and Planning.

In the latter capacity, Congressman COLMER has submitted 11 comprehensive reports to the Congress dealing with basic economic problems growing out of the war.

The following summary of Congressman COLMER'S latest recommendations to the Congress, as chairman of the Special Committee on Postwar Economic Policy and Planning and calling for congressional inquiries by appropriate committees, is typical of the sound approach and thoroughgoing way in which he and his committee are functioning:

1. A review of the financial aspects of our occupation policy in order to substitute productive and self-supporting economies in exenemy countries for the present method of supporting them with American money while they in turn are being drained by Russia and France.

2. Specific assistance to the western occupied zones of Germany and Austria, and direct relief to Italy and Greece.

3. The making available of loans to our occupation authorities through the Export-Import Bank rather than the Reconstruction Finance Corporation in order to start the flow of raw materials necessary for industrial production in these countries. This involves a limited further capitalization of the Export-Import Bank for political loans made necessary before the effective operation of the International Bank and Fund. This further capitalization should be authorized only after a review of the existing loans, and the withdrawal of credits to countries which have violated the agreements that formed the basis of the loans.

4. A further inquiry into the remaining restrictions on the movement of businessmen; and into the methods by which freedom of access into foreign countries of United States information agencies, including books, magazines, papers, movies, and reporters, can be facilitated.

5. A specific study of safeguarding the trade recommendations with respect to the abuse of state trading practices, particularly by the state monopolies of nations who are not members either of the Bank, the Fund, or of the International Trade Organization.

6. A study of the desirability and effectiveness of the elimination of the export of American technical know-how and of finished products which could be useful in the development of atomic weapons under the provisions of the McMahon bill on the control of atomic energy. Security considerations may call for broadening such controls over experts to prevent building of other armaments.

7. The holding up of further settlements of lend-lease until inquiries as to the fulfillment of the conditions of the lend-lease agreement have been made and until the safeguarding of access to strategic materials and equal trading operations for the United States have been obtained.

8. A study of the nature of the employment of gold reserves by countries which are not members of the International Bank and Fund which may prejudice the operation of gold as a medium of international exchange for multilateral trading.

Congressman COLMER'S work in all these vital inquiries and studies cannot fail to show that the South, and the State of Mississippi in particular, is being represented today in the National Government by a leadership of the most able and diligent kind. In COLMER the citizens of the Magnolia State have a spokesman whose importance, evidenced daily in the Nation's Capital, bids fair to become as memorable in future years as that of such distinguished Mississippians as Lucius Quintus Cincinnatus Lamar, Jefferson Davis, and Sergeant Smith Prentiss.

Let's Practice What We Preach

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. HOPE. Mr. Speaker, I have recently received from Mr. C. T. Thompson, of the Thompson-Hayward Chemical Co., Kansas City, Mo., a copy of a circular which is being distributed by that company on the subject of Government economy. It is entitled "Let's Practice What We Preach."

This circular points out in a very telling manner that the only way we can reduce taxes and expenditures is by reducing the activities of the Government. While the truths contained in this circular are self-evident, they cannot too often be repeated and emphasized.

LET'S PRACTICE WHAT WE PREACH!

There is almost a universal demand for a decrease in National Government expenditure.

The same demand exists for decreased taxes by business and individuals.

Yet what causes Congress to delay action so definitely promised before elections?

Why? Why? Why?

Because—

Farmers don't want subsidies and crop guaranties discontinued.

States want hand-outs for road construction.

Cities want donations to expand airport facilities.

Veterans want expenditures which are growing by leaps and bounds.

Localities want Federal aid for school lunches.

Federal agencies refuse to reduce their specialized activities and enlist favored blocs to scream at the prospect of being cut.

We could continue, but you get the point.

What further do we see?

Every State, every city, engaged in a mad competitive rush to expand.

Citizens all demanding more services, which cost money to create and more taxes to maintain.

Never were so many bond issues being proposed by every metropolitan city for new projects at a time when money will buy less tangible results.

Educational agencies all out raising funds to expand for an emergency condition again with highest costs for accomplishment.

So it goes.

How can taxes be reduced unless we exercise some self-restraint, self-denial, and self-discipline.

(A) As citizens, we must resolve—

1. To vote against additional bonds in our own communities when it is not sound to do so.

2. To be willing to forego many improvements.

3. To be hardy enough to stand some inconveniences and discomforts if our pocketbooks are not able to pay the price of the bill to eliminate them.

(B) As communities—

1. To stop looking to Federal aids for donations and help.

2. To only undertake projects the community can properly pay for.

3. To be willing to expand on a realistic and orderly basis.

4. To stop starry-eyed competition with other communities and be content with doing the best we can with what we have.

(C) As States—

1. To eliminate duplication of Federal programs such as veterans' bonuses, and paternalistic programs.

2. To restore to their local communities their local responsibilities.

We can't have our pie and eat it too. The New Dealers have proved this to us in our debt load.

Lower taxes can only come with less expenditures.

Let's practice what we preach.

Individual Income-Tax Reduction, H. R. 1

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. REED of New York. Mr. Speaker, now that H. R. 1 has passed the House of Representatives, its provisions are of interest to all individual taxpayers. The bill as it passed the House is a tax-reduction bill for the benefit of those who pay individual income taxes. It does not apply to corporations.

What changes may be made in H. R. 1 before it becomes a law are problematical, but I am inserting tables taken from the Ways and Means Committee report on H. R. 1, which will show the effect of H. R. 1 on individual income taxpayers.

What each individual income taxpayer will wish to know is how H. R. 1 will affect him if the bill becomes law in its present form. The purpose of each table and the person or persons to whom the tables apply is clearly stated at the top of each table.

Individual income taxpayers, whether single or married, who have attained the age of 65 or over, will be especially interested in tables 4, 5, and 6.

TABLE VI-A.—*Comparison of individual income tax under present law and H. R. 1, as reported*

SINGLE PERSON—NO DEPENDENTS

Net income before personal exemption	Amount of tax		Amount of reduction in tax, H. R. 1 (as reported)	Percent tax reduction, H. R. 1 (as reported)	Effective rates

High Taxes Versus Incentive and Revenue

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. REED of New York. Mr. Speaker, the adverse effect of present high taxes upon our national economy is overlooked by those in the lower income-tax groups who stand to profit most from the creation of new pay rolls and the general expansion of free enterprise.

Under leave to extend my remarks, I am inserting the following article by Henry Hazlitt in Newsweek under date of April 7, 1947:

HIGH TAXES VERSUS INCENTIVE AND REVENUE

(By Henry Hazlitt)

In a recent Gallup poll the question was asked: "About how much do you think a married man with two children who earns $50,000 a year now pays in Federal income taxes?" The typical answer was $9,000. The actual tax on such a net income, however, is around $24,000. It would be instructive to learn how many people know that a $300,000 net income shrinks to $66,000 after taxes and a $1,000,000 income to $161,000.

In its March letter the National City Bank publishes some illuminating income-tax tables. One of these shows how much is actually left at various income levels for the taxpayer himself out of every extra dollar he earns. The figures are for a married man

with two children and legal deductions of 10 percent of his gross income:

Gross income:	*Taxpayer keeps out of each additional dollar*
$2,000	$1.00
$4,000	.81
$8,000	.75
$16,000	.59
$32,000	.41
$64,000	.29
$128,000	.15½
$350,000	.13½

When the Gallup poll asked people how much they thought a man who earns $50,000 a year ought to pay in income taxes, the median average answer was $7,500. This is only about a third of what such a man actually does pay. The taxpayer is allowed to keep less than half of everything he earns above $22,000. The question of fairness, however, is one on which it seems impossible to get agreement. No matter how much is taken from the big incomes, some people cannot see why those who earn more than they do should be allowed to retain any amount higher than they themselves can earn.

It seems more profitable from a pragmatic standpoint, therefore, to consider not so much the fairness of the tax structure as its practical effects on the economy. One obvious effect (considering the present corporate as well as personal income-tax structure) is to soak up the principal sources of capital funds. The funds that the present tax structure takes are precisely those that would have gone principally into investment—that is, into improved machines and new factories to provide the increased labor productivity which is the only permanent and continuous means of increasing wages.

An even more important effect of taking so much of the taxpayer's earnings is to diminish or remove the incentives to bringing such earnings into existence in the first place. This means not merely a loss to the taxpayer who does not trouble to earn the money. It means a loss to the wealth of the whole Nation. It means a loss even to the Treasury itself. Another table compiled by the National City Bank, based on reports of the Bureau of Internal Revenue, strikingly illustrates this result. (The dollar figures stand for millions of dollars.)

[Millions of dollars]

	1926–28 average	1942
National income	$77,000	$122,000
Incomes over $300,000:		
Total amount	$1,669	$376
Taxes paid	$281	$292
Top tax rate applicable (percent)	25	88
Number of returns	2,276	654

Let's see what this means. During the same period that the total national income increased 58 percent total incomes over $300,000 fell 77 percent. If each individual's income had risen by the same percentage, total incomes over $300,000 would have risen by a much greater percentage, for all incomes previously above $190,000 would now be counted among the incomes over $300,000. Yet even if the aggregate of such incomes had risen no more than proportionately to the whole national income, the total would have reached $2,637,000,000—7 times greater than it actually was—and if this income had been taxed at the same schedule as in 1926–28, with a top tax rate of only 25 percent, the yield to the Treasury would have been about $444,000,000.

It would have been, in other words, about 50 percent greater than the actual yield from the greatly reduced incomes taxed at a top rate of 88 percent, for there can be little doubt that overwhelmingly the most important reason for the contraction of incomes over $300,000 in 1942 compared with 1926–28 was precisely the increase in the top personal income-tax rate from 25 to 88 percent. In other words, there can be little doubt that a sharp reduction in the top tax rates prevailing today would eventually greatly increase rather than reduce revenues.

Power Needs of the Northwest

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by Paul J. Raver, Administrator, Bonneville Power Administration, in Seattle, Wash., on February 26, 1947, containing some very interesting and I think important observations on the power problem of the Northwest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The last time I appeared before you, I believe, was in December of 1940, a little more than 6 years ago.

On that day I announced the appointment of Frank Ward as manager of the Bonneville Power Administration for the Puget Sound territory, with offices here in Seattle.

Since that time there have been a number of changes. One of them is the departure of Mr. Ward from the position which he has so ably filled, to become superintendent of Tacoma City Light. We are distressed at losing Mr. Ward's services, but we are partly comforted by the knowledge that he is not going very far away.

It is my hope to fill his position, and in fact, to keep the standard of all Bonneville staff appointments at a level which will inspire the confidence of the Northwest region and the Nation as a whole. There is no substitute for competence.

Since 1940 there have been many changes in the Northwest's power picture.

In 1940 we had power to sell and prospects for still more power.

Now that situation has been completely changed. We have very little property to sell now—most of it is already sold—and prospects of having still less power to sell in the immediate future.

Six or eight years ago these facts would not have been very distressing because at that time the meaning of Bonneville and Grand Coulee was scarcely more than a beautiful theory.

Some people said that cheap power in large quantities produced by these dams would bring a tremendous industrial development to the Pacific Northwest.

Other people said that this was a lot of hogwash—that the power could not be sold, that the river would not "pay out", and that industry was interested principally in market and transportation factors.

Because the theory was in dispute 6 or 8 years ago, a lack of power supply at that time would have meant relatively little to us. We would not have known what we were missing.

But the war period, and particularly the postwar period of the past year and a half, have changed all that. The connection between cheap power and industrial development is no longer a matter of theory out here.

It is a proved fact.

Thus, some of us do know now what we will miss if we do not keep the power supply up ahead of the demand and always available.

Those of us who have had an opportunity to realize this, owe it to the region and the Nation to spell the story out again and again and again.

Let me refresh your minds on it briefly once more.

No region, no nation can progress in this technological age without an adequate supply of energy. This energy may be in the form of coal, oil, gas, or hydroelectric power, or a combination of these energy sources. That area within a nation which contains a supply of any one or more than one of these resources will, other things being equal, be the area that has the greatest industrial and related economic development. It will also be the area supporting the largest segment of the population.

Regions without one or more of these energy bases must import their energy by pipe line, steamship, truck, or rail transportation and add the costs of such transportation to the cost of production of its goods and services or remain an undeveloped hinterland.

One of the most dramatic illustrations of the importance of an energy base, not only to a region but to an entire nation, was given a few weeks ago when John L. Lewis called out his miners and the industrial economy of the entire Nation was gradually but certainly grinding to a complete halt.

During the past 8 years the Northwest has had a demonstration of what an adequate and cheap supply of energy can mean to its economic development. This demonstration came first in the tremendous productive output of war plants in this region based on an adequate supply of hydroelectric energy. The demonstration has been even more dramatic since the war—when the surplus supply of energy which briefly existed upon the cessation of hostilities and the shut-down of the great war producing plants was absorbed almost overnight by resurgence on a peacetime basis of one of the greatest expansion movements in the use of electrical energy that has ever occurred anywhere.

It should be pointed out, however, and emphasized in every way that we can emphasize it in order to bring it home to the people, not only in industry but on the farms and in the homes of the Northwest, that this rapid development of industry and the rapid expansion of the uses of electricity on the farm and in the home is going to come to a stop unless new supplies of the Northwest's energy base are quickly developed—just as surely as if a John L. Lewis of the power industry had called a strike on further development of the river.

Tte Northwest does not have coal in industrial quantity. It does not have oil. It does not have natural gas. All of these energy resources must be imported. It does have hydroelectric power still to be developed. It is apparent that the Northwest is in no position to compete with regions that have adequate supplies of coal, oil, and gas as the bases for their whole economic development, unless there is always available in the Northwest an adequate supply of hydroelectric power already developed and ready for use.

Certainly, whenever any expansion in industry comes in the industrial East, more coal can be mined because the mines are there, or more gas can be piped in because

the gas is going to waste in fields where it exists today, or more oil can be pumped—but in the Northwest more hydroelectric power cannot be pumped into industry until new dams have been constructed.

Consequently, the only way that the Northwest can keep abreast of its own expansion potentialities is for the Northwest to maintain its own energy supply which means that it must always be ahead of the demand for energy by having the supply available ahead of the demand. Otherwise the Northwest will lose much of its potential industrial development to other sections and areas of the Nation where the energy bases is expansible almost overnight because of the character of the material which is used to supply that energy base.

Here it takes 5 years to build a new dam. We should always have a new dam in reserve in which new generators can be installed at any time the demand for expansion of our energy base makes itself apparent. Such new dams on the Columbia River can be built and should be built to extend navigation and flood control and to provide water for irrigation. These other purposes provide the basic justification for the Federal Government to step in and make the development in the first instance. Power is and should continue to be a byproduct of these other multiple purposes—and power will pay the way.

In the Northwest since hydroelectric power is the only cheap energy base which can be made available to the region, that factor should be used to emphasize the feasibility of the other multiple purposes for which the dams are fundamentally built.

Until the people of the Northwest come to a full realization of this basic approach to their own expansion and development, it goes without saying that the rest of the country cannot be made to realize the importance of the program to the Nation as a whole.

Chambers of commerce, leaders of industry, as well as leaders of farm groups and smaller consumer groups need a better appreciation of the financial stake which they as businessmen have in the continuation on a fairly large scale of the construction of multiple-purpose dams on the Columbia River and its tributaries.

Industries are investing millions of dollars of private capital here in the Northwest, on the assumption that a cheap energy supply will be available as a continuing resource of this region. They are becoming conscious of the need for continued expansion of this base.

At a recent meeting of the Bonneville Regional Advisory Council, for instance, we had as a guest, Mr. E. H. Vicary, of the Crown Zellerbach Co. Mr. Vicary is undoubtedly known to a number of you here. I am not at liberty to quote Mr. Vicary's statement in its entirety, but I can say that he made it quite clear that his firm is very much in the market for power, especially in the Port Angeles area. Mr. Vicary declared that the need for his company was so urgent that they would take emergency steps to develop their own capacity if need be, but he concluded his statement with these words: "Isn't it a shame to spend money for fuel oil when you have water going down the streams? In the long pull it seems to me the generating and transmission facilities you are talking about are the best bet we can think of nationally."

The utility industry, comprising publicly owned agencies, large and small, and the five major privately owned operating companies, have, of course, seen this picture most clearly.

At a series of meetings in Tacoma in January, members of the Northwest Power Pool, including the Seattle and Tacoma city systems, Puget Sound Power and Light and others, reached agreement on the region's power needs for the next 6 years.

Let me read you their statement:

"It is recognized that provision for future supplies of electric power adequate to maintain continued industrial, agricultural, and utility development in the Pacific Northwest depends upon the construction of multiple-purpose projects on the Columbia River and its tributaries. The Federal Government, by numerous acts of Congress, has assumed responsibility for the construction of these multiple-purpose projects.

"The assumption of this utility responsibility by the Federal Government has caused investors and management of both publicly and privately owned industrial and power distribution enterprise in the States of Oregon and Washington to plan their investments and developmental programs in the belief that this Federal policy will continue.

"Recognizing that the existing generating capacity in the Northwest is now fully utilized and that the maintenance of an adequate power supply is of extreme importance, the undersigned privately and publicly owned utilities, after conferring with representatives of the Federal agencies concerned, have given careful consideration, first, to the power requirements by year through 1953; and, second, to the requirements for the construction of additional backbone transmission circuits needed to bring power supplies from Federal projects to the region's load centers.

"As a result of these extended deliberations, and detailed load studies, it is determined and agreed that new Federal generating capacity in the amount of 318,000 kilowatts, over and above the 745,000 kilowatts of generating units now on order, will be required between now and November 1, 1949, to meet the present critical power supply problem; and 1,565,000 kilowatts will be required by November 1, 1953, as set forth in detail in the attached memorandum. To meet these requirements it is urged that the necessary appropriations be made available as rapidly as possible to the Corps of Engineers and to the Bureau of Reclamation.

"Inasmuch as these Federal generating plants are located a considerable distance from the region's load centers and inasmuch as present transmission facilities of the Bonneville Power Administration are already approaching conditions of full load, it is agreed as essential that appropriations for backbone transmission facilities be made available to the Bonneville Power Administration on an annual and continuing basis adequate to provide a means for the delivery of power to load centers."

The facts of power needs cited in this statement of policy have the agreement of the Northwest Public Power Association, representing most of the PUD's, cooperatives, and municipal facilities, which reviewed them in Portland on February 4 and passed its own statement of policy. There are, of course, marked differences of opinion between utilities as to specific facilities needed; but there is no difference of opinion on the over-all amount of generating capacity needed, or on the need for the continued extension of the basic transmission grid.

I think these figures on needed supply are of basic significance to every businessman in Seattle.

They are significant because they show that the current program is not sufficient to keep up this region's energy base.

To be effective it is not enough to meet current demand. We must have power on the shelves ready for market or the market will not materialize.

This power inventory will not be built up unless the leadership of the region is aggressive in making its needs known.

We cannot stock our power inventory without capital or credit.

It is my personal view that the kind of capital and credit we must have can be obtained only from a bank of the largest size. I think there is only one bank big enough. That is the United States Treasury. In this case, as with any other enterprise, the bankers (in this case, the Congress) "have to be shown." It is up to you, as the stockholders and the directors of the Pacific Northwest, to prove your point and to get the money. You can quote Interior and BPA as your technical advisers and your managing engineers, but it is you who will have to actually do the borrowing.

I know you can show plenty of security for the money, and ample revenues for pay out.

There has been some question as to whether Northwest power and industrial development is not too dependent upon an industry with an uncertain future out here—the aluminum industry.

All the evidence points to permanence—if power supplies are developed. The testimony of big producers and fabricators; and, in fact, the economics of the industry itself, point to an expanded, permanent operation—if power supplies continue available at competitive prices.

On December 31, Mr. R. S. Reynolds, president of the Reynolds Metal Co., of Richmond, Va., wrote me a letter. Almost the first sentence in that letter mentioned his plans for expansion of his business, and then said: "I am wondering if the rumors are true that we can't get any more power from the Bonneville Power Administration." Unfortunately, at the moment, the rumors are true.

No industry remains static. It either grows or it slips. This is especially true of the aluminum industry in the Pacific Northwest. It must grow until it is an integrated operation from the production of raw material to the production of fabricated goods. Unless Mr. Reynolds and others can expand, the splendid start of a great new industrial development will die aborning.

All this goes to show that the Northwest can't wait even 1 year on the possibility of some other source of energy. Our need is now and immediately foreseeable. We must have all the power we can scrape together prior to 1953 to meet actual deficiencies. This requires money for the Army and Reclamation Bureau projects, and money for transmission to bring the output of those projects to load centers.

I want to close with this observation. The program I am talking about is not a program involving a gift from Uncle Samuel. I am talking about a self-liquidating, financially feasible program from every point of view.

I should like to point out to you that as of June 30, 1946, the date of our last annual audit by Arthur Andersen & Co., of Chicago, the Federal Government had invested in the Pacific Northwest, in Bonneville Dam, in Grand Coulee Dam, and in the Bonneville Power Administration approximately $275,000,000 in ower facilities. As of that same date we had collected in gross revenues approximately $84,000,000. We had spent out of that $84,000,000 approximately $26,000,000 for operation and maintenance of the power facilities in the 3 projects. We had set aside approximately $26,000,000 in interest on that investment. We had set aside approximately $14,000,000 in depreciation on that investment and had left over in the neighborhood of $16,000,000 in net surplus.

It is, in fact, the greatest of its kind in the entire country. Upon it the Nation as well as the region can depend for the production of new taxable wealth and the creation of new opportunities for new people coming to the region to make a livelihood. It is a program to undergird and expand the free enterprise system—to expand opportunities for the exercise of individual initiative and of private capital. For the private capital system anywhere depends for its success on

three factors: (1) An assured energy base; (2) an expandable energy base; (3) a cheap energy base. These three factors are present in those sections of our country where the greatest industrial expansion has taken place—in Chicago, Detroit, Pittsburgh, and the industrial east where coal is an assured, expandable and cheap energy base; in California and Texas where the energy base is gas and oil. But in the great Northwest the energy base which is inexhaustible must be harnessed before 't is available and it must be harnessed in advance of the demand for energy if progress is to be assured.

Distribution: The Key to Agricultural Progress

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. HOPE. Mr. Speaker, under leave to extend my remarks, I am including excerpts from the talk made by Harvey S. Firestone, Jr., at a meeting of the Firestone champion farmers in Washington, D. C., on February 13 last.

I thoroughly agree with the emphasis which Mr. Firestone places on marketing and distribution as a key to agricultural progress, and hope that all Members of Congress interested in agriculture will take the opportunity to read what Mr. Firestone has said:

During World War II and in the immediately following postwar period, the farmers of America literally saved a large part of the world from mass starvation. Although they were severely handicapped by shortages of manpower, machinery, and materials, they nevertheless succeeded in breaking all previous records in the production of food and other vital materials. They proved beyond a shadow of doubt that this country could turn out far more farm products than it did in normal prewar years. And I am sure that with ample help, plenty of machinery, and unlimited supplies of materials, even those amazing production records could be broken.

Basically, it is not overproduction, but underconsumption which bars agricultural progress. In other words, the real bottleneck lies in distribution. There is a real need, somewhere in the world, for everything you can produce, and more. The problem is to get your products to those who need them.

In this respect, the problem of agriculture is the same as that which industry faces. The productive capacity of both has been substantially increased as the result of the wartime emergency and, if we are not to slip backward, we must find outlets for all that we can produce and enough more to justify future expansion.

Markets must be broadened by making more products available to more people. To accomplish this, a close and careful study must be made of methods of distribution, eliminating all needless expenses and spending more time on effective marketing efforts. We must do everything we can to maintain the high living standards of our country, because we cannot sell the output of our farms and our factories unless people have purchasing power. These are steps which we can take right now. But the real hope of ultimately solving the problems of our economy lies in the youth of our country.

But the time has come when training farm youth in the science of production is not enough. The farm boys and girls of tomorrow must also be trained in the science of distribution.

We have learned that lesson the hard way in industry. For many years, after the beginning of the machine age, we concentrated on attaining greater efficiency, economy, quality, and quantity in our production. Not enough attention was paid to distribution, because it was not then a serious problem and few could foresee the day when we could not consume all that we could produce. But now, it is a different story. Industry is, at last, beginning to recognize the urgent need for concentrated attention on the problem of attaining greater efficiency, economy, quality, and quantity in our system of distribution.

One the principal difficulties is a severe shortage of men trained in the science of distribution. Comparatively few institutions of learning have comprehensive courses of study aimed at graduating a student qualified to enter into distribution as a vocation. A young man today has the choice of hundreds of schools which grant degrees in chemical, electrical, mechanical, and civil engineering and many other subjects which will fit him to become skilled in various phases of manufacturing.

But if he intends to follow distribution as a vocation, he must acquire most of his training after he leaves college, by working in one or more of the marketing organizations now established or in the market research division of some industrial concern. Only after years of on-the-job experience can he qualify as an expert in this field.

Consequently, if we are to progress in the years to come, we must begin at the grass roots by fostering and encouraging young men and women to consider the science of distribution as their life work and by persuading colleges and universities to offer regular courses of study which will eventually result in the granting of degrees in distribution.

Echoes From Cornfield Conference

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Echoes From Cornfield Conference," from the Washington (Ind.) Herald of March 27, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECHOES FROM CORNFIELD CONFERENCE

On the occasion of his famous Cornfield Conference, August 27, 1938, HOMER E. CAPEHART, in his first political address, used these words:

"I am sick and tired of hearing businessmen and men of other groups condemn the New Deal and then do absolutely nothing about it.

"I am a farmer and a businessman. I cannot stand by idly and see this Nation of ours, that has blessed you and me and millions of others with vast opportunity, ruled by a man whose false leadership, if not changed, will bring it to destruction.

"We are not a Communist country, nor a Fascist country, nor a Nazi country. We are still a Nation of free people who believe in an Almighty God and the right of every man to follow his own ability to opportunity's end.

"We cannot live under two systems of government—the American system and the New Deal experiment."

Since that hot August day in 1938, Mr. (now Senator) CAPEHART has made hundreds of speeches in which he has flayed communism in all its forms. During the last campaign he set the keynote of the campaign by declaring that the basic issue was a contest between two ideologies of government—the ideology of free men, free government, and free enterprise and the ideology of regimented men and dictatorships.

Last week Senator CAPEHART called attention again to those words that he used at the Cornfield Conference and reminded his audience of how far we have traveled on the pathway of Communist ideology—so far that we are now engaged in a major operation to purge our roster of Government employees of Communists—so far that we now are poised on the edge of a world conflict to stop the spread of philosophies of government that we have nurtured and encouraged for the past 15 years.

It was Roosevelt's reversal of United States policy by recognizing the Government of Soviet Russia in 1933 that started Stalin on his quest to world power. It was the New Deal coddling of Communists in this country and the Roosevelt coddling of Stalin throughout the period of the war that put Russia in a position to threaten the peace of the world today.

Had there been more Capeharts and more people who followed his advice, even as late as 1938, the situation would have been much different the past several years and it would be much different today.

Aid for Greece and Turkey

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. MILLER of Connecticut. Mr. Speaker, I fail to recall a legislative proposal that has caused me as much concern as has President Truman's announced policy of providing relief and military aid to Greece and Turkey.

Since listening to President Truman's message to the joint session of the Senate and House on March 12 I have tried to read every article on the subject that has come to my attention.

I am inserting as part of my remarks today an article written by William L. Shirer which appeared in yesterday's New York Herald Tribune.

Throughout the war years I have read many thought-provoking articles written by Mr. Shirer. His story as it appeared in the press of yesterday should be read by every citizen who is striving to make the correct decision.

"TRUMAN DOCTRINE" CALLED A STEP TOWARD WAR—AID TO GREECE AND TURKEY SEEN HIGHLY UNLIKELY TO INDUCE RUSSIANS TO QUIT EUROPE WITHOUT CONFLICT THAT WOULD DESTROY CIVILIZATION

(By William L. Shirer)

If, as everyone in Washington now seems to agree, President Truman's proposal for aid

to Greece and Turkey is essentially a military matter whose purpose, in Walter Lippmann's words, "is to exert American military power upon the Soviet power," then, obviously, further discussion about saving nonexistent "democracies" in Turkey and Greece has become a waste of time and the "Truman Doctrine" has to be judged solely on its military merits.

Perhaps a reporter, being a civilian, has no business venturing into the military field. But since many of his brethren have, this one, with due apologies, would like to offer his 2 cents' worth. My only excuse—and it's pretty flimsy—is that on many a dreary night in Berlin I had nothing better to do than to delve into such authorities as Luderdorf and Clausewitz on the general subject of the relationship between politics and war, that last winter in Germany I had the opportunity of studying the full texts of the operation plans of the Wehrmacht for each phase of the recent war, and that, like many another American reporter, I was fascinated and horrified by the realization that the most perfect plans of the military fraternity go awry as soon as they are put to the terrible test of battle and the unpredictable uncertainties of world politics.

No general staff ever planned more expertly, more meticulously, than the German. When you study its ingenious plans you can see how sure its members must have been that their military calculations could not help but succeed. And yet in the end their greatest calculation—to risk war itself—was so ghastly a mistake that their country was destroyed as a result of it.

Obviously our own high command has not got to that point yet—of risking war with Russia. But if the newspaper accounts about the correctness of our decision to exert American military power against Russia in Turkey and Greece have any basis whatsoever, then we have certainly taken a first step. And the American people ought to know why—and what the risk, so far as it can be calculated, is.

"Diplomacy and strategy, political commitments, and military power are inseparable," as Edward Mead Earle pointed out in his excellent book, Makers of Modern Strategy. "The very existence of a nation depends upon its concept of the national interest and the means by which the national interest is promoted; therefore, it is imperative that its citizens understand the fundamentals of strategy."

The German experience, it seems to me, has a lesson for us. As expert as the German soldiers were at their trade, there was always one thing, it seemed to me, that they lacked in their calculations—they had no political sense. They failed to comprehend the dictum of their own greatest modern strategist, Clausewitz, that "war is politics continued by other means."

Specifically, the German generals could never see the world picture. In the fateful August days of 1939 they would not stop to make a fundamental calculation as to the chances of the two great neutral states, Russia and the United States, coming into the war against them. We know from the secret German archives that Hitler, in his various harangues to the high command, brushed aside the subject as of no importance. Even on the eve of the German declaration of war against us, Hitler assured everyone that American troops could never land on the European Continent.

In the early months of the war I asked the late Goering if America's potential airplane production did not enter into his calculations. He laughed the question off as a joke. It was plain he had never faced that prospect.

Now that we have decided to throw in American military power against the Soviet Union, our statesmen and high command, it seems to me, could profit from the German lesson by getting very straight in their own minds the consequences of politics by diplomacy being suddenly replaced with politics by war. Professor Earle emphasizes that Lenin, like Engels, had "read, annotated, and pondered Clausewitz" and that, speaking of the latter's "famous dictum" that "war is politics continued by other means," Lenin once exclaimed, "The Marxists have always considered this axiom as the theoretical foundation for the meaning of every war."

MOVE TO CONTRACT RUSSIA

We are now told by certain writers who presumably reflect the thinking of our military men that our new strategic plan is designed not only to check Soviet expansion but to contract it—in fact, to put us into a position where we can talk the Russians into withdrawing their military power from Europe. It is argued that by strengthening the armies of Greece and Turkey we can achieve this tremendous goal.

But certainly this is highly doubtful. In their present unreasonable mood the Russians are not likely to be talked into withdrawing from Europe. If that is so, they can only be forced to do so by American military power. The question is: Have we the power at such a distant point from our shores and so close to Russia's frontiers?

The Turkish Army could probably hold out longer than did the Poles in 1939. But is it as good as the former German Army? The Greek Army, held at bay for 2 years by a few thousand bedraggled guerrillas, could hardly stand up, say, to a combined Yugoslav-Bulgarian force strengthened by Russian unit which could be made quickly available.

The only Army we have in Europe is a small contingent in Germany. It is a police force, not a combatant Army of any strength. Indeed, seasoned European journalists express the fear that, if the Soviet Union desired to, it could probably occupy the entire continent within a few weeks and thus deprive us of even the possibility of air bases. Also Europe, including Great Britain, is exhausted by war. Its peoples, especially on the continent, would hardly spring to arms, even if they had them, to join in a war against Russia, however, much they may detest the Soviet dictatorship and love us.

MILITARY PRESSURE ABSURD

From a purely military point of view, since that appears to be the issue, it would seem as absurd for us to try to exert successful military pressure, however just our cause, against the Soviet Union on or near its borders as it would be for Russia to use its military power against us from below the Rio Grande. Even a puzzled civilian could predict the results in both cases with deadly certainty.

And if war comes between the world's two greatest powers, as it will certainly come if either side starts using its military power against the other, then, regardless of who wins, our civilization, such as it is, will perish. On that, at least, there can be no disagreement.

Need for Occupation Forces

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under the heading "Need for occupation forces," published in the New York Times of March 13, 1947.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEED FOR OCCUPATIONAL FORCES—PROPOSED BUDGET CUTS AFFECTING OUR PERSONNEL IN GERMANY

To the EDITOR OF THE NEW YORK TIMES:

Last September I returned from Germany, where I was attached as attorney to the War Crimes Branch, United States Army, and had the privilege of taking an active part in various war-crime trials, especially the so-called Malmedy trial, conducted at Dachau, to punish the killers of American soldiers taken prisoners in the Battle of the Bulge. During my stay over there I had ample opportunity to observe our occupation forces at work and to notice that most of our Military Government offices which I saw were adequately manned, but that none of them was overstaffed.

Since that time conditions have radically changed. True, the total of American wives and children surpasses the total strength of our constabulary, but I doubt that this fact will enchance our military and administrative efficiency. The Seventh and Third Armies have been deactivated. The constabulary, upon which the Military Government counts to suppress any resistance movements, is without its tanks; our Air Forces are without bombers.

General Clay was compelled to announce several radical personnel cuts, resulting in 30 to 40 percent reduction of MG's personnel by July 1, 1947, doing away with practically all of the liaison detachments in the smaller places of the Landkreise and cutting the strength of various administrative departments to the bone—not even to mention the complete lack of personnel for one of the most important tasks, denazification, the handling of which we should have reserved for ourselves.

Moreover, although all these reductions were instituted on the basis of a greatly reduced tentative budget for 1947, the present economy drive in Congress threatens even this budget with further very substantial cuts, which well might make occupation a meaningless gesture and a hollow shell. Already AMG is compelled to cancel running contracts with civilian employees. All personnel with a rating below CAF-8 and P-3, who have their families over there, cannot, pursuant to a notice recently appearing n Stars and Stripes, expect a renewal of their contracts.

RESULT OF CUT

What will happen if the intended six-billion cut, or even the liberal four-and-one-half-billion cut, should become law is only too obvious. While I was still over there, many of the Germans in all walks of life expressed their doubts about the seriousness of our intention to stay and sweat it out in Germany.

But what is our alternative? To turn over the occupation of our zone to the French or the English, who, although they on their small war-ravaged and impoverished island certainly do not have the financial resources of this country, now have substantially more troops (300,000) under arms in Germany than we have? Or to continue to occupy Germany with totally inadequate and insufficient forces?

When will we ever learn that power is the only language all of the other countries understand? There cannot be the slightest doubt in anybody's mind that by indiscriminately cutting down our occupation forces (as will be the inevitable result of the intended budget reductions) we will not only lose face in the eyes of the German people, who would certainly be the first ones to avail themselves of our weakness, but will also lose the much-needed bargaining power in AMG's dealings with the other occupying governments.

From all I have seen, the military government and its military and administrative personnel have done an excellent job. Undoubtedly, mistakes and errors have been made; undoubtedly, people were occasionally placed in positions for which they were not fit and in which they exercised faulty judgment; undoubtedly, a small minority placed good living and personal gains above their tasks. But, on the whole, the military government's personnel are efficient, honest, and capable, deeply devoted to their duties; they measure up fully to the forces of any of the other occupying powers, and do not deserve to be let down now by economy measures, however well intended they may be, which would cripple this efficiency beyond repair.

Congress, before cutting the budgets of the War and Navy Departments, should listen to the warning voices of men like Secretaries Marshall, Patterson, and Forrestal, and Generals Eisenhower, MacArthur, McNarney, and Clay, who are certainly no New Dealers, and whose personalities and backgrounds should vouch for the absence of any bias or personal interest.

WARNINGS OF LEADERS

The Secretaries of the War and Navy Departments are civilians themselves. Generals Marshall and Eisenhower are professional military men, who have time and time again in the past placed the interest of the Nation above the gains or interest of any particular group or class. In General Clay we are happy to possess a man who combines, to an otherwise rarely attained degree, the top qualifications of a soldier with the qualifications of a civilian administrator and diplomat. Their warning voices should not be heard in vain.

And it is more than a coincidence that there seem to be not many supporters of the budget cuts among the Republican Members of Congress who have actually been over there, be it as a fighting man, like Senator LODGE, or as an observer, like Senator MORSE. These men know what is at stake.

A substantial cut in income taxes would, no doubt, be welcomed by everybody, but I think much too highly of the patriotism and intelligence of the average American to believe that they would also welcome such cut if it can be achieved only by wielding an ax in a dark room, by the relinquishment of our international obligations, and by paying a price which might not fall due for another 10 or 20 years, but which we one day would have to pay.

We did have money enough to bring dozens of witnesses from everywhere to Washington to testify in the 6 weeks' fight against Mr. Lilienthal's confirmation. Concededly, the amounts needed for the efficient occupation of Germany and Japan are bigger. But bigger things are also at stake, and for those bigger things we ought to, and must, have the money, even if it means a tax reduction of less than 20 percent, or no tax reduction at all.

The Second World War is not yet ended. Hostilities have merely ceased.

HERBERT J. STRONG.

NEW YORK, *March 8, 1947.*

Press Freedom Report

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the La Crosse Tribune:

PRESS FREEDOM REPORT

Freedom of the American press is in danger, according to the Commission on the Freedom of the Press. The group does not see an immediate danger, but it cites a potential peril if present set-ups and practices continue.

This conclusion is the result of 4 years of study by 13 scholars, headed by President Robert M. Hutchins of the University of Chicago. Their study also included radio, movies, books, and magazines.

But since when did radio and movies become "press"?

The Commission found the chief perils to press freedom in such things as the "big business" aspects of newspaper ownership; too much sensationalism and too little public responsibility; news distortion through pressure, personal interests, or emphasis on "firstness"; and lack of "mutual criticism."

If freedom of the press is in danger, most newspapers will certainly want to know where the danger lies. And certainly they will be grateful for intelligent outside criticism in their own and the public's interest.

Direct or implied criticism is a vital newspaper function. Members of the profession will scarcely overlook its value as it applies to them and their product.

But there is some doubt as to whether this criticism is as valuable as it is interesting. The doubt arises from the fact that the Commission has made its report so generalized that it runs the risk of distortion and overemphasis.

Perhaps many of its criticisms are true in individual cases. But we don't think they add up to an entirely accurate conclusion. For one thing, the report tends to make big business synonymous with evil.

It is true that newspaper ownership is in fewer hands today than 30 years ago. The same thing is true of railroads and automobile manufacturing. But it does not hold that the railroads and auto industry serve the public less well as a result.

There are limitations imposed on newcomers in the publishing field—some good and necessary, some not. The latter are being eliminated gradually by internal and external action.

But with all of them removed, there might not be a great increase in the number of papers. There are varying degrees of competence in newspaper publishing, as in other fields. Lack of public acceptance and consequent failure cannot be eliminated.

As for "sensationalism," that's a loose and tricky word. Many sensational exposures by newspapers have advanced justice and the public welfare.

Furthermore, the normal is not always news. Millions of John Joneses may live uprightly, perform valuable duties, be kind to the wife and kids, and go to bed early. But people aren't going to buy newspapers to read about them.

The Commission advocates mutual criticism and repeal of the "unwritten law," whereby newspapers ignore one another's errors, misrepresentations, and lies.

Well, we don't think they do ignore them. If one newspaper reports the truth where another errs or lies, the shortcomings are not being ignored.

Errors and misrepresentations are not always malicious. Would it help, when they occur, for a rival paper to come forth with an editorial saying, "The editor of the Morning Bugle is a liar," or "Our contemporary, the Evening Breeze, is staffed by fat-headed executives and lousy reporters"?

Newspapers used to do that, back in Horace Greeley's time. They don't today, for the same reason that other professions don't. Constant mutual criticism would cast doubt on the good faith of the critics, and undermine public confidence in an honorable calling made up in the great majority of honorable men.

The newspaper profession is by no means perfect. It has its share of publishers and editors of low taste and low standards. But we think they are the exception.

Perhaps the Commission missed a bet by not taking a tip from journalistic practice and putting a finger on specific evils.

If it had named names, cited cases, and said, "Such things are an affront to the public and a neglect of duty," any dangers to press freedom might be averted more readily.

Should We Not Be Cautious in Moving Into Greece?

EXTENSION OF REMARKS

OF

HON. JOHN H. FOLGER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. FOLGER. Mr. Speaker, following is a statement expressing what my views have been all the while. As what I regard as truth has come to light, it seems apparent that there is no hope of adjusting the Greek situation without requiring a representative government in Greece, something not now obtaining.

Under leave to extend my remarks in the RECORD, I include the article:

GREEK SEES NATION FACING LONG DISUNITY

ATHENS, March 30.—Greece's elder statesman predicted gloomily tonight a fierce division, for at least a generation, among the unhappy people here, and the possibility of dictatorship by the royalist government.

White-thatched, 89-year-old Thanistocles Sophoulis, former premier and leader of the Liberal Party, who is as leftist as a Maine farmer, asserted that even should the government offensive exterminate the guerrillas, "it will affect the relatives and sympathizers in hundreds of thousands. There will continue to be reprisals. Greece will be divided at least a generation."

Sophoulis, whose party is recognized as the center bloc in Parliament, charged that the record of the Populist Party (Royalists) has been predicated on the thesis "crush everyone who is not with the party."

He believes the Government misinterpreted President Truman's speech, which he thought was an "idealistic United States means of aiding the country on the verge of collapse."

Since President Truman condemned excesses of the extremists, Mr. Sophoulis observed, a government truly cognizant of its responsibilities would have resigned.

Mr. Sophoulis felt during the interlude that "the majority of the men in the mountains are not active Communists, but persons who fled for security." Nevertheless, he maintained they must, for future realistic purposes, be considered potential Communists.

Asserting the present Government policy was "the best recruiting agent for the guerrillas," Mr. Sophoulis proposed a democratic government be restored provisionally, give guaranties of personal liberty to the guerrillas who lay down their arms, and "in 4 or 5 months Greece would be able to proceed with free elections."

Send MacArthur to Reich

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne News-Sentinel:

SEND MAC ARTHUR TO REICH

During the war Douglas MacArthur was accused of playing to the gallery. Everything he did, said his critics, was carefully planned for its dramatic effect. They were fond of pointing out that at the Japanese surrender ceremonies, in which General MacArthur made his famous speech placing man's entire hope of survival on a spiritual entity, nothing was overlooked that would contribute the histrionic touch.

Since the war ended, other generals have returned home and received their acclaim. MacArthur remained on the job, accepting, with everlasting credit to himself and his country, the herculean task of guiding a conquered nation through its postwar tribulations. Was it in character for a parade-hungry actor to refuse a trip home where many think he would have been accorded the biggest ovation of any war hero in all time?

Douglas MacArthur has adhered to the simple formula that there was a job to be done.

Even his sourest critics today agree his guidance of the Japanese people in disarming and adopting a democratic constitution is phenomenal.

More importantly, the Japanese people think he has done a good job, too. Their appreciation of a man in whom they feared vindictiveness but who, as Time so aptly puts it, "touched the deep chords of the Japanese soul," rose to new heights following MacArthur's anonuncement that Japan was ready for a peace treaty.

When the Supreme Commander lunched publicly with Tokyo correspondents, the Japanese were astounded that, unlike their own generals (before surrender), MacArthur had no men with guns standing guard for blocks around.

Nor did the general, as the cooks expected, send someone around to taste the food to be sure no sulking Jap had poisoned it.

How unlike a showman concerned only for his personal safety.

General MacArthur has warned that delays in signing a treaty with Japan may impair her already weakened economy. This invitation to disaster can be averted if the country is declared at peace so that trading with other countries may resume.

If Premier Yoshida's words are reliable, the Japanese are ready for a treaty but not for an American withdrawal. MacArthur sees the post treaty job of steering and protection as a function for UN.

Beyond assurances that the Japanese can get back on their economic feet, one positive danger could result in premature withdrawal of United States forces. It is the same hammer and sickle menace here as in Turkey and Greece, and in every spot on the globe where democratic processes have not entrenched themselves against communism.

The fact remains that General MacArthur is on the last lap of an assignment requiring his presence.

In our opinion, his presence is more urgently required to take over rehabilitation of the Reich than to remain much longer in the Orient.

What better qualification for a tough job is available than successful experience in a comparable assignment?

No American, Britisher, or Russian has demonstrated the leadership required to reconstruct the Reich. A new high in maladministration has now hit Germany in the form of hunger strikes.

It will be said, of course, that MacArthur knows only the oriental mind, that he is unfamiliar with European problems. Is it forgotten that he fought in World War I with the Rainbow Division in Champagne-Marne and Aisne-Marne defensives and the St. Mihiel, Meuse-Argonne offensives? That he was with the Army of Occupation in Germany in 1918 and 1919?

Let General MacArthur be named to direct the rehabilitation in all of Germany. Russia will object, but Britain and the United States can point out that it will be in the mutual interest of the three powers to get Germany's industries going, her farms producing and other commerce resumed as quickly as possible.

MacArthur's appointment to coincide with the proposed unification of Germany by July 1 of this year would be a long step toward bringing a real peace to Europe.

Let's send MacArthur to Germany.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Legislature of the State of Oklahoma memorializing Congress to continue the Rural Electrification Administration and to provide funds for loans to rural electrification cooperatives. The memorial reads as follows:

Whereas Congress is now in session and is considering the amount of funds, if any, to appropriate for continuance of the rural-electrification program; and

Whereas the record of rural-electric cooperatives is one of outstanding service and achievement and is a wholly self-liquidating enterprise with several million dollars paid back in advance of schedule; and

Whereas Oklahoma is in great need of the continuance and extension of the REA program: Now, therefore, be it

Resolved by the House of Representatives of the State of Oklahoma (the Senate concurring therein)—

SECTION 1. That the Congress of the United States be and it is hereby memorialized to enact such legislation as shall continue rural-electric cooperatives in operation and to enable them to extend service to all additional rural communities in the United States as is practicable on a self-liquidating basis.

SEC. 2. That the speaker of the house of representatives be and he is hereby directed to forward a copy of this resolution to the President of the United States Senate, the Speaker of the United States House of Representatives, the chairman of the Appropriation Committee of said United States House of Representatives, and to each member of the Oklahoma delegation to Congress.

The Value of Military Training—The Necessity for Universal Military Training

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. PLUMLEY. Mr. Speaker, since this is Army Day, it occurred to me it might be appropriate to put into the RECORD the speech I made last Thursday to the Joint Assembly of the Vermont Legislature, covering the matter of the value of military training and the necessity for universal military training.

Under permission heretofore granted, I extend my remarks by including the address referred to above.

THE VALUE OF MILITARY TRAINING

Mr. Speaker, I appreciate the courtesy of the invitation to address the joint assembly. Fortunately, the Easter recess of Congress makes it possible for me to accept and to be here.

As a graduate, trustee, and sometime president of the oldest military collegiate institution in this country, namely, Norwich University, Northfield, Vt., I have observed the exemplifications and accomplishments for which this military collegiate training is responsible. I know whereof I speak when I say that the lessons it teaches are invaluable. It impresses upon the student mind the axiom that "no man is fitted to command who has not first learned to obey." He learns to meet emergencies, to be prepared for the unexpected, and to assume responsibility as the opportunity and occasion therefor are presented. I doubt if any course of study or training can show better ideas, ideals, or educational theories, or any that in practical results better fit those who are taught—citizen, soldier, or sailor—for either private or public career; hence I am going to address you upon the subject of universal military training.

A CITIZEN SOLDIERY

In common with Capt. Alden Partridge, who founded Norwich University, and with the people of the State of Vermont who have faithfully supported it since 1819, I believe that a citizen soldiery is essential to the maintenance of free government, and that every citizen should be trained to discharge his duties as such in times of peace, as well as those of war.

A short 2 years ago in March, the most superbly trained and equipped army in history was smashing down the last feeble guard of a beaten and bloody Wehrmacht, while in the Pacific our war-hardened task forces were knocking at the inner ramparts of Japan.

Two months later the shattered remnants of Hitler's once invincible war machine laid their arms in unconditional surrender and the spotlight of war swung its merciless glare toward the land of the rising sun. At this same moment began the dissolution of the most effective citizen fighting force ever assembled upon the face of the earth. A dissolution whose initial leisurely pace and orderliness were so accelerated by the capitulation of Japan that the awful energy released above Hiroshima and Nagasaki seemed somehow to have transmitted itself into the race to demobilize. "Bring the boys home" and "Stop the draft" were slogans of the day. The war was over, and we had won.

Well, we brought the boys home—12,000,000 of them. We stopped the draft. On the last

day of last month the Selective Training and Service Act really expired. From that day forward our ability to raise and train armies and navies will rest solely on the success of the recruiting efforts of our armed forces.

OUR RESPONSIBILITY

We face today the heavy responsibility of bringing peace to a war-torn world. The unsettled conditions which make this problem so difficult of solution are familiar to us all. They present a real challenge to our generation, one which we cannot ignore nor fail to meet. The course which we chart during the coming months will determine whether the world is to march forward into an era of lasting peace or merely snatch a fitful breather before plunging headlong into another war.

The framework for peace is, in the main, being designed by two great nations—our own and Russia. The struggle for its design goes on apace. Anxious eyes follow every move of these principal contenders, seeking to determine the shape of the final outcome. The attitude and statements of our representatives to the United Nations and to the peace conferences are being analyzed in the light of the actions we are taking here at home. Will the critical years ahead find us "speaking softly and carrying a big stick," or vocally strong though physically weak? Make no mistake, we are in a power game and will continue to be in a power game from here on out. The degree of power we must retain is relative to that retained by others. It must not be varied to suit the demands of wishful thinking, malicious sabotage, or emotional obfuscation.

PROMPT ACTION ESSENTIAL

We need to act promptly, in the interest of international peace, to attune our military policy to the requirements of our foreign policy. We should move without further delay to strengthen our hand at the peace table by placing on our statute books a universal military training law.

Our reservoir of trained manpower is slowly and inexorably trickling away. The lessons of past wars, the sure knowledge of the shape of future wars—and we are not yet in position to ignore their threat—combine to urge us not to let this continue. I shudder to think of this great Nation being subjected to the blitz tactics of a future aggressor without having turned a wheel to train its citizens against such an eventuality. Our coming generations are entitled to more foresighted planning than this. Yes; we can take it. England took it. A nation of 130,000,000 people cannot be wiped off the earth nor conquered in a day. But why risk being drawn into a prize fight committed to conditioning yourself between rounds? Better far to be in shape when the opening gong sounds.

TRAIN IN PEACETIME

Yet we will not be in shape unless we train in peacetime. There will be no time to train when war comes. And not only must we be prepared to meet the shock of its initial impact, we must be capable of absorbing this shock and of instantly mobilizing a counterblow of such swiftness and power as to quickly transfer the battle grounds to the lands of the aggressor. How, then, can we move now toward this capability?

Our concept of national defense envisions in peacetime a small, professionally efficient Regular Army, Navy, and Air Force, a strong National Guard and a large Organized Reserve. Provided these forces are properly balanced and capable of warding off initial attacks for a time sufficient to mobilize and train an army af citizen soldiers such as we raised in this past war, no nation on earth will ever stand against us. But these forces cannot be balanced, cannot be trained as in the past, after hostilities have started and before the enemy can reduce our outer bastions. Time and space factors have changed with the development of new weapons of war. There are no outer bastions capable of holding an enemy at bay. This forces us to reestimate our military potential in the light of these developments. It forces us to conclude that we must gear up our mobilization capabilities in point of time. Experience proves that this cannot be done at the expense of training. Therefore, we must do a part of our training in advance. Therefore, we must train in peacetime. But why you may ask, can't the peacetime training of our National Guard and our Organized Reserve be stepped up to meet these new demands?

NATIONAL GUARD AND RESERVE

I have served as an officer both in the National Guard and in the Reserve. I have a high regard for these civilian components but I know their capabilities and limitations as instruments for military training. One hundred hours of armory training plus 100 hours of summer-camp training do not permit a yearly schedule of sufficient training value to prepare men, even basically, for modern war. The cost and scarcity of modern training aids and newly developed weapons do not permit us to supply each armory and camp with such necessary equipment. Even could this be done, demands upon the time and interests of our civilian soldiers which would be necessary to carry on the required training would prove impossible to meet. The National Guard and active units of the Organized Reserve can contribute spirit and organization—they can weld trained men into a team but they cannot impart the necessary individual training to prepare a soldier for combat. Could these civilian components but recruit their strength from a pool of trained individuals they would, indeed, be prepared to carry out their intended mission as first line of defense troops. Herein we find the way to gear up our mobilization in point of time. Herein lies the true function of universal military training—it is the cornerstone of our national security.

Again I repeat, we need a system of universal military training in the interests of international peace. We need a system of universal military training in the interests of national security. Let us move to provide it.

PROPER MILITARY DISCIPLINE

I insist that the due cultivation of proper military discipline among the great mass of the people, and a general diffusion of military information, always have been, are now, and always will be indispensably necessary for the preservation of this Government.

The road to universal peace is a tortuous path which leads down the dark future through long generations, involving the Christianization of the world—an end devoutly to be sought, eventually to be obtained—but obviously ages hence.

IDEALISM VERSUS REALITY

The sober realization of a people who fail to allow their idealism to divorce them from stark reality and a clear conception of the foibles and idiosyncracies of human nature impresses the fact upon them that just so long as racial hatred and discrimination, economic rivalry between nations for world markets, and arrogant nationalism remain, disarmament and a pacific world cannot be.

To be an American citizen in this, so wonderful an age, is the greatest blessing any man or woman may enjoy. To have and play a part in the shaping of history is the greatest opportunity with which any man or woman of any day or generation can be confronted. The best educated citizen is the one who respects the rights of others, recognizes that properly constituted authorities are entitled to be obeyed, and realizes the responsibilities attaching to the rights and duties of his citizenship. A man educated to understand, to accomplish, and to command is the type of citizen such training develops.

With every rational and conscientious person the world over I join in the wish and the hope that there may never be another war, but a commonsense, unemotional survey of the existing world condition compels all of us to acknowledge that there is no assurance that such hopes may soon be realized, nor that our wishes may speedily come true.

The fight between good and evil has just begun. Old as the beginning of things, yet young as tomorrow when it is born, the struggle between these two opposing forces must go on forever, through all history, to the end. Those who believe in the eventful triumph of the right must still march and fight and fall, recruited from the flower of mankind, cheered only by their own hope of humanity, strong only in their confidence in their cause.

In the final analysis education is the bulwark against all things destructive of American institutions.

THE EDUCATION OF YOUTH

"All who have meditated on the art of governing mankind have been convinced," said Aristotle, "that the fate of empires depends on the education of youth."

Everyone who measures up to the full stature of his citizenship should be trained to discharge in full, not in part, his obligations of citizenship as well in times of war as in times of peace. Military training as an incident to the education of American youth should be encouraged, continued, and extended as an incident to the academic, scholastic, and physical preparation of a 100-percent-American citizenship for today and tomorrow in order "to insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty" to themselves and their posterity.

Statement of Policy of Public and Private Power Users

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a letter which I received from the Chamber of Commerce of Pasco, Wash., expressing the concurrence of that chamber in the statement of policy of the so-called Tacoma Power Conference on January 22, 1947.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PASCO CHAMBER OF COMMERCE,
PASCO, WASH., *March 25, 1947.*

Senator WAYNE L. MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: The Pasco Chamber of Commerce wishes you to know that it has endorsed the statement of policy as agreed upon at the conference in Tacoma, January 22, 1947, of public and private power users. The chamber members realize the great importance of adequate and low-cost power to the industrial future of the Northwest and wish you to know that they appreciate the efforts you are making to preserve this natural advantage given us by our great river

system. And they will be happy for you to make any use of this endorsement you may find possible.

Yours very truly,

HILL WILLIAMS, *Executive Secretary,*
Pasco Chamber of Commerce.

United States Lacks Resources To Save Entire World

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I insert the following column from the World-Herald, Omaha, Nebr., March 30, 1947:

UNITED STATES LACKS RESOURCES TO SAVE ENTIRE WORLD

(By Louis Bromfield)

The more rapidly crises develop around the world the clear it becomes that we have had no foreign policy in the past and that we have none now.

The Greek crisis, seen from the proper prospective, is no more than an incident in a world filled with similar disasters. It may lead not only to confusion but to disaster for us, as well as for the peoples of the Balkans and the Near East.

There is no reason whatever to suppose that by pouring money into Greece or Turkey we shall solve their respective problems or stave off the spread of Russian aggression and expansion.

President Truman in his sensational speech (and it was one of the most sensational ever made by an American President) politely referred again and again to the "spread of communism." All the world, including Soviet Russia, knows that he meant the "expansion and aggression of Russian ambitions."

It has long since become clear that communism is merely a tool, a modern political method by which the small group of men in control of Russia are seeking to expand their power. The circumstances and the methods being used are almost indistinguishable from those of the Nazi government of Germany.

WE CANNOT BUY GOOD WILL

The error in the proposal of President Truman and his advisers to aid Greece has at least two facets:

1. The old American error based upon the belief that you can buy anything you want including good will with money.

2. That the whole program will be successful without the use and backing of strong armed force.

The writer has spent a great deal of his life in Europe. He knows its nations and peoples a great deal better than do most newspaper correspondents. He is prepared to state that you do not and cannot buy good will with money alone.

Actually the fact is that much of the American food and machinery sent into Poland, Yugoslavia and the other Balkan States under UNRRA was used by selective distribution to create ill will toward capitalistic America and good will for communism and Soviet Russia.

Also he is convinced that we have not enough money, raw materials, or machinery to rehabilitate the whole of the world. If we attempt to do so, we shall only bleed ourselves white and reduce our natural real wealth and living standards to the level of the more desperate European nations.

The citadel of western civilization has moved across the Atlantic from Europe to America. A superficial, unwise, head-long policy of trying to buy off or rehabilitate the whole world could easily crack the walls of this last citadel.

I doubt President Truman or the State Department is prepared to ask for troops and ships to back up the proposed Greek and Turkish policy. I am certain the American people are not prepared or willing to grant such a request.

The proposals made so hastily following the trigger decision of Great Britain to pull out of Greece seem to be superficial, hasty, and almost hysterical.

Intervention in Greece is not simply a single incident, quickly and decisively closed. Of necessity, it institutes a policy of intervention which, to be effective, must be extended around the whole circumference of the globe, in China, in India, in Korea, in Germany, in the Near East.

We cannot go halfway without wasting the money, material, and lives involved in any hastily prepared program.

The question is whether we are prepared for the colossal, probably insoluble problem posed for the moment in Greece alone.

The fact is that in the long run the world is on the crest of a colossal surge of history and that even the superhuman efforts of the greatest and richest nation in the world cannot stem or alter its course.

Two great nations are involved, Soviet Russia and the United States, for Great Britain or the other western empire states do not count any longer unless they achieve some strong form of federated union.

In the wake of such a wave, history moves rapidly, and time becomes the most important element. Already countless Americans have transferred their enmity from Nazi Germany to Communist Russia.

No accidental, hit-and-miss plans of intervention hastily prepared and ill-contrived are of any use. Unless we are prepared to back the millions of dollars to be poured into Turkey and Greece with military force, the whole amount plus some lives is certain to be lost.

GREAT FORCES AT WORK

The shape of the world is being determined not by what we want or what Soviet Russia wants but by much greater forces of economics, of ideologies, of weariness and despair, of famine, of death and rebirth.

Both Russia and this Nation are faced by challenges.

If these are met and solved, preferably by common action, our civilization will survive; if they are not we are headed for another dark age. Even the atomic bomb is only incidental to the process.

The decisions which will determine the future of the world lie with Russia and the United States. All the rest merely clutters up the scene and serves to complicate and cripple the actions of these great powers and cause enmity between them. This fact lies at the root of the futility of the United Nations.

The Greek issue has clarified one thing—that when cause for action arises, history in these times cannot wait upon a United Nations cluttered by flotsam and jetsam left behind in the great wave of history upon which Soviet Russia and the United States are riding.

The decisions in the end, as history will show, happily or tragically, can be made only by these two nations.

It would be well for all the world if they got together on a friendly basis and worked out what is to be done with that same stricken, decaying world. The rest is weakness and sentimentality and essentially tragic nonsense which can only prolong the agony.

Court Should Not Recharge as General Offsets Payments Made on Specific Accounts

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1947

Mr. CASE of South Dakota. Mr. Speaker, under permission granted in the House, I am placing in the RECORD two letters which I have written to Ralph H. Case, of Washington, D. C., who became attorney for the Sioux Indian Tribe many years ago and is well posted on Indian legislation. These letters deal with the effect of the Indian Claims Commission Act upon certain claims of the Sioux Tribe.

Below, I place the first of these letters, and in a separate insertion, I am placing the second letter, together with the reply of the attorney for the Sioux:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 2, 1947.

RALPH H. CASE,
Attorney, Southern Building,
Washington, D. C.

DEAR MAJOR CASE: I wish to congratulate you upon your success in your new motion to the Supreme Court to send back to the Court of Claims for further proceedings certain claims which were pending at the time the Indian Claims Commission bill was passed by the Congress.

I have read with interest your 4-page motion. It seems to me that you presented unanswerable logic in pointing out that the original jurisdictional act was amended for new claims then pending in the Court of Claims or the Supreme Court with respect to the deduction of offsets, even though the claims themselves could not be transferred to the new Commission.

Necessarily, then, the Supreme Court held rightly, I think, in saying that the Sioux claims which were then pending should be further considered by the Court of Claims in the light of the amendment to the Jurisdictional Act with respect to offsets.

If my memory is correct, this will apply to the so-called case No. 11 covering the land opening of '89, in which there was a finding of $3,500,000, and the trust-fund cases Nos. 18 to 24, involving Standing Rock, Cheyenne River, Rosebud, and Crow Creek Reservations, with a finding of $2,500,000 but both of which were destroyed by the Court of Claims allowing offsets of approximately $8,000,000.

I feel sure that reexamination of the offsets will show that some of them were expenditures for educational, health, and possibly some of the other purposes which are forbidden by the new rule on offsets set forth in section 2 of the Claims Commission bill.

As I recall, a large part of the offsets were charges against the tribal moneys for so-called Sioux benefits paid to individual members of the tribe. I have always thought that was not fair because the tribal money belonged to all members of the tribe while the Sioux benefit payments went only to certain members. In addition, I am sure that examination of the individual programs submitted for the use of Sioux benefit money will reveal that much of the Sioux benefit money has been expended for educational and health purposes, including clothing re-

quired so that the recipient could go to school.

It will be appreciated if you can write me a letter confirming my understanding of the meaning of the grant of your motion by the Supreme Court and setting forth the ways in which I or the people in my office can assist you in gathering evidence to throw out the illegal offsets which the Court of Claims set up which are now clearly illegal.

Incidentally, are there any other claims pending which are entitled to reconsideration under the same rule in the above-mentioned matters?

With appreciation for the good work you have done in this matter and my best wishes for 1947, I am

Sincerely yours,

FRANCIS CASE,
Representative, Second District of South Dakota.

Reduction of the Personal Income Tax Will Stimulate Incentive

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. McDONOUGH. Mr. Speaker, reduction of the personal income tax will provide more risk capital for new business ventures and hence create more opportunities for employment. It will also leave a greater volume of purchasing power in the hands of consumers and hence stimulate demand and production. With increased production and business expansion a reduction in tax rates may result in little, if any, reduction of the total amount of taxes collected. It is well known to students of taxation that there is a point beyond which increased tax rates fail to produce increased revenues.

Not only are present taxes so high as to have reached the point of diminishing returns, but they are so high as to be confiscatory. They are leading toward nationalization of industry. Such high taxes will also tend to produce a deflationary gap, which may lead to a depression.

Reduction of personal income taxes following World War I helped to produce initiative. Taxes which drastically limit use of income not only limit funds available for investment but also remove incentive.

A reduction in personal income tax rates can be effected without further deficit financing provided governmental expenses are reduced. Now that large wartime costs are largely eliminated, such cuts can and should be made.

If income taxes are reduced by increasing exemptions for those at the lowest income level, a burden will be removed from those least able to pay, especially white-collar workers such as teachers, and persons with fixed incomes, such as those living on pensions or annuities. These groups are now caught between the rising cost of living and the inelasticity of their incomes. Decreased taxes for the low-income groups will amount to a pay increase for American workers. Such an automatic increase in take-home pay should help to alleviate industrial unrest.

If taxes are reduced by a given number of percentage points for each of the present tax brackets, relief would be provided on the same basis for all; undue reduction of tax revenues would be avoided, and great numbers of taxpayers would continue to have a stake in fiscal policy. Taxation of low and middle incomes is necessary if revenues are not to be too greatly diminished.

If taxes are reduced through a flat percentage decrease for all taxpayers, the disproportionate share of wartime taxes paid by large incomes will be reduced and brought more nearly into balance.

Whichever method is adopted, a decrease in personal income taxes is clearly in order in the interests of the health of the national economy.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on March 29, 1947:

Dear friends of the Triple Cities and my congressional district, this week I received notice of my appointment together with Mayor Lounsbery and Justice Gold and others to honorary membership on the Binghamton Committee of American Relief for Italy. It goes without saying I deem it a privilege to lend such support as I can to this worthy cause.

As a matter of fact, our attitude toward relief for Italy has been strained too long. The war has been over nearly 2 years. Thousands of young American men of Italian parentage have returned from the front to Binghamton, Johnson City, and Endicott, have gone back to their former jobs or gained new ones and are giving to our locality and our country the finest citizenship that can be found.

These young American-Italians joined wholeheartedly with all other Americans in the fight against fascism which gripped the country of their fathers for 2 decades. They helped rid the Italian people of their heavy yoke.

No war-torn country is more prostrate than Italy is today. Her people are in poverty. They certainly deserve the friendly consideration from a nation which has so large a percentage of citizens originating from Italian climes.

For the sake of petty politics, a few irresponsibles are trying to put the heat on me for the lack of adequate housing for veterans. It's the old game of making somebody the goat for a lot of mistakes and blunders in the whole housing fiasco.

Those who are blaming me and firing personal insults at me either are ignorant of my record or just don't know the score. Are they so ignorant they don't know I voted for every dollar spent thus far on veterans' housing in Binghamton?

Are they so dumb they don't realize the administration in Washington is still in the saddle?

Don't they know these attacks are being hurled at me to take the heat off a lot of others who are the ones responsible for inaction while I have been striving with might and main to help the people back home?

No; they can't pin their failure to get our veterans homes on me. They can't stretch a lie quite that far although they have told a good many in the past few years.

Fortunately you people know my record and you don't need cheap demagogs to lie about it to you.

Your thousands of letters of gratitude and thanks for help I have been able to give to our veterans and their families are in my files for inspection to any "doubting Thomas." They pour into my office daily, so there is, always a fresh supply.

I expect to defend that record over this program tonight and every Saturday night as long as I am attacked by enemies of the veteran.

I expect to continue to propose measures which benefit the veteran in spite of the below-the-belt personal and vicious attacks made on me by those same enemies of the veteran.

I will continue to fight for the veteran regardless of how much my right to do so is challenged by the enemies of the people whether they raise their voices in Binghamton or anywhere else.

I will continue to fight against hypocrites who pose as friends of the veteran yet who try to block every move I make to assist the veteran.

No; they cannot hang the blame for no veterans housing on me when they have done absolutely nothing themselves to help the veteran get a home.

They would smear my efforts, but would not deign to do anything themselves.

Your letters thanking me, dear friends, are all I need to throw back the enemies of the veteran for an awful loss. They cannot win that way.

No, boys, the responsibility is yours. I voted for the veterans' housing bill and helped get it through Congress. Now your job is to carry out the law as Congress intended it and stop smearing me for something you're to blame for.

Get busy, boys, time's a-flying! Use your knives to cut the Government red tape instead of putting them into my back. I'll cooperate with anybody who sincerely wants to help.

Thank you.

Sugar Rationing

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEAR MR. RAMEY: I thought I'd sit down and blow off some steam. Listen to this: My husband works for the NYC Railroad. A while ago he handed me a sugar stamp, good for 1 pound, and told me to buy him some the first chance I got.

I put it away in my purse, or pocketbook, whatever you want to call it, right next to a stamp of my own, good for 5 pounds (No. 52, since expired).

I had to leave the room for a few minutes the next day. When I came back I see that our two kids have everything turned inside out from the handbag, and tore and ate up half the contents. I'm only glad that it was a couple of days before pay day, and that I didn't have any bills in it, just change. I looked, but no stamps were in sight.

I wrote the ration board in Cleveland, for new ones.

They sent me a form to fill out. I fill it, send it back.

Two weeks lapse, and I get a letter saying, "So sorry, we can't replace stamps that have been torn loose."

I write back telling them that the stamp good for 1 pounds is supposed to be loose, my husband gets them that way (two such stamps, one he already spent). When the conductor receives stamps for use on the caboose, he divides them among himself and the two brakemen, and as far as my stamp No. 52 was concerned, I could have used that for 5 pounds easy. I could just have made believe that I was tearing it out of my book, if I happened to know that the grocer was a stickler for form. It came from my books, and I can't help it if the books are so old they're falling apart. It was still my 5 pounds sitting on a grocery shelf somewhere.

Well, I get another letter from them, and this time they want to know my husband's caboose number. (No mention of my stamp.)

So I sit down and write down his caboose number, in preparation of sending it to them, and at the same time the thought flashes through my mind that for all the money I spent on stamps, writing to them, it would have paid for the sugar. I get mad, and add a footnote to the caboose number, I'm sending, which reads, "If I don't get results this time, I'll take it up with someone who has jurisdiction over the rationing board." That did it, I guess. I haven't heard from them since, and it's been way over 2 months. Some fun. No sugar, no justice.

It just goes to show you, I've borrowed sugar from my friends to tide me over, and am going to have a picnic paying it back.

Mrs. VIRGINIA MEYER.

TOLEDO, OHIO.

Shall the Teamsters Union Be Allowed To Rule the Dairy Industry?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting an address made by Mr. Fred Brenckman before a special convention of the Pennsylvania State Grange at Lock Haven, Pa., April 3, 1947:

SHALL THE TEAMSTERS UNION BE ALLOWED TO RULE THE DAIRY INDUSTRY?

The teamsters union, which is one of the most arrogant and ruthless labor organizations in the United States, has given notice of its intentions to organize all milk haulers on the Pacific coast, together with any other independent groups of employees in connection with the dairy industry that are thrown into competition with members of the teamsters union. Judging from the actions of this union in various parts of the country, it may be taken for granted that this is to be a Nation-wide drive.

The weapon upon which the union depends to enforce compliance with its demands is the secondary boycott. In plain language, under this plan unionized plants would refuse to receive the farmer's milk unless it were hauled by union drivers, or drivers receiving union pay and working under union conditions.

UNION RULE OR RUIN

One large concern operating in the California area has been definitely told by the spokesmen of the union that, regardless of the opinion of the attorney general of the State to the contrary, they demand from the company a contract which will guarantee to the milk hauler a rate which the union claims to be necessary to the proper maintenance, repair, and replacement of all equipment used, plus a wage scale, vacations with pay, and a closed-shop requirement which is the equivalent to that now enjoyed by union employees engaged in the trucking business.

The union is also insisting on a guarantee of hours and of income which will make certain that independent haulers receive from the employer an amount equivalent to the weekly take-home pay of the average union employee.

To grant these demands would, of course, have a decided effect on the price of milk. The public would have to pay more, and as consumer resistance would develop, the farmer would have to take less for his product.

Moreover, in many parts of the country the farmer himself pays for the hauling, and much of the hauling is done by farmer patrons who own trucks and gather and haul the milk of their neighbors in certain areas.

The union has definitely stated that it will draw up a model form of contract which all independent haulers will be asked to sign. If this should be met by a refusal, the union plans to call out on strike all its plant employees at any particular point to force the employer to make such an agreement.

Last year the teamsters union tried these same tactics in the Kansas City area, limiting their operations to only one or two points, so as not to shut off the entire milk supply of the city and thereby causing a popular uprising.

Thereupon, the farmers and milk haulers secured an injunction in the courts. When the case was appealed to the Supreme Court of the State, the action of the lower court was sustained. It was held that the teamsters union violated a State law which forbids conspiracies of this kind.

Appearing as a witness before the Senate Committee on Labor and Welfare recently, Charles W. Holman, secretary of the National Cooperative Milk Producers Federation, gave many illustrations of intolerable abuses of which the members of the teamsters union have been guilty in their determination to organize and control the dairy industry.

THE WALKER-GORDON FARM

One of these was the case of the Walker-Gordon farm at Plainsboro, N. J. The employees of this concern were really engaged in agricultural pursuits, and they did not want to join the union. The company's production of 23,000 quarts of certified milk a day was hauled and distributed by union drivers. But in order to force 36 people employed in the bottling establishment to join the union the teamsters union declared all the milk produced on the place "hot cargo," with the result that the milk, which was used for feeding babies and invalids under the prescription of physicians, could not be delivered. Before the company surrendered to the demands of the union it lost $20,000.

Last year in Detroit the teamsters union tried to compel grocers, shopkeepers, and their employees to join the union or pay tribute to it under penalty of getting no supplies. This bold attempt at wholesale brigandage was halted by the courts, and it is possible that criminal prosecutions may grow out of it.

Farmers join with all the other groups who stand for common decency and fair play in demanding that Congress enact legislation at this session that will restore the rule of law and order in this country, giving the rank and file of the people the protection which they have a right to expect at the hands of the Government.

A Correspondence

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a correspondence between the Attorney General, the Director of the Federal Bureau of Investigation and myself dealing with the general subject of communism. I call the particular attention of the Members to the dates of the first eight letters in the series:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 14, 1946.

Hon. TOM C. CLARK,
Attorney General, United States Department of Justice, Washington, D. C.

DEAR MR. CLARK: This letter is written for the purpose of obtaining your permission to discuss with agents of the Federal Bureau of Investigation the activities of Communist agents and the problems incident to the growth of communism in this country. I also request your authorization to review the records of the Federal Bureau of Investigation in connection with their study of the problem of Communist activities.

I appreciate that this authorization should be limited to only such information as can be divulged by the Bureau without jeopardizing current and future investigations by the Bureau.

I have already been in touch with Mr. E. A. Tamm of the Bureau, who advises me that they have information which they are willing to release to me and which can be released without in any way interfering with their work.

I sincerely trust that this request will receive your favorable consideration. I earnestly ask that you honor this request at the earliest date.

Yours truly,

JOHN W. BYRNES,
Member of Congress.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., February 27, 1946.

Hon. JOHN W. BYRNES,
House of Representatives,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: I have your recent letter in which you request permission to discuss with agents of the Federal Bureau of Investigation the activities of Communist agents and the problems resulting from the growth of communism in this country. You have also requested authorization to review certain records of the Bureau relating to Communist activities.

I have discussed this matter with Mr. Hoover, Director of the Bureau, and, after very careful consideration, we have concluded

that we cannot accede to your request. The Department and Bureau have always maintained the steadfast policy that the files of the Bureau should be maintained in a confidential status.

I regret very much that I am unable to comply with your request. However, if in the future you feel that I can be of help to you, please do not hesitate to call on me.

With kind personal regards,

Sincerely yours,

———— ————,

Attorney General.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 1, 1946.

Hon. TOM C. CLARK,
Attorney General, United States Department of Justice, Washington, D. C.

DEAR MR. CLARK: I have received your letter of February 27, 1946, denying my request to discuss with agents of the Federal Bureau of Investigation the activities of Communist agents in this country and to review certain records of the Bureau.

May I emphasize and call your attention to the fact that my request is only for such information as will in no way jeopardize the current and future work of the Bureau in this field. It is my understanding that the Bureau is doing an exceptional job in connection with its investigation of Communist activities. I would under no circumstances want to interfere or handicap them in the work they are doing.

I would be remiss in my duty, however, as a representative if I did not point out to you certain deep convictions that I have with regard to Communist activities and the work of the Bureau in this regard.

It certainly must be well known to you that the growth of Communism in this country has reached such proportions that it now constitutes a definite threat to our Republic. This threat is not imaginary. It is real. It is known to exist by every investigator. This in itself constitutes a problem that our Government must face. A more serious problem, however, arises out of the fact that the people of this country have not been given the facts of the situation.

I am convinced that when the people of this country are given the facts on this or any other matter the problem will soon be solved and eliminated. By withholding the facts from the people the problem will become aggravated.

The basis of my plea to you, Mr. Attorney General, is not that I be given the facts but that the people of the United States be given the facts. I am not concerned with the question of how they get the facts. I am concerned with when they get the facts. I trust that our Government will not again be responsible for giving the people too few facts too late.

I am reliably informed that the Federal Bureau of Investigation has the facts and that the facts can be divulged without jeopardizing the future investigation and work of the Bureau. It is within your power alone to make these facts available to the people or to withhold them. I trust that you will choose the former course of action and reconsider your letter of February 27.

There can be no real value in hiring a fireman to stand by and watch a fire. His job should be to put it out. How then can you justify the investigation of communistic activities if the results of the investigation are to be suppressed?

May I renew the request contained in my letter of February 14. I trust that you will reconsider the position you have taken in this matter and that I might have your favorable reply at an early date.

Yours truly,

JOHN W. BYRNES,
Member of Congress.

MARCH 5, 1946.

Hon. J. EDGAR HOOVER,
Director, Federal Bureau of Investigation, Washington, D. C.

DEAR MR. HOOVER: I am enclosing copies of my letters of February 14 and March 1 to the Honorable Tom C. Clark, Attorney General, and a copy of his letter to me of February 27. As you will note, the purpose of my letters to the Attorney General is to obtain authority to discuss with agents of your Bureau the activities of Communist agents in this country and to review certain records of the Bureau. In view of the fact that the Attorney General advises that he cannot accede to my request and that you share his views, I believe it advisable to address you on the subject and solicit your assistance.

There are two points that I want to make very clear. In the first place, it is my desire to obtain only such information as will in no way jeopardize the current and future work of the Bureau in investigating Communist activities. Secondly, if it is deemed inadvisable to release such information to me, it is my desire that at least the facts as found by your investigations be immediately brought to the attention of the public generally.

For a considerable length of time I have become more and more impressed with a conviction that Communist activities in this country have reached such proportions that they constitute a very real threat to our republican form of government and that people generally are not acquainted with the gravity of this situation or the extent of these activities. I fear that, by the time the people generally are aware of what is taking place, it will be too late to take corrective steps. My problem and the purpose of this letter is to inquire as to how you feel the people of this country can be apprised of the methods used by Communists and the extent of their activities in undermining our form of government. I cannot believe that it is your personal conviction that the findings of your investigations on this subject should be buried and withheld from the American people. I believe you must admit that this is exactly what is being done today.

I must assure you that I have the highest regard for your Bureau and the very exceptional work that it has done under your direction. I feel that it is the outstanding agency of the Federal Government, both from the point of view of its accomplishments and its efficient operation. I trust that it will continue to hold the well-deserved respect of the American people, which it now has. I cannot help but feel, however, that, if important facts which I am certain the Bureau has with regard to Communist activities are withheld, this situation will reflect adversely upon the work of the Bureau.

I would appreciate your giving consideration to the question of how the public can be best advised of the current Communist activities in this country. I would be very pleased to receive your sentiments and suggestions on this subject.

Yours truly,

JOHN W. BYRNES,
Member of Congress.

FEDERAL BUREAU OF INVESTIGATION,
UNITED STATES DEPARTMENT OF JUSTICE,
Washington 25, D. C., March 13, 1946.

Hon. JOHN W. BYRNES,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Mr. Nichols has advised me in detail regarding his conversation with you on Tuesday, and I was glad that you understood our position in this whole matter. In turn, I can understand your situation and interest, and I do appreciate your desire to be of assistance.

In accordance with your conversation with Mr. Nichols, I am enclosing copies of a few of my addresses wherein I have dealt with this subject matter.

With best wishes and kind regards,

Sincerely yours,

J. EDGAR HOOVER.

THE ATTORNEY GENERAL,
Washington, March 19, 1946.

Hon. JOHN W. BYRNES,
United States House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: This has reference to your March 1 letter and to our subsequent telephone conversation regarding activities of Communist agents in this country. I understand you have since talked with J. Edgar Hoover and I am assuming from this that the matter has been taken care of to your satisfaction.

Kind personal regards and best wishes.

Sincerely,

———— ————,

Attorney General.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 25, 1946.

Hon. J. EDGAR HOOVER,
Director, Federal Bureau of Investigation, Washington, D. C.

DEAR MR. HOOVER: I wish to thank you for your letter and the copies of your speeches in which you refer to the activities of Communist agents in this country.

I appreciated the opportunity of being able to discuss this problem with your assistant, Mr. Nichols.

I have summarized my present position on this matter in a letter to the Attorney General. A copy of that letter is enclosed for your information.

Yours truly,

JOHN W. BYRNES,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 25, 1946.

Hon. TOM C. CLARK,
Attorney General, United States Department of Justice, Washington, D. C.

DEAR MR. CLARK: I refer to our previous correspondence and telephone conversation regarding activities of Communist agents in this country.

As a result of my conversation with you and with Mr. Nichols, of the Federal Bureau of Investigation, I have been influenced to hold this matter in abeyance. I do this in view of your assurance that you will take all steps necessary for the proper security of our country and our form of government and your further assurance that all facts coming to your attention and the attention of the Federal Bureau of Investigation which can be revealed without jeopardizing such security will be presented to the people at the earliest possible time.

Yours truly,

JOHN W. BYRNES,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 4, 1947.

Hon. J. EDGAR HOOVER,
Director, Federal Bureau of Investigation, United States Department of Justice, Washington, D. C.

DEAR MR. HOOVER: May I express my sincerest congratulations on your statement made before the House Committee on Un-American Activities on March 26, 1947. I have written Mr. Tom C. Clark a letter outlining my reactions to your testimony, and, in

view of our correspondence on the same subject last March, I am enclosing a copy.

Yours very truly,

JOHN W. BYRNES,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 4, 1947.

Hon. TOM C. CLARK,
Attorney General, United States Department of Justice, Washington, D. C.

DEAR MR. CLARK: I refer to our correspondence of last February and March on the subject of communism.

You will undoubtedly recall my concern at that time over the threat to our Republic posed by the growth and success of the Communist movement. I sought your permission to interview various FBI agents and review certain Bureau records to ascertain for myself the true facts concerning the activities and operational program of the Communist Party. It was my hope that I could somehow help bring those facts to the attention of the American people. I felt that, while the people had been subject to much misinformation, it was only too apparent that they were being starved for lack of authoritative information.

It was for this reason that I made my unusual request. You will further recall that you were unable to grant me the desired permission because of departmental policy. I wrote to you again on March 1, saying:

"This threat is not imaginary. It is real. It is known to every investigator. This in itself constitutes a problem that our Government must face. A more serious problem, however, arises out of the fact that the people of this country have not been given the facts of the situation.

"I am convinced that, when the people of this country are given the facts on this or any other matter, the problem will soon be solved and eliminated. By withholding the facts from the people, the problem will become aggravated.

"The basis of my plea to you, Mr. Attorney General, is not that I be given the facts, but that the people of the United States be given the facts. I am not concerned with the question of how they get the facts. I am concerned with when they get the facts. I trust that our Government will not again be responsible for giving the people too few facts too late."

You will recall, finally, that I was persuaded to hold the whole matter in abeyance, after a telephone conversation with you and an interview with Mr. Nichols, assistant to Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation. I did so expressing my sincere desire that all facts coming to your attention and to the attention of the FBI which could be revealed without jeopardizing our national security would be presented to the people at the earliest possible time.

This letter is prompted by the recent statement made by Mr. Hoover before the House Committee on Un-American Activities.

To me, Mr. Hoover's statement filled a long-felt need. It expressed clearly, forcefully, and what is most important, authoritatively, the real nature of what he so aptly termed "the diabolical machinations of sinister figures engaged in un-American activities," I wish to commend your department for rendering a significant public service. I am sending my personal congratulations and a copy of this letter to Mr. Hoover, with whom I also had correspondence last year.

To my knowledge this is the first time that an official statement outlining the facts concerning the program and operational plan of the Communist Party has ever been issued. Its value, coming from a person with authority and authentic knowledge of the problem, cannot be overemphasized.

It was a satisfying pleasure, too, to learn that Mr. Hoover had emphasized the obvious remedy. I heartily agree with his concluding statement:

"Victory will be assured once Communists are identified and exposed, because the public will take the first step in quarantining them so that they can do no harm."

My only criticism is one that has probably suggested itself to you already. I feel that much valuable time has been lost in not making these facts available to the American public at an earlier date. However, I have no desire to cry over spilt milk. I am now confident that your Department and its affiliated Bureau are wholly conscious of the importance of keeping the public informed by the release of reliable information to which only you can lend credence.

Again, let me express my satisfaction. It is my fervent hope that this policy will be continued and that as new facts concerning the Communist Party, its program, its method of operation, and the identity of its members are brought to light, you will swiftly bring them to the attention of the American people

Very truly yours,

JOHN W. BYRNES,
Member of Congress.

The United Nations Is Kicked Out the Window and the President of the United States Is To Take Personal Charge

---

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. ELLIS. Mr. Speaker, after reading the newspaper reports of the speeches at the Jefferson Day dinner, Saturday night, it is reasonable to conclude that the administration has decided that they thrive better under a war mania, and it becomes apparent that they will go to any extreme to prevent the Republican Party from doing the job the voters gave us to do last November. It appears now that in the new proposal, the United Nations is kicked out the window and the President of the United States is to take personal charge.

The following is a news item from the Times-Herald, Washington, D. C.:

UNITED STATES INTERVENTION REGARDED AS TRUMAN PLATFORM FOR 1948—DEMOCRATS ADMIT PURPOSE OF BILL TO AID GREECE AND TURKEY IS POLITICAL

(By Arthur Sears Henning)

Democratic as well as Republican leaders yesterday were interpreting the President's Saturday night speech as Mr. Truman's announcement of his candidacy to succeed himself next year on the platform of American intervention for the protection of free peoples wherever menaced by aggression.

Viewed as particularly significant were passages in the speech suggesting that the Truman doctrine is a global extension of the Monroe Doctrine, despite the fact that while Monroe interdicted intervention in this hemisphere he renounced American involvement in European affairs.

USING MONROE'S MANTLE

In these passages, as the politicians construed them, Mr. Truman appeared to visualize himself seeking election next year wearing the mantle of Monroe with the blessing of Jefferson. As visualized by others, he appeared to be setting forth to civilize the world with the atom bomb in one hand and the Bill of Rights in the other.

The President defined the Truman doctrine as "aiding those peoples whose freedoms are endangered by foreign pressures." Then, launching the Truman candidacy of this platform, Gael Sullivan, acting Democratic national chairman, proclaimed that "the triumph of President Truman in the cause of peace and human welfare will be the triumph of the Democratic Party in the days ahead."

CALLED SAFE GAMBLE

From the viewpoint of the practical politicians, the Democratic strategy is a gamble but a safe one. If the Truman plan to check Russian expansion is successful, the Democrats would expect to win the election hands down with the President as their candidate. If it should get us into war or near war with Russia the plea would be not to swap horses while crossing the river, which was successful in 1940 and 1944.

Many Republicans were of the opinion expressed by Senator KEM (Republican), of Missouri, who commented:

"Is the President attempting to make political capital of the Nation's foreign policy? He appears to be a student of the crisis technique of his predecessor."

POLITICAL AIMS ADMITTED

One of the most significant developments as the Truman Greco-Turkish program goes before the Senate this week is the admission from the Democratic side that its purpose is political and is dictated by the principles of military strategy. Senator GEORGE (Democrat), of Georgia, second ranking Democratic member of the Foreign Relations Committee, said that tactical reasons are involved, inasmuch as Turkey is the key to the Middle East.

He voiced the view of Secretary Marshall, who had advanced military considerations in persuading the President to intervene in Greece and Turkey.

The British stand to benefit prodigiously from Mr. Truman's policy. The United States virtually would take over the protection of the British oil concessions in Iran and the Middle East, including the British oil concessions in Iran and Iraq. It would hold the northern front against Russian aggression. The famous life line of the Empire, running through the Suez Canal to the Far East, would be shortened, but it would be guarded by American might.

Adulterated Coffee

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TOLEDO, OHIO, *March 25, 1947.*

The Honorable HOMER A. RAMEY,
Representative, Ninth District of Ohio, Washington, D. C.

SIR: Knowing you are always interested in the folks back home, felt you might like to hear about a universal gripe. To illus-

trate my point, I have enclosed a sample of what is purported to be "coffee." Believe me, any resemblance to coffee is strictly coincidental.

After making a purchase of a pound of coffee in the bean last night, I examined the contents just prior to placing it into our grinder at home. For a while I was sorely tempted to send this to an examiner for the Pure Food Act but on second thought, knew a publicity blast from your office would get quicker action. Like other citizens, we don't mind paying higher prices for coffee, but when this doubling in price is coupled with the sale of such a wretched, adulterated, foul smelling, product as per sample, I believe our patience is exhausted.

You know, from vast experience, that Mr. Average Citizen will stand for quite a lot; taxes, rationing, restrictions, and so forth. Therefore I sincerely believe you will be remembered best for your stay in Washington, if you could secure once again, a "good cup of coffee." Bolstered by the return of such nectar, we could face conditions with renewed vigor.

Respectfully yours,

CALVIN LIEBERMAN.

What's Wrong?

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by Dr. Norman Sweet which appeared in the Fort Wayne News-Sentinel of March 29, 1947:

WHAT'S WRONG?

To the EDITOR:

A linoleum merchant asked me: "What's wrong with the world?" While he laid my linoleum, I began by asking, "What is wrong with anything?" I answered myself by saying: "A thing is wrong between two or more people because they cannot agree upon what is right." And now we come to the enigmatical question of the ages: "What is right?"

I'm starting this like one of Socrates' observations of human life. What is right to one may naturally be wrong to another if one secures a better advantage in any particular.

What seems right to a child of five not understanding (due to not having had experience) from the parent's lengthy experience that is wrong, is further complicated by the parents trying to talk in adult language to the child.

The child becomes more confused, and feels resentment at being forced to do the right thing it has not yet learned is right. It does the wrong thing, in defiance, believing it is right.

The parent was right but handled it in the wrong way.

So with UN, Russia and America in particular. We talk to Russia in our over 160 years of freedom of living, while Russia has been under Czarish and communistic rule for centuries.

Russia is suspicious of us and we're suspicious of her. Therefore, suspicion (doubt and fear) must be the first element to be removed before any progress on any subject can be even discussed.

Now, our forms of government, natures, anthropological development have been widely different. Human relations can only be established by each understanding the other's natures, and talk, policies, and programs should be built upon this basis.

It will take many years—and it should—to reach a final understanding. But let us approach the matter in a suggestive (psychological) not a critical manner (political) and show Russia we do not want one iota of territory, except for possible protection from attack, but she can say the same thing to us—that she wants equal protection from attack and wants territory for the selfsame reason.

Both are right to themselves, but wrong to the other. Now, what we need in the UN is an educational program on war as a destructive agency between nations, not particularly concentrated upon the two largest (America and Russia) nations.

The atomic-bomb secret held exclusively by America is our greatest handicap to effect this objective, and naturally we're going to control its secret until control of its manufacturing use all over the world is obtained and sustained.

Russia feels this as a "sword of Damocles" over her head. If Russia, in lieu of America, had atomic control, she would do just what we are doing.

Therefore, what's wrong with the world? Nothing. It's what's wrong with the human beings in the world. We're full of fear and are selfish, and education is the only process that can remove both, and we (all of us) are poor students. We must get down to first principles—live and let live. No exceptions.

NORMAN SWEET.

FORT WAYNE.

Classroom Courses for On-the-Job-Training Veterans

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 7, 1947

Mr. RIZLEY. Mr. Speaker, under permission granted, I include a petition from numerous World War veterans from my congressional district. The petition speaks for itself.

We the undersigned, being veterans of World War No. 2, and residents of Alfalfa County, Oreg., hereby respectfully ask and request the Veterans' Administration and the United States Congress to omit and waive the requirement that veterans who are on-the-job-training be required to take classroom applied training courses in this area; for the reason that the subjects offered are not pertinent to the training. The schooling requires a man who is tired from working all day to go to school at night, 4 hours per week, and the expense to the veteran of traveling to and from schools is prohibitive in many cases.

Clarence L. Roberson, Wayne A. Ford, Robert V. Goldsmith, Al S. Pantel, Comer L. Jenlink, Jess E. Tatro, Alvin J. Schiffner, William Edward Kerr, Roy Lee Gibson, Ralph John Hutson, William J. Boston, William J. Smith, Maurice M. Frank, Bill B. Bowles, Ray E. Davidson, Howard F. Leslie, John A. Steele, Richard L. Bright Jack C. McDaniel, Bill B. Young, Roy S. Williamson, William F. Kinney, Charles E. Brewer, Raymond C. Hutson, Maynard Cramer, Robert E. Wilson, Harry E. Smith.

Prospects for Industrial Peace

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, I have three addresses which I wish to have printed in the Appendix of the RECORD. The first is an address entitled "Prospects for Industrial Peace," delivered by Edwin E. Witte, chairman, department of economics, University of Wisconsin, to the Milwaukee County League of Women Voters, at Milwaukee, Wis., on February 7, 1947; the second, an address entitled "Labor Management Problems in 1948," delivered by Mr. Witte at the meeting of the Business and Professional Men's Group of Cincinnati, on March 21, 1947; and the third, a companion address entitled "Government Control of Industrial Relations," recently delivered by William M. Leiserson, of Johns Hopkins University, in Los Angeles, Calif. The three addresses—two by Mr. Witte, and the third by Mr. Leiserson—are of great importance to Members of the Senate as we begin to approach the whole problem of labor legislation. I think these two men, recognized as great experts in this field, have put down in black and white a few cautions which the Senate might well afford to heed.

First, I ask unanimous consent to have the address entitled "Prospects for Industrial Peace" delivered by Mr. Witte, printed in the Appendix of the RECORD.

I am advised by the Public Printer that Mr. Witte's address will make approximately two and a quarter pages of the RECORD, which is one-fourth of a page in excess of the two pages allowed under the rule without a statement of cost. The cost is estimated to be $159.75.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROSPECTS FOR INDUSTRIAL PEACE

(Address of Edwin E. Witte to the Milwaukee County League of Women Voters, at Milwaukee, February 7, 1947)

In discussing the prospects for industrial peace, I will deal both with the outlook in the months immediately ahead and with the factors, as I see them, upon which will depend the prospects for improvement of labor-management relations in the longer run.

As everyone knows, the United States had experienced an extraordinary amount of labor trouble since VJ-day. In 1946, this country had 4,700 strikes, which caused a loss, as estimated by the United States Bureau of Labor Statistics, of 113,000,000 man-days. The 4,700 strikes were not the largest number of strikes in any year. In 1944, we had 5,000 work stoppages. But in that year, all of the strikes caused a loss of but 8,000,000 man-days. During the entire year, in more than 3½ years, work stoppages caused a loss of 36,000,000 man-days—only one-third the strike loss of the single year 1946.

The strike record of 1946 was the worst in all our history, although this was not the year of the largest number of strikes. But

the strikes of this last year involved large number of workers and lasted a long time. Above 75 percent of the total lost time in 1946 was accounted for by the 29 strikes each of which involved above 10,000 men. In the war period there were less than a dozen strikes involving such numbers of workers and the average duration of strikes was only a few days, contrasted with 24 days in 1946. While during the entire war there was not even one strike which was authorized by an A. F. of L. or CIO union, nearly all the work stoppages since VJ-day have been authorized strikes. They have occurred after the expiration of the union contract and have concerned demands for wage increases. Union security has been far less of an issue in strikes than before the war and none of the major strikes have involved jurisdictional disputes.

Bad as has been our strike record since VJ-day, it is important that it be seen in its proper perspective. Man-days lost through strikes as reported by the United States Bureau of Labor Statistics take account only of time lost by workers on strike and by other workers rendered idle in the same plant by reason of a strike although they themselves are not on strikes. The totals given omit from consideration working time lost in other plants by reason of shortage of materials attributable to a strike. Even so, it is worth noting that the 113,000,000 man-days lost in 1946 through strikes were less than half of the man-days lost through industrial accidents in this last year as estimated by the National Safety Council. They amounted to less than 1.5 percent of all working time in nonagricultural employment.

Even more significant is the fact that more than 10 times as many union agreements were concluded in 1946 without strikes as there were strikes. In 1946 there were at least 50,000 situations in which agreements were arrived at between management and unions without any interruption of work. It is the exceptional which makes the news and it is fortunate that in this country strikes attract little attention. In many great industries there have been no or but very few strikes since VJ-day. This holds true for such great industries as building construction, textiles, men's and women's clothing, hosiery, shoes, rubber, and many more. Most of the bad strikes since VJ-day have occurred in industries and plants in which the unions gained recognition only shortly before the outbreak of the war—that is in industries and plants which had but a very limited experience with collective bargaining when the war brought with it an end, for the time being, to normal collective bargaining.

It is not surprising that in these industries labor and management experienced difficulties in arriving at agreements through collective bargaining when after VJ-day they were again on their own. There are many reasons why the end of hostilities was followed by a great increase in strike losses.

First among these must be cited the natural reaction against wartime restrictions. The world over, there have been many serious strikes since the war ended. In proportion to its industrial population, Australia has had a worse record than the United States, and Canada certainly not a better one. In the United States the year 1919 was the worst year for strikes until 1946.

Governmental controls kept both wages and prices during the war below what they otherwise would have been. Both labor and management were restive under these Government-imposed restrictions. Both sides clamored for restoration of free collective bargaining.

Responding to their demand, the Government almost at once after VJ-day started to withdraw its controls. The War Labor Board took no new disputes and before long terminated its work. Wage controls were largely abandoned, but price control remained.

The result was that in major mass-production industries, which had but very limited experience with collective bargaining before the war, the serious strikes previously noted developed. As I see it, there is little value in trying to assess blame for these strikes. The old adage, "It takes two to make a quarrel," pretty generally is also applicable to labor disputes. For the labor troubles of the recent past no one is entirely blameless.

Fearful of loss of take home pay, labor made demands for greatly increased wage rates. While privately conceding the need for some increases, management generally was very slow in making increases. One reason was uncertainty about the possibility of recouping the increased wage costs through price increases. As Business Week, the McGraw-Hill publication of wide circulation among businessmen, pointed out, a few months ago, in its analysis of post VJ-day strikes, there was a price aspect as well as a wage aspect in all or substantially all of the great strikes which developed. In not one major strike were wage increases made until management had been assured of corresponding price increases. Retention of price controls, while wages were free from control except where price increases were sought hindered arriving at compromise settlements and in many cases led directly to strikes.

Both labor and management professed faith in collective bargaining. But to many in the ranks of labor, collective bargaining meant: "Give us what we want, or else." To many managements, free collective bargaining meant being able finally to say "No" to union demands without possibility of review by any one. Among the union men in several of our major mass production industries there was an almost irresistible strike fever and a widespread belief that management would give in after a short strike, as it had so often given in after wildcat strikes during the war. Many managements, similarly, believed that it was a good time for a show-down, while needed materials were still so very short in supply. Not a major cause of strikes, as I see it, but clearly a factor enabling managements to hold out longer once strikes were begun was the reconversion tax credit provision of the Federal income tax law. Companies which paid large amounts in taxes during the wartime could recompute their taxes for the war years and get refunds if they sustained losses in the reconversion period. This provision, in some cases operated much like the payment of strike benefits from the Federal Treasury to companies involved in great strikes enabling them to show substantial profits after taxes despite operating losses

Plus these factors affecting labor and management tending toward industrial strife, an uncertain governmental policy increased tensions and often delayed settlements. The undue publicity given strikes and the tendency of nearly everybody in the public to adopt a highly partisan attitude, usually without much, if any, knowledge of the facts, clearly did not help matters.

The recital of the reasons why the post VJ-day period was one of many large strikes could be further prolonged. What really matters in relation to the prospects for industrial peace is that many of the causes which produced such great strike losses are, fortunately, no longer operative.

There is much evidence that the workers are fed up with strikes. The fact that even now average take home pay in manufacturing industries is below the maximum of the wartime while the cost of living has risen very greatly is, of course, a source of discontent. So are the high food costs and the large, although spotty, profits of manufacturing corporations, which are greatly exaggerated in the accounts believed by the workers. But there appears to be among union men an attitude of, Stop, Look, and Listen. It is realized that labor gained but little through the first round wage increases while immensely damaging its cause with public opinion. Very certainly the responsible labor leaders of the country do not want further great strikes if they can prevent them. Even in the CIO vigorous efforts are now being made to curb left-wing elements, whose party line is again class warfare. The bitter A. F. of L. rivalry, which of itself was an important cause of postwar labor troubles, is apparently becoming less intense. Union treasuries, never as large as popularly supposed, are now very low. The state of public opinion is such that labor will be blamed for further serious labor troubles. In that event legislation which at the least will be annoying and insulting to the unions if not seriously damaging is certain to be enacted. For these and still other reasons the dominant union sentiment at this time is one of trying to avoid strikes and to arrive at compromises of disagreements with management.

There are factors in the present situation also which make management anxious for industrial peace. Government controls are off and price adjustment can now freely be made. No longer can the Government be blamed for strife which may develop. We are back to free enterprise and management has a direct interest in making it work. Shortages of materials have either disappeared or are in the process of doing so and in many lines there is a reason to believe that loss of production through strikes will mean a permanent loss of business which can never be recovered. In the industries in which great strikes are most likely, the war tax credits by now have been pretty well exhausted. While the position of the unions has been weakened, their membership is still very near the peak. Neither management nor the unions proved a pushover in the postwar period, as many extreme partisans on the respective sides had expected. In a sellers' market such as now prevails for labor, the unions' position is intrinsically very strong if strikes develop and that whether Congress is pro- or anti-labor.

Happily the factors enumerated already have resulted in marked improvement in the strike situation. It is not generally known but a fact that the trend in strike losses has been downward ever since February a year ago and that since June strike losses have been at a much lower level than in the first 5 months of the year. The man-days lost through strikes increased practically every month for the first 6 months following VJ-day. They reached a peak of 23,000,000 man-days lost in February 1946. This represented nearly 4 percent of total work time and was the worst month for strikes in all our history. Strike losses remained at unprecedented heights for four more months, although considerably less than in February. After the settlement of the first coal and the railroad strike, late in May and early in June, respectively, strike losses decreased sharply. The only nation-wide strikes since then have been the maritime strikes of September-October and John L. Lewis' second coal strike in November, which was of short duration but did more to prejudice the public against the unions than probably anything else. Even in the high months of this period, September and November, the man-days lost through strikes totalled only 5,000,000, contrasted with above 10,000,000 in each of the first 5 months of 1946 and 23,000,000 in the peak month of February a year ago. In all of the other months beginning with June, strike losses have not been so very alarming. Since settlement of the last coal strike, almost the only major strikes in the country have been the two which so long have plagued Wisconsin. For January 1947, no report is yet available, but it is a certainty that this was the lowest month in strike losses since VJ-day and not much, if at all, above the average prewar Januaries. For the country

as a whole strike losses ever since June have been only a small fraction of 1 percent of work time.

It is no exaggeration to say that settlement of disputes through collective bargaining is now the pattern, rather than disagreement resulting in strikes. For some months industry has been confronted with second-round wage demands, comparable to the first-round demands following VJ-day. But this time compromises are being worked out around the conference table. Such settlements have been arrived at not only in industries which have had little trouble since VJ-day, like construction, textiles, clothing, hosiery, and rubber, but also in some industries which experienced serious strikes in the first round of wage increases, like meat packing, lumber, and oil. These settlements represent collective bargaining at its best. They do not provide for the same flat-rate increases throughout all industry, on the model of the 18½-cents-per-hour increase which became pretty much a universal pattern after settlement on the basis of the steel strike. As they are adapted to the peculiar situation in each industry and even the special circumstances of a particular company, they are basically much sounder than the first-round increases. And, generally, they have not led to immediate price increases.

As recently as a month ago, predictions about the prospects for industrial peace in 1947 were very gloomy. Now they have become rosy, indeed. I also am optimistic, but direct attention to the fact that the new contracts in a least three of our major industries remain to be written. In steel, in many respects the most crucial of all industries, the old contract has been extended to April to permit longer negotiations and the same thing has been done in relation to the Chrysler contract. Other union agreements in major automobile plants do not expire until that time, and April 1 is also the normal new contract date in coal. There is no ground for alarm in the fact that this year's contracts have still to be negotiated in these three critical industries, which have accounted for the largest part of the strike loss since VJ-day.

Extension of the time for negotiations, in fact, is most hopeful. But the fact must not be lost sight of that no agreements have been reached to date in these critical industries and in all of them, it now appears, matters will come to a head in April. While the prospects for new agreements without strikes seem good, there is still the possibility that the spring may bring simultaneous strikes in a large segment of all American industry. Whether settlement or strikes will be the outcome, it seems to me, will depend upon whether both parties in these troubled industries display the same statesmanship which has kept many other industries at peace since VJ-day.

The will to peace and an earnest desire to find a basis for adjustment, I believe, also holds the clue to the longer time prospects for industrial peace. I have no faith in any political solution of labor relations problems. Industrial peace cannot be brought about by law. Legislation such as is now before Congress will put Government into the labor relations picture more than it ever has been before, at least in peacetime. In the end it cannot but result in further governmental restrictions upon both labor and management. The route to industrial peace does not lie in further legal restrictions and increased governmental intervention. Just as the Employment Peace Act has not brought industrial peace to Wisconsin, so similar legislation by Congress will not assure industrial peace to the Nation. It may well have precisely the opposite effect, reversing the present trend toward fewer strikes and reduced strike losses.

The long time prospects for industrial peace depend upon managements and unions learning how to live together peacefully. That this is not an easy matter, the difficulties experienced in many instances clearly indicate.

There is an old French saying: "When the other fellow acts unreasonably, look inward." This saying is a sound rule in relation to labor difficulties. But the inward look must not be one of self-righteousness. Rather, it needs to be one, as suggested in a recent speech by Charles Luckman, president of Lever Bros. Co., of "humility" and of "realization." Said Mr. Luckman, "there is no hope that either side will bring to the bargaining table those qualities of sanity, moderation, and tolerance which are indispensable for the survival of democracy in industry."

Besides such an inward look of humility, there is need for improvement in labor relations, a sympathetic understanding of the problems of the other fellow. There is today and has long been a wide gap between the thinking of labor and management. Unfortunately, we even lack appreciation of the fact that there is such a pronounced difference in basic patterns of thought. Many managements do not understand unions and all too often do not even try to understand them. On the part of the many unions and their leaders there is very inadequate appreciation of the problems facing management and all too often indifference as to how union policies may affect the survival of a company or industry.

It is false, as asserted by the Communists, that the interests of labor and capital are completely antagonistic and irreconcilable. It is also false, as often stated by management partisans, that the interest of the workers, the stockholders, and management are in all respects identical. Labor and management have common interest in everything that pertains to production. But their interests are not identical on questions concerning the distribution of the joint product. Quarrels over the distribution of production are as old as is production itself. These quarrels will not be adjusted solely by preaching identity of interests. But neither is their hope of peace in class warfare or its constant preachment.

It is in frank recognition both of common and divergent interests that there lies hope for reconciliation. Prof. E. Wight Bakke, director of the labor-management center of Yale University, sees the principle of mutual survival as the key to the development of satisfactory relations between managements and unions. Unions will be militant and unreasonable so long as they believe that the employers are seeking to undermine them. Managements will fight unions to the death so long as they believe that the unions are seeking to overthrow the system of free enterprise which has made our economy the strongest ever developed.

Managements need to get over their longing for the good old days when there were no unions. There is little if any prospect that unions will soon disappear from the American scene. Unions in this country are now more than 100 years old. They have survived all of the ups and downs of the business cycle, all political changes, and all shifts in public attitudes. When managements seek to destroy unions they are certain to bring to the top the rabble rousers and the most extreme elements among the union men. Giving status and security to the union is not a guaranty of no further labor trouble but a sine qua non in getting along with the union.

On the part of labor a first essential is to convince management and the public that the unions are not revolutionary and do not seek to destroy the American way of life. Unions cannot expect management to deal other than in a spirit of hostility with them, so long as their leaders and their publications are constantly villifying managements and stirring up grievances and magnifying them. The prosperity of the workers is dependent upon the prosperity of the company, even though large profits are not a certain guaranty of high wages. And the rights of workers as human beings, democracy in the shop, can be attained and safeguarded without destroying the rights of management and its ability to successfully conduct the enterprise.

Both labor and management need to cease taking the advice of the extremists in their ranks. It just does not make sense to follow the leadership of industrialists who have made a mess of their labor relations and to reject the advice of other industrialists who get along well with unions. On the part of unions it is high time that they realize that responsibility goes with power. Unions must recognize that they have grown up and act accordingly. On the part of both labor and management there must be, not merely free, but genuine, collective bargaining—an attitude of tolerance and understanding, earnest desire to make collective bargaining work, a willingness to explore possibilities for adjustment with an open mind and to make accommodations enabling the other fellow to live and function in accordance with the basic concepts of our American democracy and of our American system of free enterprise.

While expressing my views on what labor and management can do to improve labor relations, I do not want to overlook the responsibility of those of us who are neutrals. We have talked a lot about the rights of the public, but very little about the duties of the public. But in our legal system, every right carries with it a corresponding duty and that applies to the public as well as to the parties directly involved in labor controversies.

A first duty of all neutrals is to be truly neutral. That is impossible if we form judgments on insufficient information and align ourselves with one party or the other, as we are prone to do. It is only when we are certain of all the facts that we can have an intelligent opinion or in any manner contribute to the settlement of a controversy. Generally, neutrals not in official position can do but little directly toward settling labor disputes. But informed public opinion is a very potent force and can contribute a great deal toward improved labor relations.

The Government, as the representative of the entire public, has important responsibilities in the development of improved labor relations. It is its responsibility to establish minimum standards for the protection of the weak and the unorganized. In all the discussion of new labor legislation the fact that much of our legislation for the protection of the children in industry and of the lowest paid and weakest of the adult has become meaningless, has been entirely overlooked. Government can also make an important contribution to better collective bargaining by making available to the parties the latest relevant data. It can do much for the peaceful settlement of labor disputes through making impartial mediation and voluntary arbitration service available to parties whenever they may want their assistance. In strikes the Government has the responsibility of preserving law and order. Industrial disputes cannot be allowed to become actual warfare and it is up to the responsible executive authorities to enforce the criminal law even during strikes. In great emergencies the Government must go beyond such measures, and through the exercise of all its powers and with the support of public opinion somehow, and in any manner that it can do so, end strikes which threaten to stop our entire economic system, as President Truman did in the railroad strike of last June and the coal strike in November. But I would reserve such coercive intervention by Government to

great emergencies and would not dull its effectiveness by too frequent use. Disraeli's maxim, "Never expose the impotence of democratic government," applies with peculiar force to labor disputes.

While the Government and the public generally have responsibilities for the preservation of industrial peace, the primary responsibility rests upon labor and management. We will have self-government in industry only if they mutually solve their problems. That they can do so has been happily demonstrated in many industries. It is to be hoped that similar progress will be made in those other industries which have been mainly responsible for the great strike losses since VJ-day. The downward trend of strikes and the progress made recently in the development of genuine collective bargaining afford hope that the corner has been turned and that in these troubled industries also the situation will continue to improve.

Labor-Management Problems in 1947

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, the second address which I ask to have printed in the Appendix of the RECORD is entitled "Labor-Management Problems in 1947," and was delivered by Mr. Edwin E. Witte, chairman, department of economics, University of Wisconsin, at the meeting of the Business and Professional Men's Group of Cincinnati, on March 21, 1947.

Mr. President, an estimate from the Government Printing Office indicates that it will cost $248.50 to print this address delivered by Mr. Witte.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LABOR-MANAGEMENT PROBLEMS IN 1947

(Address of Edwin E. Witte, chairman, department of economics, University of Wisconsin)

In discussing the labor-management problems in 1947, it is logical to begin with a review of past developments.

I will say little about the period before 1935 when Congress enacted the National Labor Relations Act, popularly known as the Wagner Act. Unionism was then over 100 years old in this country. It had survived all of the ups and downs of the business cycle, all political changes, and all climates of public opinion. It was firmly established in many industries, but was almost completely excluded from the mass-production industries.

Both unionism and collective bargaining had long been of undoubted legality. While there had been a few early cases in which labor unions were held to be illegal, it had long been firmly established that combinations of workingmen to increase their wages, shorten hours of labor, or improve working conditions, are lawful. There never had been even one case in which a combination for these purposes had been held to violate the antitrust laws, regardless of the size of the union or the percentage of the employees in a given industry included within its membership. Union agreements were of unquestioned legality, including agreements for the closed shop—and without the limitation specified in the Wagner Act that closed-shop agreement must be made with a union representing a majority of the employees.

As early as 1918 in the Declaration Principles to Govern Labor Relations during World War I, it was declared to be the policy of the United States to accord workers the rights of self-organization and collective bargaining, free from all interference by employers. This statement came from the War Labor Board of that day, of which the then ex-President and later Chief Justice William Howard Taft was co-chairman. This principle was first written into statute law in the Railway Labor Act of 1926, approved by President Coolidge. It also was included in the Norris-La Guardia Act of 1932 and in the Bankruptcy Act of 1933, both of which were approved by President Hoover. It was reaffirmed in section 7 (a) of the National Industrial Recovery Act of the early days of the Roosevelt administration.

This same provision is the central section of the Wagner Act. This law differs from the earlier legislation to safeguard the right of workers to form labor organizations and engage in collective bargaining only in that it implements this statement of the rights of workers by a short list of unfair labor practices of employers. The most important of these unfair labor practices are discrimination against workers for union membership or activities, the establishment or maintenance of company dominated unions, and refusal to bargain collectively when a majority of the employees have designated a collective bargaining representative. Commission of an unfair labor practice—by an employer does not constitute a crime nor does it subject him to suit at law. But it does make him liable to proceedings before the National Labor Relations Board and, if found guilty of unfair labor practices to an order directing him to desist from these practices and to make whole, as nearly as can be, the persons injured by his unlawful conduct. But it is only after such an order has been confirmed by a circuit court of appeals that the employer is subject to any penalty for disregard of the Board's order.

The National Labor Relations Act became law in July 1935 but it did not really become operative until April 1937, when the Supreme Court unanimously held its provisions to be constitutional. In another case decided at the same time a majority of the Court held that the act applied not only to what had theretofore been considered interstate commerce, but to all industries, other than agriculture, in which interruption by a labor dispute would in a substantial manner interfere with interstate commerce. These decisions were rendered by the Supreme Court before a single appointee of President Roosevelt sat on that Court.

These decisions upholding the Wagner Act and giving it the broadest possible scope were followed immediately by the greatest wave of union organization we have ever known in this country. Since 1937, union membership has increased from less than 5,000,000 to nearly 15,000,000. The great mass production industries were largely organized at this time. In these industries, however, there was but a short experience with collective bargaining when the war came and interrupted normal developments.

During this period, while union membership and union agreements multiplied, the unions lost favor with public opinion. For this, their own conduct was largely to blame, although by no means all unions were responsible. This was the time of the sit-down strikes and of the attainment of control by Communists in a fairly large number of CIO international unions and of more local unions. In the intense organizational drives of the rival federations into which the labor movement had been split, public interests were disregarded and public opinion flouted.

Labor paid dearly for this mistake. Labor excesses were an important factor in bringing on the conservative wing in American politics which has been very pronounced since 1938. One of its major consequences has been the enactment in many States, beginning in 1939, of a new type of labor legislation, restrictive of labor unions and their activities in labor disputes. At the same time there has been an all but complete cessation of new labor legislation of the protective type, which until recently was the only legislation to which the term "labor legislation" was applied. The restrictive laws in the States have been very little enforced. In no State other than Wisconsin was there up to last summer even a single case in which a union has been proceeded against for unfair labor practices. In Wisconsin there have been many cases against labor unions under its Employment Peace Act, but even there many of the provisions which were designed to hit unions have in practice turned out to be additional restrictions upon employers. All actions premised upon illegal closed-shop agreements have been against employers. This has been true also of the great majority of cases in which a breach of a union agreement has been charged. State experience indicates that labor legislation of the restrictive type is more of an insult than an injury to organized labor. But just as the employers resented having the Wagner Act forced upon them, so the union workers have felt aggrieved by the restrictive State laws. These laws may to some degree have checked the spread of union organization but, unfortunately, they have not brought labor peace. In nearly every State which has a restrictive labor law the governors in their messages of this year have dealt upon the need for further restrictions, while most of the governors in States without such laws reported that their States had been relatively free from labor troubles.

Since the period, from 1937 to 1941, of the greatest spread of unionism and of union excesses which turned public opinion against the unions, we have been through the trying but glorious days of World War II and the disturbing experience since VJ-day.

During World War II this country had relatively little labor trouble. In the nearly 4 years of our participation in the war our direct strike losses totaled only 36,000,000 man-days—considerably less than one-half of 1 percent of working time in industrial employments. This was not only a much smaller strike loss than in the prewar years, but, relative to our number of workers, the smallest wartime strike loss in any English-speaking country. Many strikes occurred in the United States during the war years. In 1944 there were more strikes than in any other year, including even 1946. But with few exceptions, these were wildcat strikes, involving few men, and, typically, they were settled within a few days. Not a single strike occurred during the war which was authorized by an international union then affiliated with either the AFL or the CIO. Independent unions had a somewhat less good record, but only the coal strikes resulted in any serious interference with war production.

Contrary to a widespread impression now prevailing, strikes were not prohibited by any law during the war. Nor did we have compulsory arbitration, as this term is usually understood. The National War Labor Board was vested with authority to decide issues in disputes which management and labor did not themselves settle. But its decisions were merely advisory, with plant seizure as the only possible method of enforcement when the Board's orders were not voluntarily accepted. Plant seizures were resorted to in but few cases and sometimes failed to bring about compliance. But the great majority of the Board's decisions were accepted in good faith by both sides, although they often did not like them.

In 21,000 labor-disputes cases decided by the War Labor Board there was defiance by unions in less than 50 cases and by employers in less than 300 cases, the great majority of the latter after VJ-day. More important was the fact that even in wartime the great majority of employers and unions settled their own difficulties without resort to the Government. As was to be expected from the fact that collective bargaining was so new in these industries, this was less true in the mass-production industries than in most other industries.

The strike record during wartime, which was on the whole very good, was not due to any legislation or the great wisdom of the National War Labor Board. It is to be attributed to the no-strike pledge, and its faithful observance by the great majority of union leaders and managements. The no-strike pledge was a very informal promise of the labor leaders to avoid strikes while the war was in progress and a corollary promise of both management and labor to abide by decisions of the War Labor Board on issues which the parties were unable to settle. The no-strike pledge was not kept 100 percent on either side. It was, however, observed remarkably well on both sides. Typically, labor felt aggrieved because the Board refused to allow as large wage increases as it felt entitled to and as it could have gotten but for the existence of wage controls. On the other side, many managements felt aggrieved because the Board often settled disputes over demands for the closed shop by directing union maintenance of membership during the life of the contract. With few exceptions both sides abided by the Board's decisions. Thanks to the patriotism displayed by them, we got through the trying war period with a minimum of interruption of war production through strikes.

Wartime restraints, however, were productive of much discontent and produced many frictions, which were an important factor in bringing on the serious strikes which plagued this country during the first 10 months following VJ-day. Almost as soon as the shooting stopped and at the insistence of both labor and management, the Government returned responsibility for the settlement of labor disputes to the parties directly involved. After August 18, 1945, the War Labor Board merely cleaned up its old cases and it went out of existence on December 31, 1945. Wage control was withdrawn except where price increases were sought simultaneously. Labor and management were strictly on their own and, it was hoped, that they would settle their differences through collective bargaining.

In many industries they did so, without strikes. But in the mass-production industries as well as other establishments where unionism was new very serious strikes developed. From VJ-day through February 1946, strike losses increased every month. In February they were at a peak of 23,000,000 man-days—nearly 4 percent of working time and three times as great a loss as in the entire year of 1944, the worst year we have ever had for number of strikes. Since February a year ago the trend of strike losses has been downward. It remained very high for three more months. Since early June 1946 the total of the strike losses has not been so very alarming. Since then we have had only two Nation-wide strikes, the maritime strikes of September and October and the second coal strike of John L. Lewis in November. Only in 2 months of this period was the strike loss as great as 5,000,000 man-days, contrasted with above 10,000,000 in each of the first 5 months of 1946. During the last 3 months, strike losses have been less than in normal prewar years.

Considering the entire year of 1946, the strike record was by far the worst of any year. Direct strike losses totaled 113,000,000 man-days—three times the combined total of the four war years. There were fewer strikes in this year than in 1945 or several earlier years. But the strikes of 1946 involved more workers and lasted longer. Twenty-nine strikes each of which involved more than 10,000 workers accounted for above 75 percent of the strike loss. These were nearly all in the mass-production industries, plus the coal and maritime strikes. In nearly all of the post-VJ-day strikes demands for wage increases were the primary issue. Union security figured as an issue (even as a minor one) in less than 5 percent of all the strikes, compared with above 50 percent in the prewar years. Of the 4,700 strikes in 1946, only 19 are recorded as jurisdictional strikes. In very few of them was there even a claim of contract violation. The serious strikes of the postwar period have developed after contracts expired and have concerned disagreements over wage rates.

Each side insists that the other was to blame for these strikes. Very probably, the old adage that it takes two to make a quarrel is closer to the truth in most cases than to exclusively blame either. A small number of strikes may have been due to Communists within the unions, as the party line changed when Russia was no longer in danger. A much more potent cause was the belief of many workers that wages had been kept down unduly during the war and that profits were so high that very substantial increases could easily be granted. Even more important in this connection was the steady upward climb in the cost of living. On part of management there was an understandable, but unfortunate hesitancy to promptly grant reasonable wage increases that were clearly called for. There was also a feeling that the time was opportune for a show-down with the unions, to regain management rights lost during the war. Both sides had asked for the restoration of free-collective bargaining. But to many union leaders that meant, "Give us what we want, or else." And to many managements it meant the right to say "No," without possibility of review by anyone. This may have been free collective bargaining, but clearly was not genuine collective bargaining.

Responsibility for the strikes after VJ-day must be shared by the Government and the public. The Government's policies were uncertain and frequently changed. We had no less than three radically differing wage policies in the first 6 months following the close of the war. Largely dropping wage controls while retaining price controls was most illogical. The press, by giving undue publicity to strikes, tended to produce a situation in which we always seemed to be in a crisis. As was said at the time by a keen observer: "We could make some progress toward better labor relations, if somebody was not always saying that we are in a crisis, alarming the public, and magnifying differences." Public opinion, because hysterical, uninformed, and partisan, was a far less effective force for industrial peace than it could and ought to have been.

There is little in the record of the postwar labor troubles of which any one can be proud. But no good can be served in harping upon past shortcomings. With all of the bad strikes we had in 1946, it was nevertheless the year of the greatest peacetime production we have ever known. The 113,000,000 man-days lost through strikes in this worst year represented only 1½ percent of all working time and less than half of the loss estimated by the National Safety Council as the cost of industrial accidents in this year. The 4,700 strikes during 1936 are to be compared with a total of above 50,000 union agreements in effect in the United States. There were 10 agreements reached without strikes for every strike. Many important industries have had few, if any, strikes since VJ-day. Among them are building construction, textiles, men's and women's clothing, rubber, paper, and shoes. The postwar strikes occurred mainly in industries in which collective bargaining was new when the war came and in which there was but little collective bargaining during the war. That serious trouble developed in these industries might almost be said to have been natural.

The best part of the postwar period is that the trend of strikes has been downward now for more than a year. During the last 3 months strikes have been at a low point. However faulty the Government's handling of this problem may have been in the first period following VJ-day, it has become much more sure and consistent in the most recent period. The Government's course of action in the railroad strike of last spring and the coal strike of last fall could scarcely have been improved upon for vigor and effectiveness. These potentially most serious strikes were settled without any real damage to our economy and without any yielding to the strikers. But the principal credit for the greatly improved strike picture belongs to the managements and to the unions which have worked out compromise settlements without strikes of the troublesome second-round wage increase demands.

When these demands were first presented they seemed likely to produce another wave of strikes comparable to that which followed the presentation of the first round wage increase demands. But in industry after industry compromises have been worked out, representing settlements, without strikes, which are eminently reasonable and fair to both sides. Through this process, it has been possible to make adjustments to the peculiar situation presented in particular plants, avoiding the unfairness of the 18½ cents per hour increase, across the board and in all plants, which finally became the pattern of the first round wage increases.

Unfortunately, not all industries to date have worked out such reasonable compromise settlements. In the great mass production industries of rubber, automobiles, and steel there is still a serious possibility of bad strikes ere many months. The same holds true for the railroads, the telephone industry, and, as always, coal. When in the steel industry, on expiration of the contract in January, it was extended by mutual agreement until the end of April, to allow further time for negotiations, this was generally regarded as an assurance that there will be no steel strike this year. Similar action in relation to the Chrysler contract was viewed as an indication that there will be no automobile strike. To date, however, no compromises have been agreed to in either the steel or automobile industries and the rubber workers are due to go on strike within a few days against the four major rubber companies, unless there is a last-minute settlement. Such last-minute settlements are exceedingly common in labor disputes and the situation is by no means hopeless. The fact that these are the industries in which occurred the greatest of the strikes after VJ-day, however, is not reassuring. Similarly, it must be deemed a cause of concern that to date the employers in steel and automobiles are reported not to have made any counter wage offers. If settlements are effected in the critical industries mentioned, 1947 may well prove one of the best years we have ever had. But the danger of bad strikes in these industries is still very real.

What Congress does or does not do will have very little influence upon the chances of avoiding this danger. The long-time effects of many of the proposals now under consideration in the Congress are debatable. I have opinions about them but do not claim to have the answers. That some changes in the present legislation may have value in the development of improved labor relations I readily concede. To make the obligations of

the National Labor Relations Act two-sided, instead of one-sided, is clearly desirable. So is the writing into the law of the employers' freedom of speech which is guaranteed by the Constitution. Opposition of the unions to requirements to insure the honest handling of union funds and of democratic procedures within unions, I have long regarded as short-sighted and most unwise. Jurisdictional disputes are so unfair to employers that I favor experimentation with governmental machinery for their settlement. If the power of seizure in labor disputes which threaten our entire economy can be safeguarded so as to prevent the serious threat to the continuance of our system of free enterprise which such power carries with it, authority to that effect may appropriately be given the President. Like everybody else who has spoken on the subject, I favor strengthening of the Conciliation Service and believe that, instead of the reduced appropriations proposed by the House committee, appropriations for this purpose should be increased. There is still other additional legislation which has some promise of being helpful.

My general view, however, is that satisfactory labor relations cannot be developed by law. I do not see the solution of our labor difficulties in politics and have no faith in increased governmental restrictions and authority in this field. Some new legislation may be helpful to get employers over the feeling which is now so widespread that they are the underdogs and that the law is unfair to them. There is danger, however, that this feeling may be shifted to the workers, with the inevitable consequence that there will be a drive ere long for further restrictions upon management, which will reach fruition on the next swing of the political pendulum. Even as now proposed, many of the restrictions intended to operate against unions are likely to prove further restrictions upon the freedom of action of managements. The final net result of reliance upon legislation to solve labor problems may well be, as Cyrus Ching, of the United States Rubber Co., has often warned, that both labor and management will be bound hand and foot and that the Government will dictate all aspects of labor relations, which is pretty much the same thing as the end of our system of free enterprise. When strikes threaten to stop our entire economy the Government needs must act. In such emergencies, the Government must act to end these strikes by all means within its power. But I would heed the maxim of Disraeli, "Never expose the impotence of democratic government." I would reserve governmental intervention, going beyond mediation and voluntary arbitration, to real emergencies and not dull the effectiveness of what the Government needs must do in crises by too frequent use.

Good tests of sound new legislation at this time seem to me to be these: Clearly every change in the present law which puts labor in a less favorable position than it was before the Wagner Act was enacted needs to be most carefully scrutinized and generally should be avoided. It is manifestly unfair to impose restrictions upon labor unions which do not apply to corporations, which represents combinations of capital intrinsically much the same as labor organizations. Further shifts of authority from the States to the National Government should be reviewed with suspicion. That is why I have said nothing about Federal legislation against acts of violence and such clearly unlawful conduct as mass picketing. Such conduct is unlawful in every State and I believe that we can get effective law enforcement only if public opinion insists upon local and State officials doing their sworn duty, to impartially and vigorously enforce the law during labor disputes, as well as at other times.

But all this represents something of a departure from the principal subject I am discussing, the prospects for industrial peace in 1947. Whatever may be the long time effects of what Congress may do by way of additional labor relations legislation, it is quite clear that it can have only indirect effects upon the disputes which may result in strikes within the next few months. It is very doubtful whether Congress will act by the time any of these disputes reach the critical stage. Even more important is the fact that the legislation Congress is likely to pass is concerned with issues and matters other than those involved in the pending disputes. The issues in these disputes center around wage demands, not the closed shop, industry-wide bargaining, jurisdictional disputes, or the unionization of foremen. Prohibiting the closed shop in the industries in which it now exists, in most of which there have been few strikes, will not lessen the danger of strikes in the near future in the rubber, steel, automobile, and telephone industries in which the closed shop is almost unknown. Similarly, the demand for the prohibition of industry-wide bargaining comes not from industries which are now bargaining on that basis but from industries which have never had industry-wide bargaining and in which it is not now a major issue.

Conversely, I also do not believe that what Congress may do by way of additional labor relations legislation will have the effect of bringing on another strike wave, as some of the opponents of this legislation are predicting. Should the downward trend of strikes be reversed after Congress acts, it is inevitable that the proponents and supporters of the legislation will be charged with this result. But even in that event, the true causes of the strikes are likely to be much more deep-seated than any legislation that Congress may pass.

Major strikes ere long in the industries in which there was so much trouble last year, it seems to me, will be avoided only if labor and management in these industries arrive at compromise settlements, particularly upon the central issue of wages. Neither labor nor management is a push-over in these industries, and neither is it at all likely to yield its present position completely. Even if compulsory arbitration were instituted, the final determination is almost certain to be a compromise. The real question is whether such a compromise can be worked out by the parties or must be dictated by Government. This presents a test for collective bargaining—whether collective bargaining can be made to work in these industries in which it is still very new.

Making collective bargaining work in such a way that it will preserve industrial peace is not any easy matter. As the bad experience in some industries, notably coal, in which there long has been collective bargaining, illustrates, collective bargaining is not a guarantee against strikes. But world experience, I believe, has demonstrated that the best hope for industrial peace lies in agreement between labor and management.

Collective bargaining involves more than negotiation or even the conclusion of union agreements. It involves the parties learning to live together and making adjustments to their mutual advantage. This is something that the Government cannot do for them—something which law, at the most, can encourage but of itself never accomplish.

Developing genuine collective bargaining in industries in which it has not heretofore prevailed is not an easy matter. Management, unaccustomed to dealing with unions, will be alarmed about encroachments upon management rights. Union leaders who have thought and talked of management as if it had horns will find it difficult to reverse themselves.

Outsiders can only make suggestions which labor and management, earnestly seeking to get along with each other, may find helpful. One such suggestion is the old French saying: "When the other fellow acts unreasonably, look inward." But the inward look must be more than a look of self-righteousness. Rather it needs to be, as Charles Luckman has said, a look of "humility" without which "there is no hope that either side will bring to the bargaining table those qualities of sanity, moderation, and tolerance which are indispensable for the survival of democracy in industry."

Besides such an inward look of humility, there is needed for improvement in labor relations a sympathetic understanding of the problems of the other fellow. There is today and has long been a wide gap between the thinking of labor and management. Unfortunately, we even lack appreciation of the fact that there is such a pronounced difference in basic patterns of thought. Many managements do not understand unions and all too often do not try to understand them. On the part of the many unions and their leaders there is very inadequate appreciation of the problems facing management and all too often indifference as to how union policies may affect the survival of a company or industry.

It is false, as asserted by the Communists, that the interests of labor and capital are completely antagonistic and irreconcilable. It is also false, as often stated by management partisans, that the interests of the workers, the stockholders, and management are in all respects identical. Labor and management have common interests in everything that pertains to production. But their interests are not identical on questions concerning the distribution of the joint product. Quarrels over the distribution of production are as old as is production itself. These quarrels will not be adjusted solely by preaching identity of interests. But neither is their hope of peace in class warfare or its constant preachment.

It is frank recognition both of common and divergent interests that there lies hope for reconciliation. Prof. E. Wight Bakke, director of the Labor-Management Center of Yale University, sees the principle of mutual survival as the key to the development of satisfactory relations between managements and unions. Unions will be militant and unreasonable so long as they believe that the employers are seeking to undermine them. Managements will fight unions to the death so long as they believe that the unions are seeking to overthrow the system of free enterprise which has made our economy the strongest ever developed.

Managements need to get over their longing for the good old days when there were no unions. When managements seek to destroy unions they are certain to bring to the top the rabble rousers and the most extreme elements among the union men. Giving status and security to the union is not a guaranty of no further labor trouble but a sine qua non in getting along with unions.

On the part of labor, a first essential is to convince management and the public that the unions are not revolutionary and do not seek to destroy the American way of life. Unions cannot expect management to deal other than in a spirit of hostility with them, so long as their leaders and their publications are constantly vilifying management and stirring up grievances and magnifying them. The prosperity of the workers is dependent upon the prosperity of the company, even though large profits are not a certain guaranty of high wages. And the rights of workers as human beings, democracy in the shop, can be attained and safeguarded without destroying the rights of management and its ability to successfully conduct the enterprise.

Both labor and management need to cease taking the advice of the extremists in their ranks. It just does not make sense to follow the leadership of industrialists who have made a mess of their labor relations and to reject the advice of other industrialists who

get along well with unions. On the part of unions, it is high time that they realize that responsibility goes with power. Unions must recognize that they have grown up and act accordingly. On the part of both labor and management, there must be, not merely free, but genuine, collective bargaining—an attitude of tolerance and understanding, an earnest desire to make collective bargaining work, a willingness to explore possibilities for adjustment with an open mind and to make accommodations enabling the other fellow to live and function in accordance with the basic concepts of our American democracy and of our American system of free enterprise.

While expressing my views on what labor and management can do to improve labor relations, I do not want to overlook the responsibility of those of us who are neutrals. We have talked a lot about the rights of the public, but very little about the duties of the public. But in our legal system, every right carries with it a corresponding duty and that applies to the public as well as to the parties directly involved in labor controversies.

A first duty of all neutrals is to be truly neutral. That is impossible if we form judgments on insufficient information and aline ourselves with one party or the other, as we are prone to do. It is only when we are certain of all the facts that we can have an intelligent opinion or in any manner contribute to the settlement of a controversy. Generally, neutrals not in official positions can do but little directly toward settling labor disputes. But informed public opinion is a very potent force and can contribute a great deal toward improved labor relations.

The Government, as the representatives of the entire public, has important responsibilities in the development of improved labor relations. It is its responsibility to establish minimum standards for the protection of the weak and the unorganized. In all the discussion of new labor legislation, the fact that much of our legislation for the protection of the children in industry and of the lowest paid and weakest of our adults has become meaningless, has been entirely overlooked. Protecting the employer against unreasonable portal-to-portal pay suits is a legitimate amendment to the Fair Labor Standards Act, but clearly the present standard of 40 cents per hour in employments in interstate commerce also needs to be changed.

Government can make an important contribution to the improvement of collective bargaining by making available to the parties the latest relevant date. It can do much toward the peaceful settlement of labor disputes by way of impartial mediation and arbitration—and I note here that the Advisory Labor-Management Committee has extended deserved praise for recent improvements in the organization and functioning of the United States Conciliation Service. The Government also has the responsibility for maintaining law and order in strikes, which in our governmental system is an executive duty and primarily a State function. When great emergencies arise the Government, as I have suggested, must go beyond such measures and, through the exercise of all its powers and with the support of public opinion, end strikes which are really a serious menace to our entire economy.

This program assigns a very important role to Government in relation to labor disputes. But it leaves the major responsibility, where it should be, upon labor and management. Governmental determination of labor relations problems represents a departure from our American ideal of self-government in industry. In some situations it is necessary, but all of us, I feel sure, much prefer adjustment through the democratic processes of collective bargaining.

Collective bargaining has worked reasonably well in many industries even during the early months of the postwar period, when there were so many great strikes. It did not function in other industries, but in most of these industries there had been little experience with the institution. We cannot be sure that these industries will be able to make collective bargaining work in the public interest as it has in so many other industries. But I see no cause for despair. I believe that if left alone, labor and management in these industries will be able to solve their own problems, with the minimum of governmental intervention we all desire.

Government Control of Industrial Relations

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, the third address which I ask to have printed in the Appendix of the RECORD is entitled "Government Control of Industrial Relations," and was recently delivered at Los Angeles, Calif., by William M. Leiserson, of Johns Hopkins University.

Mr. President, it is estimated, according to the Government Printing Office, that the address delivered by Mr. Leiserson will cost $319.50, as it will take approximately 4½ pages of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT CONTROL OF INDUSTRIAL RELATIONS

(By William M. Leiserson, Johns Hopkins University)

I

The great obstacle to orderly development of public policy with respect to industrial relations is the tendency of each generation to consider its labor problems unique. There is a general impression, for example, that active government participation in labor relations began with the New Deal laws protecting union organization and encouraging collective bargaining. And the more ardent New Dealers have been inclined to think labor history began in 1933. As a matter of fact, labor relations have been controlled by law and government in this country since the beginning of our history. Nevertheless recurring periods of labor turmoil and widespread strikes continue to succeed each other over the years, and each generation repeats the cry for something that will really solve the labor problem.

Our concern being the relations of free workers and free employers, I propose to begin the discussion with a text from the prophet of free, private enterprise, Adam Smith. I read from book I, chapter VIII of The Wealth of Nations:

"We rarely hear * * * of the combinations of masters, though frequently of those of workmen. But whoever imagines, upon this account, that masters rarely combine, is as ignorant of the world as of the subject. Masters are always and everywhere in a sort of tacit, but constant and uniform combination, not to raise the wages of labor. * * * To violate this combination is everywhere a most unpopular action, and a sort of reproach to a master among his neighbors and equals. * * * Masters too sometimes enter into particular combinations to sink the wages of labor. * * *

"Such combinations, however, are frequently resisted by a contrary defensive combination of the workmen; who sometimes too, without any provocation of this kind, combine of their own accord to raise the price of their labor. Their usual pretenses are sometimes the high price of provisions; sometimes the great profit which their masters make by their work. But whether their combinations be offensive or defensive, they are always abundantly heard of. In order to bring the point to a speedy decision, they have always recourse to the loudest clamor, and sometimes to the most shocking violence and outrage. They are desperate, and act * * * (to) * * * frighten their masters into an immediate compliance with their demands.

"The masters upon these occasions are just as clamorous upon the other side and never cease to call aloud for the assistance of the civil magistrate, and the rigorous execution of those laws which have been enacted with so much severity against combinations of * * * laborers and journeymen."

Apparently people were fighting the same devils when the good book was published in 1776 that we are fighting today. Though writing in England Smith described as well the labor relations that prevailed in the United States and the role the Government has played in them down to recent times. Today many employers think the situation has been reversed. The law, they say, especially the National Labor Relations Act, bears with greatest severity on them rather than on the laborers; and the magistrates' hands have been tied by the Norris-LaGuardia Act. But they still do not cease to call aloud for the assistance of the Government, only now their clamorous cries are directed to the Congress rather than to the magistrates.

Like Adam Smith, however, we must not be misled by the clamor of those who have been masters. The picture is not as dark as they paint it. No employer has gone to jail for violating the Labor Relations Act, but workers are still going to jail for their "unfair labor practices"—for disorderly conduct in connection with strikes, for mass picketing, as well as for the violence they resort to in desperate efforts to bring their disputes to a speedy decision.

To understand what really has happened to our industrial relations in recent years, we need to look back at least a hundred years. During the first quarter of the nineteenth century property qualifications for voting were abolished and manhood suffrage established in most of our States. This fact probably has more to do with our present labor troubles than most of the other causes we ascribe them to. It brought relaxation of the laws against combinations of working people, and soon led to legalizing of unions and of the right to strike. Certainly public control of industrial relations today is primarily conditioned by the fact that labor has votes, and has learned how to use them.

Legalizing unions and strikes was helpful to wage earners, but largely ineffective in safeguarding their interests, so long as employers had the equal right to destroy their unions, to refuse to deal with them, to discharge or discriminate against employees for talking unionism. It was the votes of workers, aided by the support of the general public which sympathized with their cause, that changed this condition by laws designed to equalize their rights and bargaining strength with those of industrial managements.

But like most remedies for social life, this remedy has created new problems equally serious. Although many workers and unions are still weak in relation to their employers, some unions have so grown in power that they are in a position to dictate terms of employment, and they have demonstrated their ability to shut down whole industries

like coal and steel, transportation and other public services.

There has been a natural reaction of anti-labor public feeling which finds expression in Congress and State legislatures in a flood of bills to restrict and regulate the activities and practices of union organizations, and to abolish some of their privileges. The unions want no labor relations legislation at all. Although they strongly advocate and prepare programs for general social legislation, in respect to their own activities, they take a completely laissez faire position. They want to be let alone.

Some legislation directed against unions is bound to be passed. The negative attitude of organized labor has made this inevitable. But little effort is being made to study the experience with the laws that have been passed, and with the policies of the Labor Relations Board, the War Labor Board, and other Government agencies, to find out what measures were helpful and constructively directed toward peace and amity in labor relations and which tended in the opposite direction. A brief examination of what we have been doing about our labor relations in the last decade or so will make plain, I think, why failure to study this experience is likely to result in legislation that defeats its own purposes.

II

When Congress adopted the Labor Relations Act in 1935, it laid the foundation for a national labor policy that was at once a wage policy and a policy of governing labor relations. It chose to avoid Government setting of rates of pay and other details of employment contracts. It sought instead to equalize bargaining power between industrial managements and their labor forces, and leave them free to agree on terms by the process of collective bargaining. Congress recognized that individual bargaining meant, in effect, management dictation of terms of employment. By eliminating employers' unfair labor practices, it tried to establish what the law refers to as actual liberty of contract, and thus avoid also dictation by Government officials. Wages and working rules would be determined by collective agreement and mutual consent.

That the act has been eminently successful in accomplishing its immediate objectives is obvious. The bargaining power of workers has been enormously increased by encouraging and protecting union organization, and all the major industries now recognize and deal with unions. But the collective-bargaining policy was adopted not because freedom to organize and equality in negotiating labor contracts were regarded as ends in themselves. The underlying idea was that the public interest in industrial peace and justice in labor relations would be furthered by such a policy. This is made plain by section 1 of the act, which recites that the practice of collective bargaining is necessary for the following, among other reasons: (1) To remove certain recognized sources of industrial strife and unrest; (2) to stabilize competitive wage rates and working conditions; (3) to secure friendly adjustment of industrial disputes arising out of differences as to wages, hours, and working conditions.

But what happened to these larger purposes? Apparently the policy in this respect worked to ends opposite of those intended. Certainly work stoppages did not become less frequent, and the attitudes of management and labor less bitter and more friendly. Perhaps the explanation is that no provision was made for dealing with the problems that would arise when collective bargaining ends in disagreement. The law compels bargaining, but not agreement. Its requirements are satisfied when the Labor Relations Board succeeds in joining managers and workers in a vow to bargain collectively. Was the assumption that they would live happily ever after?

The Labor Relations Act does not deal with the subject matter of collective bargaining—wages, hours, working conditions. Because the Government provided no adequate machinery and policies for securing peaceful and friendly adjustment of disagreements about these vital matters, industrial strife was stimulated. When the national-defense program got under way, a rash of strikes broke out over the country about just such problems. A Labor Division was hurriedly set up in the Office of Production Management to deal with them, which duplicated the meager facilities of the United States Conciliation Service. Both proved ineffective, and a third agency was hastily created, the National Defense Mediation Board. This Board soon found itself making decisions, in the form of recommendations, which fixed wages and granted maintenance of membership, among other conditions. If the recommendations were not accepted by either party, the Government took over the industry. Thus, voluntary mediation ended up in a form of compulsory arbitration, and John Lewis' coal miners wrecked this when the Board decided against a closed shop in certain mines.

Then came the war; and it will be recalled that the War Labor program did not start out to be a compulsory program with the Government fixing details of the labor bargain. The pledge not to strike or lockout made with the War Labor Board was established by agreement of representatives of labor and industry. This voluntary method, after the manner of collective bargaining, was proposed and accepted as a substitute for compulsory legislation passed by the House of Representatives and pending in the Senate toward the end of 1941.

By 1943, however, Congress had given the War Labor Board the power and the duty to provide by order the wages and hours and all other terms and conditions (customarily included in collective-bargaining agreements) governing the relations of the parties to labor disputes. Directive orders supplanted collective bargaining as the method of adjusting labor relations and fixing terms of employment. To be sure, some compulsion was necessary under war conditions, but it was not foreseen and planned. We drifted into it while struggling to maintain voluntary methods.

The Smith-Connally Act, which formalized this compulsory policy, also provided for a so-called cooling-off period, for Government-conducted strike votes, for plants to be taken over by the Government, for prohibition of strikes in such plants, and for other restrictions. But despite this law, if not because of it, labor strife increased, and mines or factories operated by the Government have been shut down by strikes just like privately managed enterprises.

After the war ended the Government wanted to get out of the business of dictating terms of labor contracts. An Executive order authorized free bargaining about wages, provided no price increases would result from such action. But by that time collective bargaining had become a lost art, and the Government itself did not know the part it has to play in it. As a result we had the great national strikes last year with lost working time breaking all records. And we ended up by Government fact-finding boards setting the pattern of wage increases after all.

So our legislative and administrative methods of controlling labor relations have gotten us much that we didn't want, and what we wanted most we didn't get.

III

There are many who think that when powerful and well-financed national labor organizations are pitted against great employing corporations, the inevitable result is either industrial war on a grand scale or collusion against the consuming public; and however reluctant the Government may be to dictate terms and conditions of employment to both management and workers, public necessity and public opinion will force it to do so? This view is expressed in the current demands for labor courts, and other devices for outlawing or restricting strikes and subjecting labor controversies to compulsory arbitration of some kind.

But this was substantially what we had during the war period. Yet 1944 saw the greatest number of strikes on record up to that year. Both individual and collective bargaining were all but done away with and terms of employment were fixed by Government flat. Free managements and free labor unions could not be maintained under this policy, and because most employers and unions have learned the lesson, they are joined in opposition to such a program. Public exasperation with their inability to settle controversies peacefully may force some kind of compulsory arbitration; but the experience of other countries as well as our own makes plain that only a police state can make this system work.

There is much popular support, also, for the view that unions have built up powerful labor monopolies which need to be made subject to antitrust laws as monopolistic business combinations are. Coal operators, we are told, cannot combine to choke off our supply of coal until they get the price they want; but, mine workers can combine to stop production until they get the wage they want. The owners of an electric-light company are obligated by law to give continuous service, even though losing money, but employees of such a company, through a union, are allowed to shut that service down and plunge a whole community into darkness and danger. Such actions by labor unions are permitted, so the argument goes, because they have been given a special license to violate the law against monopolies. Labor should be brought within the law.

But not only labor unions, farmers' organizations, too, are exempted from antitrust laws. Unquestionably unions are combinations to restrict competition among workers, to raise and standardize wages and working conditions through whole industries; and farmers organize to standardize products and raise prices. In fact the Government lends money to combinations of farmers to help them withhold their products until they can get the prices they want. These Government policies with respect to labor and agriculture were established by law to deal with economic and social evils brought on by competition among farmers and workers, just as the antitrust laws were directed against the evils of business monopolies. To say they are special licenses to violate the law and to compel wage earners (or farmers) to compete and underbid each other is to ignore history and the progress that has been made since the combination laws of Adam Smith's days.

Closely related to the fear of union monopoly is the fear of industry-wide bargaining. To prohibit such bargaining is one of the main demands employers are pressing on Congress. But the very purpose of union organization is to standardize wages and working conditions so that employers will earn their profits by good management, and not by paying less for labor than their competitors. That is why any bona fide union, even though it gets started locally, soon spreads out and strives to organize the whole trade or industry. Economic forces have pressed our unions to become the national organizations that most of them are. A law prohibiting formal labor contracting on an industry basis can only result in unions insisting on the same terms from each separate employer. This is the current actual practice, and the unions usually have their way; which means of course that the terms agreed upon in the first plant or two set the stand-

ards for the whole industry. But because employers are reluctant to organize nationally for labor bargaining, strikes multiply to force all competing employers to adopt the same standards.

So far as this reluctance is due to fear of antitrust laws, it seems to have little basis in fact. All industries have their national trade associations for dealing with trade problems, but most of them shun labor problems. These organizations have frequently come into conflict with the Sherman Act. But I know of no employers' association that has ever been prosecuted as a monopoly, if it confined itself to dealing with labor—defined by law as not an article of commerce. The lack of employers' organizations for labor bargaining is a distinct weakness in our industrial relations.

To be sure there are dangers to the public in possible Nation-wide strikes, or collusion against consumers between industry-wide organizations of employers and workers. The purpose of public control of industrial relations is to provide safeguards against just such dangers. But if we are to have unions at all, they will be national unions, and in industries whose markets are Nation-wide they will bargain nationally. It seems as futile to try to stop this as to compel employers to sell only to local customers.

Public opinion generally, despite its condemnation of union abuses and reckless use of the strike weapon, still feels that freedom of workers to combine in labor unions for bargaining purposes is somehow connected with the maintenance of democratic political institutions and with free private enterprise. Even those who favor the strongest antiunion laws are careful to provide in their bills for "full freedom of association, self-organization, and designation of representatives of their own choosing." No better proof of this public feeling is needed than the policy of the western Allies in defeated Italy, Germany, and Japan. Among the first steps taken to build democracy in the former Nazi and Fascist countries was to proclaim freedom for workers to form and join unions. Revival of suppressed free labor movements has been stimulated and organization of new self-governing unions encouraged. Apparently those who framed the policy felt that democracy could not be built in those countries without union organizations like those that thrive under free governments. And it is to be noted that this policy has brought no public opposition in the United States.

Plainly the tumultuous labor relations we have experienced since the Wagner Act was passed, and the failure of Government efforts to reduce industrial strife, have not changed the minds of most of our people as to the soundness of the policy of protecting labor's right to organize and encouraging the practice of collective bargaining.

IV

The foregoing indicates, I think, that any constructive program for controlling labor relations must be predicated on continuation of the collective-bargaining policy Congress adopted with the Wagner Act. Yet the problems which have aroused the public to the need of more Government control have grown out of this policy. What then is needed in the way of additional controls and improvements to make the policy work to the public ends stated in the act itself: Reduction of industrial strife and unrest, stabilization of wage rates and working conditions, and friendly adjustment of industrial disputes?

In trying to perfect the policy we must understand the limitations of the tools we use—Government control. There is a common misconception that the Government is all powerful. If it passes a law, say to forbid certain kinds of strikes or some customary management or union practice, and the law has teeth in it, it is thought that the prohibited practices will really disappear, except for a violation here and there for which those responsible can be punished. Then there is the notion that if the Government or the public does control, the results are necessarily fair and good and in the public interest.

But relations between teachers and public schools are completely controlled by public authorities. They license teachers and they frown on unions among them. Strikes to force changes in salary scales fixed by legislatures or boards of education are obviously illegal. Nevertheless beginning in Norwalk, Conn., last summer, a wave of such unlawful strikes has shut down schools in many cities throughout the country. In Buffalo, at least, even the principals, who are part of the management of the schools, joined the strikers. There is much opinion that the public, or the taxpayers, have not done right by the teachers, and usually the strikers have triumphed over the authorities rather than suffered punishment for their unlawful revolts. Who will say that Government control of teacher relations has been in the public interest during the period of high price of provisions, as Adam Smith put it. And who is in a position to say that the illegal strikes, picketing, and closing of schools have not contributed as much as the Government controls to improving teacher relations and meeting the public responsibility for educating the young.

Government control may have just as bad effects as lack of control. And the Government alone cannot fairly and effectively control industrial relations any more than it can maintain law, order, and justice generally without the aid of self-governing organizations or institutions like the family, the church, professional societies, trade associations, better business bureaus, etc., and the codes and traditions they develop. Private governments, the political scientists call them, and industrial managements and labor unions are such private governments. When these enter into collective-bargaining agreements they set up joint industrial governments which institutionalize labor relationships with codes, traditions, and norms of conduct that are the basic elements of social control. Despite temporary breakdowns when strikes occur, such industrial governments are maintaining law, order, and justice in industry today to an extent that the public government alone could never achieve.

Just as international law has been slowly developing over the years through conferences, agreements, decisions, and precedents, so industrial law has been developing through similar collective-bargaining customs and practices; through union agreements, and decisions, and precedents made in administering and interpreting them. If we would have effective public control, the Government must build its program on this industrial law, and on the methods by which it is made and developed. What happens when this necessity is disregarded is well illustrated by the public furor over the billion dollar portal-to-portal suits. These, by the way, though following the course of law in the courts, seem to be regarded as greater threats to the economy of the Nation than the strikes that unions carry on.

The National Labor Relations Act has freed the forces that make for union organization and collective bargaining, and thereby it has contributed greatly to the private industrial law making through which Government control is made practical and effective. Its basic provisions must therefore be retained, and Government policy grounded in them. But the act has also developed some abuses which obstruct rather than promote agreement between labor and management. It is folly, therefore, to hold that no changes in it are necessary. But if the collective-bargaining policy is to achieve its purposes, any amendments made must strengthen such bargaining, not weaken it.

To strengthen the policy, an amendment is needed that will require unions to bargain collectively, as well as employers. On the assumption that unions exist primarily for bargaining purposes—which is true enough—the obligation was imposed only on employers. But this stimulated a take-it-or-leave-it attitude on the part of not a few unions, and the omission needs to be corrected.

Similarily the act does not make it an unfair labor practice for a union to discriminate against employers who form or join employers' associations. Neither does it encourage organization among employers as it does among working people. There is no good reason why the act should not treat management and labor alike in these respects, and an amendment to this effect would strengthen the bargaining policy. To make sure of such equal treatment, some countries define labor unions as organizations either of employers or workers for collective-bargaining purposes. As our unions have grown in membership and power, some of them have tipped the scales with more bargaining strength than the employers. This tends to make the unions headstrong, conciliation and mutual agreement more difficult. The policy, however, is predicated on equal bargaining power. Many proposed amendments would weaken unions as a means of equalization. This would be a backward step. It would lessen responsibility, and stimulate warfare rather than industrial law makng. The constructive way is to encourage employers to organize to match the strength of the unions.

Another change in the act is necessary to prevent interference by a minority with the functioning of a union chosen by a majority to act as collective bargaining representative. Some unions have called strikes to compel employers to deal with them after they had lost elections which resulted in another union being certified as the legal representative. This is contrary to the policy of the act, and should be made an unfair labor practice. A closely related problem is the practice of a few unions to boycott products made by members of another union which has been legally designated bargaining agent. This too can be met by defining the practice as unfair under the act. There is reason to believe, also, that a more precise definition of bargaining units would also be helpful.

These are examples of the types of amendment that we must always be prepared to adopt in order to strengthen the collective-bargaining policy of the law. By the same token we must be ever watchful to reject amendments that are constantly being offered that would have the contrary effect. For example there are proposals for taking away rights of employees, unions and their officers under the act, if they misbehave in certain ways. But it would be as absurd to say that the management of a corporation or its officers shall not be allowed to act for the owners because they have committed some unfair labor practice, as to prohibit a union or its officers to represent or bargain for the employees. Certainly bargaining and adjustment of disputes would not be furthered by such legislation. Proposals of this kind would disorder, not control industrial relations.

I have mentioned the futility of trying to stop the growth of industry-wide bargaining. A safeguard against its abuse has already been provided by the Supreme Court in its decision that if unions conspire with employers to fix prices or monopolize articles of commerce they are as guilty as the employers, and subject to the same penalties. Protection against dangers that might grow out of legitimate bargaining on an industry basis can be provided by the administrative and judicial agencies which conciliate, mediate, arbitrate, and otherwise direct the process

of collective bargaining, and which I shall presently describe.

But the public interest is furthered by the wider bargaining because it provides a sounder base for industrial government. It extends the area of law and peace over a whole industry, just as the king's law and peace were extended over a whole nation to supplant the petty rule and warring of feudal lords. It provides administrative and judicial procedures for settling and deciding controversies in accordance with law. The collective agreement is the constitution of this government, and the customs, precedents, and decisions constitute the body of common industrial law. Periodical conferences of representatives of management and labor provide new laws.

On a small scale such governments exist also in the plant or plants of a single employer. But the smaller the scale, the less stable the governments; and the traditions of common interest in the industry of both management and labor are slower to grow. Also the small-scale governments can rarely afford a permanent independent judiciary in the form of an umpire, impartial chairman, or adjustment board. This institution grows only under industry-wide governments, or where a great employing corporation operates many plants covering large sections of the country.

In this connection a realistic program of Government control would correct a weakness in the judicial system of the private industrial governments, and at the same time provide a means for embodying the private industrial law into public law. Contrary to the practice in other countries where compacts between managements and unions are treated as gentlemen's agreements, in the United States they are legal contracts enforcible in the courts. The common complaints about violations of union contracts make plain that ordinary courts are not equipped to administer justice under industrial laws. On the other hand the judicial processes developed under union agreements are still in rudimentary form. The judges are still in the circuit-riding stage—temporary itinerant referees, arbitrators, umpires.

Nothing illustrates better the need of an organized system of industrial adjudication than the dispute between John Lewis and Secretary of the Interior Krug which brought on the recent coal strike. The question about which they differed was whether the agreement between the union and Mr. Krug could or could not be canceled before the mines were returned to private ownership. This obviously was justiciable under the terms of the contract. But when the case got to the courts, the issues were about injunctions, the Norris-LaGuardia Act, and about a lot of other things in which lawyers are learned. Punitive remedies for violations of agreements can help little because in the course of their working relationships management and employees are unwittingly violating agreements almost every day. The need is for an independent judiciary to apply and interpret the industrial law developed under the customs and practices of collective-bargaining agreements.

This does not require an elaborate system of labor courts established by the Government. An act of Congress is needed, however, requiring every union contract to include a provision that all grievances arising under it, and all disputes about its meaning shall be settled by arbitration if they cannot be adjusted by mutual consent. Then if they fail or are unable to set up their own arbitration system, there should be made available an industrial arbitration tribunal to which either party may refer cases for final and binding decisions. This is not compulsory arbitration in the ordinary sense of the term. It would merely substitute an effective industrial judicial system for deciding disputes arising under labor agreements in place of the regular courts which theoretically are already empowered to decide such issues. Public opinion both among unions and management favors such adjudication of disputes under agreements. The Government would merely extend their own custom and practice, and make certain that the judicial system works to prevent work stoppages.

v

But when agreements expire or are to be revised, or new agreements are to be made, the differences are not justiciable. These controversies have been causing our greatest industrial wars, since the Labor Relations Act has made strikes for union recognition unnecessary. True, most disputes of this kind are settled peacefully by collective bargaining, nevertheless it is the disagreements about making or changing contracts that bring on the great strikes and labor crises, and pose the most difficult problems of public control.

In international affairs we have learned that wars cannot be prevented unless we organize for peace, and establish orderly methods and procedures for consultation, investigation, conciliations, mutual adjustment and voluntary arbitration. But we have not yet learned that we need similar machinery, organized methods and established procedures to prevent industrial governments from breaking down when the contracts which set them up expire in the legal sense of the term. Instead we have been content with haphazard Government intervention by the United States Conciliation Service, or by so-called fact-finding boards, as often after the wars are on as before they have begun. Actually the contracts do not really terminate. For the seniority, pension, promotion, transfer, and work-assignment rules provided in the agreements are permanent rights that continue in effect until changed by mutual consent. There is no hiatus in reality between agreements. And this is the most powerful factor that collective bargaining provides for maintaining industrial peace.

The Labor Relations Act compels bargaining. Why should not conciliations or mediation also be compelled? The principle is the same. As already indicated much of the criticism of this law is more justly ascribed to the lack of adequate mediation machinery. Whenever a critical labor situation, as during the defense and war periods, or during the wage and price strikes of last year, new boards are created, and these usually drift into compulsory arbitration because methods, procedures, and traditions of mediation have not become established.

For the very reason that a program of Government control based on collective bargaining cannot compel agreement, it must compel mediation and organize an adequate administration of it. Once this is done the absurdity of laws requiring so-called cooling-off periods and Government-conducted strike votes will become evident. Mediation machinery, if properly designed and operated, settles disputes, not strikes. There is an important distinction between the two; and the measure of the effectiveness of this method of control is the number of strikes it prevents, not the number it settles; for the strike itself is a method of settlement—the war method.

If therefore, strike notices have to be filed at any time before the whole process of mediation is completed, and this sets the time for the expected cooling to begin, the effect is to heat rather than cool tempers during the periods of collective bargaining or conciliation when cool heads are most needed. This is what actually happened under the Smith-Connally Act, and disagreements and strikes were thus stimulated.

What is needed is a mediation period after bargaining has ended without an agreement. But this requires that the Government must be ever ready with an established organization and procedures, and expert mediators trained in the methods by which differences between management and labor are adjusted to the satisfaction of both. If the Government is prepared to meet its responsibilities in these respects, both parties customarily agree to maintain the status quo until all mediation proceedings have been completed. Here again is an industrial custom which needs to be embodied into public law. Government mediation must require, therefore, that while a dispute is in process, management shall not change the conditions out of which it arose, and workers or unions shall not attempt to force a change. Because the Government has failed to do this, the propaganda slogan "no contract, no work" has become popular and caused many unnecessary strikes.

Whether the mediation organization is headed by a board or a single administrator is immaterial. The important thing is that managements and unions, and the Government too, shall have obligations, duties to perform in connection with mediatory efforts to settle disputes before they break out in strikes. In addition to maintaining status quo while cases are in process, there are other responsibilities that must be imposed on the parties to disputes, if mediation is to be effective in preventing strikes. The negative requirement of the Wagner Act that they shall not refuse to bargain collectively needs to be translated into positive specific duties.

There must be the duty to exert every effort to make and maintain collective labor agreements; to give adequate notice in writing of proposed changes in agreements; to arrange joint conferences promptly for negoiating the changes or new proposals; to exert every effort to settle all disputes, whatever their nature, in such conferences between authorized representatives of employers and employees; the duty to refer all unsettled disputes to the appropriate Government agency for mediation or other assistance. Some of these are commonly stipulated in union agreements with employers, but those referring to obligations to the Government are not common. I propose that they should be prescribed by law.

We hear frequently that what mediation machinery we have needs to be strengthened. But this can only mean jobs for more mediators unless responsibilities like these are met by both management and workers in connection with the Government's conciliatory efforts. But legal penalties will be of little help in enforcing them. What is most needed are habits of law and order in settling labor controversies, and these can best be established by orderly procedures provided by a mediation agency with appropriate methods for handling different kinds of disputes, and then pressing and exercising the parties in meeting their obligations in connection with the mediation process. Unions say they want to use the strike only as a last resort. But this is not possible without Government mediation measures of the kind suggested.

Other measures such as voluntary arbitration and what is called fact finding need to be integrated into the mediation system. They are really a part of it, and they have been much less effective than they might be, because they have been haphazardly used, and their places and functions in the system have been ignored. Fact finding, for example, is a useful emergency procedure when all mediation efforts have been exhausted and voluntary arbitration cannot be secured. But if a board really found and published all the facts, the effect would be to defeat the purpose of securing a peaceful settlement. People would draw different conclusions from the facts, and much of the public might conclude that the board's recommendations were wrong. This emergency procedure, therefore, requires that the dispute shall be arbitrated, with the decision put in the form

of a recommendation. If such decisions are well publicized, and are not frequently made so that public attention can be centered on them, then pressure of public opinion is mobilized to secure acceptance of the recommendation, provided the men who made it are well known and respected for their impartiality.

There is no assurance, of course, that partisan and political pressures will not prevent the maintenance of an adequate mediation organization to avoid strikes by settling disputes. But here again industry-wide and other large-scale bargaining have valuable contributions to make. Wherever such bargaining has existed for a long time, and permanent arbitrators adjudicate disputes arising out of the agreements, it is customary to invite these industrial judges to assist as mediators in negotiating new or revised agreements. They know the problems of the industry, and both parties have confidence in them if they have functioned well as arbitrators. Sometimes the adjudication functions are entrusted to an adjustment board representing labor and management in the industry as a whole, with or without a neutral umpire.

Here are the elements of a complete mediation system within Nation-wide industries. Instead of discouraging bargaining machinery of this kind, Government policy would serve public interests better if it encouraged them, as it does farmers, processors and distributors to organize cooperatives. Such industrial home-rule arrangements, I think, hold the greatest promise for effective maintenance of labor peace. If industries, or groups of industries were helped to develop their own mediation systems, with the kind of impartial conciliators they would jointly select, then the Government's mediators and arbitrators would have to be men of equal caliber and experience. They could neither influence nor help the top men in the industrial set-up if they were not; and both management and labor would have a direct interest in seeing to it that Government mediators are top-notch men.

VI

This completes the improvements that seem to me to be immediately necessary to make Government control based on a collective-bargaining policy work more effectively to safeguard public interests. The compulsions in the proposed amendments to the Labor Relations Act, the obligatory mediation, and the adjudication of disputes about interpretation of agreements, are nominal, not punitive, and are based on the customs and rules developed through the collective-bargaining process.

I offer no suggestions for regulating unions by law, not because they must be kept free of all Government regulation, but because we do not know enough about their internal affairs at present, to devise effective regulations that will not do more harm than good. The Smith-Connally Act provided that every strike ballot shall have printed on it the question: "Do you wish to authorize this interruption of war production?" The assumption was apparently that union officials wanted strikes and if the Government took a secret ballot on this question, the workers would mostly vote "no." But what most of them did was to vote "yes." The attempts to outlaw closed shops, without providing for the needs they meet, have proved futile in the States, and a Federal act is not likely to fare any better. I see no objection to requiring unions to register, and file financial reports, constitutions, etc.; or to requiring that partisan political contributions shall be voluntary. This has been tried, but the laws have not changed labor relations for the better.

Our courts have been regulating unions for very many years. They hear and decide numerous cases in which members of local unions complain of violations of union constitutions or bylaws, arbitrary expulsion from membership, and autocratic practices by union officials. But whether a statute will accomplish any more than the court decisions have done, we do not know. If, however, such legislation is to be adopted to improve labor relations, we would have to regulate the internal affairs of management as well as unions. For the same kind of autocratic practices occur within the management hierarchies, as within union organizations. Both are responsible for bad labor relations. Until we can be reasonably certain of the effects of regulatory legislation, it would be better not to try it.

I conclude, therefore, with suggesting that the predominantly voluntary methods outlined above offer the best course of action for perfecting Government control of industrial relations founded on a collective-bargaining policy. To those who think that laws with teeth in them can improve human relations like those between workers and managers, this will be unsatisfactory. The only answer I can give is that in democratic countries, strong laws providing for compulsory settlements and restrictions on strikes have proved less effective in maintaining peace and amity in labor relations, than the apparently weak voluntary, conciliatory methods.

The Cartel System

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 7 (legislative day of Monday, March 24), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Cartel System," delivered by Edward H. Levi, of the University of Chicago Law School, before the Chicago Chapter of the New Council of American Business, on March 13, 1947, in the city of Chicago.

Mr. President, the Government Printing Office informs me that the address delivered by Mr. Levi will take about 3½ pages of the RECORD and will cost $248.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CARTEL SYSTEM

(By Edward H. Levi, University of Chicago Law School)

During the war years the cartel system, the system of restrictive control of business through private international arrangements, became a topic of popular conversation. This was largely due to the revelations of the Department of Justice and of various Senate committees, among them, the Truman Kilgore, and Bone committees. The revelations indicated that American production had been drastically limited, if not prevented, through cartel arrangements; that divisions of territory harmful to American interests had been effected, and that cartels generally had been used by the German Government as instruments of war in peacetime. Cartels were used by the Germans to support espionage groups and to obtain vital information concerning weapons of warfare produced in other countries, including the United States. More than that, cartels were used as a most effective weapon to weaken industry throughout Europe at the expense of the expanding and ever more dominant German monopolies. The spheres of influence explicitly given to Germany through private cartel treaties anticipated the Hitler march through Europe. Because the cartel system was carried to its perfection by Nazi Germany we came to think of cartels as one of the avenues leading to authoritarian government and as enemies of democracy.

But we forget quickly. Cartels were operating prior to the First World War and they were then German-dominated. Through the control over American patents and supposedly American firms Germany prior to the First World War almost succeeded in crippling the industrial military potential of this country. The president of the Bayer Co., Dr. Hugo Schweitzer, was complimented on his work of industrial sabotage prior to our entrance in the First World War, and was told by his German superiors that his accomplishments could be compared to the work of an army leader who had succeeded "in destroying 3 railroads of 40 cars containing 4,500,000 pounds of explosives."

After the last war President Wilson warned of our need to build an American chemical industry. He stated that the German chemical industry "was and may well be again a thoroughly knit monopoly, capable of exercising a competition of a peculiarly insidious and dangerous kind." The Federal Trade Commission in 1924 boasted that through its power to issue licenses on seized patents it had destroyed the German monopoly. We forgot quickly then. We not only helped to rebuild German industry but we willingly entered into restrictive arrangements with the successors of the firms that had previously tried to dominate us. We permitted German firms which had been seized in this country to go back to German-dominated cartel ownership. We entered into private territorial arrangements which kept American firms out of foreign markets. We entered into patent licensing agreements which gave German firms control over American production.

And we permitted Germany, which we regarded as weak and feeble, to evade the terms of the Versailles Treaty through the use of cartel agreements and cartel-controlled companies. For example, under the terms of the Versailles Treaty the German firm of Carl Zeiss was not permitted to manufacture military optical instruments. In 1921 Carl Zeiss created a manufacturing subsidiary in Holland which it controlled, and using this as a dodge, continued its military business. The Zeiss firm explained some years later in a letter to Bausch & Lomb that it had done this "because it had at no time the intention to allow our business and knowledge of the military business to rest." It was this same firm of Carl Zeiss that entered into restrictive arrangements with the American firm of Bausch & Lomb under which "the American firm could not sell military instruments directly or indirectly to countries outside of the United States until Carl Zeiss agreed" and under which the American company was required "to set up a special department which would handle research and development of military instruments," with the Germany company being given the right to veto and to participate in the selection of the head of this department.

One of the mainstays of Germany's armament program was the firm of Friedrick Krupp. "As a part of the Treaty of Versailles, this firm was required to destroy its machinery and implements of war. In order to evade the treaty, Krupp transferred its patents, its licenses, and its secret processes of manufacture to a Swedish armament manufacturer, Bofors, in exchange for a block of that company's stock. While the Inter-Allied Commission was supervising German disarmament, Krupp continued with its manufacture of new types of heavy artilleries, tanks, antiaircraft, gas masks,

bombs, and other war matériel" through its cartel companion, Bofors, and also through Spanish interests in a similar way.

It is not true that some Allied officials did not know what was happening in the period between the two wars. The British representative of the Inter-Allied Commission supervising German disarmament stated in a public lecture in 1923:

"We in this country flatter ourselves that the war ended on January 10, 1920; a future generation may yet describe the period in which we are living as an armistice during which the war was continued by other methods than rifle and howitzer, only to be resumed in all its carnal horrors after the lapse of a few ambiguous years."

We knew that while Germany was prohibited from manufacturing munitions by the peace treaties the German I. G. Farbenindustrie firms were making and importing military explosives as early as 1925 and, in addition, had entered into arrangements controlling the production of explosives throughout the world. A representative of the United States State Department told a meeting of arms manufacturers in 1925, when Germany was regarded as hopelessly weak, that:

"Notwithstanding the fact that it was known that Germany was exporting arms and munitions, it was not possible from a diplomatic standpoint to mention Germany or any of the Central Powers in this connecnection, since they were supposed to abide by the treaties which put an end to the World War."

The period between 1920–33 was a period of successive plans to give financial aid to Germany. It was necessary to help Germany because the economic futur. of Europe was said to be dependent on a strong Germany. This period was also the time when Germany regained her control over the international industrial order through a series of sweeping cartel arrangements. Some of these arrangements were worked out in conferences in New York in 1929. The Department of Justice was informed of these conferences by an anonymous post card but apparently decided to do nothing about them. And nothing was done about the agreements either until war had broken out in Europe. The American people were then surprised to discover what had been going on.

One agreement worked out in 1929 was the arrangement between the I. G. Farbenindustrie and the Standard Oil Co. of New Jersey. The agreement was termed by the parties to be a "full marriage." The agreement was reported in the New York Times soon after it was made. But the American public did not realize that the agreement was no less than a world-covering division of territory and allocation of business arrangement under which, as a Standard Oil official reported, "The assumption is that the I. G. are going to stay out of the oil business and we are going to stay out of the chemical business insofar as that has no bearing on the oil business." Nor did the American public realize until the revelations of the Department of Justice and the Senate committees as late as 1942 that the effect of this arrangement had been to give to I. G. Farbenindustrie control over strategic patents covering the processes for making synthetic rubber in this country. The early failure to provide an adequate stock pile of natural rubber and to encourage the development of a synthetic-rubber program in this country must be placed on the United States Government. But the assumption of the United States Government was in part that free and competitive enterprise would bring to this country such synthetic-rubber developments as were then possible. Neither the Government of the United States nor the industry of this country realized that I. G. Farbenindustrie had a veto right over the American development. Or to quote a Standard Oil official again, that "the thing that is really holding us up, however, is not the lack of a plan * * * but the inability of our partners (meaning thereby I. G. Farben) to obtain permission of their government to proceed with the development in the United States."

Conferences were held in 1929 also between officals of I. G. Farben and the Aluminum Co. of America. The result of these conferences was an agreement finally concluded in 1931 under which the two companies pooled their patents covering processes for the manufacture of magnesium in the Magnesium Development Corp. But the American public did not realize that by the terms of the agreement I. G. Farben was given the right to limit the American production of magnesium. The agreement read in part as follows: "The holders of the I. G. shares * * * shall have the right to limit the increases in production capacity of every such producing company after the initial contemplated production capacity shall have been reached. The initial contemplated production capacity shall in no case be more than 4,000 tons per annum." Magnesium was important during the last war. This country's inadequate magnesium capacity was not due solely or even mainly to this agreement. But the agreement was certainly no help.

As a matter of fact the outstanding quality of the cartel agreements worked out by the German concerns in the period between the wars is that they were all part of a plan. To say this is not to say that they were a part of a master plan of the German nation to dominate the industrial world. But it is to say that German industry was sufficiently centralized and monopolized so that what appeared to be separate agreements to individual American firms were in reality part of a large program to allocate world territories and production as to all important industrial items. When the du Pont Co. for example concluded a patent and licensing agreement with the British Imperial Chemicals company, this agreement was really a tripartite agreement between du Pont, Imperial Chemicals, and I. G. Farben. Memoranda found in the I. G. files in Germany since the war show that the I. G. officials at least believed that they conferred regularly although informally with du Pont officials on the carrying out of cartel arrangements all over the world. This may have appeared to be only an individual business arrangement to du Pont, but to I. G. Farben it was one of a number of key agreements—each agreement giving to German industry a protected place and securing for it the power to limit production outside of Germany. Almost every important war item—beryllium, plastics, military optical instruments, synthetic nitrogen, pharmaceuticals, electrical and radio equipment, aircraft component parts—were covered by these individual treaties.

Not only was production outside of Germany limited where the control of patents could be used for that purpose but areas of great importance to the United States were systematically reserved for German industry. One key to all cartel arrangements made by German industry with American firms was that the Latin-American market in some measure was to be reserved for Germany. This was accomplished during a time when the American public thought we had a good-neighbor program as part of a general policy to develop closer relations with Latin America. The Sterling Products Co., for example, the successor of a firm seized by the American Alien Property Custodian during the first World War, had an arrangement under which its sales in Latin America had to be handled by the agents of the German Bayer firm. Typical of the arrangements was the one concluded between the Rohm and Haas firm of Philadelphia and the Rohm and Haas Co. of Darmstadt, Germany. To understand what the arrangement was one need only read a letter from the German firm to its American partner on December 22, 1939. It begins: "The arrangements which we have with your firm about synthetic tanning limits the markets where you are free to sell your synthetic tannings to the United States of America and Canada, whereas we supply the rest of the world." The letter goes on to say that most of the South American markets, "Can at present not be supplied by us regularly and in order to allow our friends in those markets to maintain their position we should very much appreciate if you could supply them." The response to this letter reads in part, "Of course we shall be glad to follow your wishes in every detail * * * I wish to assure you that no matter who is doing the shipping we shall revert to the status quo ante as soon as normal conditions have been restored."

What the restoration of the status quo ante may mean for American business if it should ever be restored is set forth quite clearly in a letter from the Rohm & Haas Co. to Mr. Nelson Rockefeller, then Coordinator, Council of National Defense. The letter reads:

"Shortly after the start of the war, the German house asked whether we might be willing to sell, during the war, to some of the firms with whom they had been dealing. We gave our consent. It is obvious that it would not be worth while for us to go to any great expense to develop the South American trade, since there is a good chance that our right to sell in South America may be cut off when the war ends."

Today it undoubtedly does not appear that there is much of a chance of this taking place, but may I remind you that Rohm & Haas, of Philadelphia, which in 1939 was selling in Latin America only by the grace and request of a German firm and which previously had been barred from that market was seized by the American Alien Property Custodian during the First World War. The purpose of the seizure was to free American industry from foreign restrictions. That which seems unlikely now also seemed unlikely after the First World War.

As a matter of fact it should be pointed out that the American Alien Property Custodian seized during the First World War the property in this country of the German Bayer firm. The Alien Property Custodian sold the properties to the Sterling Products Co. It in turn sold the dyestuff plant, business, and patents to the Grasselli Chemical Co. By 1923, the Grasselli Chemical Co. had already entered into negotiations with the German Bayer Co. for the formation of a new company to be jointly owned and to be known as the Grasselli Dyestuff Co. A series of arrangements followed concerning the Grasselli Dyestuff Co. between the American and German interests. The heart of these arrangements was that the German interests would not manufacture dyestuffs in the United States, its territories or Canada save through the Grasselli Dyestuff Co. and that the Grasselli Dyestuff Co. would confine its manufacture and sale of said products in the United States of America, its territories, and Canada.

The successor to the Grasselli Dyestuff Co. is General Aniline and Film, and its sale in Latin America prior to our entry into the war were by permission of I. G. Farben because the Latin-American market was by this arrangement allocated to Germany. I. G. Farben used General Aniline and Film as a depository of patents taken out in this country with the purpose of blocking American developments outside of the I. G. Farben agreements. As the war approached, I. G. Farben made a hurried arrangement with Standard Oil of New Jersey in an attempt to work out what a Standard official called "complete plans for a modus vivendi which would operate through the term of the war, whether or not the United States came in." As a part of the complete plans, thousands of patents were thrown into General Aniline

and Film. The American Alien Property Custodian has seized General Aniline and Film but these patents are still being enforced to stop the development by other American companies of the processes covered by these patents, and General Aniline and Film has not abrogated the contracts which prohibit it from selling outside the United States and Canada.

I do not believe that the main purpose of these arrangements was to provide a vehicle for the German Government through which it could support espionage groups and obtain vital information concerning weapons of warfare produced in other countries, including the United States. Certainly American firms which entered into these arrangements had no such idea. Yet it was perhaps inevitable that these arrangements should have been used for these purposes. In any event the German Government made use of cartel outlets as centers of propaganda and centers of espionage, particularly in Latin America where the German outlets, protected against competition for so many years, were in many cases sufficiently strong to be able to survive the blockade and to operate in the Argentine. But the Germans made use of cartel agreements with American firms in order to send groups of experts through American plants as late as 1939. And they constantly made use of patent licensing agreements in order to obtain precise information not available to the American public as to American capacity.

The arrangement between Carl Zeiss and Bausch & Lomb, for example, required the transmission to the German firm of minute reports. Carl Zeiss in a letter of March 24, 1939, for example, made this demand on Bausch & Lomb, "it is absolutely necessary, and that is why we ask you for it, that you supply us * * * with a precise statement of those patents of ours which you use in your manufacturing processes, designating at the same time those instruments in whose manufacture these patents are used, also indicating the turn-over you have had in these instruments during the last two business years, and the volume of orders which you have at present on hand for such instruments." It is only fair to state that Bausch & Lomb did not comply with this request. "Instead of the detailed reports which had formerly been sent, Bausch & Lomb" sent "a statement of the aggregate amount of sales of instruments covered by Zeiss patents in 1937 and in 1938, designating the patents. They stated they had orders for future delivery of instruments covered by Zeiss patents totaling approximately $1,000,000" and they sent "the patent numbers."

International patent exchange agreements, of course, pose a difficult problem if cartel arrangements are to be used for the purpose of espionage. The Japanese Government attempted to use patent exchange agreements for the purpose of obtaining information on propellers being tested by the American Navy. And according to the files of the Universal Oil Products Co., "During the period August 21, 1939, up to the end of December 1939, 32 technical representatives of various Japanese concerns were here. * * * During that period the entire U. O. P. organization cooperated fully with them on their problem, which was mainly production of aviation fuel." This comment is added to the Universal Oil Products interoffice memorandum, "It is our belief that the information given to the Japanese representatives was as complete, if not more complete, than any information given on these processes which we have supplied to anyone." It has been pointed out that much of the information supplied pursuant to cartel arrangements and patent exchange agreements was of no importance even though thought important by Germany and Japan. That is no doubt true. It is also true that we do not know all of the information which was supplied. A habit of exclusive communication was established by years of cartel arrangements.

Perhaps it is more significant to note that it was the deliberate policy of German firms to gain the acquiescence of French, Belgium, and Dutch concerns to restrictive agreements under which a fine would have to be paid if either party exceeded production by an agreed amount. The German firms then proceeded to pay their fines and to build up their productive capacity. With increased capacity they could then threaten the rest of Europe with a trade war and gain thereby a revision of cartel arrangements more favorable to them, and more unfavorable to the rest of Europe. A representative of the Belgian steel mills complained, "We resent just as much as you do to see our mills subjected to the German dictatorship." But he pointed out that "should the steel cartel break up the prices of all steel commodities would dwindle down very fast." France tried to liberate its dyestuff industry from Germany control during the First World War. It placed the seized firms in the hands of the French Kuhlmann Co. But it was not long before the French Kuhlmann Co. was again tied to German industry and prohibited from manufacturing the dyestuffs which were more closely related to important wartime capacity. Of course, this policy reached its climax during the occupation of Europe. The German Government followed a systematic policy of building up German industry at the expense of the occupied areas. This should be remembered when it is suggested that German industry be restored.

I feel somewhat embarrassed in parading before you these old stories of German cartels. The stories are old. The only stories that can be told, however, are the ones that have been made public in that they are a part of the public record of cases or in the available files of Senate committees. It is not proper to make use of confidential Department of Justice information. I am embarrassed also because I think the emphasis of these stories is somewhat wrong, as I shall point out later, and because there is no particular point in muckraking. Yet the very fact that these stories are old has some significance because I believe we have already forgotten them. There is an uncomfortable analogy between the present time and the period after the First World War. More than that, during World War II a variety of constructive steps were suggested in this country to help take care of the cartel problem. Most of these steps have not been taken.

Senator O'MAHONEY introduced a bill to require the compulsory registration of private restrictive international agreements and international patent agreements. No action has ever been taken on this bill. As a result of the revelations of the Truman, Bone, and Kilgore hearings, various patent reform measures were proposed and introduced. No action has been taken on any of these. The proud boast of the Alien Property Custodian during this war, and indeed he had explicit and public instructions from President Roosevelt, was that the seized firms during this war were to be used for the benefit of the American public as a whole in accordance with high American policy. But as a matter of fact these concerns have been operated as though they were preferred private businesses, holding on desperately to their illegal patent monopolies, and in some cases not even daring to formally abrogate agreements which prohibit them from selling abroad.

There is a high mockery in all this. The American Cyanamid Co. wanted to cooperate with the Mexican Government in setting up a monopoly of the chemical industry in Mexico. The Alien Property Custodian opposed this and so did the Department of Justice. The Department of Justice opposed it because it wished to have no monopoly set up by an American company which would have closed sales avenues for other American firms, and also because it thought it dangerous to have an American firm establish a monopoly in a necessity in any foreign country. The Alien Property Custodian opposed it because he said he could use the seized firms, which were really departments of the American Government, as a means of helping industry in Latin America and as a means of opening up trade for American firms generally. Because of this argument President Roosevelt stopped the American Cyanamid deal. But to what avail? We have not developed trade with Latin America through the seized firms acting for all American industry. The seized firms have been operating as private companies in some instance making use of the German agents in Latin America as their own agents, and, as is the case with General Aniline and Film still subject to old restrictive arrangements.

Of course, these old restrictive arrangements are not now effective. But this is to be remembered. Most of them, informal or otherwise, were supposed to be resumed after the termination of the war. There is no mechanism for making these agreements public because no public registration act has been passed or is even being considered in the Congress. And the drive to make restrictive arrangements centering around patent agreements will continue, because our patent law has not been reformed. The Department of Justice knows very well that restrictive arrangements were being negotiated even while the war was on. It knows that now is the period to stop the resumption of these arrangements. But the anticartel program of the Department of Justice seems to have fallen to pieces. In this respect we are reliving the days after the First World War.

There are two differences. We have a somewhat halting program to make German industry competitive. The program is a halting one not only because of the division of Germany and the inability to get agreement on the carrying out of such a program but also because among the American representatives are those who quite sincerely believe that a strong Germany is more important than a decartelized one. And it is natural that some of these men should hold to these views because their activities in American industry included the consummation of restrictive cartel arrangements. It was to be expected that the German industrialists have taken advantage of this. They knew that we would insist upon some kind of a rearrangement of German business. They even had a plan ready for the rearrangement of I. G. Farbenindustrie. And they have come forward today to maintain that the maintenance of the German chemical industry is of the utmost importance for the rest of the world. They urge, and I am quoting from a document prepared by an I. G. Farben official: "It should not prove difficult by means of controls through Allied control personnel and by cooperation with available, highly qualified German experts, who after the terrible experiences of the last decade, are ready to cooperate in this task from inner conviction, to see to it that another rebirth of bellicose tendencies is nipped in the bud or that preparations to start undesirable operations are rendered impossible." And there are many who are willing to believe that the second difference is that we are attempting to establish within the framework of the UN an international trade office which will have as one of its objects the outlawing of restrictive arrangements. But we have not taken the domestic steps to implement such a program, and the program is fraught with danger in any event because it also provides for the setting up of international commodity agreements, which can be private cartel arrangements in a thin disguise.

The cartel problem is not the most important problem in the world today, but it is important. We probably are getting the

kind of anticartel policy we deserve. The policy is weak and ineffective. I think we forget that there is a great deal of sympathy for cartels in this country. As a matter of fact, sympathy for German cartels was for a long time traditional in this country. Mr. Samuel Untermyer testified before the Interstate Commerce Committee in 1912 as follows: "We have a great deal to learn from the experience of foreign countries. With all due respect to our President, I think we are children in the science of government. I have seen something of the operation of the German cartels. I have been brought into professional relations with one aspect of that situation, and it is far ahead of our chaotic haphazard system." And Mr. Gilbert Montague, a New York lawyer, delivered himself of the following in 1918: "In Germany there is no prohibitory legislation on the subject of trusts. No official has received letters of marque to harass at will the high seas of commerce and flaunt in every channel of business the terrors of antitrust statutes." He said: "The advantage which German industry derives from legislative tolerance and official good will toward industrial combinatior must inspire the envy of American businessmen." During the Hoover administration no action was taken to prevent known cartel arrangements because it was not deemed desirable to disturb enterprise during a difficult period. And there is something a little bit unhealthy in the way the cartel problem of necessity has been approached during the last war.

The cartel problem is not a German problem. German cartels are not popular today because Germany has been or is an enemy. If in describing the effects of international cartels we weigh heavily the use of espionage and the effects of restrictive arrangements imposed by foreign firms whose country became our enemy, then we are apt to pass over the fact that the objection to cartels applies equally when the arrangement is consummated with a British firm as well as with a German. The emphasis on Germany is dangerous. Our views toward Germany will change. They have already changed. It must be made clear that taking the German out of the cartel or the bad German will not make the cartel good.

The emphasis upon the effect of these agreements on wartime production has its ludicrous side. The Standard Oil Co. of New Jersey quite naturally began a publicity campaign after a decent interval to remove from the public mouth the taste of its I. G. Farben agreements. A part of this campaign was intended to show that whatever the arrangements that were made, this country got more out of Germany because of them, than I. G. Farben got for Germany. And they told a very convincing story. So convincing in fact that the Nazi government, which of course had access to the articles and advertisements became quite angry at I. G. Farben for having been so duped and demanded an explanation. Thereupon I. G. Farben in Germany, as Standard Oil had done in the United States, prepared a well-documented report showing that Germany had done all the gaining by these restrictive arrangements, and that Standard Oil was not telling the truth. A sound anticartel policy cannot be based on the theory that one party gains and the other loses by the agreement and that an agreement is to be judged by whether one's own national gained. Such a view would be an invitation to the United States Government to behave the way the German Government did. It would mean that the only lesson we had learned from German cartels was that we should behave as effectively as the Germans did.

Indeed, it sometimes appears that that is the only lesson we have learned.

Cartel arrangements in the long run are bad for people everywhere. In the short run they are misleading. In the short run a cartel is urged to solve the problem of so-called overproduction or of an uneconomic allocation of resources. By restricting production or momentarily removing competition, a cartel may disguise the fact that economic resources are misallocated or are going to waste. A cartel solves nothing. It does not force a shift in resources. In the long run it encourages the misuse of economic resources.

But a cartel arrangement does more. A cartel cannot operate where there is free access to the market. By artificially stabilizing prices, a cartel, if it were not founded on coercion or monopoly, would only result in new enterprises entering the field. The basic requirement for any international cartel is therefore coercion and monopoly at home. The most frightening thing about the number of cartel arrangements to which American firms were parties is that each one of these arrangements signifies that the American participant had achieved such domination over the domestic market that it could exercise monopoly power and coercion at home. A German firm would have found it valueless to have entered into a cartel arrangement with an American concern to keep it out of Latin America, if other American firms could have gone in to fill the gap. Such agreements were only made when the American firm either had no real competitors or could police and coerce them.

The problem of cartels in the last analysis is therefore a problem of monopoly at home. If a German firm and Germany were to blame for restricting French production of dyestuffs, then the French Kuhlmann firm and the French Government were equally to blame. And if American firms entered into arrangements to restrict American production, they and the United States Government were also to blame.

The reason for making these arrangements is clear. The reason was to make money. It was thought that more money could be made if prices were stabilized. An official of an important American electrical company explained to a newcomer, "Now to deal with your dissatisfaction with our inferior position in the export market. It is perfectly true that we are second largest lamp manufacturer in the world (probably joint second with the German Osram Co.) but we only have a participation, outside of the United States and Canada, of approximately 1.2 percent of the Licensed Lamp Manufacturers' business, which is probably about 0.8 percent of the world business outside of the United States and Canada. I agree this is definitely lousy." But then he went on to explain that the restriction had been imposed upon them through a patent agreement and that in addition if they did not adhere to the restriction then foreign companies would come into the American market. The restriction in other words was the result of monopoly power and adherence to it was given because of the desire to have monopoly benefits.

It is silly to expect a monopoly to act as though it were competitive. Monopolies will make restrictive arrangements with other monopolies. They will police their own dominions and they will keep independent enterprise out if they can.

The shape of American industry today is alarmingly monopolistic. The standard pattern of control over a manufacturing industry is to have domination in the hands of two, three, or four companies. American industry got that way through two great merger movements, each of which ended in a depression. We are now in a third great merger movement. The impulse toward greater concentration is strong indeed. If American industry assumes this form then we must expect cartel arrangements. Business is of course international. We would not want American business not to exchange know-how and technology with foreign firms. But a simple exchange agreement between two firms competitive in their home markets inevitably becomes a cartel arrangement when it is between two monopolies.

The world today is a world in which the free and competitive enterprise system is losing out. This is not strange. Competition has never really been tried. It is not true that competition cannot be enforced. It is much more correct to say that competition cannot exist if a country is not willing to enforce it. That was the case in Great Britain where the cooperation between the monopoly firms such as Imperial Chemical Industries and the British Government had to reach a point where the chemical industry even under a conservative government was only one step from socialization. A monopoly which thinks it can survive as a monopoly is the modern world without government control and regulation is living in a fool's paradise indeed.

We have not tried a free and competitive enterprise system in this country. We have achieved a rather precarious mixed economy. But it is an economy sufficiently monopolized to promote inflation during the upswing of the business cycle and to make recovery difficult on the downswing. And we have an economy which invites the formation of international cartels.

It is possible that we cannot have a free and competitive enterprise economy. It is possible that we cannot do away with cartels. It is certain that we cannot do away with cartels unless we are willing to take effective steps to do so. It is possible to chart what these steps must be. They are:

1. We must reform our present patent law. We should not put companies in the position where they will make more money if they misuse patents as part of more general restrictive arrangements. Patents which are misused ought to be forfeited. This suggestion was made as long ago as 1912 by Louis Brandeis. It has always been opposed by the patent bar.

2. We ought to enact a statute which will require the public registration of private international agreements which contain restrictive arrangements or which provide for the continual exchange of patents or trademarks. The filing of these agreements should not confer any immunity from the antitrust laws. The filing of these arrangements, however, would make it possible for the American public to know where the business of their country stands and what are the barriers to true competition.

3. We ought to insist upon vigorous enforcement of the antitrust laws. The monopoly pattern of American industry today exists in violation of those laws. The cartel arrangements which were formed in the period between the wars were consummated in violation of the antitrust laws. The only alternative to enforcement of the antitrust laws, if we are not going to abandon the objective of a free and competitive society, is a drastic revision of our corporation laws, either through combined State or Federal action in such a way as to limit the size of corporations.

Finally, we are entitled to a report on the progress or lack of it which has been made in the readjustment of German enterprise. We are entitled to know whether effective steps have been taken during the formative period to strengthen industry outside of Germany and to put German industry itself on a basis where, to quote President Wilson after the First World War, it will not be again "a thoroughly knit monopoly" capable of activities "of a peculiarly insidious and dangerous kind."

World Federation

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, on February 21, 1947, a number of organizations which had been working separately toward the goal of world government met in a joint convention, and formed a new organization, the United World Federalists. The new organization will coordinate the activities of proponents of world government, and will work toward the creation of a world republic with limited powers adequate to insure peace.

One of the great speeches made at the Asheville conference was the notable address by Dr. Frank P. Graham, president of the University of North Carolina. Because I think its stirring message will have value for all of us, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMON DEDICATION OF AMERICAN BROTHERHOOD WEEK AND THE ORGANIZATION FOR WORLD GOVERNMENT

(By Frank P. Graham, president, University of North Carolina)

This is the eve of Washington's birthday. We pause in honor of the memory of the man who became the rock of the revolution upon whom broke defeat, intrigue, and despair. In winter's gaunt retreat his dauntless faith held on as he fathered the birth of a nation, a venturing hope for freeing the earth in time.

This is Brotherhood Week in America, sponsored by the National Conference of Christians and Jews. These are World Federation Days in Asheville. The two movements coincide in time and purpose, the one emphasizing the value of the freedom of differences and the other emphasizing the necessity of the security of unity.

America, settled by peoples of many regions, races, colors, cultures, and creeds, should lead the way in helping to make the world safe not only for majorities, but also safe for minorities, not only safe for democracy, but also safe for differences. The haven for heretics in the day of its weakness should not, in the days of its power, become the stronghold of bigots. The world has given America the vigor and variety of its differences. America should protect and enrich its differences for the sake of America and the world. The freedom of honest differences is necessary to a free personality and a free world. True freedom of self-expression leads neither to self-exploitation nor to self-deterioration, but to a self-realization of the whole personality for the good life in human brotherhood.

In the cause of freedom of religion, freedom of assembly and organization in churches, parliaments, corporations, agricultural cooperative societies, and labor unions, freedom of the press, and freedom of all honest differences, spiritual heroism shines out all along the way of the human pilgrimage. The cross and the stake reveal, and the synagogue and the church carry on, the unconquerable aspiration of the human spirit for a freer and better world. Idealism does not cringe before force. Repression is the way of frightened power. Freedom is the way of enlightened faith. History teaches beyond the denial of bigotry or the sneer of cynicism that the answer to a difference of opinion is not denunciation, is not the smear of a great public servant such as David Lilienthal; the answer to idealism is not a concentration camp; and the answer to error is not terror, but the cleansing power of light and liberty under the law. Without sacrifice of loyalties or convictions but with mutual respect for differences we meet on the common ground of our great religious communions.

The Jewish people who gave us the highest conception of the one God, the sovereignty of the moral law and the greatest book, the greatest life, and one of the greatest cultures in all history, speak to us today through their old and new prophets in the deep moral tones of personal goodness and social justice. The Catholics represent to us the unity of mankind and a universal sympathy for human beings everywhere in need of mercy and compassion. They bear the cross far and near with its call to sacrifice and heroism in the sharing and giving of life. The Protestants stand for the individual, his intellectual freedom and his spiritual autonomy. Without mediation of bishop or king, but as individuals in the congregation in direct communion with their Lord, they made over their churches and their states in the name of the people and under the authority of God. For them all, there still speaks the Carpenter's Son, at once Jew, Catholic, Protestant, Son of man and Son of God, who shared all that He had with all mankind. After 2,000 years we crucify mankind and crucify Him with our religious bigotry and persecution, racial hatreds, wars, and motives of greed for ourselves. Today, as sincere Jews, Christians, and human beings, without divisions in His spirit, as we stumble along on our human pilgrimage, may we ever press forward together in the eternal adventure toward the kingdom of God.

As barriers across our pilgrimage toward human brotherhood in a world government are now dangerous lags in our democracy. Science and democracy and the great human freedoms for which the war was won make dangerous lags out of the idea of the innate superiority of a master class, whether it be the nobility, the middle class, or the proletariat; a master race, whether it be German or Japanese or Anglo-Saxon; and a master state, whether it be German or Japanese, British, Russian, or American. The leadership or dominance of any group or race or nation based on special privileges, monopolies, tyranny, and force rather than on the freedom and equal opportunity of all people regardless of race, color, creed, or party is a frustration of the American dream and is a denial of the Hebraic-Christian hope.

Before human society could rise to the opportunities of the first scientific revolution and the mighty industrial revolution which came out of it, we find ourselves in the midst of the second scientific revolution—with its pure theories and ideas of radioactivity and nuclear physics—and the great atomic revolution, which came out of it, in the momentous transition of our times. In capturing the energy of the atom, the pure scientists, in the universities, the men and women of ideas, have captured nothing less than the power of the universe, loaded with the hopes or the doom of mankind.

The transitions of history impelled by the compass and later by the steam engine were processes of slow centuries and gradual adjustments. Social drift and slow adjustments did not then, on such a scale as now, mean swift and wide social tragedy and involve mayhap the survival of the human species on this earth. The possession of the earth might return to a species which has not learned to make mechanisms beyond its control.

Human society with an atomic bomb in its bosom cannot lag in adjustment to its explosive power. Mankind, with his swift scientific inventions and his slow social adjustments, has, with much economic progress and much human misery, muddled through to this fateful hour. Confronted with the atomic bomb, men and the nations through cooperation now are to master this modern mechanical civilization or be destroyed in its unregulated self-destruction.

The one world needs an international authority in line with the Baruch-Acheson-Lilienthal report for inspection and control of the sources and manufacture of atomic power; a world court with jurisdiction over the crimes of individuals against the United Nations subject to the guarantees of an international bill of rights; an international police force responsible not to separate nations but to the United Nations; and the shifting of legislative power from the Security Council to the Assembly of all the United Nations, weighted for representation of the peoples of the world.

The atomic bomb in the hands of the absolute state is the greatest threat which has come to man. With regard to the other dangerous lags, we have the freedom to struggle for freedom and hope for a better day. With the lag of the idea of the absolute national state in an atomic age, we may have no world in which to struggle or hope or even to live. The one world truly begins at home, but without the one world we may have no home in which to begin. The one world should advance with the merger of the World Federalists, Americans United for World Government, the Massachusetts Committee for World Federation, the Georgia World Citizens' Committee, the Student Federalists, and the World Republic.

We meet in the historic city of Asheville whose high ground is a rugged stronghold for world federation. We meet in the historic State of North Carolina from whose eastern shores Woodrow Wilson as a boy looked out wistfully upon the waters of the world and from whose capital Josephus Daniels went forth to fight valiantly for the League of Nations of Woodrow Wilson and for the good-neighbor policy of Franklin D. Roosevelt. In this State already have merged on a State basis under the leadership of Levering, Albright, Brandis, Phillips, Bishopric, Merritt, Ramsey, Smith, Shoemaker, and Humber, Americans United for World Government, World Federalists, and the Student Federalists. In this program of federation we envisage not the United Nations against world government, or world government against or around the United Nations, but the United Nations for world government, and world government through the United Nations.

It is now imperative that all groups, all races, and all nations, whatever be their differences, make their first concern the strengthening of world government through the United Nations for the international control and the humane use of atomic power. The great international economic framework thrown around the earth by the commercial and industrial revolutions and the international political framework now being thrown around the earth, organized to include in time all the nations of the earth, require the acceptance of an idea of the intellectual and spiritual fellowship of all men and all nations reaching around the earth in our one world. Above the idea of the economic interpretation of history we need the spiritual interpretation of life. An idea, old as 2,000 years and as young as the hopes of men, the idea of the fatherhood of God

and the brotherhood of man, rejected these centuries as impracticable and impossible, has become in the atomic age the most necessary and practical, the greatest idea of them all.

Just as surely as the Italian and Iberian Peninsulas were the fifteenth and sixteenth century home of the commercial revolution and just as surely as Britain was the eighteenth and nineteenth century home of the industrial revolution, so America is the midtwentieth century home of the atomic revolution. Through the ideas of scientists from many lands, the loyalty of workers from many States, American Presidential daring, American technology, military organization, and business enterprise, the United States is the home of the atomic bomb, catastrophic for war or regenerative for the peace of mankind.

As the home of the atomic bomb, America has a great moral responsibility. America, for the sake of her own soul, must take the lead in putting the atomic bomb under the control and ban of world government. America must, with the wise safeguards of an international authority under the United Nations, share the knowledge and use of atomic power and with all peoples, for research and humane causes, for full production, and fair distribution within the nations, and for justice and peace among the nations.

Standing where cross the high road and the low road of human destiny, America, with her ideas, her mechanisms, and her universities, let us pray, will not fail mankind in this tragic hour, but will rise to the responsibility of her power and the opportunity of her greatness to give fresh hope to the stricken, hungry, and fearful peoples of the earth as sons of God in a federal government of all nations in one world neighborhood of human brotherhood, we pray God, in our time.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Federal Aid for Education, which I delivered at Teachers College, Columbia University, on April 7, 1947, under the sponsorship of Phi Delta Kappa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Federal aid for education needs no defense before a group of this kind. I am not going to spend my time attempting to show you that the necessity is with us, that the time has come in our constitutional and Federal development, that aid on a Nationwide basis is essential in guaranteeing an equal opportunity for the fundamentals of ordinary education to all of the people of America. This has already been aired well over the radio and has been given full publicity in our press, and statistics are easily available.

There are one or two branches of educational thought in the Nation which reflect some sort of fear about the Federal Government getting too close to education in the States and in the communities. This fear to the thoughtful has been completely allayed because no person in approaching the question of Federal aid would attempt to overcome what has been one of the basic ideas of American Government, the local control of education.

American education based upon the great public-school system recognizes the place for the home, the church, and private organizations in our educational set-up. The endowed schools are too well established and are functioning too successfully for the benefit of America ever to attempt to do anything but to aid them in a better functioning of their contributions to American life. The church schools have found their place in the American system and are contributing to the evolution and development of their own objectives, as well as to the growth and development of American democracy. The home, too, through such agencies as the parent-teacher associations, and as a result of the thoroughly democratic manner in which teachers in our public schools are trained and selected, is contributing its share to the proper growth and development of our Nation. The great problem—which is a fundamental problem of a democracy—is that of preserving the individual that he might attain the maximum of potential enlargement; always in theory and practice stressing the importance of maintaining the concept of the individual that the welfare of the citizen shall be the reason for government; and at the same time developing the community so that it will exert the influence of society upon the individual and thus temper him, that his aims and activities shall be bent toward social helpfulness. Education's task is to serve the leaven that will preserve the individual, yet mold him to a thoughtfulness of his place as one of many others, an individual with a social conscience. This is democracy's mission.

Was there ever a time for a greater need? Pay attention to world trends and see if those ideals and those ideas which have made us a Nation stand in danger. As a reader of history I count the American experiment definitely worth while. This land is one where many peoples and cultures mingle and from the contributions of all receive an enhanced appreciation of each. As one who has been made by America—who is a product, or should I say, a victim, of our American public-school system—I count this land blessed and its ideals and ideas worthy of preservation. And in the preservation of those ideas and ideals I count our schools the greatest contributor. Can government ever have a greater function than that of its own preservation? Education is the path democracy treads. Propaganda is the way of the dictator and dictatorships. And there is a vast difference. Shall the people learn the truth and be free to express it, discover it, expand it, and use it, or shall they be given just what is for their good? Thoughtful American citizens demand the first. He who would destroy democracy in America will picture the second as attractive. Equality of early educational opportunity offers democracy's greatest chance.

Conditions are not perfect, but ideals controlling and governing education in America are more widely and universally accepted today than they ever were before. In fact, educators are in reality a unit when it comes to these things: All recognize the place for the home, the place for the church, the place for the endowed private institution, and the place for the public school in our educational scheme. There is in reality no conflict. The great American Government settled once and for all that it was possible even in the individual for many loyalties to exist without producing an inconsistency. Thus, all contribute to the building of our Nation. American citizenship has become so complex that we no longer divide our all into those things which are to be rendered unto Caesar and to those which are to be rendered unto God. American citizenship has now evolved to the place that even in our constitutional system itself the complexity of the citizen is recognized, for in the Fourteenth Amendment we laid down the principle that persons born in the United States, and under its jurisdiction, are citizens of the United States and of the State wherein they reside. There are, you see, at least two political loyalties in each of us and there is no conflict. With the adoption of that principle of citizenship came a tremendous significance to our constitutional scheme and new America had its beginning with that theory.

We fought our Civil War because men could not see that a person had a dual loyalty. For the first 75 years of our national development, concepts in regard to sovereignty controlled the thinking of all of our statesmen. The Constitution itself was a symbol of sovereignty and so were the constitutions of every individual State, and therein came the clash. "Sovereignty is indivisible," said Webster. "Sovereignty is surely indivisible," said Calhoun. "Sovereignty must therefore rest in the nation," said Webster. "Sovereignty must therefore rest in the state," said Calhoun. And then we fought.

A better light dawned and wiser heads, after the shedding of our brothers' blood, realized that we were fighting over a principle that need not be, and we learned that our Federal system could be preserved through the creation of a dual citizenship without loss to either State or Nation, but with benefit to them both.

Since I do not have to convert you to the necessity for Federal aid for education, probably I can, with advantage to all, trace our constitutional development and thereby emphasize not only the need but even justify in our constitutional scheme the desirability of a step which we will be taking when Federal aid becomes an accomplished fact. This seems necessary to do because the thoughtless among the critics of Federal aid for education assert that Federal aid is contrary to our States rights theory—that Federal aid means Federal control. And some even go so far as to call the whole idea unconstitutional.

Various thinkers approach our constitutional development in different ways. I like to do it in this way: The Constitution came into being that moment that various men throughout our Thirteen Colonies recognized the fact that there were some things which were of common concern to all of the Colonies. It was that thought which made us a Nation. In April of 1775 we had Lexington and Concord; in May we had the meeting of the Second Continental Congress; in June we had Bunker Hill; in July we had Washington taking command of the Army of the United States at Cambridge. Those four steps are history. Their significance is the thing which I would stress now. Lexington and Concord were Massachusetts incidents. The meeting of the Second Continental Congress was a reaffirmation of the fact on the part of the leaders in all of the Colonies that there were elements in the various local conflicts that were of common concern. Bunker Hill was, therefore, the first fight after the discovery of this concept. By that fight the de facto Government of the United States came into existence, and Washington the following month ratified that concept in accepting the command of the Army of the United States. The Declaration of Independence in the following July turned the de facto United States Government into a de jure Government, and

the American Nation was born. As the Nation grew, written descriptions of these fundamental concepts were created by the preparation of the Articles of Confederation and our Constitution. This gave us a Federal system creating one out of many but based upon the theory that each State should take care of its local affairs, but the Nation should take care of those affairs which were of common concern to all. And our Federal system based upon this simple concept actually existed before our Constitution and was the mother of it, not its child as so many seemed to think. Today this distinction is not essential because both mother and child are fused in the dim past.

But in the beginning a national citizenship was not thought of. The Constitution remained a symbol of sovereignty, thought of more or less as a static affair. Then it evolved into a living organism, much as a result of changing concepts in the world and as a result of judicial review and Marshall's great reasoning in expounding the doctrines of a Constitution that was established to endure through the ages. Then came the Civil War, and with it came the concept of a dual citizenship. And today no longer is the Constitution a mere symbol of sovereignty; no longer is our Constitution a mere embodiment of a living organism; but today it has become in very deed the companion of the American people in the accomplishment of their objectives. Thus it is not only the word and the letter of the law, but it is its living spirit.

Now let us turn to the growth of some of our national educational habits as they have evolved in relation to our constitutional development. Federal aid for education is not new. That which has been done has in no sense harmed the local control or marred our Constitution's spirit and that which is about to be done must in no sense harm the local control or mar our Constitution's choicest principles.

It was in Buchanan's administration, I believe, that the first bill to create the land-grant colleges was introduced. You all know how our country had grown politically and economically, how the movement to the West carried the ideals of the American educational system, but not the facilities for its preservation. My own State and territory reflect the theory very well, for the second act of our territorial legislature created the university which became one of the first to be established west of the Mississippi and one of the earliest to inaugurate the coeducational system.

You will remember that after the bill creating the land-grant colleges passed Congress President Buchanan vetoed the bill on the score that there was no provision in the Constitution of the United States for Federal aid for education. But with the coming of Lincoln, and with the necessities growing out of or incident to the Civil War, Lincoln found a sanction in our Constitution and signed the bill and our land-grant institutions became a fact. Probably this act of Lincoln's has meant more to the growth and development of American democracy than any other single act. When one realizes what has been accomplished in research alone by the great institutions which have evolved from this simple act of Lincoln's, sanctioned undoubtedly as an act consistent with the national defense provision of the Constitution, one realizes its importance not only to our country but to the whole world. Yet if we had remained strict constructionists in constitutional theory, if we had conceived our Constitution as a mere symbol of sovereignty, and the division of rights merely between the State and the Nation, we could not have taken this great step. But on analysis we see that what was taking place was merely the same as that which took place when our Nation came into existence. Lincoln discovered one more thing which had been conceived of as being merely of local concern actually to have been something of national concern. Pause long enough and consider, if you will, the retarded growth of our country had Lincoln persisted in maintaining Buchanan's Constitutional outlook!

That also is the story of the building of our railroads. That also is the story of the evolution of Federal relief and Federal aid for the distressed. We must remember that during the extremely hard times of Cleveland's administration, when the farms throughout the Mississippi Valley were left so dry and desolate that even seed crops were not preserved, a bill was introduced into Congress to provide for Federal aid to farmers, but Cleveland vetoed that bill as a strict constructionist on the theory that the Government of the United States was set up to be supported by the people and not to support the people of the United States. But with the growth of the need for relief and the development of the cooperative activities between the State and the Nation has come, of course, the necessary change. Yet who today would call Buchanan or Cleveland illogical? Constitutional development is not a matter always of logic; there come times when it is a matter of necessity.

It is in keeping with the necessities of the times that we turn to Federal aid for education. It is in keeping with this evolving theory of cooperation between the State and the Nation that we today justify that aid. It is in keeping with the growth and development and the meaning of American citizenship and the relation of that citizenship to the theory that education is basic in American democracy that we extend now the cooperative spirit and justify Federal aid on the score that all persons born in the United States shall have an equal opportunity in the attainment of the fundamentals of education

A society based upon a well-trained citizenry is still America's best dream. It should be the world's dream. There can be no peace until there is some contentment, until living standards are such that men and women can produce not only enough to live on, but a surplus to keep that living bigger, better, and more complete.

I believe that for the first time that a nation has attempted to express itself with thankfulness to those who have served it well, by offering educational advantages to the individuals who have come out of that service, placed the philosophy of education where it should be put. The soldier education bill is not a bill primarily for the benefit of the soldier boys and girls. It is for the benefit of the Nation and the American people. Realizing what happened to France and what happened to England as a result of the last war, we recognized the loss of a whole generation of leadership and the American Government was determined that a generation of leadership should not be lost to us as a result of this war. The soldier education act is based upon that theory. Build us a better nation is its slogan. No one knows that better than I do because I, myself, wrote that theory into the bill.

American democracy, resting upon the theory of a trained citizenry, a citizenry growing into more complex activities as time goes on, conscious of the worth of that American democracy both to itself and to the world, marches on with the growth and development of our Constitution. Thus, Federal aid, viewed as a cooperative activity—cooperative on the part of the State and the Nation; cooperative on the part of the State, the Nation, and the citizen; cooperative in the development of our constitutional scheme in harmony with Marshall's great notion that the Constitution was set up to endure through the ages, and in harmony, too, with our present day enlightened concept of that Constitution as the companion of the people in the accomplishment of their objectives. I repeat, Federal aid for education viewed in this sense finds its place and keeps its place in the development of American democracy. We may go even further, it is a base upon which that democracy rests. Both reason and purpose underlie American democracy, both reason and purpose will preserve it, but it is only through the medium of trained minds and trained persons that reason and purpose and therefore democracy can be maintained.

For the past 20 years attempts have been made to get Congress to authorize Federal aid for education. Fifteen bills calling for Federal aid to assist the States in financing elementary and secondary schools have been introduced in the Eightieth Congress, 4 in the Senate and 11 in the House.

On July 3, 1946, the Senate passed, by a vote of 48 to 18, S. 1850, of which I was one of the sponsors. This bill provided for the establishment of a National Science Foundation. The Seventy-ninth Congress adjourned without passing this bill.

In his message to Congress last year, President Truman stressed the importance of such legislation. Such congressional action has been urged by spokesmen for government, education, labor, clergy, agriculture, medicine, and science. Studies by subcommittees of the Military Affairs Committee and the Commerce Committee have proved beyond doubt that a program of Federal aid is imperative. I believe it is necessary to the public health, the public welfare, to scientific education, and to the Nation's defense. Research in the natural sciences, largely dependent upon universities, has been made possible by traditional private endowments and State appropriations. The evidence is that heavy taxes have removed private funds and that State appropriations cannot meet the need.

These are the factors behind the growing sentiment for Federal support of science. We have worked diligently to avert any possibility of affecting the freedom of science through Federal control of science. The proposals would nurture the flowering of basic knowledge, not constrict it.

On March 26, 1947, a compromise was worked out between my bill, S. 525, which is the same as S. 1850, and S. 526, introduced by Senator SMITH for himself, Mr. CORDON, Mr. REVERCOMB, Mr. SALTONSTALL, Mr. MAGNUSON, and Mr. FULBRIGHT, which provides for a bill to create a National Science Foundation bearing a title, "A bill to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes."

Quoting further from the committee report of March 26, "The committee finds that Federal support of scientific research, including provision for scholarships and fellowships for study in science, is essential to the preservation of the national health, prosperity, and security of the Nation and to the full development of our scientific resources.

"The recommendations of this committee for the creation of a National Science Foundation are substantiated by the testimony of over 150 witnesses heard in both Houses of Congress during the Seventy-ninth and Eightieth Congresses. The testimony of these outstanding scientists, educators, public officials, and representatives of labor, industry, and the clergy is, but with one exception, unanimous as to the need for a National Science Foundation."

The bills authorizing Federal aid to assist the States in financing elementary and secondary schools which in all probability will receive the closest attention in the Senate

hearings are S. 472 and S. 199. S. 472 is a bipartisan-sponsored bill introduced by Senator TAFT, for himself and Senators SMITH, COOPER, TOBEY, THOMAS of Utah, HILL, ELLENDER, and CHAVEZ. This bill authorizes grants in aid to the States for public schools only. S. 199 was introduced by Senator AIKEN of Vermont who is chairman of the Senate subcommittee. S. 199 proposes Federal aid for both public and nonpublic elementary and secondary schools.

S. 472 in its provisions is the same as S. 181, which Senator HILL and I introduced in the 79th Congress and which was favorably reported to the Senate by the Committee on Education and Labor, June 13, 1946. Eleven of the thirteen members of the Senate Committee on Labor and Public Welfare to which S. 472 is referred, were members of the committee that reported S. 181. S. 472, first, absolutely prohibits Federal control of education; second, authorizes Federal funds in direct proportion to need and effort and in indirect proportion of the financial ability of the States to support schools; third, establishes a minimum foundation school opportunity in the Nation through public and elementary and public secondary schools; fourth, protects the educational welfare of minority racial groups, and fifth, limits the use of Federal funds to such schools as the States make eligible for State support.

The 1945 hearings on S. 181 developed very little opposition to Federal aid to public schools. Considerable opposition was evidenced toward Federal assistance to private and parochial schools.

Support for S. 472 is headed by the National Education Association, joined by such national organizations as The American Legion, The Federal Council of Churches of Christ in America, The General Federation of Women's Clubs, The Association of Childhood Education, and the American Association of University Women.

Labor Department Appropriations

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from A. F. Whitney, president of the Brotherhood of Railroad Trainmen, to Senator KNOWLAND, of California, and also a statement by Mr. Whitney:

MARCH 28, 1947.

Hon. WILLIAM F. KNOWLAND,
United States Senate, Washington, D. C.

MY DEAR SENATOR KNOWLAND: I have never believed that Congress would deliberately sacrifice human life and promote industrial chaos. Yet those are the tragedies implicit in the proposed cut in the appropriation for the Department of Labor.

I do not see how the Labor Department can possibly provide even the barest minimum of the desired services if this totally unjustified cut of 40 percent in its appropriation, made by the House, is passed by the Senate. The Labor Department will exist in name only.

The Division of Labor Standards will go by the boards and with it the unceasing check needed to prevent unnecessary industrial accidents. Recently here in Cleveland a 15-year-old boy employed in a factory as a spray painter was hospitalized for 14 weeks and permanently disabled when the paint caught fire. He became literally a human torch.

The United States moved to bring charges against the company involved. This did not help the burned boy, but it did help to check similar accidents in the future. Yet, elimination of the Division of Labor Standards, as directed by the House, will invite the repetition of this abuse of human labor.

The Bureau of Labor Statistics will also be badly crippled. The findings of this Bureau are used by millions of people yearly. They are absolutely essential to any approach toward determining causes of industrial accidents, studying and eliminating friction in labor-management relations, determining fair wages where they are tied to the cost of living, accurately determining the number of unemployed, checking on the progress of housing through construction statistics, and other equally vital areas of our activity as a people. Yet, all of these will be discontinued or seriously curtailed if the House action is sustained.

If the Congress were deliberately to set out to promote industrial chaos, it could not choose a more effective route than insuring that the statistical raw material for planning are destroyed.

This blow at industrial progress is underlined by cutting by one-fourth the funds for the Conciliation Service. This just does not make sense; at a time when both labor and management are placing increasing faith in Federal efforts at mediating or conciliating industrial disputes, the ability of this vital agency to function is crippled.

In respect to the slashing of funds for the United States Employment Service, I do not understand how this agency is to be expected to guarantee that the money turned over to the States for their employment programs will be administered in accordance with Federal standards.

In turning employment services back to the States, Congress promised that Federal money would be used in accordance with Federal standards. The House voted the full sum for the State employment services which the Budget Bureau requested—some $71,728,000—while reducing by almost 80 percent the funds of the Federal agency charged with seeing that these $72,000,000 are wisely spent.

It almost seems as if the House desired to turn over to the States Federal money which they can use as a slush fund without adequate check by the United States Government.

Similarly, with the Veterans' Employment Service. How can this agency be expected to service the needs of jobless veterans when its funds have been slashed by 34 percent? Its work of uncovering job opportunities for veterans would virtually halt.

It would also seem that the House is not altogether in sympathy with enforcing the current low minimum wage of 40 cents an hour. In utter disregard of the imperative need to employ sufficient inspectors to see that this standard is enforced, the House would slash the appropriation for the Wage and Hour Division by 25 percent.

I have always believed in economy. But the House action is not economy. It is a fantastic, stumbling chase after an elusive will-o'-the-wisp. Its reckless disregard of the needs of the great body of labor, management, veterans, women, and children for assistance through the tested and proved services of the Labor Department will cost the country heavily in the months ahead.

I urge the Senate to insist on the full restoration to the Department of the amount recommended by the President's Budget Bureau.

Respectfully yours,

A. F. WHITNEY,
President, Brotherhood of Railroad Trainmen.

BROTHERHOOD OF RAILROAD TRAINMEN PROTESTS SLASH IN LABOR DEPARTMENT FUNDS—PRESIDENT A. F. WHITNEY OF THE BROTHERHOOD OF RAILROAD TRAINMEN SAYS CONGRESS CHASING WILL-O'-THE-WISP

What happens when an economy-minded Congress applies the ax to essential Government services?

A. F. Whitney, president of the Brotherhood of Railroad Trainmen, has supplied the answer in asking the Senate to restore to the Labor Department the 40-percent slash in its funds for the next fiscal year voted by the House last week.

Said Whitney, "I believe in economy. But the House action was not economy. It was a fantastic, stumbling chase after an elusive will-o'-the-wisp. Its reckless disregard of the needs of the great body of labor, management, veterans, and even women and children for assistance through the tested and proved services of the Labor Department will cost the country heavily in the months ahead."

In a letter to the Senate Appropriations Committee, Whitney protested vigorously against eliminating or crippling a number of agencies of the Labor Department, including the Division of Labor Standards, Wage and Hour Division, Bureau of Labor Statistics, United States Conciliation Service, and the United States Employment Service, the latter including the Veterans' Employment Service.

Whitney warned that the House action to eliminate the Division of Labor Standards would invite repetition on a Nation-wide scale of the recent Cleveland disaster in which a 15-year-old boy employed as a paint sprayer became a human torch when the paint caught fire. The Division of Labor Standards is currently charged both with preventing abuse of labor of young people and training safety inspectors.

Appropriation for the Bureau of Labor Statistics was slashed 60 percent by the House. "This Bureau," said Whitney, "furnishes the statistical raw materials for planning to determine causes of industrial accidents, establish good relations between labor and management, wage analysis, job opportunities, productivity, technological developments, employment statistics, and construction statistics."

Construction statistics are particularly important because they offer a check on the progress of the Nation's housing program.

Most heavily hit by the House action is the United State Employment Service whose funds were slashed approximately 80 percent. The USES—the Federal office—is charged with certain specific responsibilities which if not supplied by the Federal offices to all State services will have to be duplicated by each of the 48 States, and insuring that Federal funds granted to State employment services are administered in accordance with Federal standards as laid down by the Wagner-Peyser Act, passed in 1933. In direct contrast to its treatment of cutting 77 percent of the Federal end of the Federal-State system, the House voted to give the States the full amount recommended by the Budget Bureau, $71,728,000.

Pointing to the weakened ability of the USES to enforce Federal standards, Whitney raised the question of whether the States were about to receive a Federal slush fund which, for lack of Federal supervision, could be mishandled by State political leaders.

On behalf of the veterans, Whitney objected to reducing the already inadequate job-placement work set up for them. This is currently carried on through the USES by the Veterans' Employment Service, whose funds were slashed 35 percent.

Whitney accused the House of being out of sympathy with enforcing the current low minimum wage of 40 cents per hour, since the Wage and Hour Division, which provides Federal inspectors to insure compliance with the minimum-wage laws was slashed 25 percent.

A cut of 25 percent in funds for the United States Conciliation Service also drew Whitney's fire. "This just does not make sense," he said. "At a time when both labor and management are placing increasing faith in Federal efforts at mediating or conciliating industrial disputes, the ability of this vital agency to function is crippled."

The Triumph of President Truman in the Cause of Peace and Human Welfare Will Be the Triumph of the Democratic Party in the Days Ahead

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. SABATH. Mr. Speaker, last Saturday evening the Democratic Party fittingly and triumphantly paid tribute to the immortal Thomas Jefferson, author of American democracy and founder of the Democratic Party.

There were many splendid speeches; and among the most inspiring I place that made here in Washington by the Honorable Gael Sullivan, who hails from my own State of Illinois and my own city of Chicago, vice chairman and executive director of the Democratic National Committee; young, dynamic, and a progressive leader of great ability and promise.

Mr. Sullivan's speech so favorably impressed me that, under leave to extend my remarks, I now embody it in the RECORD for the inspiration and encouragement to sincere men and women of our Nation. It follows:

Mr. President, Mr. Chairman, and fellow Democrats, in these precious hours we commemorate the birth of our political faith—and the beginning of new and greater tasks to be worthy of that faith. The principles of Thomas Jefferson are the articles of our political faith—but the vibrancy of those principles must be matched by the vitality of our performance.

We answer tonight a new call to organize our party for victory in 1948. We join ranks again in answer to a new reveille against reaction. The reveille for free men and free women who want to work out a peace, and make that peace work.

The Jefferson faith that dedicated our party to human rights—that places the first priority on human welfare—knows that the fight to sustain the dignity of the individual and the sanctity of the family unit is never-ending.

Greed and intolerance are the twin tyrannies that never take any time off.

HUMAN BUDGET OUT OF BALANCE

Our kind of political faith is one of constant redemption. It can turn defeat into victory, it can change indifference into confidence, it can blot out fear and replace it with courage, it can revive hope where only doubts have been. Without that fire of faith our labors would be stalled at the start.

The problems we face have no soft solutions; the Democratic Party offers no easy escape for those who want to make the fight for victory from the side lines. As long as this Nation still spends $13 to control crime for every dollar it spends for education the human budget is far from balanced.

As long as one young man out of every three was rejected during the war for physical and mental defects we still know that the struggle to make the Nation's health our first wealth is far from won.

As long as two citizens out of every three failed to vote—as they did in the last congressional election—we must prepare to organize and educate more and more of our people to express their will at the ballot stations of freedom.

THREE GREAT DEMOCRATS LINKED

Wherever free men and women band together in this Nation to oppose business monopoly or racial intolerance they gather in the spirit of Thomas Jefferson, the Jefferson who knew that the well-informed citizen was the right-acting citizen, the Jefferson who proclaimed this principle of our political faith. "Our freedom depends on the freedom of the press and that liberty cannot be limited without being lost."

Wherever our citizens rally to safeguard the interests of the human family, whether they would liberate the prisoners of our slums or the economic cast-offs of our factories and farms, the justice of their cause comes from Franklin D. Roosevelt when his heart spoke these words: "The test of our progress is not whether we add more to the abundance of those who have much, it is whether we provide enough for those who have too little."

Wherever our citizens unite to plan and work out the techniques of abundance, they share the moral stamina and broad-gage vision of President Truman when he says: "More and more we are learning, and in no small measure through the medium of the press, how closely our democracy is under observation. When we fail to live together in peace, the failure touches not us as Americans alone, but the cause of democracy itself. That we must never forget."

TRUMAN WAY IS THE HUMAN WAY

Millions of Americans cherish that same thought in their hearts tonight. Millions of our people who know that police states begin and end with concentration camps want more Truman and less tyranny.

Millions of those Americans say with one voice, "President Truman has kept faith with our principles and our party. The Truman way is the human way."

Tonight we marshal the loyalties and energies for our fight. Behind us we have the records of those leaders who helped to push forever outward our frontiers of the mind. We have the inspiration of the Jeffersons, the Jacksons, the Wilsons, and the Roosevelts, who believed that low incomes for the many and high profits for the few don't mix in a thriving democracy.

In front of us today we have a leader, tested and triumphant. He is prepared to meet the challenge of abundance in our atomic age, confident because of the people's confidence in his program, eager to see and do the right because his hopes have an abiding kinship with the people's hopes.

Therein lies our strength to fight, and therein lies our will to win.

The triumph of President Truman in the cause of peace and human welfare will be the triumph of the Democratic Party in the days ahead.

Electoral-Vote Plan

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. GOSSETT. Mr. Speaker, a number of us hope shortly to secure hearings before the Judiciary Committee on several resolutions proposing to abolish that archaic, dangerous, and undemocratic institution known as the electoral college.

One of the greatest newspapers in the United States, the Dallas Morning News, carried an editorial in its April 5 issue supporting our plan to abolish the electoral college and to divide the electoral vote on the basis of the popular vote. I commend the substance of this editorial to your serious consideration. It follows:

ELECTORAL-VOTE PLAN

There is being advocated by Representative ED GOSSETT, of Wichita Falls, and other Congressmen a constitutional amendment to make the electoral vote of each State proportional to the split in the popular vote. In the last Presidential election, for example, New York's entire 47 electoral votes went to the Democratic Party because it won over the Republicans by a vote of 3,304,238 to 2,987,647 at the polls. Mr. GOSSETT's plan would have divided the electoral vote, 25 to the Democrats and 22 to the Republicans.

On behalf of the plan Mr. GOSSETT advances the very sound argument that the present system makes both political parties the victims of organized pressure groups in the pivotal States. "If you will examine the platforms of both political parties," he says, "you will find that they are designed to catch the votes of these organized minorities. * * * These said minorities are neither fish nor fowl. They are simply up for sale to the highest bidder. Their prices are exceedingly high in terms of public welfare."

It may be asked, Why not adopt an outright popular vote? To this Mr. GOSSETT cites the fact that such a system would throw the voting machinery into Federal control and deprive States of their right to fix voting ages and other standards. Georgia, for example, permits 18-year-olds to vote. Under a popular vote system, either Georgia would be deprived of this right in presidential elections, or it would be forced on other States.

It will be argued by the opponents of the plan—by both those wishing to adhere to the present system and those wishing to adopt the outright popular vote—that Mr. GOSSETT's plan is one best calculated to release the South from its present disadvantage because of the bidding of political parties for the pressure-group vote in the pivotal States and, at the same time, preserve for the South its privilege of maintaining the poll tax provision. There would be truth in that argument. The reply to this is that the Southern States are on sound constitutional grounds, and on sound governmental theory, in wishing to maintain the sovereignty of the States in the matter of suffrage. On the other hand, the present provision for electoral college voting is a gone-to-seed attempt to apply an

original provision which was a many-sided compromise, lacking in any distinct principle.

Mr. GOSSETT's plan for abolishing the electoral college without abolishing the electoral vote and providing that the latter be cast in proportion to popular vote seems in reappraisal a sound middle course for preserving State sovereignty, on the one hand, and, on the other, giving the southern and western States relief from the present political advantage of the pressure groups in the pivotal States.

What Does Labor Really Want?

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. JAVITS. Mr. Speaker, a significant contribution to the thinking on labor relations is contained in an article by Hon. J. D. Zellerbach, vice chairman, governing body, International Labor Organization, appearing in the current issue of the American Magazine. Mr. Zellerbach presents the view of an enlightened employer and places heavy reliance on free collective bargaining between management and labor unhampered by repressive labor legislation or the guardianship of employers and employees by the Government. Though I do not agree with Mr. Zellerbach on profit sharing with employees which I favor, I find myself in agreement with so many other points in his article and believe that it will be of such real value to have in the RECORD the salutary point of view of an enlightened employer with personal experience in bargaining with unions, that I am submitting it for the Appendix. It follows:

WHAT DOES LABOR REALLY WANT?

(By J. D. Zellerbach, vice chairman, governing body, International Labor Organization)

One day in Montreal, during a session of the International Labor Organization, I made a casual reference to our American faith in a system of industrial labor relations founded on freedom and mutual fairness. Instantly I was challenged by a delegate from an authoritarian nation—not Russia, by the way. How could I justify praise for our system, he demanded, when, that very day, world headlines were black with news of disastrous strikes in vital American industries?

"We have none of that foolishness in our country," he said proudly.

I asked him to explain his country's system.

"Just as you Americans are suffering from labor conflicts," he said, "so our people suffered after the revolution. Our leaders, realizing something had to be done, called in experts and developed a plan. This plan was given the Army to enforce. Under the plan, industry is told what it may and may not produce, and workers are told what they may and may not do. We have no more strikes, no lock-outs, no arguments. We have the perfect system for industrial peace."

Is that what we want in America? Is that what we are headed toward?

Heaven forbid. But at the same time we certainly do not want a continuance of the disastrous labor conflicts which marked 1946.

Between us and some authoritarian system of domination and restriction stands one factor which can save the day; the intangible but very real thing we call good labor relations. Whatever happens eventually in this country will be dependent largely upon how intelligently and faithfully each one of us, manager and worker alike, administers our responsibility to get along harmoniously with our fellows.

Perhaps your instinct is to say, "Oh, that isn't for me to worry about. Let the big fellows settle it." Unfortunately, it isn't that simple, for good labor relations begin with the individual and directly affect the intimate lives of almost every human being on earth. They affect our pocketbooks and our peace of mind. They are important to those who work, whether in management or labor, because they directly affect our personal welfare, our bread and butter, and the immediate welfare of our families. They are important to those whose income is derived from investments.

They are important to our purchasing power, being responsible to a great degree for high prices or reasonable prices. They are important to our communities, which prosper or hunger with us. They are important to our Nation, causing good times or bad times. They are important to the world, for our affairs have become so interwoven that a strike in St. Louis, United States of America, can cause a famine in Prague, Czechoslovakia. Most of all, perhaps, they are important to America's position among world powers.

One evening in Paris I had dinner with a group of French families. The dining room was bitterly cold; there was no fuel. Throughout devastated Europe, families, down to the smallest child, were scrabbling desperately in the rubble for anything that would make a fire. Yet the newspapers and radio were crackling with word of an impending strike in America which would close down the coal mines and cripple countless other industries.

"How can such a thing be?" one of the French women asked me, wonderingly. "What is wrong with the American system that such a frightful thing could occur in a land where everyone is rich and happy?"

Well, of course, everyone in the United States is neither rich nor happy—except by postwar European standards. But the lady's question touched off a general and extremely serious discussion about different systems of government.

Here were people typical of others all over the world. people whose established ways of life had been ripped apart by the fury of war and who were groping for something, anything, with a reasonable assurance of stability. Before them are two great examples of systems, two ideologies, both calling themselves democracy, both claiming to be the best way of life for the people as a whole. One is the so-called democracy of authoritarianism, under which every function of living is regulated and dominated by a government plan. The other is the democracy we know, the democracy of free people and free enterprise, the American system. Which should they choose?

Whether we like it or not, we are objects of curiosity today in an international goldfish bowl. People everywhere are watching us, studying us, evaluating our system against the other system which calls itself democracy. Our actions, our relations with one another here at home, may throw the balance of sentiment in favor of our system or against it. Thus, how we get along with one another under our system may determine the destiny of many people in many lands and, in the long view, the future of the world. For, more than any other one thing, the great bulk of people all over the world today want a system that will guarantee peace, not only peace among nations, but peace among individuals.

So all this focuses down to the one factor which, properly administered, can bring about industrial peace and give us contentment here at home and a good face before the world—the factor called labor relations. How are we going to attain good labor relations? What's the answer?

Good labor relations are the sum of living and working honestly together for a common cause, our personal welfare. They are the joint responsibility of management and labor, as groups and as individuals. They cannot be written into a union contract, and they most certainly cannot be created by legislation under a system of free enterprise.

The term itself has come into common usage only since 1934. Prior to the National Labor Relations Act, most employers and employees mutually lived labor relations without thinking or talking much about them, and those relations were good or bad depending upon the natures of the individuals involved.

My father was always puzzled when people mentioned labor relations. He didn't know what that meant. It never occurred to him that relations with his workmen could be a problem; they were simply a part of his everyday life. Now the system has changed, but the basic principle is as sound as ever.

The system changed principally, I think, because factories grew so large it was no longer humanly possible for the executive head to know each of his men by name, or for the men to feel free to carry their personal problems to him. So now we have negotiation between groups. This is presumed to be an impersonal system, but it is not impersonal and cannot be impersonal, for the agreements arrived at and the administration of those agreements cannot possibly be stronger than the integrity, the good faith, of the individuals who have to work them out. Human nature is still the keystone by which the entire structure must stand or fall.

Good labor relations are not necessarily created by high wages. When a strike occurs, the first impulse of most people is to say, "I suppose they want more money, or shorter hours." Sometimes, although with increasing rarity, these are the focal points of the dispute. But 9 times out of 10 they are not the underlying causes of dissatisfaction. They are the surface rash rather than the disease itself. Some of the bitterest relations exist in the highest-paid industries.

A good many polls are taken by impartial observers from time to time to determine what workers really want. I think it will surprise you, as it surprised me, to learn that these, in the order given, are the factors which workers listed as most important to themselves:

1. Definite understanding of what is expected of me in my job.
2. Fair and understanding supervision.
3. Assurance that my job will be permanent as long as I do my work satisfactorily.
4. Assurance that I will get advancement if I am qualified when better jobs open up.
5. Assurance that I will be paid as much as conditions permit.

Wages, then, are less important to most workers than understanding, fair treatment, security, and expectation of promotion. Hours of work are even less important than wages. It would be a genius, indeed, who could write those intangibles into a contract or into a law. They explain why labor disputes did not end with enactment of wages-and-hours legislation.

Wages will always be important and must always be adjusted to meet changing conditions. There is no such thing as a stable wage pattern. In that connection, we have heard some talk about a guaranteed annual wage, but the phrase has too many different meanings to be talked about loosely. To some it means the guaranty of so many dollars for a year ahead, whether the employer can sell the product of the workers' time or whether he can't, at a fair price or at any price. In

this sense, all thinking men must agree that it is an entertaining but impractical dream. A prominent union official summed it up recently when he said, "Its basic guaranty by an employer is a fallacy. No employer can guarantee his own solvency."

A good deal of the dissention over wages is rooted in a rather general belief that owners and managers of a business net as much as 60 cents on every dollar of gross sales. That, of course, is a far cry from truth. According to Government reports, the average profit per dollar of sales in American business in 1944 was 3.9 cents; in 1945 it was 3.8 cents. These were so-called good years. The public impression of exorbitant profits probably stems largely from the belief of many businessmen that it is unwise to let employees become familiar with the company's financial status. This policy inevitably breeds distrust, murderous to good labor relations.

Frankness, on the other hand, tends to create a realization among workers that they have a responsibility to keep alive and healthy the goose that lays the golden pay checks. We have no financial secrets from employees in our business. Some of my friends in industry feared the worst when we began to make the company's financial reports available to every workman in the mills and candidly discussed such touchy subjects as the relation of wages to the cost of living. They objected to the idea of mentioning millions of dollars in reserves or distributed to stockholders. "You'll make the men dissatisfied," they argued.

I disagreed with this point of view. "They'll be proud to work for a company that can show financial stability," I said. "It makes for a sense of security." That's how it has worked out. Today every mill hand can know about the company's finances and its plans.

There is an increasing tendency toward this candor in other industries, and it is a promising sign. When factories were smaller every employee understood that the "old man" had to be kept solvent so jobs could continue, and that principle is still basically sound. Nowadays it may be necessary to interpret sometimes involved financial statements, but generally it is well worth while.

Just as management has a responsibility to pay adequate wages, so labor must realize that management has an equal responsibility to pay an adequate return to investors. If the higher cost of living is justification for increased wages, it is also justification for increased profits to pay stockholders and build up reserves. A dollar is worth no more in a dividend check than it is in a pay check.

Today many factory properties are carried on the books at a fraction—one-fourth to one-third—of the amount it would cost to replace them, and this is true of raw materials, machinery, tools, and equipment. Consequently, if a company's future is not to be imperiled, its reserves must be higher to provide replacements at today's high prices, so that jobs may continue. Everyone can understand this, but it is a point too often overlooked in labor negotiations.

In striving to attain the intangible thing we call good labor relations, some well-intentioned employers, particularly during the war years, when we had many unusual employees, leaned so far toward humanitarianism that they developed what is sometimes called the Jehovah complex. These are the employers who showered their workers with baby bonuses, furniture, free rent, and motorcars.

The story is told of one such industrialist who was showing a friend through the model residential district he had built rent-free for his employees. The visitor commented that each home had a petunia garden. The employer explained, "Certainly, I like petunias." Unhappily, not all his employees shared this passion; some of them probably disliked petunias intensely, but had to tolerate them to humor the boss. When the revolt came—because eventually the employer had to refuse a request for still more free things—he saw the recipients of his benevolence throw rocks through the windows of his model factory.

No, labor doesn't want paternalism. Grown men and women don't want to be babied by philanthropists. Most American workers want what they can earn, and they are perfectly willing to do an honest day's work for an honest day's pay. In their private lives they want the free right of self-expression.

Another fairly common wartime device was profit sharing. We heard a good deal about those industrial utopias where every worker was a part owner in the company. The plan seemed to work pretty well while the war was raging and the Government guaranteed both costs and profits. In a few instances it is still working fairly well. In most instances, however, it fell to pieces when profits decreased or disappeared in the face of postwar free competition. One of the great Midwestern concerns which was held up as a model of the profit-sharing system has now been forced to reorganize and return to orthodox methods.

Experience has proved that in times of no profit, the very times when the company desperately needed the utmost degree of effort and cooperation from its employees, the system fell apart. Employees, certainly, should be given a normal opportunity to purchase stock in the employing company, but sound and enduring interest cannot be created by handing them stock gratuitously, perhaps because an individual seldom cherishes anything he gets for nothing.

The most stupid tactic in labor relations is a show of force, whether on the part of management or of labor. Good relations never were established and never can be established by a lock-out or a walk-out. No human being can deal effectively or reasonably or, with a good will, carry out agreements arrived at when there is a gun on the table. Good relations can be established only when problems are approached with reasonableness, frankness, fairness, honesty, objectivity, and a determination on each side to live up to agreements in spirit as well as in letter. Even such a seemingly small thing as the surroundings for a negotiation meeting are important.

At one time, in our industry, we considered our labor negotiations to be a company matter. We found a wider feeling of confidence and broader unity could be created by dealing on a regional industry-wide basis. Now we hold negotiation meetings in a large hall. Each local union and each employer sends its delegates. Negotiation committees for each side are chosen and carry on their discussions before the entire group. A verbatim stenographic report is kept. It is a matter of firm policy that each company is represented by its executive head or a responsible official empowered to make binding decisions then and there. The latter point is vital.

It is astounding, sometimes, to find that some employers feel no sense of personal responsibility for labor negotiations. Not all, fortunately, are so thoughtless as the wartime factory head who wired one of our universities: "Please rush an industrial-relations plan for a concern employing 1,500 people," or another who engaged a labor-relations expert and told him, "From now on this is your worry. Don't bother me with it. If we have any more labor trouble, you're fired."

No one aspect of modern industry is more directly important to the executive head of a company than labor relations. No one would hire a treasurer, a production manager, and a sales manager and tell them, "Go ahead and run your jobs and don't bother me." That business would go to pot in a hurry. No, top management should devote at least as much time and effort to labor relations as to financing, production, and sales—more, as a matter of fact, because it is a newer and less well patterned phase of modern business, and because it is a phase which touches every activity of business.

The employer must realize that labor is people—human beings. Workers cannot be treated impersonally, like so many lumps of coal or bolts of cloth or numbers on a chart. Labor is not a commodity, and an understanding of that fact is the key to harmony between labor and management—the same key which unlocks all human relations. It is forged of frankness, fairness, and honesty. These are factors which cannot be written into labor contracts or enforced by legislation.

All these things are particularly important this year. Today we are facing a grave crisis in industrial relations, a crisis that can have tremendous influence upon our pocketbooks and our entire scheme of living. Thirteen years ago we saw corrective legislation enacted in Washington, prompted at least in part by some pretty indefensible practices on the part of management in some industries. The tenor of this legislation was not only prolabor but antibusiness.

History teaches us that when one group in America becomes too powerful for the general welfare, public opinion is aroused against it and we get corrective legislation. In some cases these laws are emotional and go to extremes. This spring, in Washington, we are facing legislation to correct certain practices on the part of labor. Many of us in management believe such legislation must be moderate and constructive, not emotional or resentful. Equilibrium can no more be gained by a violent push to the right than it was achieved by the extreme push to the left.

It is equally indisputable that most of the past efforts to curb abuses by legislation have proved to be destructive rather than constructive, have led to persecutions rather than to progress. We have just been through a period of persecution of business; we want no persecution of labor. Industrial leadership has gone on record for measures which will cure labor abuses, but without curtailing the power of organized labor to promote and protect the legitimate interests of its members. Organized management is united for patience and justice.

At one time or another in recent years, nearly every American has had a twinge of regret for the good old days. Yet those of us who remember the good old days clearly realize only too well that they were not so good after all. Most of the social-security systems set up in fairly recent years are sound. No thinking employer would dispense with them if he could. Many employers, on the contrary, complain that they do not go far enough, and in many industries retirement and benefit plans have been instituted to supplement them. All these things are manifestations of progressive thinking about labor relations. All of them are based upon a human desire for fair play as the only key to real teamwork.

Top management must realize, as many industrialists already realize, that if industrial leaders neglect their responsibility, if they fail to establish relations which will assure peace and good will, other types of leaders with other objectives will inevitably rise, and the result conceivably could be chaotic. Thus the matter of good labor relations, for management and labor alike, becomes much more personal than altruistic; it becomes a matter of intelligent self-interest, a struggle to retain for all of us the gains already made, and to add to them.

The good old days are not coming back. But by working together in humanness and understanding we can create in America, perhaps this year, good new days which will be far better.

America Must Protect Herself

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 7, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following article by Ira E. Bennett which appears in the April number of the National Republic:

AMERICA MUST PROTECT HERSELF
(By Ira E. Bennett)

Events inevitably will demonstrate that President Truman made a mistake when he overstepped the bounds of national self-interest in demanding virtual abandonment of tariff protection.

As world production is restored, Americans determined to protect national defense, including economic defense, cannot but part company with Mr. Truman. The century-old policy of tariff protection is declared by him to be obsolete. But it will be found anything but obsolete when all nations begin to produce again. Champions of protective tariff, including industry and labor, will rally to the colors.

It is unfortunate that a breach must occur among the ranks of Americans, because the attempt of "one worlders" to break down tariff protection will have a tendency to chill the warm desire of the people to do everything reasonable to help the crippled world.

The people have just shown that they will not tolerate further sacrifice of their liberties and interests at the behest of spendthrift enthusiasts who have tried to introduce a new system of government in this country.

The bureaucrats in control of the reciprocal trade agreement program may run to the end of the rope that Congress improvidently gave them. They are to negotiate a fancy world trade agreement at Geneva (unhappy site of many international failures) and they hope to hammer down the tariff rates that protect American industry and labor, all in the name of peace and world happiness.

Protectionists hold that President Truman's speech at Waco audaciously declaring war on American economic protection, will prove in the end to have marked the turning point of the brief period of cooperation between Republicans and Democrats in foreign policy.

Protectionists who have been as generous as other Americans in contributing to world relief are indignant when the President brands them as "isolationists"—that is, Americans who have no sympathy whatever with the woes of other peoples. But under whatever names they may be called, the supporters of the American protective-tariff system intend to remain Americans. They believe that unless the United States is kept sound and wholesome in her economy it is idle to suggest that she can help other nations.

Mr. Truman followed the example of others who have misrepresented the Smoot-Hawley tariff law. He denounced it as one of the major causes of the depression beginning in 1929, a year before it was enacted. It may be impossible to find an impartial critic among Americans, but a visitor from Venus might ask, "If the Smoot-Hawley tariff is so abominable, why did not the New Deal repeal it?"

The Smoot-Hawley Tariff Act is still in effect. Why did not Mr. Truman, when a Senator, introduce a bill to repeal it? Why does he now attack it, when he is under oath to execute it?

The answer volunteered by protectionists is that the New Dealers lacked the courage to revise the tariff. They did not dare go up against the workers whose bread and butter in normal times depend upon national defense against foreign pauperism. The New Deal contented itself with abusing the law and inventing ways to destroy labor's protection while pretending to obey the law.

The "reciprocal" trade agreement system insinuated into law by the New Deal is a pious fraud, well known to be such by many of its advocates. It is a fraud that is supported by many well-meaning citizens who do not know its real character. It is intended to bring about free trade as a substitute for protection to American industry and labor. This true intent is disguised under the word "reciprocal."

So far as history shows, every citizen is in favor of true tariff reciprocity. Protectionists have supported it and now favor it. What they oppose is not reciprocity in tariff concessions, but betrayals of protection to American industry and labor in the name of reciprocity.

No one knows the identity of the genius who invented the scheme of siphoning away tariff protection by pretending to promote genuine reciprocity in trade agreements. This inventor, whoever he was, took pains to conceal himself. But he had inspired disciples like Cordell Hull and Henry A. Wallace, who made little or no concealment of their opposition to protection for American labor. Mr. Hull was somewhat cautious, but Mr. Wallace made no secret of his willingness to sacrifice American industry employing many workers. His plea was that any American industry that was not efficient should be slaughtered, to make way for imports from abroad, furnished by industries that were efficient. He contended that the German toy industry, for example, was more efficient than the corresponding American industry, and that, therefore, a tariff rate protecting the American industry should be scrapped. Under Wallace's plan, any American industry unable to compete with a foreign concern paying coolie wages should be killed off. Mr. Truman in his Waco speech adopted the Wallace philosophy.

The inherent fraud in the reciprocal trade agreements, according to protectionists, lies in the fact that when the United States makes an agreement with a certain foreign country, covering certain concessions in tariff rates, it immediately bestows the same concessions to all other countries under the most-favored-nation clause of general treaties. Thus, when the United States gave a concession to a European country on a certain item, it gave the same concession to Japan.

This generalization of tariff concessions is anything but reciprocal. It is not intended to be reciprocal. Its aim and effect are to tear down rates that protect American producers who employ American workers. The net result, so far as it goes, is to open the gates of the United States to any concern that furnishes cheap goods made by coolies, peons, enslaved war prisoners, or other underpaid workers. Logically carried out, the reciprocal-trade agreements would reduce American workers to the wage standards of Japan.

Under the acid test of actual trial, the so-called excessively high duties of the Smoot-Hawley tariff were not high enough to protect American workers against ruinous coolie-labor competition from Japan. Until the late war stopped the business, Japanese goods flooded the American market in spite of the alleged high duties. Several American industries were crippled by this unfair competition, and a few of them perished. If the war had not intervened, public opinion would have demanded higher duties against cheap Japanese goods.

In his Waco manifesto President Truman waved the flag of war-terror. His argument was that trade rivalries breed hatred and encourage war, and that the United States must therefore make sacrifices in the economic field for the sake of promoting world peace. Americans must not be content with paying billions in taxes to be spent for foreign relief. They must also agree to remove the economic shield that protects the American worker against the direct competition of foreign low-wage labor.

Those who take a stalwart stand for protection at home for the sake of keeping America great and strong, with well-paid labor, wholly disagree with Mr. Truman and are preparing to fight him to a finish. Their reasoning runs like this:

There never was and never will be entire accord among nations on trade matters. It is natural that they should be rivals in trade. It is not a rivalry that breeds war. Germany did not make war for trade reasons, nor did Japan. Trade rivalry is merely a self-reliant urge to provide for a nation's defense. A tariff system is like a gate in a nation's walled defenses. Through the gate trade may pass, but always subject to the will of the gatekeepers. If the gate be left unguarded, enemy goods, like real human enemies, will swarm in. Free trade means the tearing down of one of the gates of national defense. What avails the nation's will of defense if one of its gates is left open?

The same gate that bars entry of a flood of cheap goods also bars the entry of swarms of coolies, peons, moujiks, Communists, and other dregs of war. Those who stand for tariff protection are equally opposed to subjecting American workers to unrestricted immigration of aliens.

It is suggested, also, that the United States alone should not make all the concessions in promoting trade among the nations. One of the strongest barriers against unimpeded flow of goods is the system of cartels sponsored and even directed by foreign governments. Indeed, trade is now a government monopoly in many countries, including Great Britain. Yet this fact is not a breeder of war.

Britain borrowed money from the United States and was thereby enabled to buy goods from Argentina. Argentina had a fine balance in her favor. Then Britain tried to induce or compel Argentina to spend this balance (American dollars) in Great Britain. This demand was in flagrant violation of Britain's pledge when she borrowed money from the United States that she would not use the money in any way to discriminate against the United States.

Did this breed war? Not at all. The United States merely called Britain sharply to account and reminded her of her pledge. Britain replied, 'So sorry," and the incident ended, with the United States a little disappointed, but far from indulging in such thoughts of war as Mr. Truman conjured up at Waco.

Hard-pressed countries will resort to many devices to build up trade. Real barriers, such as lack of credit, lack of ships, etc., can be removed without destroying every nation's right to regulate its own commerce. It is not necessary to destroy American high wages and big production in order to promote world trade. Protectionists point to the vastness of the American market, which is still under control of Americans. Within that market the people enjoy a high standard of living and can greatly assist other countries that are in need.

World trade under existing conditions is a glittering generality. American exports will not be greatly expanded under any proposals pending at Geneva, because certain foreign governments are expecting to be supported by the United States by means of money loans, food relief, etc. Why should

they make any concessions to the United States, when they are already obtaining American help free of charge?

A few American industries, such as motion pictures and automobiles, are eager to break down the tariff system that protects other American industries. Is it desirable that American workers should be unprotected against undue and ruinous foreign competition in order to promote the foreign sale of American movies and automobiles? Workers in both of those industries receive high wages, thanks to the system that develops the world's greatest market and holds it for the benefit of Americans. Protectionists hold that to throw away the home market for the sake of trying to win more foreign trade is worse than folly. They say it is taking the way of national bankruptcy and economic suicide, in view of the universal urge by destitute foreign countries to break into the rich pastures where Americans enjoy special advantages conferred by a protective tariff system as a part of the national defense.

Architectural Competition for Design for Federal Memorial to Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. THOMAS of Utah. Mr. President, because of the public interest, and in the hope that many a worthy contestant will learn of this great undertaking, I ask unanimous consent to have inserted in the Appendix of the RECORD an article appearing in the New York Times March 30, 1947, announcing an architectural competition, offering $125,000 in prizes to obtain a design for a $30,000,000 Federal memorial to Thomas Jefferson and the pioneers of the western expansion of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEMORIAL TO HAIL JEFFERSON, WEST—ARCHITECTURAL COMPETITION WITH PRIZES OF $125,000 MARK PLANS AT ST. LOUIS

ST. LOUIS, March 29.—An architectural competition offering $125,000 in prizes to obtain a design for a $30,000,000 Federal memorial to Thomas Jefferson and the pioneers of the western expansion of the United States was announced here today.

The competition is sponsored by the Jefferson National Expansion Memorial Association, a national group of interested citizens, who raised the prize moneys by private subscription.

Site of the memorial is a plot of 80 acres already cleared in the downtown center of the St. Louis river front, an area historic as the funnel of early migration to the West.

The competition is open to architects, construction engineers, and students in both fields. Landscape architects, painters, sculptors, and laymen are invited to take part in the contest by associating themselves with an architect.

COMPETITION TO COVER A YEAR

The competition will be held in two stages and will require about a year to complete. At the end of the first stage next September, five finalists will be named to compete in the second stage. Each of these will receive $10,000.

The author or authors of the final winning design will receive a prize of $40,000 and be recommended to the Department of the Interior for employment in executing the design. A second prize of $20,000 and a third of $10,000, together with two honorarium awards of $2,500, will be made.

It is intended that the memorial area be developed as a place of resort, inspiration, relaxation, and instruction for visitors from all of the world.

Application to enter the contest may be made to George Howe, Old Courthouse, 415 Market Street, St. Louis 2, who is directing the competition as professional adviser to the association. A fellow of the American Institute of Architects, Mr. Howe has made it clear to the sponsors of the contest that collegiate Gothic and collegiate Georgian buildings are not his idea of a memorial.

LOUISIANA PURCHASE RECALLED

The site of the memorial contains the place at which the United States in 1804 took formal possession of western territory acquired from France by the Louisiana Purchase. The area is directly associated with the start of the expedition of Lewis and Clark as well as those of Pike and Fremont. The Santa Fe, Oregon, and California Trails also began here.

Within the memorial area were situated the first theater, the first Episcopal and Unitarian churches, the first post office and the first music publishing establishment west of the Mississippi.

"The purpose of the memorial for which a design is sought in this competition," Mr. Howe said, "is not only to commemorate the past, but also, and especially, to keep alive in the present and in the future the daring and untrammeled spirit that inspired Thomas Jefferson and his aides to offer men of all nations new opportunities under democracy by consummating the Louisiana Purchase."

Nomination of David E. Lilienthal To Be Chairman of Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. WILEY. Mr. President, there has been much discussion recently relative to the Lilienthal nomination. I have at last had an opportunity to go through the record of the hearings, and I have prepared a statement on the subject of the nomination which I ask to have printed in the Appendix of the RECORD. The statement sets forth my reasons for opposing the confirmation of Mr. Lilienthal.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY IN OPPOSITION TO CONFIRMATION OF DAVID LILIENTHAL

Mr. President, I believe that the nomination before us may be the most important single nomination I have yet been called upon to consider during my 8 years in the Senate or that any of my colleagues has voted upon during this period.

I am not a member of the Joint Atomic Investigating Committee, nor have I, unfortunately, because of the pressure of other legislative business, had an opportunity to read through the full transcript of its intensive hearings on this nomination. I have, however, consulted as many sources as I could within the limited time that has been available to me on this subject.

I have approached this subject with an open mind and have not sought to confirm or reject any preconceived notions about this nomination.

ADVICE AND CONSENT FEATURE

I have weighed very carefully "the advice and consent" power of the Senate in connection with Executive nominations in addition to the other relevant factors that must be considered. All of the factors I have reviewed with one paramount question in mind, "Will my consent to this nomination serve the public interest?" At stake is not only the reputation and standing of one man, but the very security of our Nation.

Never before did the full meaning of "advice and consent" impress itself so forcefully upon me. This is no ordinary case where the President gets his man. This is a case where we ask, "Have all of us gotten the right man?" After all, we in the Senate are but servants of the Nation, and it is our obligation to get right men, and make no mistake.

I should like to direct the attention of the Senate to the fact that in section 2 of the Atomic Energy Act, Public Law 585, Seventy-ninth Congress, which relates to the establishment of the Commission itself, the Act specifically emphasizes the "advice and consent" of the Senate.

Let us bear in mind, too, that the Atomic Energy Commission is a congressional creature, created by congressional action, to meet congressional requirements.

In other words, it is apparent that the responsibility of Congress with specific reference to the Chairman of the Atomic Energy Commission goes far beyond the normal responsibility which Congress has with reference to appointments which fall more peculiarly within the province of the Chief Executive's family.

UNIQUENESS OF THIS POSITION

It has been stated that the action of the Senate is confined to simply affirming or rejecting the President's nomination. I do not so interpret the significant words "advice and consent" in this case, where the situation presents the issue whether or not a certain man whom the President nominates should be confirmed for this powerful position.

Where the man is a member of his official family is one case. Where it is a question of confirming a man for a judicial position which involves whether he has sufficient qualifications and is of judicial temperament and believes in the American way, this is another situation. But where you have the responsibility, such as we have here, which would place at the head of a new political and economic creature—the Atomic Energy Commission—a creature such as has never before in the history of the world been created, then the responsibility of "advice and consent" is a matter that is of the greatest consideration.

CORESPONSIBILITY OF SENATE AND PRESIDENT

We must remember that the appointment to this position is a coresponsibility of the Executive and the Senate. The President nominates. It is only when the Senate has confirmed, that the appointment is consumated.

The situation which we are facing as Senators is, therefore, something new and virtually unprecedented. I don't think that at least my responsibility has been adequately met if I should find that the nominee has merely some limited qualifications

for the job. This job, because of its importance, calls for the highest degree of judgment on the part of the advising and consenting power in evaluating the nominee.

LEGAL BACKGROUND OF ADVICE AND CONSENT

Mr. President, I hesitate to go into great detail on the subject of advice and consent. But I do believe that a brief statement as to the constitutional and historical background of this matter is called for in connection with this unprecedented nomination.

Therefore, before I list the various reasons why I have taken my position in opposition to the confirmation of Mr. Lilienthal for this post, I should like to submit to my colleagues a brief historical review on "advice and consent." In so doing I hope to straighten out what I believe to be some misconceptions which have been previously voiced in the Senate.

THE ADVICE AND CONSENT OF THE SENATE

Article II, section 2, clause 2, of the Constitution of the United States, provides that the President "shall nominate and, by and with the advice and consent of the Senate, shall appoint Ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for and which shall be established by law."

This provision was not in the first draft of the Constitution which proposed to give all of the appointing powers, insofar as was not otherwise provided for in the Constitution, exclusively to the President. The same draft, however, gave to the Senate the power to appoint ambassadors and judges of the Supreme Court. The advice and consent of the Senate, and the appointment by the President of ambassadors, ministers, consuls, and judges, was afterwards reported by a committee as an amendment, and was unanimously adopted. (Story, Commentaries on the Constitution of the United States, fifth ed., vol. II, pp. 351–352.)

This mode of appointment to office seems entitled to peculiar commendation. It is definitely preferable to selection by the President alone, without any check, or by the more cumbersome concurrence of both Houses of Congress, or by the electorate.

The grant of this power to the Senate was strongly opposed by John Adams who engaged in a friendly correspondence with Roger Sherman on this point. In reply to Adams' objections that this power would lessen the responsibility of the President, focus attention of the country on the Senate in executive matters, excite ambition in the Senate, and involve the Senate in strictly partisan matters, Mr. Sherman replied:

"It appears to me that the Senate is the most important branch in the Government, for the aid and support of the executive, for securing the rights of the individual States, the Government of the United States, and the liberties of the people.

"The Executive is not to execute its own will, but the will of the legislature declared by the laws, and the Senate, being a branch of the legislature, will be disposed to accomplish that end; and advise to such appointments as will be most likely to effect it; from their knowledge of the people of the several States they can give the best information (as to) who are qualified for office. And they will, as you justly observe, in some degree lessen his responsibility, yet will he not have as much remaining as he can well support? And may not their advice enable him to make such judicious appointments as to render responsibility less necessary? No person can deserve censure when he acts honestly according to his best discretion." (Pitkin, A Political and Civil History of the United States, 1828, vol. 2, pp. 285–291.)

Alexander Hamilton discussed with care this provision of the Constitution in the Federalist (No. 76). In reply to the question, "To what purpose then require the cooperation of the Senate?" he stated:

"I answer that the necessity of their concurrence would have a powerful, though, in general, a silent operation. It would be an excellent check upon a spirit of favoritism in the President, and would tend greatly to prevent the appointment of unfit characters from State prejudice, from family connection, from personal attachment, or from a view to popularity. In addition to this, it would be an efficacious source of stability in the administration."

In discussing the reason for not placing the exclusive power of appointment in the President, Story points out that such power assuredly would be abused except in the hands of a President of great firmness, integrity, and public spirit. He concludes that the requirement of consent of the Senate was a wise precaution.

Under article II, section 2, clause 2, the President is to nominate, and thereby he has the sole power to make the selection for the office; but his nomination cannot confer office, unless approved by the Senate. (See *Marbury* v. *Madison* (1803), 1 Cranch. 137, and *U. S.* v. *LeBaron* (1857), 19 How. 73.) His responsibility and the Senate's is complete and distinct. He can never be compelled to yield to the Senate's attempt to obtain appointment of a man unfit for office. On the other hand, the Senate may withhold its advice and consent from any candidate who, in its judgment, does not possess due qualifications for office. The consciousness of this check will make the President more circumspect and deliberate in his nominations for office. He will feel that, in case of a disagreement of opinion with the Senate, his principal vindication must depend upon the exceptional character of his nomination. And in the case of a rejection, the most that can be said is, that he had not his first choice. He will still have a wide range of selection; and his responsibility to present another candidate, entirely qualified for office, will be complete and unquestionable (Story, p. 354).

It is not to be expected that the Senate will ordinarily fail to consent to the appointment of a suitable person for office for there will be a responsibility to public opinion for this failure, which will overcome all common private wishes. The greater danger probably lies in a tendency to yield to the wishes of the President rather than to interpose to prevent an unsuitable choice.

All of the foregoing should be especially considered in view of the provisions of the Atomic Energy Act of 1946.

I should like to list now the various factors that I have evaluated and that I am sure my colleagues have evaluated.

Of course, my fellow Senators have undoubtedly seen the poll in the newspapers indicating that this nomination will be confirmed, based upon present vote commitments. This does not for one moment relieve those of us who have not committed our votes to report on our weighing of the pertinent factors in this decision.

What then are the factors?

BASIC QUALIFICATIONS

1. The most important factor is, of course, the basic qualifications of Mr. Lilienthal for the post—technical, administrative, judicial. Rarely have qualifications so diverse been necessary in a nominee for the adequate handling of so vast an enterprise. Pertinent to this question are considerations of the nominee's temperament, his ability to handle people, handle money, handle vital secrets, to cooperate with authorities at all levels of government—national and international.

In this connection, we may note a second factor—the gearing of the nominee's qualifications into his duties.

NATURE OF DUTIES

2. It is obvious to all that the position of Chairman of the Atomic Energy Commission is one of the most powerful and critical positions in this Nation today. Yes, in the world in this new atomic age.

Mr. President, on reading Public Law 585 of the Seventy-ninth Congress, "An act for the development and control of atomic energy," we note the unprecedented powers of the five-member Atomic Energy Commission, of which Mr. Lilienthal would be Chairman. The Chairman would have under him the General Manager and Divisions of Research, of Production, of Engineering, and of Military Application. The Commission itself will exercise its powers for the continued research into the vast, unexplored fields of nuclear processes, atomic energy, fissionable and radioactive materials.

The Commission will be the exclusive owner of all facilities for the production of fissionable material other than certain facilities specified in the act. It will have title to all fissionable materials in the United States. It alone will issue licenses for any person to manufacture, produce, or export any equipment or device utilizing fissionable material or atomic energy. It will engage in the production of atomic bombs, atomic-bomb parts, and other military weapons utilizing fissionable materials.

It will own all facilities, equipment, and materials heretofore utilized in Government atomic research. It will handle the dissemination of restricted data on atomic energy in such a manner as to insure the common defense and security. With the consent of the agency concerned, it will utilize or employ the services of the personnel of any Government agency or any State or local government or voluntary or uncompensated personnel to perform such functions as the Commission may deem advisable.

It will determine compensation for any property or interest therein taken or requisitioned pursuant to the act. It will have the power to make application to the appropriate court for enjoining any acts or practices which it regards as constituting a violation of the Atomic Energy Act.

These and many more provisions indicate the unparalleled scope of the chairman's and the Commission's powers.

JUDGMENT OF JOINT COMMITTEE

3. Ordinarily, I would give very substantial weight to the judgment of any Senate committee which has considered a matter such as this as extensively as has the Atomic Investigating Committee. Its 8-to-1 vote on behalf of the nominee is a matter which must be given due respect by all Members of the Senate. Nevertheless, I do not regard the committee's judgment as final and as automatically binding upon me in this particular case because of the tremendous importance of the new and vital issues involved, and the necessity for each Senator weighing the whole matter in accordance with his own conscience. I repeat, the Senate is a fundamental part of the appointing power. The President nominates, our duty is to advise and consent, and advice and consent never meant so much before.

OBJECTION OF FELLOW SENATOR

4. I do not believe that the objection raised so strongly by my colleague, the senior Senator from Tennessee, to the effect that the nominee is personally obnoxious to him, is determinative. Certainly this objection has vitality, but on the basis of the available precedents which I have personally had compiled in a Senate Judiciary Committee print, I believe that the objection of obnoxiousness has no determining effect when the nominee is to fill an office which is not exclusively within the objector's jurisdiction.

VIEWS OF PEOPLE

5. Another factor to be considered is the judgment of the American people. One phase of that judgment is expressed in mail from the folks back home. But, unfortunately, a vast proportion of this mail has been of an inspired character with individuals submitting to the Senators, not thoughts which they have arrived at after individual judgment based on evidence, but canned thoughts that they have been directed to present by one pressure group or another. These inspired communications, therefore, must, unfortunately, be considerably discounted.

NOMINEE'S PHILOSOPHY

6. Another and vital factor is the fundamental political philosophy of the nominee. I refer to the philosophy which will characterize his judgment on a multitude of economic, political, and social problems which he will face—a philosophy which will undoubtedly bring him to appoint men with a similar philosophy—men of subordinate position under his jurisdiction; a philosophy that will come to be regarded in large measure by our own people and the peoples of the world as constituting "the American position" and "the American philosophy" (on atomic energy) in this critical age.

Those are some of the factors which I have sought to bear in mind, judging them on their own merits and character and then together into a complex whole.

Hearsay evidence, rumors and gossip, attempts to smear the nominee, or to paint him as an angel, must all be discounted.

MY CONCLUSION

After weighing all of the above factors in the public interest, it is my judgment that the paramount welfare of the American people requires that I cast my vote in opposition to the confirmation of Mr. Lilienthal as Chairman of the Atomic Energy Commission.

MY REASONS FOR OPPOSING THE CONFIRMATION OF DAVID LILIENTHAL

The following are my reasons for opposing the confirmation of Mr. Lilienthal:

1. Lack of public confidence in him

Mr. Lilienthal definitely does not enjoy the respect and confidence of the overwhelming proportion of the American people. Yet the Chairman of the Atomic Energy Commission must enjoy such almost unanimous respect and confidence as the people had, for example, in Mr. Baruch, if the Chairman is to serve effectively in promoting world peace and an expanding industrial economy in our country. But in the case of Mr. Lilienthal, we see at every hand nothing but bitterness, division of opinion, and dissension, regarding his nomination—qualities which cannot help but destroy his effectiveness if he were confirmed.

2. His dissension-creating quality

It is apparent that Mr. Lilienthal himself is in part responsible for much of the ill feeling against him. However capable an administrator he may be, the position of Chairman of the Commission requires more than ability as an administrator; it requires the ability to harmonize conflicting interests, to bring men together rather than to further separate them. Mr. Lilienthal has in the past, according to all impartial observers, needlessly created enemies and obstacles through his high-handed, czaristic treatment.

This quality in him could not help but split the country wide open on countless atomic issues in the future. Already the Nation is severely split over his nomination. There must be unity on this matter rather than division. Surely, in this land of one hundred and forty millions, there are capable men who could fill this post and do not have the cloud of suspicion and distrust over them that Mr. Lilienthal has.

3. He is not an indispensable man

Proponents of Mr. Lilienthal's confirmation have indicated that catastrophe will ensue unless Mr. Lilienthal is confirmed. I cannot believe that anything of the sort will occur. On the contrary, I believe that Mr. Lilienthal can very well be dispensed with and that he should be replaced by a man of Mr. Baruch's caliber, who enjoys the unlimited confidence and respect of the American people and who could be a scientist and engineer. There is grave doubt in the minds of the American people that a man can fill this job simply because he has demonstrated administrative qualities in TVA without being a scientist and an engineer.

Mr. Lilienthal is but one in a long line of New Deal prodigies of whom it has been stated that they and they alone can perform given jobs. I cannot go along with that view. No man is indispensable for any particular job, even though he has been in charge of a vast New Deal superstate like TVA.

4. Socialistic philosophy

Mr. Lilienthal is hardly an unequivocal believer in our system of private enterprise. This is evidenced by his socialistic-public-ownership position on TVA and related projects. While there are certain features of the Atomic Energy Act which provide for public ownership, nevertheless it is the purpose of the Congress that there can be maximum atomic development along the lines of private enterprise consistent with our national security and economic health.

In the declaration of policy of the Atomic Energy Act of 1946 it is declared to be the policy of the people of the United States that subject at all times to the paramount objective of assuring the common defense and security—

"The development and utilization of atomic energy shall, insofar as practicable, be directed toward improving the public welfare, increasing the standard of living, strengthening free competition in private enterprise, and promoting world peace."

The question now before Congress is whether or not Mr. Lilienthal has the kind of a philosophy which will enable him to "strengthen free competition in private enterprise." The question before Congress is whether or not Mr. Lilienthal's background, experience and philosophy, are such as to enable him to do a more effective job than anyone else in promoting world peace insofar as it is tied up with atomic energy.

I submit that there is nothing in the record which demonstrates that the nominee's experience renders him a particularly able proponent of strengthening free competition in private enterprise. I submit, likewise, that the record discloses at least a reasonable doubt with respect to establishing Mr. Lilienthal's qualifications as the man best able to promote world peace.

Opposition to Private Research

Following the declaration of policy in the Atomic Energy Act is a statement outlining the purpose of the act, and the purpose of the act, among other things, is to "foster private research and development to encourage maximum scientific progress."

I submit, Mr. President, that there is nothing in the record which particularly demonstrates the adherence of this nominee to a philosophy of private enterprise or private research, and it is, in fact, conceivable on the basis of the record that his predilection for government enterprise and government initiative might conceivably lead him to place an emphasis on government research to the possible detriment of the private research specifically mentioned in the act.

In the organization provisions of the act it is apparent that the Chairman of the Atomic Energy Commission should be peculiarly well qualified as an administrator to work with the military liaison committee, and to direct research, and to direct the protection of fissionable materials, and to direct the utilization, both private and military, of atomic energy. It is moreover apparent that the Chairman of the Commission must be a man keenly conscious of the implications inherent in any international arrangements which might be concluded with reference to atomic energy.

With respect to patents and inventions, it is crystal-clear that the Chairman of the Commission must be a man whose concern with the public welfare is integrated with his concern for the maintenance of a system which adequately protects the interests of American free enterprise.

Confirmation Means Impetus to Collectivism

I do not believe that we can entrust Mr. Lilienthal with the responsibility of encouraging private initiative. On the contrary, I believe that in confirming him we will be giving immeasurable impetus to forces of collectivism in our country and throughout the world. In confirming Mr. Lilienthal we are also in effect establishing the policy for appointments of collectivist-minded individuals all the way down the line who will serve under him. This must not occur; from the topmost level down to the bottom the Atomic Energy Commission should be staffed by men who believe in the private-enterprise system basically.

5. His lack of resistance to communism

The charge of communism has been leveled against Mr. Lilienthal, but I am not stating that Mr. Lilienthal is a Communist or is a sympathizer of communism. I am, however, stating that his record displays little, if any, evidence of resistance to communism. Yet we need to build up in America a resistance movement against communism consisting of individuals who are so devoted to our constitutional system and to our free enterprise system that they will not be susceptible to the wiles of communism, but will combat it with all the force at their command at every turn of the road. We know that countless folks in our land have been impacted and poisoned by the virus of Communists, and that they would not give resistance to the sabotaging of our free way of life.

6. Lack of bipartisanship in his appointment

As a result of the November election, the President should have given this very important nomination to a man who enjoyed the respect and confidence of both political parties, and who had been endorsed by both parties prior to submittal to the Senate. Instead, as in almost all of his appointments since November, the President has unfortunately selected a man who in no way represents the feelings of the American Republican electorate. I am not concerned about Mr. Lilienthal's party label, whatever it may be. I am concerned with the fact that he doesn't represent the views of the vast proportion of the electorate.

It is with these reasons in mind—the reasons of the public interest—that I will cast my vote in opposition to his confirmation.

We Must Conquer Fear

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a statement

which I gave to the newspapers a few days ago entitled "We Must Conquer Fear."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The newspapers and the radio are filled with direful prophecies of gloom and the American people are led to believe that the whole future is so dark that it is unfathomable and there is not even a ray of hope. I do not discount the troubled condition of the world and the many problems with which we are confronted in America, and yet I am reminded that we have had similar experiences before and somehow our country and the world have survived. I have confidence to believe that we will survive again and after a few years, when adjustments have been made, our economic situation fully reconverted and our international affairs organized upon a stable basis, with the United Nations organization prepared and equipped to deal with world problems, and functioning in the sphere of world affairs, with both authority to settle difficulty and power to enforce its decrees, we shall marvel that our spirits were so low and our apprehensions of fear so dominant.

America today needs above other things to conquer fear. The late President Roosevelt never said a truer thing than that fear itself was the one thing which we had most to fear. That is definitely true today in our domestic and international affairs. There may not be a wide distinction between courage and fear, but there is enough difference to make victory possible. A great minister said that the difference was that "courage was fear after it had said its prayers." Anyway, my thought is that if we review the present condition and look the facts straight in the face there is no occasion for gloom to settle over the domestic front, and those who are predicting a depression are doing more to create it than any of the facts of our present situation.

A depression arises from the reduced purchasing power of the people, from the inability of the farm and factory to sell their products at a profit, from the slackening of business resulting in unemployment, so that vast numbers of people are out of a job, and hence without means of support. None of these elements are present today, and yet the effort is continuous to create in the public mind fear of what is going to happen tomorrow. The attitude of fear and distrust becomes at once the most disturbing elements and not the facts of business, industry, agriculture, or labor.

The total earning power of the people of the United States for the year 1946 exceeded $168,000,000,000. The earnings for 1947 will approximate and may exceed that sum. In the deep-depression year the total earnings amounted to only $44,000,000,000. As long as the earnings continue high there is a sound market for everything produced on the farm and by industry and full employment for labor at reasonable wages.

In the four depression years of 1929 to 1933, there were over 5,000 bank failures in the United States and the banks had no money to lend for business expansion or new industries or agricultural improvements to create jobs for the American people. There has not been a single bank failure in the United States during the past 3 years and the bank had on deposit the vast sum of $166,000,000,000 the first of the year.

The people of the United States now own over $260,000,000,000 of Government bonds and the interest is paid semi-annually and an installment paid on the bonds each year which will provide a constantly increasing reservoir of funds for purchasing goods, making investments, building new homes and otherwise contributing to the general maintenance of prosperity, in our country.

The first of this year there was in force $158,000,000,000 of life insurance on the lives of the people of the United States, larger by $39,000,000,000 than it was even 6 years ago. A tremendous sum is paid to beneficiaries each year in death benefits, endowments or annuities, all of which adds to the available cash in the hands of the people to meet the demands of living and investments.

As a basis for predicting a depression following this war is the statement that we have had depressions following the other wars, and that since this was the greatest war of all time, we ought to have the greatest depression in our history. There is no justification for such a conclusion. Conditions are entirely different. The figures already cited demonstrate that. Another factor which enters into the whole situation has not been considered, which is that every State in the Union now has millions of dollars in its social security fund for the very purpose of tiding us over any period of slackening employment. The workers when unemployed will receive weekly payments from this accumulated fund which will aid in making ther self-sustaining even during a period of unemployment. When you add to this the old-age assistance, retirement and insurance benefits, you have another backlog of support against a serious depression.

I have gone into these matters in some detail because I think it is vitally important that we look ahead with confidence and hope, based upon the actual facts of our economic condition, rather than taking counsel of our fears and helping to create an atmosphere and attitude favorable to the development of a depression.

As an indication of the disposition to engage in gloomy predictions and dire prophecies of ruin, I need only quote a few in past years. These relate both to the condition of our own country and to the whole international situation. William Wilberforce said in 1790: "I dare not marry; the future is so dark." William Pitt in 1800: "There is scarcely anything around us but ruin and despair." Benjamin Disraeli in 1850: "In industry, commerce, and agriculture, there is no hope." In 1837 the Detroit Free Press: "All is darkness and despair. As a Nation we are at the bottom of the hill." In 1837 the Philadelphia Gazette: "Nothing in this country is safe, solvent, or reliable." And as late as 1907 the Wall Street Journal said: "The old ship of state is sinking." Many more quotations could be given to similar effect. However, it remained for Harper's Weekly, under date of October 10, 1857, to paint this picture:

"It is a gloomy moment in history. Not for many years—not in the lifetime of most men who read this paper—has there been so much grave and deep apprehension; never has the future seemed so incalculable as at this time. In France the political caldron seethes and bubbles with uncertainty; Russia hangs as usual, like a cloud, dark and silent, upon the horizon of Europe; while all the energies, resources, and influences of the British Empire are sorely tried and are yet to be tried more sorely, in coping with the vast and deadly Indian insurrection and with the disturbed relations in China. It is a solemn moment and no man can feel an indifference—which, happily, no man pretends to feel—in the final issue of these dark and disastrous events. Of our own troubles in the United States, no man can see the end."

How like so many speeches, editorials, and radio comments today. But 90 years have intervened since that was written and America today is the greatest and most powerful Nation in the world, and we have in this country 140,000,000 people who are in better financial condition and have more of the material benefits and comforts of life and with a higher standard of living than at any other period of our history.

We are going forward in our efforts to bring to the world the realization of its age-old dream of universal peace, and if we will cease talking war, and desist from trying to create a depression, we shall have a good chance of achieving our great goals of prosperity and peace at home and abroad.

I plead for that courage that will conquer fear.

Popular Election of President

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. LODGE. Mr. President, I ask to have printed in the Appendix of the RECORD two editorials on the subject of popular election of President.

There being no objection, the two editorials were ordered to be printed in the RECORD, as follows:

[From the Fall River (Mass.) Herald-News of March 24, 1947]

ELECTING A PRESIDENT

The controversy over a change in the Federal Constitution that would abolish the electoral college and provide for the election of a President and Vice President by direct popular vote is being revived. Senator LODGE, of Massachusetts, is the sponsor of a resolution in Congress that calls for the change. The present procedure in elections, whereby votes are cast for members of the electoral body, rather than directly for the candidates for the high offices, has been so frequently explained that it is generally understood. Also understood is the possibility that, through State unit voting in the electoral college, candidates who have actually received a minority of the popular vote may be declared elected over others who have shown greater strength at the polls.

It is pointed out in support of the change that such a situation has already arisen in three instances in the history of the country and is likely to arise in any sharply contested election. In such an outcome, it is argued, the rule of the majority, as a fundamental principle in a democracy, is defeated. The intent of the framers of the Constitution in approving the electoral college was to give the sparsely settled States a better representation in the election of the President in relation to the political strength of the big centers of population. Previous attempts to introduce a change have ended in debate. The new movement to bring it about will test the present trend of popular sentiment regarding it.

[From the Haverhill (Mass.) Gazette of March 26, 1947]

POPULAR VOTE FOR PRESIDENT

News that Senator HENRY CABOT LODGE has reintroduced in Washington a resolution calling for a constitutional amendment to do away with the electoral college and provide for election of President and Vice President by popular vote brings up all the old arguments against the present, outdated system.

Briefly, LODGE doesn't like "the obsolete electoral college" that "makes possible the election of a man as President who has not received a majority or plurality of the popular vote." He introduced his measure in Congress back in 1941, was called into the service, and now is stumping for it again.

We think a poll of the American people would reveal that a large percentage of them are all but unaware their direct votes don't

elect the President, that if they were acquainted in detail with the present system they would favor the Lodge proposal.

The general and typically American impatience with the Georgia electoral system, that gave the late Gene Talmadge victory over an opponent who collected some 16,000 more popular votes, suggests what the attitude might be.

Indeed, what LODGE dislikes has happened more than once in United States history. Lincoln was chosen President in 1860 with 1,866,452 votes, while his opponents polled 2,815,617. Hayes and Benjamin Harrison did not receive even a popular plurality, standing lower in the scale than their principal rivals.

Historians have written for decades that the electoral college system has never been what it was intended to be by its originators, a council of the country's ablest men, exercising an independent choice of a Chief Executive.

With the rise of political parties and machines the dignified system envisioned by the original planners has gone out the window. In fact, some critics of the present system term the electors mere dummies who vote for the candidate of their party for President, the candidate nominated by a party caucus or convention, wholly outside constitutional provisions.

Opponents of the popular-vote method claim anything but the electoral college system would be too slow, too cumbersome for the United States, that the total popular vote may take months to count. But present-day communications, it seems to us, rule out any such delay. In many countries outside the United States the popular vote is tabulated in a matter of days with less efficient machinery than we possess. A count of all but negligible segments of the popular vote is sometimes necessary even under the present system.

Now that LODGE has brought the measure up again, it should be given wide publicity, placed before the voters so they can judge for themselves which system they want. Pure democracy exists nowhere in the world, is not possible among more than a handful of people, but in a country that lives by the closest thing to true democracy in the world today, the popular vote would seem to be a prerequisite to conscientious government.

War or Peace?

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Will It Be War or Peace?" published in the Camden (N. J.) News of March 13, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL IT BE WAR OR PEACE?

(By Al Rose)

Will events in Europe lead to war or peace? At Moscow a most important conference is being held by foreign ministers of the four great powers in the world. In Washington President Truman has just asked Congress for $400,000,000 to aid Greece and Turkey. In China there is civil war. There is unrest in many areas. History is repeating itself and there are many similarities between present events and those leading up to World Wars I and II. Whether you want to believe it or not, the United States is facing its mos critical period in all its history. That includes the perilous days immediately after the Jap sneak attack on Pearl Harbor when few Americans realized how badly we were hurt. Now after the war is over and all the facts have been published, Americans now realize that we had no Pacific Fleet and little defense the first few months after that attack. But we rallied quickly.

Today most Americans are more interested in getting a new automobile or more sugar than in world affairs. The News wants to wake you up about the dangerous situation and the nearness we are to war again. Forget a little about your personal pleasures and wants and think about your country and its future. Without a safe Nation, all the autos, all the sugar, and all the worldly goods won't help you much. It will be too late then. Americans always are too prone to wait until the fight starts to get worked up. This time let us stop the fight before it starts. How? That is the problem. Start thinking about the President's plea. Greece today is the Manchuria before World War II. Turkey is almost as bad as the Ethiopian situation, and China today is the Spain of pre-World War II days.

Whether you like it or not, Russia is crowding the United States hard. The Reds are playing their cards close to the vest, and they have a huge standing army, lots of tanks, and the world's largest air force. That armed force is trained to the minute. The Soviet has not demobilized. It has armed men stationed all over its domain and on borders ready to spring into action, be it Greece or China or Turkey.

America must give aid to Greece and Turkey now. But we must have some strings attached to it. We must not be the tail to the British kite any longer. The British Empire is no more. Great Britain is great in name only. It is bankrupt and has become a second-rate power. World War II was the finishing blow to this once mighty Nation. Whenever a country as haughty and as proud as Britain comes to the United States or any other nation begging, you know it must be in dire straits. It has done that. The British have informed this Government that it cannot meet its financial commitments any more. It is broke. It took a lot of courage for the British to do that. We do not admire everything the British do. They have gotten under our skin a lot, but one thing we do know, the British have saved our hides many times by playing world policeman and patrolling the sea lanes. Now the British are done. They cannot protect us any more. It is either the United States or the Russians. We are the only two great powers left. France is a weakling. China is beset by civil strife. We have no other allies save the staunch South American friends, but they look to us and they have no large armies or navies. Therefore, it is the United States on one hand against a Russian-controlled Europe and China, unless we step in now and try to save the pieces.

Secretary Marshall is the best man for the job now but he can't bluff forever. The Reds know the condition of our armed forces. He can stall and he can talk tough but he must have something to back him up.

We must step into Greece and aid that gallant nation to save itself from the Reds and also the old imperialistic British plan. We must help the Turks stave off the Red thrust at the Dardanelles and our vital oil pipe lines. Oil is the key to all wars and also the key to peace.

Camden and Ouachita County people, the News asks you to start thinking about this problem. Then do a lot of praying about it. Ask God for divine help and guidance. Pray for this country now. Our leaders need help and need it badly. Write your Congressmen and Senators and let them know you are thinking about this crisis. If we go into Greece and help Turkey, we are in there for keeps. It may stop a war. It may not. But we can't sit back and let the Russians gobble up everything, for that means war most certainly and then it will be the United States alone against most of Europe and Asia.

Think this over and do not let the myth of peace blind you to the cruel facts that are staring us in the face.

Will it be war or peace?

Implications of Grecian-Turkish Loan Proposal

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from Statewide, Idaho's illustrated news weekly, on the subject of the proposal for military involvement in Greece and Turkey.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEACE—IT'S MONOTONOUS

Congress received its toughest postwar problem last week—perhaps one of the toughest in American history—when President Truman proposed a half-billion-dollar grant to arm Greek and Turkish troops for the purpose of blocking Communist expansion in the Mediterranean.

The amount of money involved, although a large sum, is in no way as important as whether approval of the Truman proposal would speed the United States down the road to World War III. All signs indicate that it would.

The proposal, which amounts to establishment of an American army of mercenaries in Greece and Turkey, is certainly not a gesture for continued peace. It would not stop Russian expansion. Rather, it would goad it on to greater efforts. The reaction of Russians to the idea can be judged by what ours would be if Russia were to spend a half billion dollars building Communist armies in Canada and Mexico.

At the same time, Truman's proposal works at cross purposes to our Nation's avowed support of the United Nations organization. If the security of Turkey and Greece is being threatened by Russia, now is the time to test the strength and machinery of UN. That was the purpose for which it was established. If our country turns to the old system of secret diplomacy, which is the basis of the Truman proposal, and rejects the UN as a vehicle for peace, then we are guilty of scuttling that organization in its infancy, just as we were guilty of killing the League of Nations at birth.

The President's request for funds for Greek and Turkish armies is an open declaration that the United States believes that the UN won't work. And it certainly won't unless member countries have faith and a desire to see the objectives accomplished. Congress should reject the proposal and urge the President to take the matter before the United Nations organization.

Robert E. Lee, the American

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Fred P. Myers, commander in chief of the Sons of Confederate Veterans, in Statuary Hall of the United States Capitol, upon the occasion of the celebration of the one-hundred-and-fortieth anniversary of the birth of Robert E. Lee. The celebration was held under the auspices of the United Daughters of the Confederacy on January 18, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is interesting, fitting, and inspiring to us of the Southland, and especially to us of Virginia, to meet each year in this place, at different times, to honor the memory of the two great American patriots whose statues are placed in this Hall of Fame by the proud State which gave them birth. Each in his day led his State in a war for independence—one for our common country, the other for a particular part of that country. Both are honored of all men for the rectitude of their purpose and for their heroic struggle in striving for its accomplishment. One achieved victory; the other suffered defeat, but both now stand in the Hall of Fame of the National Capitol as the first citizens of their native State, and foremost among the Nation's great.

Thus Robert E. Lee and George Washington stood on the same ground at different times, both were faced by the same alternative, and both followed the same difficult course in different circumstances.

First, they had substantially the same background of culture and held similar views of their vested rights.

Second, both reluctantly broke sacred ties in obedience to a stern sense of duty.

Third, both did the brave and daring thing in manfully espousing a cause for the right as they saw it in the face of superior might.

Fourth, both stood on the bold assertion of their ancient and sacred rights for the principle of local self-government in local affairs as a part of their common heritage.

Fifth, both contributed to the understanding and stability of the constitutional system under which each lived.

Sixth, both brought world-wide renown to American arms and character to American soldiery.

No man is glorified and memorialized for the mere unmitigated fact of being a fighter. But we honor a soldier when he is more than a soldier and exhibits those heroic and self-sacrificing qualities that appeal to the best in human nature in manfully contending for a cause in which he is willing to die. For no man is fit for leadership in any cause unless he is willing to die in that cause.

From his ancestry, Lee rather naturally drifted to the profession of arms, although in his later years in a letter to General Ewell, he seemed almost to regret it. His traditions of soldiery were those of knighthood and chivalry, and to them he brought the stern righteousness of the Puritan and the militant spirit of the Ironsides of Cromwell.

As a cadet at West Point Lee unconsciously and unintentionally gravitated into a position of leadership with the highest admiration and respect of his fellow cadets. Col. John Macomb, of the United States Army, said that when he entered West Point in 1828 he found Lee the prominent figure of the cadet corps of that time. Like Washington in his day, he was spontaneously chosen to settle disputes between his fellows. Although the practice was then rife, the cadets did not attempt to haze Lee. He graduated second in his class without a single demerit.

In recognition of his promise as a soldier and his character as a man, Gen. Winfield Scott appointed Lee as Chief of Engineers on his staff. That confidence was more than justified by Lee's distinguished service in the Mexican War, in which his insight made possible the two victories that insured the success of the major objective of the campaign against the capital of the enemy country. Later when the darkening clouds of war were settling over our land, and the approaching crisis called for the most momentous decisions, General Scott was so well impressed with Lee that he influenced President Lincoln to offer him the chief command of the National Army. He said: "Col. Robert E. Lee is the greatest soldier now living, and if he ever gets the opportunity, he will prove himself the great captain of history." Another time he said that Lee's services were "worth millions a day to any government." When the offer of appointment by President Lincoln was rejected by Lee and his resignation seemed imminent, General Scott passionately cried, "For God's sake don't resign, Lee." The calm but resolute reply was, "I am compelled to; I cannot consult my feelings in this matter." Much as Lee dreaded and regretted the apparent necessity for secession, he did what he considered his highest duty, followed the allegiance to the highest sovereignty in his native State in the almost universally recognized right of secession. According to John Drinkwater, it was no longer a matter of wisdom. The die was cast and the time had come for action regardless of consequences. His rightful duty was his only consideration.

Although Lee had said: "I can anticipate no greater calamity for the country than the dissolution of the Union * * * still a Union that can be maintained only with swords and bayonets, and in which strife and civil war are to take the place of brotherly love and kindness, has no charms for me. If the Union is dissolved and the Government dispersed, I shall return to my native State and share the miseries of my people and, save in defense, will draw my sword no more." Upon accepting appointment to command of the Virginia forces, he said: "I would much have preferred had your choice fallen upon an abler man. Trusting in Almighty God, and approving conscience, and the aid of my fellow citizens, I devote myself to the service of my native State, in whose defense alone will I ever draw my sword."

Lee fought not as an aggressor against the Union, but in defense of his native State and her confederates of like belief on behalf of what he considered their sovereign rights to determine for themselves their ultimate allegiance, and to be protected in that position. He did not believe in the system of slavery, and that was not the cause for which he fought; he did believe in the ultimate and sovereign right of self-determination of the State. That was the right which he sought to defend. He opposed secession, not on the question of right, but of expediency, and regretted the apparent necessity for its exercise. But as a soldier, and a loyal citizen to what he believed his highest sovereignty, he subordinated himself and his fortune to the majority of his fellow citizens, in the conviction that only those who can first obey, can be trusted with leadership or command.

The record of General Lee is too well known to be here recounted, for it has become a proud chapter in American character and American arms. He far exceeded the opinion of General Scott. Maj. Gen. Sir Frederick Barton Maurice, Director of Military Operations, Imperial General Staff, professor of military studies in the University of London, and author of "Robert E. Lee, the Soldier," and other works said: "As a general, Lee's chief characteristics were his rapid grasp of the possibilities of a military situation, his skillful use of interior lines of communication, capacity for guessing what was in the minds of his opponents, and for his understanding of their weaknesses. Few commanders have excelled him in the power of arousing devotion in his men. * * * Beyond and above all this, Lee's great contribution to the art of war was his understanding of the part field defenses could play in aiding maneuver. In this he was years ahead of his time, and it was not until the beginning of the twentieth century that his methods were fully understood and applied in the military world. His high character, his moral courage, his noble nature, and his mastery of the art of war, make Robert E. Lee a notable figure in the pages of history."

The campaigns of Lee and those conceived and directed by him, as the Valley campaign and others, have been the objects of intensive and profitable study for many years on both sides of the Atlantic.

But Lee in defeat was even more impressive than Lee in victory. It is in misfortune that the character of the truly great and upright man appears most impressive in bold relief against the somber background of the situation in which he is placed, and when all else fails, he stands in undisturbed calm upon his integrity and his character. That was his last impregnable fortress.

Surrounded by the tattered remnants of that proud array with which he had dealt the Union Army many a crushing blow, amid the devastation of his native State, in the shadow of defeat and the despair of what many then called a lost cause, the character of Lee stood out in lonely grandeur and with a dignity that only the great and noble could maintain. Without bitterness, in humility of spirit, with a name more glorious in misfortune, and with an unimpaired faith in the ultimate rightness of things, he accepted the verdict of the sword and devoted his interests and energies to the arduous work of recovery, reconstruction, and peace. As president of a then small college which he made famous and upon which he left the indelible stamp of his character, and to which posterity has added his immortal name, he became a beacon of hope and an inspiration to the youth of his land to call their faces from the sad beauty and departing visions of the afterglow of the sunken Confederacy to the hopeful dawn of a new South of proud and sacred memories.

Lee courageously chose to abide by the results of the war and refused to desert his State in her deep distress. Although urged by many, both North and South to do so, he refused to apply for a pardon from the Federal Government while threats of prosecution were pending, and died technically a paroled prisoner of war. He resolved to face what he may as a man who had followed the guidance of an approving conscience and a clear sense of duty, regardless of consequences. By invitation, he appeared before a committee of Congress and, in response to questions, expressed the opinion that the results of the war were accepted in good faith by the southern people, and that he knew of nothing to the contrary.

Lee's attitude of resignation to the inevitable and his calm acceptance of defeat is in the following words expressed to a chaplain at Washington and Lee University: "Yes, it is all very sad, and might be a cause of self-reproach, but we are conscious that we have humbly tried to do our duty. We may, therefore, with calm satisfaction trust in God and leave results to Him."

To Matthew F. Maury, Lee wrote: "As long as virtue was dominant in the Republic, so long was the happiness of the people secure. I cannot despair of it yet. I look forward to better days, and trust that time and experience, the great teachers of men, under the guidance of an ever-merciful God, may save us from destruction, and restore to us the bright hopes and prospects of the past. The thought of abandoning the country and all that must be lost in it is abhorrent to my feelings, and I prefer to struggle for its restoration and share its fate, rather than give all as lost. * * * I still look with delight upon the mountains of my native State. Virginia has need for all of her sons, and can ill afford to spare you." In similar vein he wrote to General Beauregard, as follows: "I am glad to see no indication in your letter of an intention to leave the country. I think the South requires the aid of her sons now more than at any period of her history. As you ask my purpose, I will state that I have no thought of abandoning her unless compelled to do so."

Lee brought character to soldiery and dignified its profession with his magnanimous example. We honor him as a soldier, but more as a gentleman, who could fight without being embittered by war. Throughout the tragic days of war and the vindictive times of the reconstruction period, he remained the unshaken Christian, uncontaminated by the ugly spirit of the time. He referred to his opponents as enemies only in a military sense, and usually as "those people." It is, perhaps, fortunate that Lee was a soldier, for he demonstrated what manner of man a soldier can and should be even in the grim business of his profession. As the mountain peak appears in the sunlight of heaven above the tempests and mists of the valley below, so the magnanimous character of Robert E. Lee towers far above the turbulent hysteria of the unhappy days of his later life. That character alone did much to disarm hostility toward the South during that time which a northern historian recently referred to as "the crime of reconstruction."

The attitude and the influence of Lee in those troublous times of reconstruction appears in a reply to an overzealous minister of the Gospel in a bitter denunciation of their late enemies. Lee said: "Doctor, there is a good book which I read and you preach from, which says, 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you' * * * I have fought against the people of the North because I believed they were seeking to wrest from the South dearest rights. But I have never cherished toward them bitter or vindictive feelings, and I have never seen the day when I did not pray for them." In his letter conditionally accepting the presidency of Washington College, now Washington and Lee University, Lee said: "I think it the duty of every citizen, in the present condition of the country, to do all in his power to aid the restoration of peace and harmony, and in no way to oppose the policy of the State or General Government directed to that object. It is particularly incumbent upon those charged with the instruction of the young to set them an example of submission to authority." To the then former Governor Letcher he wrote: "The interests of the State are therefore the same as those of the United States * * * All should unite in honest efforts to obliterate the effects of war and to restore the blessings of peace."

In announcing the acceptance of General Lee as president of (then) Washington College, the minutes of the board of trustees of September 1, 1865, contains the following paragraph: "In dedicating his future life to the holy work of educating the youth of his country, General Lee presents a new and interesting phase of his grand and heroic character—a character than which no more perfect model exists among living men. 'Tis a solid fabric and will well support the laurels that adorn it.' Let the young men of the country, North as well as South, be wise, and profit not less by his precepts than by his great example."

The Americanism and the good citizenship of General Lee stand out in shining emphasis amid the turmoil of his day. To the bitter comments of a southern lady on the troublous times, he replied: "Madam, don't bring up your sons to detest the United States Government. Recollect that we form one country now. Abandon all those local animosities and make your sons Americans." When there developed a widespread and persistent sentiment to elect him Governor of Virginia, General Lee said in a letter to his chief sponsor: "I believe it (election) would be used by the dominant party to excite hostility toward the State, and to injure the people in the eyes of the country; and I therefore cannot consent to become the instrument of bringing distress upon those whose prosperity and happiness are so dear to me. If my disfranchisement and privation of civil rights would secure to the citizens of the State the enjoyment of civil liberty and equal rights under the Constitution, I would gladly accept their deprivation in their stead." In another letter to Senator Cabell on the same subject, he said: "I believe my election would be injurious to Virginia, and I cannot therefore consent to become a candidate."

The magnanimous private character of General Lee in all his contacts as a commander, as president of a college, and as a man can be understood by the secret code that was only after his death found among his private papers. It is as follows: "The forbearing use of power is not only a touchstone, but the manner in which an individual enjoys certain advantages over others is a test of a true gentleman. The power which the strong have over the weak, the employer over the employed, the educated over the unlettered, the experienced over the confiding, even the clever over the silly—the forbearing or inoffensive use of all this power or authority, or a total abstinence from it when the case admits it, will show the gentleman in a plain light. The gentleman does not needlessly and unnecessarily remind an offender of a wrong he may have committed against him. He can not only forgive, he can forget; he strives for that nobleness of self and mildness of character which imparts sufficient strength to let the past be but the past. A true man of honor feels humbled himself when he cannot help humbling others."

So far as one person can understand the religion of another, it appears that the religion of Robert E. Lee was that of a gentleman rather than that of theology. Although in his early life he was under the Christian influence of a sainted mother and Bishop Meade, he revolted from some of the sometimes violent and intolerant expressions of the church of his day, and did not present himself for confirmation until he had reached the age of 45 years. He loved the influence and the service of his church and carried with him the Book of Common Prayer as a constant companion and a sacred treasure. He was a Christian gentleman, not by virtue of a creed, but by the spirit of good will, brotherly love and a just consideration of others. His was the soul of kindness as the first impulse of a kind heart. Courtesy and his courtly manners were not matters of mere form, but the natural expression of his attitude toward others, and his dignity was an expression of his self-mastery and self-respect. His momentous decisions were the expression of a stern sense of duty which he defined as the sublimest word in our language. His was the natural religion of a good man with profound faith in a good God. That faith in the constant guidance of God in human affairs, and in His law of the ultimate rightness of things, helps us to understand his secret of calmness unspoiled by victory and unbroken by defeat. In victory, he gave the glory to God; in defeat, he accepted the result as the inscrutable will of the same God. Thus as a storm-lashed ship on an angry sea, the character of Lee went grandly on in unshaken faith and humble dignity. He would say with Shakespeare, "There is a divinity that shapes our ends, rough-hew them as we may."

It is therefore natural that Lee's favorite hymn was How Firm a Foundation, ending with the words:

"When through fiery trials thy pathway shall lie,
My grace, all-sufficient, shall be thy supply;
The flame shall not hurt thee; I only design
Thy dross to consume and thy gold to refine."

General Lee was even before his death regarded with honor and admiration by his enemies. General Grant and his staff came in eager to see and admire their great and respected foeman. Upon his return to Richmond from Appomattox, the Federal soldiers always made way for him and paid him a soldier's honor when he passed.

Upon the occasion of the death of General Lee, a leading New York paper said editorially, in part: "We have long ceased to look upon him as the Confederate leader, but have claimed him as one of ourselves; have cherished and felt proud of his military genius as belonging to us; have recorded his triumphs as our own; have extolled his virtues as reflecting upon us. Robert E. Lee was an American, and the great Nation that gave him birth would today be unworthy of such a son, if she regarded him lightly. * * * In him all that was pure and lofty in mind and purpose found lodgment. Dignified without presumption, affable without familiarity, he unified all those charms of manner which made him the idol of his friends and of his soldiers, and won for him the respect and admiration of the world. Even as in the days of his triumph, glory did not intoxicate him, so, when the dark clouds swept over him, adversity did not depress. From the hour that he surrendered his sword at Appomattox to the fatal autumn morning, he passed among men, noble in his quiet, simple dignity, displaying neither bitterness nor regret over the irrevocable past. He conquered us by the grand manner in which he sustained himself, even as he dazzled us by his genius, when the tramp of his soldiers resounded through the valleys of Virginia.

"For such a man we are all in tears and sorrow today. Standing beside his grave, men of the South and men of the North can mourn with all the bitterness of 4 years of warfare erased by this common bereavement. May this unity of grief—this unselfish manifestation over the loss of the Bayard of America—in the season of dead leaves and withered branches which this death ushers in, bloom and blossom, like the distant coming spring, into flowers of heartier accord."

Today we honor ourselves, our southland, and our common country in thus honoring the memory of this great and good man, this matchless leader and faithful comrade of our fathers, for in his character are combined the chivalrous instincts and courtly manners of a gentleman, the stern sense of righteous duty and self-sacrificing courage of a hero. Robert E. Lee is today more than an object of southern veneration and pride; he is a great American, a man whose life is an inspiration and whose memory is a benediction.

Back to the United Nations

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask permission to have printed in the Appendix of the RECORD an address on the subject Back to the United Nations, delivered by Hon. Henry A. Wallace, editor of the New Republic, at Madison Square Garden, New York City, March 31, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here tonight because we want peace.

We are here tonight because we mean to have peace.

We are here tonight to state that the Truman doctrine endangers peace.

We are here tonight to assert that peace requires Americans to reject that doctrine and reaffirm their faith in a strong United Nations.

Our soldiers did not win one war to fight another. Our workers and farmers toiled for freedom not for fear. Our dead did not bequeath to their children a legacy of death.

The world is hungry. The world cries out, not for American tanks and guns to destroy more lives and leave more hunger, but for American plows and food to fulfill the promise of peace.

The world is afraid. The world cries out, not for an American crusade in the name of hatred and fear of communism, but for a world crusade in the name of the brotherhood of man.

All of America's history was consecrated to that ideal. It was tested and proved in a great civil war. Twice in this generation Americans have fought for a free humanity. Today we come to a turning in freedom's road. Today America is in danger of turning aside.

In the name of crisis the President asks America to help the governments of Greece and Turkey.

In the name of crisis America is asked to ignore the world tribunal of the United Nations and take upon herself the role of prosecutor, judge, jury—and sheriff—what a role!

In the name of crisis facts are withheld, time is denied, hysteria is whipped up. The Congress is asked to rush through a momentous decision as if great armies were already on the march. I hear no armies marching. I hear a world crying out for peace.

Once a President of the United States faced the dissolution of the Union itself—a real crisis. "My countrymen one and all," said Abraham Lincoln, "think calmly and well upon this whole subject. If there be an object to hurry any of you in hot haste to a step which you would never take deliberately, that object will be frustrated by taking time; but no good object can be frustrated by it."

We too must think calmly and well upon this whole subject.

Nineteen days ago the President of the United States told the Congress that the people of Greece were hungry and needed our help. Was this news to the President? Or to the Department of State which advises him? Every responsible member of the Government has known since the war ended that Greece lay in ruins and that famine was at the throat of her people. Every responsible member of the Government and every Member of Congress knows today the hunger, poverty, the devastation which rides over Poland, Italy, Yugoslavia, the Ukraine, and White Russia. Seventy percent of the livestock of Poland has been destroyed. The children of Italy and Yugoslavia wear rags for clothes. Millions of the people of central Europe have no shoes to wear. Ten million people in the Ukraine are homeless. Do these facts constitute a crisis? Or is a man's belly empty only when his mind is full—full of approved thoughts?

The welfare of all peoples is our concern. Famine anywhere endangers plenty everywhere. Progress anywhere helps progress everywhere. Action to help the world must help America. But not the action the President proposes. The needs of a desperate people are being exploited, just as the generosity of the Americans is being exploited—for other ends. The truth is that the President and his Republican backers are less concerned with the need of the Greek people for food than with the need of the American Navy for oil. The plan to contain communism is second to that need. For every glamorous admiral who boasts, it is "Nobody's damn business where we go," there are 10 drab but practical procurement officers to add, "and we'll get there with Middle East oil."

America is rich in oil but thinks she needs more for the greatest navy and air force in the world. When Britain competes for these resources, we settle our differences as friends. When Russia, competes for them we sound a fire alarm and thank God for the atom bomb. Why? Great nations including Russia and America struggled for oil long before there were Communists in the Kremlin. Poverty, which causes communism, will be ended not by beating drums of hatred, but by world planning. I shall not blame America alone for present tensions, and I shall criticize Russia when I think Russia is wrong. But I do assert that a great part of our conflict with Russia is the normal conflict between two strong and sovereign nations and can be solved in normal ways. When some Americans assert that it is hopeless to seek an agreement with Russia on the Balkans and the Middle East, I answer, "How do we know?" A program for United Nations development in the Balkans and Middle East has not been tried.

As for Russia's possible use of the veto, we can no more justify a position to bypass the United Nations on that ground than a private citizen can justify a decision to take the law in his own hands because he fears he may not have a fair trial in the court established to determine his rights. If we took the matter to the United Nations and the Russians exercised their veto, the moral burden would be on them. When we act independently outside the framework of the United Nations, the moral burden is upon us.

It is sheer nonsense to assert that we have sought solutions through cooperation. America and Britain have divided the oil of the Middle East as though we were the conquerors and lord protectors of the realm. At Yalta we solemnly agreed that Turkey's grip on the Dardanelles would be loosened by mutual consultation after victory. At Potsdam we reaffirmed that agreement. Not one step has been taken in 18 months of peace.

In the long and bitter winter of 1947, the world agency which could have saved lives and prevented misery was killed. Almost all of the United Nations except America and Britain supported Fiorello LaGuardia's plan to save UNRRA. The defeat of that plan was a world tragedy.

Through months of inaction the Congress strangled the United Nations Relief and Rehabilitation Administration. The President countersigned its death warrant. Now we are told that America must act alone in Greece and Turkey because there isn't time to create a United Nations agency for relief and rehabilitation. In the Assembly of the United Nations, Senators VANDENBERG and CONNALLY said that nothing could be done to free the Spanish people because the United Nations had no right to interfere in the internal affairs of any nation. By what right do these same Americans justify unilateral interference in the affairs of Greece and Turkey?

The administration and its Republican supporters argue that we must intervene alone in Greece because the United Nations is too weak to act. I have not forgotten the appeasement of Hitler. I remember that every betrayal of world solidarity against Hitler by Daladier and Chamberlain was made in the name of the weakness of the League of Nations. Let us not betray the future. Let the world not destroy the United Nations as it once destroyed the League.

If the United Nations is weak, who makes it weak? What is the United Nations but the nations who belong to it? What have they done to make it strong? Today the budget of the United Nations is $6,000,000 less than the budget of the New York City Sanitation Department.

And who was it who insisted on keeping the budget of the United Nations $6,000,000 lower than the amount spent to keep the streets of New York City clean? The Soviet Government certainly wished to keep the budget low. Speaking in the name of a stingy-minded Republican Congress, Senator VANDENBERG cried, Amen!

In December Senator VANDENBERG was willing to spend only $11,000,000 for the United Nations. Today he is ready to spend untold millions to prop up anti-Soviet regimes.

There is but one hope for world peace—the United Nations. The Greek problem is a world problem and must be settled by the United Nations. If there is a Turkish problem, it, too, is the concern of all members of the United Nations. That is the spirit in which the Charter was signed.

We ask that the United Nations undertake a new program for relief of all peace-loving peoples in lands that have been devastated by war and today are in need. We ask that American funds be made available for this purpose.

We ask that the United Nations establish regional commissions for the reconstruction of Europe, the Middle East, and other areas as part of an over-all plan. To provide funds for reconstruction is the purpose of the World Bank. If the present Governors of the Bank are unwilling to act, then the Bank should be given Governors who will act. Adequate funds should be made available to support the Bank.

We ask that the United Nations face the problem of security not piecemeal but on a world-wide basis. This means the internationalization of the Dardanelles, the Suez Canal, and the Panama Canal. It means world disarmament and world control of atomic energy. It means real assurance against aggression and also adequate provision for peaceful change.

Let us do for the United Nations what needs to be done to carry out these tasks.

If the United Nations is untested, let us test it.

If the United Nations lacks support, let us support it.

If the United Nations is weak, let us strengthen it.

No one pretends that the United Nations will meet all needs and solve all problems overnight.

Patience and toil will not give us the millennium, but they will help to make a more decent world than we have ever known.

If we reject this course, the United Nations will crumble and man's hope will perish. Sooner or later Truman's program of unconditional aid to anti-Soviet governments will unite the world against America and divide America against herself.

The Truman program must turn the world against America. At our command freedom, in whose name Americans have died, will become a catchword for reaction. Once we grant unconditional loans to the undemocratic Governments of Greece and Turkey, then, in the name of freedom, every Fascist dictator will know that he has credit in our bank. Today it is the Governments of Greece and Turkey. Tomorrow it may be Perón and Chiang Kai-shek. Our banks will give dollars; our arsenals will give weapons. When that is not enough our people will be asked to give their sons.

The Truman program must turn Americans against each other. It will threaten everything in America that is worth fighting for. Intolerance is aroused. Suspicion is engendered. Men of the highest integrity in public life are besmirched. The President's Executive order creates a master index of public servants. From the janitor in the village post office to the Cabinet member, they are to be sifted and tested and watched and appraised. Their past and present, the tattle and prattle of their neighbors, are all to be recorded. But more Americans than these are in danger of persecution.

Intolerance has an insatiable appetite. Whom will its inquisition condemn if this drive continues? Every American who reads the wrong books; every American who thinks the wrong thoughts; every American who means liberty when he says liberty; every American who stands up for civil rights; every American who speaks out for one world; every American who believed in Willkie; every American who supported Roosevelt. Only they who say "Shibboleth" shall pass by the gate.

Hatred and violence abroad, hatred and fear at home will be the fruits of the Truman doctrine. A strong United Nations can bring peace. Which do we choose—for America must choose. The world waits for the American people.

Where are the millions who supported Roosevelt's ideals? Where are the inheritors of our great tradition? In weariness and confusion many Americans have abandoned political action. Now they must return. Their country needs them. Americans of all parties, all faiths, all creeds must now speak out in one great voice for peace and freedom.

America is our country. Because we love America, because we want America to be free and at peace in a world free and at peace, we say:

No imperialist adventures. Support the United Nations.

Millions to feed the hungry. Not one cent to arm tyranny.

Down with intolerance and bigotry. Back to the faith of our fathers.

No Outside Interference Needed

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. HENDRICKS. Mr. Speaker, I want to say to the Members of the House that I am inserting an editorial from the Orlando Star of Saturday, April 5, in regard to the legislative contest between Maj. James G. Horrell and Alexander Akerman, Jr., for the seat of representative from Orange County. This editorial expresses practically my position on the matter. I was well aware of the fact that Mr. Akerman, according to the law, was entitled to the seat. On the other hand I do not approve of the deceptive campaign which he waged.

In the statement which I made to the House previously advising Mr. Carroll Reece to mind his own business I stated that the Florida Legislature would handle this in the proper manner. They have now done so.

The editorial follows:

NO OUTSIDE INTERFERENCE NEEDED

If Carroll Reece, chairman of the Republican National Committee, wants to get James G. Horrell seated in the coming Florida Legislature, he should stick his nose into the situation and go to bat for Alex Akerman, Jr. If we know our Florida legislators they don't like to be told by someone up North how to run things down in Florida. That is one of the reasons Georgia elected the late Eugene Talmadge as Governor.

We have said before and we still feel we are correct, that Akerman and Tyn Cobb were elected to represent Orange County. The majority vote indicated that.

Horrell has a point in the contention that many voters thought they were voting for Cobb and Akerman in one group and Horrell and Leland Chubb in another. However, we do not believe a sufficient number of voters misunderstood it to have elected Horrell instead of Akerman.

The analogy which Reece makes that if Congress operated on the basis that the Florida Legislature is asked to operate by Horrell in ruling out Akerman, there would be Democrats in Congress, is silly. There was no misunderstanding when electors went to the polls to vote for Congressmen. There were but two names to ballot on. In the Orange County race there were four, two Democrats and two Republicans. We know for a fact some thought the group division, as it operated in the Democratic primary, held for the general election.

However, as we said before, we do not believe a sufficient number of voters thought that way to have given Horrell a majority.

We believe a majority of the voters voting in the State representative race voted for Cobb and Akerman because they wanted them to represent this county in the legislature. But if outside pressure is brought, in an attempt to support Akerman, there is no telling what the reaction may be.

The legislators might exercise their prerogative and seat Horrell.

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 9 (legislative day of Monday, March 24), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Before It's Too Late," on the subject of aid to Greece and Turkey, from the Lewiston (Idaho) Morning Tribune of March 16, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEFORE IT'S TOO LATE

Has President Truman decided on intervention with American money, materials, and at least indirect military force to "stop" Russia in the Near East, or is he playing a gigantic game of bluff with us—our lives and our destinies—at stake?

Because the American people do not as yet know the exact answer to that question, because the President has not chosen to tell us how far we are going, they are seriously disturbed by the implications of Mr. Truman's historic pronouncement of a new foreign policy. They know that what he asks is a larger gamble than merely who shall govern Greece and Turkey. They understand it is not enough for the President to say that his purpose is to halt a world march of communism, because stopping communism in Greece or Turkey will not of itself remove communism from this world, and certainly it cannot remove the economic cancers which fester communism.

And they know, also, that if the course indicated by the President's address is followed to its logical conclusion the result will be to divide the world into two hostile camps and set the stage for another war. Mr. Truman was vague—perhaps by studied intent—as to this. But, by implication and effect, he all but declared war upon Soviet Russia. He could not go all the way because, fortunately, this still is a democracy and, under our system, only the Congress, the elected representatives of the people, can declare war. But a President can lead the Nation to the brink.

Is it any wonder that throughout the Nation the people are seriously disturbed by the grave potentialities of this departure in national policy?

President Truman justified his requested intervention in Greece in terms of maintaining free institutions, national integrity, representative government, the individual liberties so dear to a democracy. Those are precious words and those are precious things, but is it not true that the civil war in Greece is concerned about many other things beside abstract principles?

Modern Greece began a proud fight for independence some 50 years after America won its own. With the same pride she gained the 1911 constitution, voted in democracy—the Hellenic Republic of 1924—and chafed under the dictatorship of Mextaxas after his spineless sponsor, King George, had sacrificed the people's constitution and his own character to fascism in 1936. A lasting light, that pride flamed up again 4 years later when fierce Greek soldiers halted the Italian armies inching eastward from Albania. And they resisted to the bitter end when the Nazis came to pull Mussolini's chestnuts from the fire and to drive the British from Athens, the Greek islands, and Crete.

That fight was carried on, not by the forces of the present Government, but by the patriot guerrillas of Greece, scattered cores of resistance under the banner of EAM—the national liberation front. But when the British returned they put down this liberal EAM party by force of arms and by the same force restored a discredited king to office. This Government lacking the necessary support in its own country and confronted by armed revolution now asks that foreign bayonets prop it up. Mr. Truman proposes we provide the bayonets.

It is incredibly naive, as well as dangerous, to view this civil war in Greece as merely a struggle between democracy and totalitarianism. It is a product of forces which American intervention cannot control. If we choose sides and intervene it will mean only one thing—the United States will be fighting an undeclared war against Greek patriots. That is a shocking fact and many of us may not yet be ready to admit it.

If we do this in Greece, where are we going to stop? Would it not be as logical to intervene against the antidemocratic forces in, say, France, Spain, China, and Argentina? Are our armies going to march over the world putting down all popular aspirations for change? If so, then we are storing

up immense trouble for ourselves and probably strengthening the very forces we are opposing. In every age it has been true that a government able to maintain itself only by foreign help was building its house on sand. Do we learn nothing from history?

It is very easy to damn the Russians. They have been damned and double-damned ever since the Bolsheviks came into power, because they offered a deadly threat to the institutions of capitalism and other cherished conceptions of our society. The list of American fears about Russia is well known, and the provocation on her side has been great. Her dynamic expansion, whether for defense in depth or future aggression or whatnot, her gratuitous vetoes in UN, her cool reception of America's plan to control atomic weapons, her disregard of civil liberties and "iron curtain" of censorship have heightened mistrust and suspicion.

Russia's estimate of the kind of treatment she can expect from the democracies, on the other side of the picture, is bound to be based on her experience with them in the past. After the First World War they denied her a seat at the peace table, gave away much of her territory, quarantined her radical new ideology by encircling Russia with buffer states and applied an economic blockade which resulted in the terrible Russian famine of 1920–21. The Soviet Government was not recognized by Great Britain and France until 1924, by the United States until 1933. Russia was not admitted to the League of Nations until 1934 and was expelled in 1939 for aggression against Finland. The league had taken no such action against Germany for the Austrian Anschluss, against Japan for invading China, or against Italy for aggression against Ethiopia.

There are enough openly dangerous areas of Soviet-American misunderstanding without pretending that our position in Greece is more righteous and tenable than it actually is. Relations with Russia are difficult enough and they are not being made less difficult by Mr. Truman. This does not mean that the United States must approve communism, and appeasement of Russia would be intolerable. But going out of our way to intimidate and threaten the Soviet Union is unfair to American public opinion and perhaps perilous to the future safety of the world.

Bureaucratic Propaganda Against Economy

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of April 7, 1947, entitled "Pay-Roll Propaganda":

PAY-ROLL PROPAGANDA — "I'M ESSENTIAL" CLAMOR LIFTED BY BUREAUCRATS AS CONGRESS SWINGS AX—LABOR STATISTICIANS POLL PUBLIC; CUSTOMS BUREAU OVERDOES "FIRING" SHOW—TRUMAN BACKS AGENCY HEADS

(By Vermont Royster)

WASHINGTON.—Eager congressional budget-cutters have stirred up a bee's nest of stinging bureaucrats.

Aroused department and agency heads, confronted with the first real economy drive in two decades, are buzzing into action to protect their hives from the ax. Joining forces, they've swarmed into an all-out campaign to stop Congress from what they charge is a "decimating" of the Federal Government's pay rolls.

Even President Truman is lending a hand. The Chief Executive has told his agency heads to fight for the full appropriations called for in the administration's budget. He's promised that he will throw his full weight behind the official recommendations.

ORDERED TO BATTLE

The Cabinet has been told that the President considers his proposed budget expenditures for 1948 as "rock bottom," and all bureaus have been ordered to battle it through. Those already cut by the House are to carry the fight to the Senate's Appropriations Committee and, if necessary, to the public.

They've done just that. Congress-wise bureau chieftains are striking back at the legislators' weakest point, their constituents. Congressmen rash enough to vote for the budget cuts are finding that the heat's on.

To dramatize their fight, many Government agencies are threatening wholesale firings, particularly in the home districts of unfriendly legislators. Others are circularizing interested pressure groups with warnings that their own pet projects may have to be discontinued. The hue and cry has been raised that services "essential to the public welfare"—control of smuggling and narcotics, lighthouses and air-line aids, public health—will have to be curtailed.

The hard-pressed bureaus are doubling direct pressure on Congress, too. Every agency of any size had its own budget liaison man, and today they're working overtime buttonholing every Senator or Representative on the Appropriations Committees. GOP Congressmen say they haven't had so much attention from Government officials in 15 years.

THINNING OUT A BEEHIVE

The campaign has already met with some success. The Senate's Appropriations Committee is expected to restore some earlier cuts made by the House. Thinning out a beehive has proved to be a prickly task.

The cause of all this hullabaloo is the hefty slice of economy which the House carved off the administration's budget in its first two appropriation bills for 1948. These bills covered the Treasury, Post Office, and Labor Departments and several independent offices including the Federal Security Agency.

The over-all savings achieved by the House were not great—there were too many fixed commitments—but nearly every Government office was sent away with from 10 to 45 percent less than it requested for salaries and general operating expenses.

Until these bills slipped through the House without a murmur, few of the bureau-keepers, grown cynical with the years, took the economy drive seriously. Now they do.

CUTS THAT ROCKED THEM

It was cuts like these that rocked them: One hundred thousand dollars lopped off the budget requested for the Treasury's personnel office; $2,000,000 off the Bureau of Accounts; $340,000 from the Bureau of Federal Supply; $35,000,000 from the Coast Guard; $61,000,000 from the Federal Security Agency; and $4,000,000 from the Bureau of Labor Statistics.

Almost every office covered by these bills was rolled back. However little the dent made in the total over-all budget, to the offices concerned it was a blitz, as devastating and as unexpected as Pearl Harbor.

And that was only the beginning. Intelligence reports from within the House committee have it that the other departments are to be cut from 20 to 40 percent below Mr. Truman's budget.

These hard-hit agencies are fighting back, and in the battle they are using every trick in the book.

For instance: Before the ink was dry on the first House appropriation bill—and even before the Senate had considered it—Customs Commissioner W. R. Johnson sent notices to his field offices to fire upward of 1,500 customs inspectors and assistants, all but wiping out the border and port patrols. Not surprisingly, this raised considerable furor, particularly in the border and large coastal cities.

PUZZLER FOR COMMITTEEMEN

Mr. Johnson claimed this was necessary because of the $6,000,000 cut in his budget below the President's request. But the House committeemen were a bit puzzled. For while the $47,000,000 given the Customs Bureau was a sharp cut-back from Mr. Truman's budget request, it was still as much as the Bureau got this year.

Subsequently, in fact, Mr. Johnson backtracked. The first news stories, he told a curious Senate committee, were misleading. At most, not more than 800 employees of the Bureau will have to be dropped; the others would be rehired. About 400 customs inspectors were more or less fired one day and then rehired a few days later after the furor died down.

To Chairman TABER and his House colleagues, this Customs Bureau maneuver had all the earmarks of a propaganda campaign. Mr. TABER is still trying to find out why it was necessary to fire so many persons so precipitously.

Crepe hangs over other personnel offices, too. At the Revenue Bureau, Commissioner John Nunan, Jr., threatens even heavier firings if the House budget cuts go through. Mr. Nunan says some 7,000 "T" men—the eagle-eyes who check income-tax returns for fraud—will have to be dropped. He's now busily bombarding the Senate committee with claims that these "T" men bring in $20 for every dollar they're paid.

Still other Government agencies are going to their customers to drum up support for their record-breaking appropriation requests.

Ewan Clague, head of the Bureau of Labor Statistics, for example, has undertaken a sort of Gallup poll in an effort to show Congress how much his bureau's work is appreciated and demanded by the public.

A circular mailed out to all regular users of the BLS data warns that due to the threatened 60-percent cut in the Bureau's funds it will be necessary "to drop immediately a major portion of the basic services" of the Bureau. Mr. Clague justifies the circular by saying that he wants to cut down, the services with the "least loss" to the public.

The circular provides several places for the customers to emphasize their need for the BLS data. The Bureau, which is quite expert at tabulating figures, plans to present Congress with an imposing statistical barrage on its popularity with the public. The cost of this survey will come out of the 1947, not the 1948, budget.

IRRITATION ON THE HILL

This bit of direct mail advertising has caused considerable irritation on Capitol Hill. It's true enough, of course, that the BLS was cut $4,000,000 below the Administration's budget request and even below this year's appropriation. What angers the Congressmen is that the circular leaves out a very important part of the story.

In 1938 the BLS was getting along nicely on $784,000 annually and providing such "basic services" as its consumer and wholesale indexes. During the war its functions were expanded until by 1947 it was getting a $5,500,000 appropriation. All the House was trying to do was level off some of these wartime jobs.

The final version of the House bill gave the bureau $2,300,000, or still nearly three times its 1938 budget. So Mr. Taber can't understand why it must drop a "major portion" of its "basic services."

And so it goes. The downtown offices are working like busy little bees to convince Congress and the public that they are being

butchered, while the economy bloc argues that all they are doing is cutting the agencies back to prewar size.

GOP leaders in the House concede that their appropriations will mean personnel layoffs; that, they say, was the purpose. But they fiercely deny that the threatened wholesale firings will be necessary, or that any "essential services" need be eliminated.

Loans to Foreign Countries by Reconstruction Finance Corporation

REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. WOLCOTT. Mr. Speaker, a short time ago I asked the Reconstruction Finance Corporation to furnish me with information with respect to loans which the Reconstruction Finance Corporation had made to foreign countries. The information seems to be of such general interest that I am including in connection with my remarks a letter which I received on April 2 from Mr. Henderson, the Chairman of the Reconstruction Finance Corporation. The letter gives the information in detail and is as follows:

RECONSTRUCTION FINANCE CORPORATION,
Washington, April 2, 1947.

Hon. JESSE P. WOLCOTT,
Chairman, Banking and Currency Committee, New House Office Building, Washington, D. C.

MY DEAR MR. WOLCOTT: In response to your recent request we are submitting the following information relative to RFC loans and advances to foreign governments:

NATIONAL DEFENSE LOANS AND ADVANCES

Great Britain: Pursuant to section 5d (4) of the Reconstructoin Finance Corporation Act, as amended, the RFC on July 21, 1941, authorized a loan of $425,000,000 to the Government of the United Kingdom of Great Britain and Northern Ireland. This loan was made with the approval of the President for the purpose of achieving for Great Britain the maximum dollar exchange in the United States. $390,000,000 of this loan was disbursed and as of March 26 of this year, $181,233,912 had been repaid.

Russia: On September 12, 1941, Defense Supplies Corporation, a subsidiary of the RFC, created pursuant to section 5d (3) of the Reconstruction Finance Corporation Act, as amended, entered into an agreement with Amtorg Trading Corp., a United States corporation owned by Russian interests, under which Defense Supplies Corporation made an advance of $49,741,692 to Amtorg against the purchase price of $100,000,000 worth of strategic and critical materials, including manganese, chrome, asbestos, and platinum. The strategic and critical materials have since been received and disposed of.

Philippines: This corporation entered into an agreement on August 26, 1946, with the National Abaca and Other Fibers Corp., an agency of the Government of the Republic of the Philippines, for the purchase of abaca fiber during the period August 8, 1946, to June 30, 1947. Under the terms of this agreement the RFC agreed to advance $2,000,000 against the purchase price. A portion of the abaca covered by the agreement was delivered and the balance of the advance was repaid by agreement of February 3, 1947.

Brazil: In order to increase the procurement of natural rubber in Brazil by making credit available to those engaged in such procurement, the Banco de Credito da Borracha was established in Brazil in 1942. Forty percent of the stock was purchased with funds supplied by RFC in the amount of $3,000,000 under section 5d (3). Substantially all of the remainder of the stock was purchased by the Brazilian Government. The State Department is presently negotiating for the sale of RFC-held stock to Brazilian interests.

Newfoundland: An advance of $5,628,614 for equipment, facilities, and supplies for the Newfoundland Railway was approved under section 5d (3) on July 14, 1941. This was reduced on November 21, 1941, to $2,100,000. The funds were employed to improve, extend, and rehabilitate the Newfoundland Railway, as requested by the President upon advice of the Permanent Joint Board of Defense that the military requirements of the United States and Canada required such action. The Army did the actual construction and RFC accepted installment notes of the Newfoundland Railway, which, under the agreement, may be exchanged for Newfoundland Government bonds. The railway is owned by the Newfoundland Government; $606,357 has been repaid, leaving outstanding $1,493,643.

Canada: On June 9, 1942, the President approved a $10,000,000 advance to War Supplies Limited, an agency of the Canadian Government, in order to finance the production of copper, lead, and zinc. Pursuant thereto, $1,265,872 was advanced by Metals Reserve Corporation, a subsidy of the RFC, which was subsequently repaid in full.

Ecuador: On September 30, 1941, the RFC authorized not to exceed $150,000 (made available from the President's emergency fund) to the Government of Ecuador. This was later reduced to $124,628. The purpose of this action was to permit that Government to gain control of airlines in which Germany had an interest.

Bolivia: On August 27, 1941, the RFC authorized $300,000 (made available from the President's emergency fund) to Lloyd-Aero Boliviana, a company owned by the Bolivian Government, in order to enable that Government to gain control of airlines in which Germany had an interest. This amount was subsequently paid in full.

Netherlands Indies Government: On September 13, 1946, the RFC authorized an advance of $12,000,000 to the Netherlands Indies Government against the purchase price of natural rubber, the amount of the advance to be used for the purchase of textiles and certain other commodities in the United States. The period during which the Netherlands Indies Government could call on this advance expired without any calls being made.

In each instance where an advance is referred to above, such advance was made under authority either of section 5d (3) of the Reconstruction Finance Corporation Act, as amended, or under the fifth paragraph of section 5d, and in each instance the approval of the President is required and was obtained.

LOANS UNDER SECTION 201 (C) OF THE EMERGENCY RELIEF AND CONSTRUCTION ACT OF 1932, AS AMENDED, WHICH AUTHORIZES LOANS FOR THE PURPOSE OF FINANCING SALES OF AGRICULTURAL SURPLUSES IN FOREIGN MARKETS

Russia: On July 18, 1933, the RFC authorized a loan to Cotton Exporters Finance Corp., of New York, in the amount of $1,500,000, and an additional loan of $1,300,000 was authorized 1 week later. These loans were secured by notes of the Amtorg Trading Corp., which, in turn, were indorsed by the State Bank of USSR. All of these amounts were disbursed, except $77,098, and have subsequently been repaid. Loans involving Amtorg Trading Corp. in amounts of $51,247 and $29,295 were authorized on July 21, 1933, and August 14, 1933, respectively, and disbursed. These likewise have been repaid in full.

China: On July 10, 1933, the RFC authorized a loan of $50,000,000 to the National Government of the Republic of China. This authorization was reduced on February 16, 1934, from $50,000,000 to $20,000,000, of which $17,105,386 was disbursed. Payments by China to RFC reduced this amount to $13,537,389 and the outstanding notes held by the RFC for this balance were sold on April 8, 1936, to the Export-Import Bank of Washington.

Norway: The RFC on January 12, 1940, authorized a loan of $10,000,000 to the Kingdom of Norway. None of this loan was ever used and the entire amount was subsequently canceled.

POSTWAR PHILIPPINE LOAN

On November 13, 1946, pursuant to section 3 of Public Law 656, Seventy-ninth Congress, the RFC, after consultation with the National Advisory Council on International Monetary and Financial Problems, authorized a loan of $25,000,000 to the Government of the Republic of the Philippines.

With kind personal regards,
Sincerely,
CHARLES B. HENDERSON.

Bugs in the Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George S. Denson, president of Harding College:

BUGS IN THE BUDGET

Did you know that income of the Federal Government for the next fiscal year will be 9 times, maybe 10 times, what it was in the boom period of 1929? It will be at least seven times the receipts the Federal Government had in 1939. Weak nation it would be, indeed, that could not balance a peacetime budget with the receipt side of the ledger at enormous peacetime highs.

Just to balance the budget during boom times, however, is not enough. We must retire and reduce taxes. Looking at another angle, the Federal Government wants to spend more than four times as much as it did in any year of the thirties, when deficit spending was in the habit-forming stage. Has it now become fashionable for our Government to spend all it can get? Have we forgotten that the more we spend the more we shall have to tax?

If we cannot, under favorable conditions of high employment and prosperous trade, get hold of ourselves long enough to retire our national debt and cut our taxes, at what future time do we expect to do so? Is our budgeting so out of hand that Congress cannot gain control over it? Or is the public thus unmindful of the trouble we're in for under a tax load required by the spending of $37,500,000,000 annually?

Both the President and the Congress have given evidence of honest desire to keep the expenditure side of the budget down. But the pressures that are applied from every direction call for spending more money. As a people, we shall have to exert great moral fortitude at this time if we expect an about-face in a spending philosophy grown almost traditional. We need not complain to the Government for being spendthrift, if at home

we insist upon being spendthirsty about our pet projects. Economy begins first at home.

Although the war has been over nearly 2 years, your Government wishes to spend more in the next fiscal year alone than was spent during the whole of World War I. Of course, this is a dangerous era, and no one wants to hamstring our national defenses. The whole Nation wants the occupation program to succeed. But more efficiency and the least possible waste of manpower and money should be the order of the day.

As late as November the War and Navy Departments were still employing more than a million civilians. Spending in every department, military or nonmilitary, should be studied carefully. Everyone knows it is easier to keep on spending Government money than to retrench. This is just as true of the national defense. Despite warnings of what may happen, Congress will do well to examine these expenditures.

Soviet Russia is not likely to be changed in her course by the outcome of our budget. Fact that Russia's whole national income is very little more than our proposed national budget ought to embarrass nobody but Russia. And the fact that Russia plans to spend more than our country for military services ought to be embarrassing, in these times of peace, to Russia. However, large expenditures for the sake of national defense may be necessary until the peace is secure. But we need not conclude that the habit of heavy spending is to be our full and complete offering to the dove of peace.

Trimming down expenses is not an easy task for Congress. Snail's progress will be made unless the people make themselves heard. A big and wasteful budget now, carrying with it a tax penalty upon the enterprise of our people, could do much to start us downhill toward the kind of economy Russia has. Most Americans, I believe, would rather be allowed to spend their own money than have the Government spend it for them.

Activity of the House of Representatives

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Washington Times-Herald of April 8, 1947:

HOT HOUSE

(By Frank C. Waldrop)

Both House and Senate get down to business this week, presumably refreshed by a few days' visit with the voters over the Easter holidays and with renewed ideas of what people want of the Government in these times.

The word from those few checked so far is that the House is still hotter than the Senate in its campaign to rid the country of the New Deal and that for the rest of this session it will continue stepping on the Senate's corns until that august organization get into the spirit of action.

A check-over of House and Senate attitudes on the points of the 1946 Republican campaign promises makes interesting news and clearly shows which branch of Congress is closer to the sentiment of the country. Here are the main items:

1. GOVERNMENT SPENDING

The Republicans promised "a substantial cut" in Federal expenditures. The House was first to act on this, and adopted the more strict attitude on both over-all budget cuts and on the reduction of individual departments as reviewed.

The executive departments are definitely running to the Senate for rescue.

The Senate has learned, via the mail from home, that rescue is wanted more by the taxpayers for themselves than for the monster bureaucracy built up in the past 16 years.

2. TAX CUTS

These were certainly pledged in 1946 and the House has already delivered. The Senate is still working on its own version of the House's personal income tax-reduction formula and yesterday Senator TAFT of Ohio, chairman of the Republican policy committee, promised again that this session of Congress will see both taxes and budget cuts.

But the fact remains that it is the Senate which is dragging its foot and the House which has already acted firmly on taxes as on budget.

3. LABOR LAWS

The Republicans were definitely pledged in 1946 to develop a more sensible relationship between unions and industry. The Congress has already passed one bill to that end and the House is headed right now to pass another but is only waiting on the Senate to get a little nearer ready before doing so.

The bill already passed is the one to make sense out of the so-called portal-to-portal racket that had piled up roughly $5,000,000,000 in suits against industry before the Truman administration waked up and through the Department of Justice began to show some sense of responsibility in the matter.

But the House unlike the Senate, did not wait on Truman. It acted. Senate and Executive followed.

The House has also completed its work on the general labor program designed to build a fairer balance between management and unions.

The only reason the House has not reported out and passed its labor bill is plain consideration for the Senate where the going is much rougher, mainly because of Republican timidity about last fall's plain mandate.

Maybe the telephone strike and John L. Lewis, semistrike in coal will clear that up. At any rate, the betting is that the general labor law program will all go through before the end of this month and that Truman will not veto it.

4. PRESIDENTIAL TENURE

The Republicans promised last year to give the country a chance to prevent any more third- and fourth-term Presidential menaces if it wants, and that one has certainly gone through, all right.

A proposed constitutional amendment is now before the State legislatures and has already been passed by several.

No amendment has ever moved so rapidly with the possible exception of the one to repeal prohibition.

5. COMMUNISTS

The Republicans asked for and plainly got a mandate against communism in Government last year. The House Committee on Un-American Activities has done an excellent and aggressive job so far and has smoked out the Executive to the point that Mr. Truman has ordered another loyalty board to go to work, supplementing already existing and useless ones, and Secretary of Labor Schwellenbach has asked for the outright outlawing of the Communist Party as a whole.

But note that it is the House that has done the heavy work. In the Senate there is nothing aggressive showing anywhere.

Senator TAFT coined a very descriptive phrase when he said that Atomic Commission Chairman David E. Lilienthal is "soft" on communism. He could well apply the same to a good many of his colleagues, Republican as well as Democratic.

But look for still more aggressive anticommunism from the whole House. There, Democrats as well as Republicans, are responding to general public demand.

6. THE WAR

It was definitely a part of the Republican mandate of last year to study the story of World War II and find out just who did what, how, and why. That is a monumental project, necessarily slow moving on the surface.

However, it is fair to report that the special Senate committee on the war has been digging for big ones and will crack several sensational stories before the end of this term.

The appointment of ex-Senator Burton K. Wheeler, Montana Democrat, to look into the oil leases in Arabia made under Government direction, is just a sample. This project involves many millions of dollars already spent and many more to come, not to mention its diplomatic and military aspects, past and future.

Teams of investigators for the Senate committee are also deep into the papers of the War Production Board, Lend-Lease, inside the State Department, in England, France, and elsewhere.

The things they have already turned up promise that both branches of Congress will be hotter than firecrackers before June.

The war investigating committee is the one outfit best calculated to whip the Senate's thyroid back up to the point necessary for it to keep pace with the House and the general mind of the country toward the New Deal.

In any case, the House itself is still plenty hot, feels good about the snap and speed and precision with which it has reorganized and put through its program to date.

It can be expected to move even faster from here on in. The country still wants an accounting of the New Deal.

Why No Tax Reduction?

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brookville (Pa.) American:

WHY THEY DON'T WANT TAX REDUCTION

One of the most amazing if not the most impressive sights in these days is the amount of crocodile tears of the administration, including the New Dealers, who are not, shed when it comes to the question of debt reduction and tax reduction.

These tears would seem more impressive were it not for the New Deal record during the past 14 years. The left wingers are now, for the first time, showing great concern at the size of the national debt and stating that debt reduction ought to be put ahead of tax reduction. Their concern is really touching.

For a dozen years they praised the policy of debt increase. They declared that the size of the national debt was not important. President Roosevelt himself said it didn't matter much because we owed the debt to ourselves. Some of the more fanatic New Dealers told us that a big Federal debt was actually a good thing.

Now, apparently, they no longer think it is a good thing, even if we owe the money to

ourselves, and they say that it ought to be reduced before there is any tax reduction.

Of course, the fact is that they really don't care any more now about debt reduction than they did in the palmy days of the New Deal. What they really want is to keep taxes at their present level so there will be more money to put the Government into competition with private industry and to promote the crackpot socialist schemes which the New Dealers are constantly planning and suggesting. If it is to further their program, such lack of thrift wouldn't bother them in the least. That is why they are for the swollen $37,500,000,000 budget requested by President Truman, and it is why talk of tax reduction, soon has them frothing at the mouth.

Aside from the objections of the left-wing boondoggiers to tax reduction, there are a number of shrewd Democratic politicians who don't want tax reduction either. Their main objection is that tax reduction by a Republican Congress now—over the opposition of President Truman—might help the Republicans in the 1948 Presidential campaign.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on April 5, 1947:

Dear friends of the Triple Cities and my congressional district, in behalf of the committee which is raising funds to build a memorial home for Disabled American Veterans in Broome County, I have been asked to urge your friendly consideration.

I scarcely need to point out to you that money donated to the cause of veterans wounded and maimed for life is most worth while. I therefore commend the local DAV's fund-raising drive to you all.

The trouble started last week when some of the powers that be began to worry about their failure to take care of the veterans who couldn't find homes in our section.

"We're in for a lot of criticism," they whispered, "unless we house these veterans, and we aren't doing a very good job at that. We've got to lay the blame on somebody else or we'll really be in for it.

"We'll single out Congressman HALL and blame him. Some newspapers are always glad to make HALL the goat whenever there's some blame. He won't be able to get out of that one.

"We can make the public think Congressman HALL hasn't lifted a finger to help the veterans get homes. Oh, yes; it's true HALL has been in Congress and voted for all veteran housing bills and has done a lot for veterans but we'll make the people forget that.

"We'll play the Hitler game on HALL. We'll tell lies about him so big and smear him so often the public will believe us. Then they won't put the blame for our mistakes on us, they will hold HALL responsible."

So the plotters gloated over their bright scheme. They dreamed of the public getting mad at the wrong person and thought they saw HALL's face getting red.

But they had one serious setback. Not all the newspapers fell for their game. Only one local paper printed their attacks the way they thought would damage HALL the most.

So the plot to hang the blame for no vet housing in Binghamton on Congressman HALL has failed and he's ready for their future attempts to blame him. Only next time I have some nice little plans myself to put the heat on the proper seat.

It hasn't been pleasant, dear friends, when I'm in Washington, attending to the job you chose me to do, and too busy to defend myself, to read of the attacks and plots made on me by cheap demagogs who don't know the score themselves.

If these babies want to continue to annoy me, if they want to keep playing with dynamite, they're going to take the consequences. They'll have only themselves to blame for what happens.

But let me give you the one reason why the plans of the smear-bund to hang the blame on me for their mistakes in vet housing went wrong and failed to work.

They thought both Binghamton newspapers would fall for their dirty plot. As it turned out, the evening paper did not. And I myself learned something from their failure.

I learned that regardless of what little love some local men of integrity may have for me, some will not join with cutthroats to get rid of me.

Some will not join forces with gangsters to rub me out.

Some will not get in bed with second-story men to get even with me.

They may not care for me as their Congressman, but they prefer me to the inferior, pasty face, stupid opposition that they have seen stooge for others lately.

Some may not be thoroughly sold on me but they could never stomach the pitiful demonstrations of HALL-baiting so recently in progress.

Being intelligent men, they like to see constructive and cooperative steps taken in the interest of our community and our area. Therefore, I can't believe they approve of the policy which has recently been popular with a few stuffed shirts, the policy of visiting Washington and deliberately by-passing your Congressman and appealing to bigger shots. Of course, from my standpoint, it may be a good thing. They can't blame me when they come back home empty-handed as they usually do.

Those who do condescend to call on their Congressman get results. Witness a recent excursion a group of community leaders made to the Capitol. I have on record letters from their spokesmen thanking me and assuring me that they considered my help to them during their visit was the secret of the success of their whole trip. Many others have written me likewise. Yes, when they come to my office, they get results.

Thank you.

Push-Button Warfare and the Polar Concept

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. George C. Kenney, commanding general, Strategic Air Forces, AAF, before the First National Aeronautics Conference, the American Legion, March 20, 1947:

Push-button warfare, which we hear a lot about these days, has captured the imagination of the American public. The last generation devoured the pages of Jules Verne's Twenty Thousand Leagues Under the Sea. Today, all ages from 10 to 100 read Buck Rogers. It is a good thing to keep our minds interested and stimulated, for mankind is burning the midnight oil these days all over the world trying to discover new methods of destroying himself or how to counter such means if an enemy employs them.

As long as we keep thinking, studying, developing, and producing, we are on safe ground, but if we lull ourselves to sleep by saying that we either have the answers on hand, or have them right around the corner, we will invite disaster. The road to push-button warfare with its radio controlled long range pilotless aircraft and rockets with atomic warheads, is long, tough, and exceedingly expensive. If we are forced into a war within the next 20 years the probability is that we will still see our pilots flying airplanes which shoot down enemy airplanes in air combat and piloted airplanes which carry bombs to destroy enemy targets.

From what we know right now, if we want to develop a guided missile with a 5,000-mile range the following facts stare us in the face. In the first place, that missile is no hand grenade in size. It is a missile which destroys itself on impact. That means dollars and plenty of them. It will take years to produce the first one for test. During that period the cost of research and development by all the agencies concerned, will be tremendous. In other words, by the time we get the first article, someone will have spent billions on it. If this test article is successful and we want to go into production from the point on, it is much cheaper. To set up for the first production article will only cost a mere seven million and after that, we can have them for the modest sum of $270,000 apiece.

Unfortunately, after we get a lot of these weapons there are still some serious problems. The control by radio becomes increasingly difficult and complicated for every mile of increased range. Five-thousand-mile control today really looks somewhat fantastic. Another thing to think about is the introduction of man-made static to interfere with guiding such missiles by radio. No matter how much we would like to have it in a hurry, in the light of what we see ahead of us today, push-button warfare is not right around the corner.

Of course, foremost in our minds when we speak of new developments is the atomic bomb. This weapon bids fair through its terrific power and its terrible radiological effects to change considerably methods and effects of warfare. It may place in the hands of him who uses it effectively first a decisive advantage. It may, through too widespread use in war, affect the very character of the human race. The atomic bomb of today has a destructive power of more than 20,000 tons of TNT. The B-29's during the war against Japan dropped a total of 150,000 tons of bombs. The power of just one bombardment airplane has become something appalling when you consider that it would take thousands of B-29's carrying full loads of the old TNT bomb to equal the wallop that took out Hiroshima when first the atomic bomb was dropped.

You have all seen the pictures of the underwater Bikini test where one of the old-type atomic bombs was exploded. That column of water that was pushed over a mile up into the air, was half a mile in diameter. Imagine that bomb exploding in Times Square and picking up a section of Manhattan Island a half mile in diameter, throwing it a mile high and then having the pieces

rain down over an area 3 or 4 miles from Times Square. In that half-mile-diameter circle are about 100,000 people. It is inconceivable that any of them could survive. By the time we move out 3 miles from the point of the explosion we are across the Hudson into Jersey City and Hoboken, across the East River into Brooklyn, and most of Manhattan Island has been subjected to a rain of radioactive debris that once was a section of New York City. We can really speculate on the effects of a bomb dropping in the Hudson or the East River and deluging this whole area with radioactive water and steam.

This is no theoretical dream. This picture is real. You cannot get rid of it by simply closing your eyes or by neglecting to adopt the measures essential for self-protection and the maintenance of our national self-respect.

You may hear someone say, "Oh, here is another warmonger trying to scare us into building up a big military establishment."

In this case I'm working for you. My job is to defend this country. I'm supposed to be an expert at it. To do my job, I have to assess all factors involved and make recommendations accordingly. If I see bad weather ahead, it is my duty to warn the people I'm working for.

I sometimes wonder what these people really want. Do they want the truth, the warning of possibilities ahead of them even if it does scare them a little, or would they prefer to close their eyes and ears and go back to sleep until another Pearl Harbor wakes them up?

Now I'm not preaching war. I don't want even to see another war. No one in his right mind could want another war. But, looking around the world today, I believe that failure adequately to prepare for the possibility of war would constitute national criminal negligence.

You may ask who is the next possible aggressor. I don't know his name or his nationality, but he probably lives in Europe or in Asia. There is where three-quarters of the people of the world live, and when you get into a war it is a war against people. There is where the attack will come from, and we are No. 1 priority on the list of objectives which the next Hitler will hand to his boss gunmen

World War I and World War II taught the aggressors that if allowed even a comparatively short breathing space, the industrial power of the United States would produce the machines that would defeat them. In other words, if the United States can be knocked out, world domination is assured to the victor. A would-be Hitler of the future will not forget that lesson. For us to forget it would also constitute national criminal negligence.

As part of the planning and preparation for the proper national defense, we must visualize the probable assault and then try to determine the defense against it and the counteraction. The counteraction or retaliation is the only way of gaining the decision over the self-constituted opponent and punishing him for his crime against international law and his violation of all rules of peace and common decency.

This brings us to what we have come to call the polar concept. It simply means that invading aircraft will fly the shortest route to the target. Our former immunity, guaranteed us by two friendly oceans and a powerful Navy is no more. The threat today is from the long-range airplane. The direction for us to look is no longer east or west but north. If you examine a globe you will find that an airplane coming from any take-off point along the north coast of Europe or Asia to attack our large centers of industry and population will fly over the North Polar Basin. Prior to a few years ago range and weather made it unnecessary to worry about this frontier. The modern airplane capable of operations under all conditions of weather and possessed of ranges already at the 10,000-mile mark has changed our whole concept. That is why we are so interested nowadays in cold-weather operations.

Having completed a magnificent job that is a tribute to Navy planning and to the courage, skill, and resourcefulness of the personnel under his command, Rear Adm. Richard E. Byrd is on his way home from Antarctica. This, the greatest expedition of its kind in history, will, I believe, prove to be of historic significance.

Let me quote from an interview with Admiral Byrd dated March 3, 1947:

"I voice a strong warning to my fellow Americans when I say that we can no longer crawl into cocoons and believe that distance guarantees us safety; that oceans and poles will be our ever-protecting no man's land.

"It is no scare phrase, but a bitter reality to state that conflict, should it ever come again, will lash at our Nation over one or both poles.

"We must be alert and vigilant along the icy borders which are nature's last frontiers of defense against human invasion."

Admiral Byrd continued: "I can realize perhaps better than any other man what the machine onslaught against the poles foreshadows, for I have seen startling comparisons in action."

"Since speed and progress seem to recognize no horizons, we must accelerate our thinking, our planning, our actions and our own horizons. We must do it now for we are at an important crossroads in both military science and world survival.

"Delay could well prove disastrous."

If we get into trouble again, the attack will probably come over the shortest air routes from the European-Asiatic land mass, across the North Polar Basin. It will be directed against our centers of industry and population. Following this ruthless assault may come the airborne troops to seize key points of the country before we recover from the shock of seeing every major city north of the San Francisco-St. Louis-Washington line wiped out by a comparatively few loads of atomic bombs, superexplosives, superincendiaries, or whatever means of mass destruction happens to be in vogue at the time. The objective of the enemy will be to knock out our industry and with it our capability of producing the machinery and the weapons with which to carry on resistance and at the same time to inflict such a stunning casualty list upon the Nation that it breaks the national willingness to endure further losses and thereby forces capitulation.

You will hear people say "Oh, we've heard this story before. No war has ever been won quickly like that in spite of the dire predictions every time some new weapon was invented." Of course Poland only lasted 17 days, Holland 4 days, Belgium 18 days, Norway a couple of weeks, and Denmark a few hours, as the price of inadequate preparedness, but what people fail to take into consideration is that where formerly it took days and a terrific effort to kill a few thousand people, now one airplane in a single attack can wipe out a city and kill a hundred thousand people.

Now for the defense against an assault such as I have pictured. Only an air force has the capability of doing anything in the initial stages of such an attack. An adequate warning service, coupled with fighter defenses intercepting the hostile aircraft as far away from their targets as possible and shooting down a sufficiently high percentage of them to prevent a repetition of attacks which eventually might bring us to our knees, is one must item for our national defense. But to stop our enemy from continuing his assault, we must be prepared to carry the war to him, to smash his air establishments, the factories that make his aircraft and their bombs, the sources of his fuel supply—in short, his capacity to make war. Accordingly the long-range striking force composed of long-range heavy load-carrying bombers, and long-range fighters to protect them, is another must item and the most important of all, as it furnishes the best guaranty that the transpolar assault will be stopped, that the battle for the air will be won, and that the final phase, the actual invasion and occupation of the enemy country by our surface forces, can get under way.

To carry out our mission of protection, like any police force, the Air Forces must be adequate, efficient, and properly organized. Air analysis of public opinion indicates that to the people of the United States an air force second to none is required for our national defense. The maintenance of that force costs money, lots of it. If we really want national defense we will foot the bill. If we lose interest in national defense, we will not.

Whatever else we do to preserve this country and its ideals we must not neglect our technical research and development. We don't want to, and we can't afford to, win our wars by mass spending of blood. We want to win them at a minimum cost in human lives by using our brains and the machines conceived by those brains. If we stop thinking, stop inventing, and stop developing and allow ourselves to pit manpower against manpower, we will be playing a losing game. We are only 140,000,000 in a world of 2,000,000,000. We must guard against obsolescence in both our thinking and our equipment. As fast as our weapons, our tactics, our methods, become obsolete, we must scrap them ruthlessly. National defense is national insurance. The cost of national defense is—and will continue—to strain the national pocketbook. We can afford only modern thinking, modern organization, modern weapons.

Regardless of disparity in manpower resources, if we remain ahead in technical development and win the air war, we need not fear defeat if we should again be forced into conflict.

Air power is truly peace power.

Moral Defeat at Yalta

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, William Henry Chamberlin, in a recent article, has termed the Yalta agreement our greatest diplomatic failure. It would seem that Mr. Chamberlin has correctly called the turn on one of the great crimes committed by this country against European nations involved in the war; particularly Poland which has suffered most. We can never live down the crime that was committed at Yalta. Under leave to extend my remarks, I am including this very challenging article by Mr. Chamberlin:

OUR GREATEST DIPLOMATIC FAILURE—DETAILS OF YALTA AGREEMENT REVEAL IT AS A MOST IMMORAL, UNNECESSARY VIOLATION OF ATLANTIC CHARTER

(By William Henry Chamberlin)

At long last we possess what purports to be the full text of the Yalta Agreement, signed by Roosevelt, Stalin, and Churchill on February 11, 1945. Its details had been doled out piecemeal in rather understandably shamefaced fashion over a period of more than 2 years. Soviet Foreign Minister Molo-

tov seems to have given the impetus to full publication when he cited the Yalta Agreement about reparations to bolster up his talking position at the Moscow Conference.

Measured against the developments of the last 2 years, against the dreary chaos in Central Europe, the immense totalitarian expansion in eastern Europe, the alarming situation which confronts us in the Near East, Yalta may fairly and soberly be described as the most disastrous defeat in the diplomatic history of the United States. It was immoral because many of its provisions repudiated the Atlantic Charter and those principles of liberty and humanity to which this Government has always professed devotion.

It was stupid, because it traded vital considerations of American national interest and security for what have proved to be worthless Soviet I O U's. And, no matter what its apologists, whose voices have been growing feebler with the passing time, may say, it was completely unnecessary.

The Yalta document fairly drips with unctuous and offensive hypocrisy. There are repeated genuflections before the Atlantic Charter. The signatories reaffirm their faith in its principles. Yet the two principal territorial decisions of Yalta were crude violations of the Atlantic Charter.

THE CASES OF POLAND AND CHINA

Over 40 percent of the area of prewar Poland was transferred to Russia without any provision for consultation of the will of the people affected. At the same time Poland was assured substantial accessions of territory in the north and west, i. e., the right to annex an unspecified amount of territory that is ethnically overwhelmingly German. Neither of these transfers, by any process of sophistry, could be reconciled with the Atlantic Charter principle: "No territorial changes that do not accord with the freely expressed wishes of the peoples concerned."

Only less immoral than this arbitrary drawing of new frontiers in eastern Europe, to an accompaniment of brutal mass expulsion of many millions of people, Poles from eastern Poland, Germans from the German eastern provinces, was the treatment of China. There was no Chinese representative at Yalta.

Yet, in a frantic effort to buy Soviet intervention in the war against Japan, which was superfluous and detrimental when it actually occurred, Roosevelt and Churchill signed away China's economic rights in its richest industrial province, Manchuria. It was agreed that Russia should have a naval base at Port Arthur, at the southern tip of Manchuria, preeminent interests in Dairen, Manchuria's largest port, and joint operation rights for the entire Manchurian railway system.

When a strong country, whether it be Japan or Russia, acquires sweeping strategic and economic concessions in the territory of a weak country like China the stage is set for trouble and aggression. The Russians subsequently turned Manchuria into an empty shell, industrially, by looting much the greatest part of its industrial equipment and machinery.

EXCESSIVE GERMAN REPARATIONS DEMANDED

Equally objectionable was the agreement about reparations, which may be considered the primary cause of many of our relief headaches in Germany today. It was provided that Germany should be stripped of capital goods, that there should be use of German labor (a thin camouflage for the introduction of human slavery) and that there should also be annual deliveries of goods from current production for a period to be fixed. A figure of $20,000,000,000 was suggested, of which half should go to the Soviet Union.

How a country that was being thoroughly wrecked by air bombing and that was to be stripped both of its capital goods and of its able-bodied manpower could produce a sufficient surplus to warrant a figure of $20,000,000,000 worth of reparations was not explained. Stupidity went hand in hand with profound and cynical immorality in decisions which violated basic American ideals, wrecked the economies of great areas, sanctioned the restoration of slavery, and profusely sowed seeds of hate and possible future wars both in eastern Europe and in the Far East.

American national interest was certainly not served by selling out China in Manchuria, by giving a green light for the expansion of Soviet totalitarianism in eastern Europe. We would be in a far stronger political and moral position today if we had never thrown over our friend Mihailovich for our enemy Tito, in Yugoslavia, if we had not accepted with little question the Moscow carpetbag regime in Poland.

It may be noted that the little fig leaves of decency in the Yalta agreement have been made a laughing stock by persistent Soviet bad faith. The promises of free and unfettered elections in Poland, of enabling liberated peoples to create democratic institutions of their own choice have a hollow and bitter sound, in view of what has happened in Poland, Rumania, Yugoslavia, Bulgaria, Hungary, and many other countries.

NO NEED TO APPEASE STALIN

The last stand of the apologists for Yalta is the alleged necessity of appeasing Stalin at the time when it was signed. If we hadn't signed on the dotted line, so the argument runs, the Soviet dictator might have quit the war in a huff, and where would we have been then? This overlooks the important point that Stalin was far more politically and militarily dependent on us than we were on him. The destruction of any element of check or balance on Soviet expansion in Europe and Asia was far more a Soviet interest than a rationally conceived American or British interest.

Yalta was a disgrace, and a needless disgrace. It was concluded stealthily, without any consultation with the American people or their representatives. Undoing its disastrous consequences will be one of our main foreign policy chores for a long time to come. It is an ironical reflection that many of the political fruits of victory were sacrificed on the altar of appeasement at Yalta—just 3 months before the collapse of Germany and 6 months before the fall of Japan.

Jefferson Day Address of the President

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

A PRESIDENT SPEAKS

The annual Jefferson Day dinner of the Democratic Party is strictly a political affair. But President Truman's address to the party faithful Saturday night was not a political speech.

It was a message which carried an impression of maturity and earnestness, an expression from a man who spoke, not as the leader of a political party, but as the President of a great people who are reluctantly beginning to realize that they have been pushed to the center of the world stage at a decisive moment in history.

One might say, without any intent to give offense, that here is a man who has found himself. Throughout his first year and a half in the White House, Mr. Truman functioned in the shadow of his illustrious predecessor. He labored, too, under the handicap of a domestic political climate that was unfavorable to his party. In this atmosphere he made mistakes, many of them. But once the verdict of November had been returned, a verdict which wiped out the Democratic majorities in both the House and the Senate, a change came over Mr. Truman. He stopped trying to be a President with nothing more to offer than a devotion to the policies of the man who had held office before him. Instead, he became a President with a program of his own, and on November 11, 1946, he stated it in these words: "To do in all cases, from day to day, without regard to narrow political considerations, what seems to me to be best for the welfare of all our people."

The record will show that he has adhered to this guiding principle. And to the consternation of his political opponents, the record will show also that there has been a favorable public response to this quality of leadership.

There have been certain byproducts of Mr. Truman's leadership which are to be paradoxical in character. Thus, for example, we find the President on Saturday night warning against false economy, and urging the wisdom of maintaining a high tax structure during this period of prosperity in order to reduce the national debt. That would seem to be sound doctrine. Yet a few Republicans—including some who were outraged when an earlier Democratic administration suggested that we need not worry about the debt because we owed it to ourselves—profess to believe that the President's words were the counsel of a partisan politician.

Fortunately, the hollowness of these complaints is self-evident. No one should be deceived. In this critical time, when our own future is so tightly interwoven with the future of a stricken world, we are fortunate to have a President who has set for himself the high purpose of doing in all cases what seems to be best for the welfare of all of us. What the future will bring is, of course, uncertain. But as long as Mr. Truman keeps his sights trained on that objective he deserves the support of his fellow Americans.

Why the Communist Party in America Should Be Restrained

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. MUNDT. Mr. Speaker, last night at the invitation of the American Broadcasting Co., I spoke over its Nation-wide network on the reasons why it has become imperative that America, officially, and Americans, individually, take some effective steps to curb the rising tide of communism in this Republic. Under leave granted me by the House, I am inserting my radio address in the RECORD at this point. I might add that the

Eugene Dennis mentioned in my broadcast is the same Denis, with many aliases, who was this morning cited for contempt of Congress by the House Committee on Un-American Activities and whose record also reveals that he has obtained passports fraudulently in this country by use of fictitious names. The record presented to our committee this morning also shows that he falsified the date of his birth to avoid military service when registering under the Selective Service Act.

WHY THE COMMUNIST PARTY IN AMERICA SHOULD BE RESTRAINED—RADIO ADDRESS OF HON. KARL E. MUNDT, REPUBLICAN, SOUTH DAKOTA, RANKING REPUBLICAN MEMBER OF THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

(This address was broadcast over the American Broadcasting Co.'s network at 10:15 eastern standard time, Tuesday evening, April 8, in reply to an address over the same facilities the previous night by Eugene Dennis, general secretary of the Communist Party. Mr. Dennis spoke in opposition to restraints being placed on the Communist Party in America.)

Good evening ladies and gentlemen. Last night over this network, many of you heard a man, now calling himself Eugene Dennis, speaking in defense of the Communist Party. It was quite natural that this fellow called Dennis should speak as an apologist for the Communist Party because he is the general secretary of the Communist Party in America.

Therefore, it is important that we not only analyze the party line of the Communists enunciated by Dennis last night but that we also call before this microphone a witness who can tell us with authority something of the background and reliability of Mr. Dennis.

I think we all agree that there is no better authority on either crime or communism in the United States than J. Edgar Hoover, the Director of America's famed Federal Bureau of Investigation. Testifying under oath before our House Committee on Un-American Activities on March 26—less than 2 weeks ago—Mr. Hoover was asked whether he believed Mr. Dennis had good reason to refuse to give the committee his real name. Mr. Hoover said: "That is true. He is known as Francis Eugene Waldron; alias Francis Xavier Waldron, Jr., alias Paul Eugene Walsh, and alias Gene Milton. Those are the names we have discovered up to date about that gentleman."

Dennis admitted on this network last night that he had changed his name, but he said, "What of it? So did Mark Twain." Ah, friends, but what a difference. Mark Twain changed his name only once and stayed by it—he did not change it half a dozen times and for twice that many reasons.

So much for the nature of the Communist spokesman who addressed you as a paid agent of the party over this network last night. Now let us examine the true nature of the Communist organization for which he was pleading and against which he urged you not to establish any restraints, restrictions, or controls.

COMMUNISTS ARE RED BUNDISTS

Just as the German-American Bund was the American agent of a foreign government, so, too, the Communist Party in this country serves as the American agent of a foreign power. Just as individual bundists placed their first loyalty not to America and its free institutions and Christian concepts of freedom, but to a foreign ideology, so, too, the individual Communist in this country dedicates his first loyalty to a foreign cause. It is for this reason that J. Edgar Hoover, of the FBI, recommends the use of the phrase Red Fascists to describe the American Communists, since the analogy between them and the Bundists is so closely interwoven. When all Americans come to think of Communists in this country as Red bundists, and when we all come to recognize their activities as the subversive operations of foreign agents, we shall be well on the road to constructing effective curbs against their diabolical plots to undermine our churches, our freedoms, and our Government.

Contrariwise, so long as millions of Americans fail to recognize the Communists for what they actually are in this country, we are in the vulnerable position of a fire department which would harbor arsonists on its staff and place gasoline in its fire extinguishers. Communism in America has attained a size and wormed its way into such places of influence and importance that it has become imperative that it be stripped of its thin mask of respectability and exposed to full view, naked and undisguised, as the un-American virus which it actually is.

Here is what the highly objective New York Times recently said editorially about the Communist Party, I quote: "The Communist Party is not a political party but a conspiracy which uses democratic methods to kill off democracy—and which resorts to bullets whenever the ballots go against it."

Good friends, literally millions of darkened homes in Poland, in Finland, in the former Baltic Republics, in Hungary, in Yugoslavia, in Bulgaria, in Greece and in many other countries bear mute but mighty testimony to the accuracy of that New York Times editorial.

This Red conspiracy to establish a world-wide dictatorship by the Soviet has its cell of Red Bundists—Red Fascists—Communists agents—call them what you will, in every country in the world. America is no exception. Before our congressional committee 2 weeks ago J. Edgar Hoover called attention to this startling fact, and I quote you the exact words of the Director of our Federal Bureau of Investigation. Hoover said: "The size of the Communist Party is relatively unimportant because of the enthusiasm and ironclad discipline under which it operates. In 1917 when the Communists overthrew the Russian Government there was 1 Communist for every 2,277 persons in Russia. In the United States today there is 1 Communist for every 1,814 persons in this country."

FOREIGN DOMINATION OF AMERICAN COMMUNISTS

Is further proof needed as to the acute threat of communism to our free institutions and our Christian concepts in America? Fellow citizens, on May 28, 1942, Attorney General Francis Biddle found officially that the Communist Party from the time of its inception in 1919 believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States. William C. Bullitt, our former Ambassador to Russia, told the House Committee on Un-American Activities the same thing 2 weeks ago and provided proof for his statements. Louis Budenz, former editor of the Communist Daily Worker, has admitted that as editor of the paper published in New York he had his editorial policy directed from Moscow. The Los Angeles Times, great newspaper of the west coast, and editorially a week ago, "The Communist Party isn't a party at all as we Americans understand it—it is a conspiracy run from abroad." Said the St. Louis Globe-Democrat a few days ago, "The Communist Party is a fifth column engaged in a huge conspiracy against the United States."

Even the man calling himself Dennis, America's No. 2 Communist, who spoke over this network last night urging Americans to keep the bars down and the way free for Communists to attack our way of life has said, "We are and shall continue to be an American working class political organization guided by the science of Marxism-Leninism." And what, my friends, is the science of Marxism-Leninism? That has been made abundantly clear in the Russian Mein Kampf as written by Lenin and rewritten by Stalin-Marxism-Leninism tells us on its own printed pages that its goal is Soviet world-wide domination.

It is against this conspiracy and this program that the Communists now plead with you not to establish any restrictions or restraints. The whimpering cry of the Communists pleading to be unrestrained in their efforts to destroy America is like proposing to a farmer that the best way to raise good crops is to ignore the weeds growing in his fields. Like many other Americans, however, I contend that every reasonable and legal step which can effectively be taken against communism in America in this critical hour should be undertaken without delay. The hour is already very late. The time for action has most abundantly and emphatically arrived.

COMMUNISM GREATEST ORGANIZED ENEMY OF THE CHURCH

Ladies and gentlemen, communism is the greatest organized enemy which the church of God and the cause of freedom has had in all our history. Last night, Dennis, the Communist, urged over this radio that you support his campaign to keep the bars down and the way free for Communists to attack our way of life. He brazenly told you, "Of course it is true that on occasion we Communists have agreed with the Soviet foreign policy and disagreed with American policy." What he did not tell you, however, is this. Without exception, American Communists have always agreed with the Moscow policy and they have consistently supported it against America. Neither Mr. Dennis nor any other Communist can show you a single instance where American Communists have sided with America in our disputes against Russia on any important item in our whole agenda of discussions and disputes.

SHOULD COMMUNISM BE OUTLAWED?

What should we do to restrict the activities of these Red Fascists? Here, in part, are some of the answers which Congress has in mind. In my opinion, the time has not come when we can get the most desirable results by outlawing the Communist Party by national legislation. There are several reasons for this, but two of them are the following: (1) Both the FBI and the House Committee on Un-American Activities, as well as other opponents of communism, are still securing highly valuable clues on Communist techniques and operatives through the device of reversing the fifth-column technique and infiltrating their meetings and their conference rooms with patriotic Americans who bring back reports on the plots which the Communists are formulating. In this way even that small portion of Communist activity which remains above ground in this country aids our security officers to protect America. (2) A second reason why outlawing the Communist Party by national legislation might not be desirable just now is that freedom-loving people all over the world are watching America and as we demonstrate our ability to root out enemies of freedom while at the same time extending our constitutional guaranties of freedom even to those who would sabotage the Constitution, we develop and sustain a reputation abroad which might otherwise be diminished. And, of course, in the final analysis the mere outlawing of the Communist Party would not in itself be an effective antidote to this un-American poison.

SIX EFFECTIVE RESTRAINTS ON COMMUNISM

What should we do to restrain the activities of these Red Fascists. There are a number of practical and effective restraints which can and should be applied to Communists in America without delay and without apology. Let me list a few of these possibili-

ties: (1) Since American Communists follow a party line laid down in a foreign capital, they serve as agents of a foreign government and they should be compelled to register as such. Failure to do so should be punished by severe penalties. (2) Communists should be summarily dismissed from all appointive offices which they now hold in National, State, or city Governments. Communists and their fellow travelers and sympathizers should not be permitted to draw pay from the taxpayers of a system of government which they are sworn to undermine and overthrow. (3) Passport privileges should be denied to American Communists. This Government should do nothing to facilitate the travel of un-American agents who use these travel permits to confer abroad with fellow Communists who also seek to undermine freedom in America. (4) All alien Communists should be immediately deported. (5) Labor organizations which select Communists as officials should be denied their rights under Federal labor legislation. (6) Fingerprinting should be made mandatory on all passport applications and on all incoming visas so the Communist racket in fraudulent passports and black-market immigration can be exposed and eliminated.

The six foregoing suggestions for restraining Communist growth and activity in America do not infringe upon the Constitution or the Bill of Rights. They are practical, effective steps in the job of self-preservation for Americans who want to protect this Republic from Godless communism and Red fascism.

However, the fight against communism in America cannot be won by the Government alone. Today's critical conditions require that private citizens everywhere, both individually and collectively, take active steps to drive communism from their communities. This is not a fight which can be won by faint-hearted warriors. The summer soldier and the sunshine patriot cannot defeat Red fascism. You who join in this crusade against the enemies of Christianity and country will be called Red baiters, Hitlerite, anti-Semitic, and Fascists. Anybody who opposes communism anywhere is smeared with these brands since this is a basic tactic of the Communist party line laid down in Moscow. But if you love America, and if you want to have a part in this great battle against the forces of Red fascism, there is a job for you to do in your community.

Each citizen can help in this crusade. Through your church, your service club, your veterans' organization—individually or collectively—you can help restrain and repel the vicious march of communism. Have you examined the textbooks used in your local schools and colleges? Is there Communist literature in your school of public libraries? Are Communist cooperators, sympathizers, or agents slyly peddling their slimy propaganda in your community? Have your schools, your club, your church, your professional or labor organizations, and that national organization with its high-sounding title and its announced action program of noble objectives which you have been invited to join and to support with your money, have they purged themselves and their advisory committees of all who promote or protect the Communist party line?

THERE'S A JOB FOR EVERY CITIZEN TO DO

The one thing Communists most fear in this country is an American public aroused against them. That is why they are so quick to try to smear all of us who speak out to expose their treachery and their tricks. Now, before it is too late, each of you can help mobilize a public opinion which will outlaw communism in the minds of all decent citizens without requiring a single law or regulation.

IF YOU LOVE AMERICA YOU CAN HELP SAVE IT

Our American Communists work their damage in many devious ways. Some are in labor unions, some in Government jobs. Some become teachers—others are found in almost every walk of life. They are aided in their wicked work by many fellow travelers and front organizations; some are willing cohorts; others unwitting dupes. Several lame-duck radio commentators and newspaper columnists—hang-overs from the days when communism was considered respectable in Washington—still follow the Communist party line. Some defend communism openly—others disguise their motives by simply attacking those who attack communism. Some movie studios in Hollywood still harbor Communists. However, this is still America and there is something that you can do about that. You don't have to sit still and be propagandized on the screen, over the air, and through the press. You can organize community boycotts against pictures featuring stars who are Communists or scenes which are anti-American. You can write your radio station or your editor protesting against the comments of speakers or writers who defend communism and denounce those who are trying to drive it from America. It is your home and your church that the Communists attack—you have a right and a duty to take part in the battle to destroy the influence of those who defend and support the Communists.

If you are really serious about your desire to help restrain the Godless teachings of communism in America there is one thing more which you can do—right now—tonight. You can send a dollar bill to the United States Chamber of Commerce here in Washington and order the two new documentary booklets recently published, showing just how communism is tightening its hold upon the jugular vein of American life. After reading these booklets, you can place them in your school and public libraries. You can also ask your Congressman to send you free copies of official congressional reports showing how the Communist Party in America is in fact the agent of a foreign government. Or send 50 cents to the Government Printing Office in Washington and get the official report of the Congressional Library called Communism in Action.

Unless you are ready to run up the white flag of surrender to the red flag of atheistic communism, there is work enough for each of you to do in arousing America to this crusade against communism so that freedom can prevail here in this most important bastion of its existence. To be forewarned is to be forearmed. Let us unite in creating sufficient restraints to protect our American way of life against communism here at home so that we can be strong enough to protect America against the world threat of communism which now menaces us so directly from abroad. To do less is to surrender to the forces of evil and to do violence to the traditions which have made America great.

Forest Management

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to insert a letter from Mr. Paul H. Gerrard, forest supervisor, Ozark National Forest, Ark., written in answer to my request for information regarding the work of the Forest Service in that area.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
FOREST SERVICE, OZARK NATIONAL FOREST,
Russellville, Ark., March 28, 1947.

Hon. J. W. TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR SIR: Some time ago I sent you a letter giving information covering receipts and total expenditures of the Ozark National Forest for the last fiscal year. I am now taking the opportunity of transmitting you a copy of a report by the Chief of the Forest Service. This report deals in a general way with the entire field of work covered by the Forest Service and most specifically with the timber situation in the United States. It also outlines a plan for the building up of an abundance of timber for the future.

The big job, in my opinion, is that of getting forest management practices in more general use among the small timberland owners. Some 1,649,000 small timberland owners with less than 5,000 acres each own 122,000,000 acres out of the total of 183,000,000 acres of forest land in the South. Only about 2 percent of this group of owners are now following good management practices. Likewise, this is a group which has little fire protection. The larger timberland owners (5,000 acres or more) are doing a better job of protecting their land from fire and following good cutting practices. Therefore, the big job is educating, demonstrating good practices, and assisting these small owners in the ways of good forestry. Forest land of this group can be made to produce nearly three times the volume over that of the present time.

There are 338,000,000,000 board feet in saw-timber-size trees in the South consisting of 194,000,000,000 feet in softwood and 144,000,000,000 in hardwood. Our saw-timber volume during the past 10 years has been reduced 30,000,000,000 board feet, or 8.2 percent. By species it is equivalent to 9.1 percent for pine and 7.4 percent for hardwoods. The 1944 annual cut exceeded the net growth in sawlog-size timber by 24.9 percent. The quality of sawlog-size trees is gradually deteriorating and the volume of the average sawlog tree has fallen from one-third to one-half in the past 10 years. If the 1944 drain and cutting practices continue for 20 years the stock of sawlog-size timber in the South would be reduced 35 percent. The total volume, as expressed in cubic feet and including trees of all sizes, has been maintained during the past 10 years. For trees 5 inches in diameter and larger, it nearly equals current drain. This indicates that the demand for pulpwood, plastic, fuelwood, etc., can be maintained. We must, however, improve our practices if we expect to continue to provide the production of larger sizes of timber for lumber, speciality products and for our growing pulpwood industry.

During the fiscal year 1946, 11,687,000 acres out of a total of 18,348,000 acres of State and private forest land in Arkansas were provided with organized protection involving total expenditure of $314,166 of which $156,900 was provided by Clarke-McNary funds. Of the area under protection in 1945, only 17,631 acres, or fifteen one-hundredths percent were damaged by fires, while other State and private land not under protection suffered a loss of 1.69 percent. The increased appropriation provided by the recent State legislature will be of material assistance in expanding fire protection in general throughout the State.

The Arkansas Division of Forestry and Parks produced and distributed 878,500

seedlings to landowners within the State in 1946. This activity was carried on with Forest Service cooperation through the Clarke-McNary and the Norris-Doxey Farm Forestry Act.

The Cooperating Farm Forestry Act enabled the Forest Service to share the cost with the Arkansas Extension Service for the employment of one farm forester. This man furnished on-the-ground technical advice on the proper handling of small woodland to 48 owners and assisted in the proper marking of 537,000 board feet of forest products. Here again, a recent action of the State legislature will make it possible for the division of forestry and parks to provide this type of service at a cost basis to the large owners and without charge to the smaller landowners.

I might also mention that through our cooperative agreement with the game and fish commission, they have trapped over 600 deer from the Sylamore ranger district for stocking refuges in various parts of the State.

This is a rather lengthy letter, but I did want to give you a few highlights regarding forest conditions here in the South and the cooperative activities of the Forest Service in the State. If you should have need for more detailed information in regard to the above, I will be very glad to furnish it.

Very truly yours,

PAUL H. GERRARD,
Forest Supervisor.

Terms of Office of the President

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Ninety-third Legislature of Maine:

Resolution ratifying the proposed amendment to the Constitution of the United States relating to the terms of office of the President

Whereas the Eightieth Congress of the United States of America, at the first session begun and held at the city of Washington on Friday, the 3d day of January 1947, by a constitutional two-thirds vote in both Houses adopted a joint resolution proposing an amendment to the Constitution of the United States, to wit:

"Joint resolution proposing an amendment to the Constitution of the United States relating to the terms of office of the President

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"'ARTICLE —

"'SECTION 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than 2 years of a term to which some other person was elected President shall be elected to the office of the President more than once. But this article shall not apply to any person holding the office of President when this article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this article becomes operative from holding the office of President or acting as President during the remainder of such term.

"'SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission to the States by the Congress'."

Therefore be it

Resolved, That the secretary of the State of Maine hereby ratifies and adopts this proposed amendment to the Constitution of the United States.

Resolved, That the secretarcy of the State of Maine notify the President of the United States, the Secretary of State of the United States, the President pro tempore of the Senate of the United States, and the Speaker of the House of Representatives of the United States of this action of the legislature by forwarding to each of them a certified copy of this resolution.

In senate chamber, March 31, 1947.

Sent down for concurrence, read, and adopted.

CHESTER T. WINSLOW,
Secretary.

House of representatives: Read and adopted March 31, 1947. In concurrence.

HARVEY R. PEASE,
Clerk.

Air Transport Equals Mobility Unlimited

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Robert Ramspeck, executive vice president, Air Transport Association of America, before the American Legion National Aeronautics Conference, Indianapolis, Ind., March 20, 1947:

Among all the worthy objectives of the American Legion, I can conceive none with a more purposeful meaning for the Nation than the advocacy and sponsorship of this campaign. It is completely courageous, but nevertheless in character with the motives of this powerful and influential organization that, at a time when its membership is still recovering from the awfulness of war, the Legion rises among us to point out how the United States must, for its own security and well-being, maintain its supremacy in the air.

The war ended on a note of frightfulness. The atomic bombing of Japan unleashed an era of incalculable power, whether for good or for bad. The fact that its first manifestation was destructive is perhaps a grim warning to the world. And the further fact that aviation was the means of loosing this terrible weapon points up the theme of this conference—that the United States must maintain its supremacy in the air and develop its aviation muscles still more, on the basis that our resources in the air are perhaps the best antitoxin against the germs of war.

I do not pose as a military expert. Even in the field of commercial aviation I am a comparative newcomer. Yet I have observed enough since becoming affiliated with the scheduled airlines of the United States to obtain the definite conviction that civil aviation is the great backlog of military security. Perhaps that statement puts me in the role of an armchair general. So be it. For no less an authority than General Eisenhower is credited with the statement that there are only two professions in which the amateur excels the professional—military strategy is one. The other is not generally discussed in public.

I'll go ahead with my role as an armchair general.

Though I got no closer to combat than the Nation's Capitol I share what I believe to be the feeling of most of you. Legionnaires that war is a silly way to settle international differences. Nevertheless, I am not a pacifist nor an appeaser. Nor do I think any of you in this audience feel that America will work out her destiny by laying down her big stick and saying to whosoever attacks these United States, "Come on, boys, take what you want." America wasn't built that way, and we will not survive that way.

In reading the history of the last war, one is constantly impressed with mobility as a source of military strength and combat power. Perhaps that phrase is just a more elegant way of saying what General Nathan Forrest is reputed to have said many years ago, that the secret of victory is to "Git thar fustest with the mostest." The truth of that dictum, so far as I can tell, has been inviolate from the Civil War to the surrender of Japan. Whether our future line of defense is against rockets, pilotless aircraft or atom bombs, the fighting forces having the greatest mobility will have the greatest tactical advantage, either for offense or defense.

I do not mean to be an alarmist. Yet who knows whether 1947 will be labeled by future historians as a postwar or a prewar year? All of us hope that threat of aggression will be removed in the coming months and years and a peaceable means found to settle international differences. But a casual return to history will show us that the end of aggression, devoutly hoped for after 1918, did not materialize. Neither has the threat been yet obliterated. If preparedness is the best antidote for the poison that breeds world cataclysms, let's look a little at the role of civil and military aviation in the past, to learn what may be expected of it in the future.

It was clear to almost everyone at the end of World War I that the airplane had grown out of the role of a weapon. Its potentialities changed the entire method of warfare. Henceforth, any planners for defense or aggression would have to look to the skies as well as to land and sea surfaces. And I believe I am safe in saying that despite the air power which Germany built up in the years between the two wars, created on the technical efficiency of the Germanic military mind and the evil genius of Hermann Goering, the Allied planning and production for air warfare was much better, once it got started. I will not say, of course, that either England was prepared in the air in 1939, or America in 1940–41, for the struggle that came. But the determination of the Royal Air Force was sufficient to hold off the immense power of the Luftwaffe in adequate degree until the immense resources of America could come to Britain's aid. If German air power, calculatingly strengthened in the 1930's, had been strong enough to lay waste Britain's defenses, who can say today what the course of the war might have been, and how much of the world today would be under Axis domination?

In the march of aviation, some of us are prone to forget how young the science of aeronautics really is. Most of you know that the Wright brothers conducted the first experiments that led to flight in heavier-than-air machines. But how many of you remember that it was in 1903 that aviation was born? Aviation is only in its forties.

And the most rapid part of aviation's march was since the outbreak of World War I, spurred, of course, by military necessity, but bolstered by the developments of civil aviation in the years between.

When we declared war on Germany in 1917, there were 52 officers, about 1,100 enlisted men, and about 200 civilian employees, including mechanics, in the Aviation Section of the Signal Corps. Up to that time the Army had trained 139 men to fly, of whom 25 or so were really qualified pilots.

We had no appreciable civilian flying activity in the United States before 1917. We had no air lines upon whose experiences and facilities we could draw to make up for our deficiencies in aviation. We had no civil pilots, no civil airports, no civil aerological services, private or public—in short, no great reservoir of civilian aviation resources which we now know to be the backlog of civilian defense.

Let's skip to the outbreak of war in Europe in 1939. On the day the Germans invaded Poland, Col Edgar S. Gorrell, first president of the Air Transport Association and one of the most dynamic men ever to be connected with aviation, was on a fishing trip in Ontario. The association had been instructed to locate him, if anything untoward occurred in the international situation. A survey plane of the province was sent out and finally located the party in a fishing boat. The plane landed alongside, picked up the colonel. Within an hour he was on an air liner and he arrived the same day at his office in Chicago. He called his personal friend, Gen. George Marshall and said, "General, the air lines are ready." It was as simple as that.

But what had the air lines to offer the Nation on that day in September 1939?

The very first action of the Air Transport Association, after it was formed in January 1936, was to urge the War Department to let the association formulate, with the Department, a plan for the mobilization and utilization of the scheduled air lines in wartime. The permission granted, the association worked during the year with the Army Air Corps and the Army War College to make a plan for using our civil aviation resources for war. The plan was revised from time to time, according to conditions, and checked every 2 weeks or so. The German invasion of Poland was a dress rehearsal of the plan, although no mobilization took place. When it was needed, however, it was ready. Indeed, it had been tested to some degree, for the air lines, through the association, had collaborated with the Ferrying Command of the Air Corps for development of worldwide air transport facilities. A secret mobilization plan was drawn up by the air lines which enabled them to undertake important special missions for the War Department. The Ferrying Command not only enlisted the air lines in the actual ferrying of aircraft to Alaska, Africa, India, and other foreign countries but also utilized air-line facilities for the establishment of weather, meteorological and maintenance services for development of foreign routes. Routes were surveyed and regular services overseas begun, forming the framework for the more important operations that came later in the war.

On the day that Pearl Harbor was attacked, the response of the air lines was immediate and dramatic. Minutes after the news was flashed, our air lines, already on military reserve under ATA's mobilization plan, flew to the colors. Air-line planes were ordered by radio to land at the nearest fields and await orders. Several liners discharged their passengers at the nearest airport, lingered only long enough to take aboard military personnel or war cargoes and then took off again for unrevealed destinations, many of them only dots on the map, places the pilots probably never heard of before.

Pan American Airways converted their Clipper planes to war service within 24 hours after Pearl Harbor. Their world-wide operations went on in the Atlantic, Pacific, Latin America, Africa, and the Orient. Flight operations over the Atlantic soon doubled. Their Pacific operations were continued and through China National Airways the provisional capital at Chungking was linked with Calcutta. The trunk operation between Seattle and Fairbanks, Alaska, was increased to daily schedule. Pan American went on to construct airport facilities, establish war transportation and ferrying services, replace Axis air lines in South America, train 1,850 navigators, and transport a great number of Government personnel and their supplies.

A typical instance of the value of the association's plan—and an illustration of the mobility offered by air transportation—took place the next Sunday after Pearl Harbor. In the middle of the morning, the War Department called the association to ask for an immediate secret movement of special troops. They were to go to Brazil, where it was feared an attack was coming. Within a few minutes Colonel Gorrell was in Army headquarters to receive orders for the movement. ATA's plan went into operation.

Within 5 minutes the required planes were notified to land at the nearest airport, passengers were discharged, airplanes refueled, reserviced, and equipped with fresh crews, supplies, spare parts, maps, and mechanics. Nonessential equipment was stripped. The planes were flown to the appropriate Army posts even before the troops were ready to board them. The troops were flown to the Nation's boundaries and then on to their then secret destination, all done according to the principles laid down in the plan the association had suggested and helped to formulate years before.

The logbooks of the air lines are in laconic language. But let me tell you what happened when Dutch Harbor, that cold spot on the Alaskan chain of islands pointing toward Siberia, was threatened.

The Japs had taken Attu and Kiska, and were on the verge of assaulting Dutch Harbor, the most western bastion of American defense of the North American Continent. To lose Dutch Harbor meant a Jap foothold on our continent. At 6 o'clock on Saturday afternoon, June 13, 1942, a call went through from Washington to the headquarters of 11 air lines, ordering every available transport plane to Edmonton, Alberta, to rush men and material to Alaska to stop the gap.

Flight superintendents radioed orders to all ships from coast to coast to alter their courses, drop their passengers at the nearest airport, disregard designated destinations and head north. Crews had to borrow pocket money from corner grocery stores and forget they had no clean shirts.

Quickly assembled at Edmonton, the Minute Man fleet began shuttling vitally important ammunition, medicine, food, machinery, guns, and personnel to bolster the Dutch Harbor base. These flights of thousands of miles were over uncharted terrain, with mountain ranges periodically forcing flights to 23,000 feet for safety. The concerted efforts of the air lines made Dutch Harbor strong enough to thwart the proposed Jap invasion, and who can say that the course of the war was not changed by the mobility afforded our armed forces by the instant availability of air transport?

The whole framework of the scheduled air lines went into war in December, 1941. Western Airlines' planes were requisitioned to fly ammunition to the west coast, where it was feared that enemy action might come. United Airlines maintained its cross-country services for the transportation of Members of Congress, high Government and civilian persons, and military personnel going to their posts. The cabins and cargo pits were filled with cargo and materials. They flew charter trips everywhere and added second and third sections of regular trips. The immense amount of emergency materials which restored Pearl Harbor to power went over the 6,300-mile coast-to-coast and Pacific coast systems of the line.

Continental Air Lines was ordered to make ready 49 B-17's for combat. Chicago and Southern began its program to modify its planes for combat within a week after we were attacked. Delta Air Lines also began a modification program and to create a military-transport division for Army cargo.

Northwest Airlines established the northern region routes, destined to be one of the most colorful aviation actions of the war. Across the country, Northeast Airlines made a survey flight from Presque Isle, Maine, over Labrador and to Gander, Newfoundland, to determine the practicability of regular transport flight to these points.

Early in 1942 Transcontinental & Western Air made survey flights preparatory to establishing a trans-Atlantic service. Near the end of February a TWA plan left Washington for Cairo, Egypt, carrying Army personnel, and thereby began the service for that division of the Air Forces which was to become the Air Transport Command.

The next month Eastern Air Lines, which had been flying heavy priority cargoes down the east coast to Florida and from the Midwest to the Gulf, began operations with the Air Transport Command, operating in the Miami, Caribbean, North and South American zones. Braniff Airways came into service with the ATC, its facilities aiding materially in setting up the Texas-Canal Zone area of operations.

Immediately after the declaration of war, Pennsylvania-Central Airlines sent two-thirds of its fleet of Capitaliners to the Army. Dozens of their crack crews became members of the Air Forces. In March 1942 PCA signed a contract to operate the first domestic scheduled military cargo service to be conducted by an air carrier in the United States. TACA Airways continued their operations between North and South America, meanwhile performing valuable work in detecting and locating enemy submarines in the Caribbean.

Thus, the air lines of the United States were ready when the time came, to leap in and do their part. Literally overnight they prepared to fly the Himalayas instead of the Rockies, the Sahara instead of Death Valley, the Greenland ice cap instead of the Great Lakes. Every center of population and production in the Nation became linked by air with the rest of the world. In areas where men had never flown before they navigated routes across ice fields, ocean spaces, and desert wastes. Immediately any city in the world became within 60 hours of any airport in the United States.

Within 6 months after Pearl Harbor the scheduled air lines of the United States had sold or leased to the Government 193 planes, more than half their total of 359. More than one-third of their personnel, including top executives and pilots, joined the armed forces, and the air lines faced a continuance of their domestic operations with as great handicap, but with as much determination, as any industry in the Nation.

The trained pilots, mechanics, dispatchers, and executives of the scheduled air lines who volunteered in the armed services, or were drafted for special assignments, were the seed corn from which grew the personnel of the Air Transport Command. Without the skill and experience of these persons, and the splendid example they set, these vital organizations could not have attained their efficiency so rapidly nor maintained it so magnificently. Pilots who flew 100 hours a month in their domestic air-line jobs

frequently doubled their flying time in military service, and many times ground personnel worked round the clock to support their comrades in the air.

The air lines expanded their foreign operations in war service on approximately this pattern:

United and Consolidated on long routes in the Pacific; Northwest and Western to Alaska; American and Transcontinental & Western across the North Atlantic; Northeast to Greenland; Pan American pioneered in the Central Atlantic, Pacific, and Alaska; Eastern across the Caribbean to South America; and American Export to South America, Africa, and Europe; and Pan American-Grace and Braniff to South America.

Other air lines sharing in domestic service directly for the military forces included:

All American, Braniff, Chicago & Southern, Colonial, Continental, Delta, Hawaiian, Inland, Mid-Continent, National and Pennsylvania-Central. In fact all scheduled air lines had a part in the war effort.

Even though they were handicapped by loss of personnel and planes and strained to the utmost by their separate operations for the Air Transport Command and the Navy Air Transport Service, the air lines steadily struggled to meet the demands of their own traffic which had reached an all-time peak in 1941. The flights were dominated by the carriage of passengers, cargo, and air mail on war business, with priority seats accounting for well over 50 percent of the traffic. The planes were flying almost fully loaded. The prewar normal load factor was about 50 percent occupation of the available space. Before the war ended it was over 90 percent. At the same time ingenuity and speed-ups in maintenance made it possible for planes to be in the air up to 12 hours daily, compared to the usual 7 to 9 before the war.

This talk is not intended as a paean of praise. I would rather that it be a pattern. There has been time since the end of the war to appraise the air lines' contribution to victory as a basis for planning the future of civil aviation in its two prime functions of peacetime air transport and bolstering our security.

The United States has never lost a war. But let us not permit a state of complacency to set in, with its inevitable poison to our defense organisms. Should we permit this, a strong aggressor nation could wreak damage on this country comparable to what might have happened had the Japanese been able to bomb the three big aircraft manufacturing plants on the west coast. It requires only an ordinary imagination to envision how that would have hampered our progress in the war, and little more is required to sustain the thought that if war comes to us again, the first effort of the enemy will be to bomb our production centers relentlessly, as we did in Germany and Japan.

We began World War I with a huge deficiency in air transport capacity. In 1941, the number of transport aircraft available to the military services and civil aviation combined was less than 500. The military transport program began with less than 200 aircraft drafted from the air lines, and we were well into the second year of the war before aircraft production became adequate.

We overcame our obstacles in aircraft production and operations, but it is almost certain we shall not have a similar opportunity to accomplish the same production miracle again, the miracle that let the Allies have some 10,000 aircraft in operation at the end of the war, with most of them, of course, in American hands.

It seems sensible that the United States should have a reserve of at least half that number as a simple addition to our security. If the Nation agrees that this is a logical way to support our common defense, then, in the name of all that spells security, let us find a way to build our air fleet to those proportions, keep it modern and usable and our aviation talents and resources at a high level.

It's a huge job we have before us. The technical, financial, and operating poblems of the scheduled air lines are staggering even for peacetime operation. The problems multiply as we consider the relation of our peacetime fleet to national defense. If it is decided that four to five thousand planes are needed, how shall we maintain them? By their operation on the air lines? Or in idle reserve? Or by Government subsidy? Or by some other means?

We're striking at the root of the problem. We have history to support the need for a correlated system of civil-military air power. We have the ability to produce and maintain such a system. This is as good a place as any to place the problem on a national sounding board, and I present it to you for further dissemination and study. You'll find the air lines ready and willing to cooperate. And let us keep before us always the thought that if another emergency strikes at us we must have air power to survive and win, and that air transport is an essential element of air power, for it is mobility unlimited.

Veterans' Administration's Program

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of Wednesday, April 9, 1947:

VETERANS' AFFAIRS

(By Tyrrell Krum)

Yesterday, we presented the opening remarks of General Bradley, Administrator of Veterans' Affairs, made to the House Appropriations Committee recently in surveying the VA's program for handling veterans' affairs.

We also gave you the results, in part, of a lengthy private talk we had with the general alone in his office in the Veterans' Administration in which we went over with him all the various manifold difficulties encountered in getting the VA's operation into high gear. And we want to express again our admiration for the job the general is doing.

In attempting to stave off wholesale cuts in VA's annual funds, General Bradley declared in no uncertain terms that if widespread reductions are to be effected, I frankly do not see how they can be accomplished except at the expense of service.

We take up from that point of the general's analysis of the titanic operations of the VA in administering the affairs of millions of veterans and members of their families.

General Bradley continued:

"Where operating costs are reduced to the point that services suffer, we must ask ourselves if this is not false economy. The benefits provided veterans under the Readjustment Act (GI bill of rights) were devised to speed their return to healthy civilian lives. If we slow down the process of readjustment by timid dollar-minded administration of the law, the eventual cost of that delay may far outweigh our savings.

"Delayed readjustment might result in lifelong demands by veterans for priority claims on the national budget."

At this point, we want to make the comment. How right the general is in the observation just made above. Nothing could do more harm to the affairs of the millions of men and women who won our wars than to let them gain the impression they are being given the run-around.

To continue General Bradley's message:

"The fixed charges of veterans' benefits result first from the laws enacted by Congress, second from the war, which determined the number of men entitled to these benefits. As a result of wars in which we have engaged the United States last month (March) had more than 18,300,000 veterans eligible for one or more veterans' benefits.

"In the enactment of veterans' legislation, Congress established the measure of our obligation to these men. In other words, Congress has obligated the American people for the eventual cost of such authorized benefits as 18,000,000 veterans may choose to claim. What the eventual cost may be, no one can—with certainty—say.

"This is particularly true of the readjustment benefits such as education and training, unemployment allowances, and loan guaranties available to more than 14,400,000 veterans of World War II.

"Certainly the cost of this program has been influenced from year to year by the rate of demobilization. Eventually its overall cost will be affected by the turn of our economy. If job opportunities are plentiful in a period of expanding prosperity, the demands for these benefits will be considerably less than they might be in a period of recession.

"Such other factors as availability of schools for instruction and the availability of homes for purchase will determine to some degree the eventual cost of this program. And the broadening of benefits by amendment to the law directly affects the number of veterans who may ultimately apply for them.

"Under the pressure of public opinion, the armed services greatly accelerated the rate of demobilization during the winter of 1945–46. They maintained that rapid pace through the spring and summer, so that by the start of our fiscal year 1947 a total of 12,807,000 veterans had already been discharged from service.

"The estimate on which our 1947 budget was based anticipated that not until June 30, 1947, would we reach a total of 14,000,000 veterans of World War II. As it turned out, we passed that mark early in December 1946.

"This rapid and unprecedented speed-up meant vast increases in the number of veterans applying for benefits of the Readjustment Act. At the same time, it burdened us with additional hundreds of thousands of claims for disability compensation.

"It multiplied our peacetime insurance holders.

"And it threw an early and expensive load on our veterans' hospitals."

With these preliminary remarks out of the way, General Bradley gets down to the basic fundamentals behind all veterans rights and benefits, which we'll cite for you in his own direct quotes in this same space tomorrow.

Communism in Hollywood, From Testimony of Hon. Eric Johnston

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. RANKIN. Mr. Speaker, several weeks ago I exhibited to this House a petition signed by thousands of the best

people in California urging the Committee on Un-American Activities to investigate the Communist plot centered in Hollywood and the west coast area.

Similar appeals have been coming in from that day to this.

Several days ago, Mr. Eric Johnston, president of the Motion Picture Association of America, with headquarters in Hollywood, Calif., appeared before the Committee on Un-American Activities and did about the most masterful job of side-stepping the issue to which I have ever listened. I cross-examined Mr. Johnston on this subject of Communists' activities in the moving-picture industry; and for the information of the House and the country, under the permission granted to extend my remarks, I am inserting that portion of Mr. Johnston's testimony carrying my cross-examination and his answers to my questions. In order to show the background of the issue involved in these questions, I am beginning with the question asked Mr. Johnston by Representative VAIL, of Illinois:

The CHAIRMAN. Mr. VAIL.

Mr. VAIL. Mr. Johnston, you mentioned a moment ago, in the course of testimony, that you thought that the Federal Bureau of Investigation should make recommendations to the proper authorities with respect to the necessary legislation to properly stem the tide of communism. You are aware, of course, that the Federal Bureau of Investigation essentially is a policing organization and has no power or authority to suggest legislation?

Mr. JOHNSTON. Mr. VAIL, I said that either the FBI or the Department of Justice.

Mr. VAIL. But you included the FBI?

Mr. JOHNSTON. Yes; should make recommendations if they haven't sufficient power.

Mr. VAIL. Testimony before this committee in the last few days has indicated that there are several prominent figures in the moving-picture industry, prominent actors in particular, who support communistic activities. I have in mind in particular the names that have been mentioned, March, Robinson, and Sinatra, and Cagney. In your opinion, are those individuals concerned with the progress of communism in this country?

Mr. JOHNSTON. I have no knowledge to that effect.

Mr. RANKIN. What was that question?

Mr. VAIL. The question concerned the moving-picture actors or actresses who were interested in the promotion of communism in this country; and Mr. Johnston has stated that he knows nothing of such activities.

If those activities became known to you, Mr. Johnston, would you recommend the elimination of those individuals from the moving-picture industry as you have recommended the elimination from union organizations and Government service?

Mr. JOHNSTON. If they hold offices in the unions or in their guilds, yes, I think they should be prohibited by law from doing so if they are Communists and/or proven to be Communists by trial, as we do in the United States. Then, it seems to me, they should be published. The very fact that they are published to the world as Communists is sufficient to eliminate them, in my opinion.

Mr. VAIL. You are aware of the fact that this committee has before it the problem of considering legislation to outlaw communism. You have taken a definite position, as I understand it, against legislation toward that end?

Mr. JOHNSTON. Yes, I have, but I don't think it is important. The important thing is, are the Communists conspirators? If they are, they should be exposed and prosecuted. The important thing isn't whether Communists believe in collectivism as a political belief. The important thing is, in a land of free speech and a democracy, as to whether they are carrying on conspiratorial activities. If they are, they should be prosecuted and exposed and prevented by law from holding key positions in associations or unions, or of cooperatives, or of management.

Mr. VAIL. That is all.

The CHAIRMAN. Mr. RANKIN.

Mr. RANKIN. Mr. Johnston, you say that where Communists conspire to overthrow this Government they should be prosecuted?

Mr. JOHNSTON. Right.

Mr. RANKIN. Are you aware of the fact that communism is a conspiracy against this Government?

Mr. JOHNSTON. I believe that it is; but if it is proven to be so I think they should be prosecuted.

Mr. RANKIN. Have you any doubt?

Mr. JOHNSTON. I personally have not. In our country we do things by law.

Mr. RANKIN. One of the most dangerous influences they can get their hands on is the moving-picture industry. You said a while ago that, as I understood, you would not fire one or prevent them from participating in the movie industry if you knew they were Communists.

Mr. JOHNSTON. I would prevent them from holding offices.

Mr. RANKIN. That is not the thing. The man who makes the picture, to poison the minds of children of this country, through the moving-picture industry, is just as dangerous as the man who plants dynamite under a defense plant in time of war, and it is your duty, it is the duty of every patriotic American, to drive from every position they possibly can those enemies of our country who are conspiring to undermine and destroy it. Unless that is done you are going to have some very drastic legislation with reference to the moving-picture industry from the Congress of the United States.

Mr. JOHNSTON. I think they should be exposed; should be prevented from holding office. I think their very exposition would eliminate them. But I don't think, Mr. RANKIN, we are ready for concentration camps yet in America. Men have to earn a living. I think this: If they are doing things which are conspiring or treasonable, they should be prosecuted and dealt with as real criminals.

Mr. RANKIN. Yet you say you would not prevent them, try to prevent them, from making pictures or working in the moving-picture industry, even though you knew they were Communists?

Mr. JOHNSTON. A man who works in the moving-picture industry, unless he directs the plot, or cuts the film, hasn't very much to do with Communist propaganda in the films. Mr. RANKIN, before you came in I said that unquestionably, in my opinion, there were Communists in Hollywood, but that they had not had an effect upon the American films, because we are hated in every land in the world in which communism holds sway.

Mr. RANKIN. Who is hated?

Mr. JOHNSTON. The American motion-picture industry. We are forbidden in most of the countries behind the iron curtain; we are forbidden and fought by Communist Parties in every land in the world.

Mr. RANKIN. Mr. Johnston, they don't have to hold office even in a labor union to be effective, but unless your outfit, the moving-picture industry, is willing to purge those subversive influences, it is going to have to be done by the Congress of the United States.

Mr. JOHNSTON. Mr. RANKIN, we are doing everything in our power to do that legally. We cannot discharge a man from a union because he says he is a Communist.

Mr. RANKIN. All right. Let's see whether you can or not. You mean you can't discharge a man working in your enterprise when you know he has joined a conspiracy to overthrow the Government of the United States?

Mr. JOHNSTON. That is different. If that is proven he is in a conspiracy and should be prosecuted by the Department of Justice.

Mr. RANKIN. That is what communism is. It is dedicated to the destruction of this Government. It is dedicated to the destruction of the American way of life and to every business enterprise in America.

Mr. JOHNSTON. All I say to you is, Mr. RANKIN, prove that he is a Communist; if he is engaged in conspiracy he should be prosecuted.

Mr. RANKIN. Yes, but listen: I am surprised at your attitude. I think you are going to have to revise your position and join us in this crusade to save America from its enemies within our gates. And you can't wink at them in the moving-picture industry.

Mr. JOHNSTON. We are not winking at them in the motion-picture industry, Mr. RANKIN.

Mr. RANKIN. And continue to enjoy the confidence of the American people.

Mr. JOHNSTON. We are not doing that.

Mr. RANKIN. Today we are in a deadly conflict with oriental communism and western civilization. Someone yesterday, or the day before—2 days ago—described Stalin as the Genghis Khan of the twentieth century. I thought that that was putting it rather bluntly. But we are today in deadly conflict between those two ideologies and there can be no compromise.

Mr. JOHNSTON. Mr. RANKIN——

Mr. RANKIN. In this country.

Mr. JOHNSTON. I hope you you are not impugning in any way the American activities of the motion-picture employers in Hollywood.

Mr. RANKIN. I am, some of them, I will say.

Mr. JOHNSTON. I want to tell you right now there is no group of more American people in the country than are those in Hollywood. I want to tell you some of the things they are doing, just for information——

Mr. RANKIN. I know some of the things they are doing, and I know some of the things they are doing that probably you don't know, and I can tell you now, you need a house cleaning, need it very badly, and I think you are the man to start it.

* * * * *

The CHAIRMAN. Mr. RANKIN.

Mr. RANKIN. Mr. Johnston, you say that you would prohibit Communists from holding office——

Mr. JOHNSTON. Yes, Mr. RANKIN.

Mr. RANKIN. In Federal, State, or county or municipality?

Mr. JOHNSTON. Yes.

Mr. RANKIN. You would also prohibit them from holding offices in labor unions?

Mr. JOHNSTON. Yes.

Mr. RANKIN. You would also prohibit them from becoming instructors in our educational institutions, I presume?

Mr. JOHNSTON. If those are deemed of importance, yes. If those are deemed key positions—and in my opinion they would be.

Mr. RANKIN. Don't you think it is a key position when a man has the training of the youth of the country?

Mr. JOHNSTON. If they are teaching conspiratorial or revolutionary ideas, overthrow of the Government by force, in schools, of course they should be removed.

Mr. RANKIN. Would you want to send your children to a school teacher that you knew was in favor and committed to the overthrow of this Government?

Mr. JOHNSTON. Why, of course not.

Mr. RANKIN. All right. Now, then, don't you think that actors who put on plays should also be, who are Communists, should also be banned?

Mr. JOHNSTON. If you are performing conspiratorial activities, yes. Mr. RANKIN, the difficulty is in labeling everyone who doesn't agree with you a Communist—or agree with me—and that is one of the problems. Many of these people have different points of view.

Mr. RANKIN. Mr. Johnston, you are so busy with your executive duties that I am afraid you don't read some of these films between the lines, read between the lines, but a great many of the people——

Mr. JOHNSTON. I not only read between the lines, but I get under the sheets, too, Mr. RANKIN.

Mr. RANKIN. Now, then, I want to ask you about your script writers. Do you permit these fellows to write script, the Communists, to write script for your pictures?

Mr. JOHNSTON. If the scripts that are written are in any way communistic, I have almost complete confidence that the employers would not permit such a script to be used.

Mr. RANKIN. Would you risk having a man write a script or a picture to be shown to the millions of children of this country that you knew was a Communist?

Mr. JOHNSTON. If he was using anything communistic in it?

Mr. RANKIN. Yes.

Mr. JOHNSTON. Please bear in mind that after a script is written it is reviewed by a good many people. It is read. It is reviewed by top executives. After it is photographed it is again reviewed and cut.

Mr. RANKIN. And still you can read between the lines in some instances. So I am asking you if you would, if you knew that a man or a woman was a Communist, if you would permit him to write the scripts for the picture shows that you were sending out over the country for the children of this Nation?

Mr. JOHNSTON. If a man is a known Communist, of course, he should not be. I told you a moment ago, as an employer in Hollywood—if we have a contract with a man there is no way by which we can cancel that contract, just because he is a member of the Communist Party, unless he engages in treasonable activity.

Mr. RANKIN. The mere fact that he is a member of the Communist Party, committed to the overthrow of this Government, should justify you in canceling the contract. They threw one great American off the radio there, Cecil DeMille, because he wouldn't contribute to a campaign that he considered corrupt, to which he was opposed. Now, I am going to ask one more question, and then I will close. I note you say that you attended one of these banquets where they had 62 courses and 32 wines. As a matter of fact, that was for the top-flight commissars?

Mr. JOHNSTON. Of course.

Mr. RANKIN. You were eating with the commissars. The millions of people who are held in slavery and subjugation in Russia never got into one of those banquets—even with two courses and one wine, did they?

Mr. JOHNSTON. I don't think I was allowed even to see them very much.

Mr. RANKIN. No. If they have their way the same condition will prevail in this country. One of the most potent influences that they could get their hands on—and the reason I am saying this, I have been abused so much that I have become immune to it—but I can tell you now there is a great deal, a rising tide of criticism of the moving-picture industry from this standpoint, and the reason I am saying this to you -and I will say, Mr. Johnston, I have known you for a long time, you were head of the Chamber of Commerce, I believe?

Mr. JOHNSTON. I was; yes, sir.

Mr. RANKIN. And I don't want to see the moving-picture industry crippled or discredited, but I think that unless you get busy and clean house and fumigate it——

Mr. JOHNSTON. How would you suggest we do it, Mr. RANKIN?

Mr. RANKIN. I suggest that you get as busy as the FBI does. And I am not sure that you couldn't get the assistance of the FBI. And everyone whose loyalty was questioned I would certainly get them out of the moving-picture industry.

Mr. JOHNSTON. Mr. RANKIN——

Mr. RANKIN. Just as I would get them off of the pay roll of the colleges of the country, just as I would get them off the Federal pay roll, the State pay roll, the county pay roll, and the municipal pay roll. A man who doesn't believe in this form of government, and who is out to destroy or join the conspiracy to destroy it, that man has no right to participate in those activities that control public sentiment or shape the public mind.

* * * * *

Mr. JOHNSTON. Mr. RANKIN, as I said before, if there is a conspiracy to destroy our Government by force, of course, it should be prosecuted and prohibited.

Mr. RANKIN. It is a conspiracy to destroy it by any method by which it can be destroyed. That has been brought out so forcibly here by Mr. J. Edgar Hoover and others who are familiar with the situation that I don't see how any American can question it.

Mr. JOHNSTON. I do not question Mr. Hoover. I have the greatest confidence in him, Mr. RANKIN.

* * * * *

The CHAIRMAN. Mr. RANKIN.

Mr. RANKIN. Mr. Johnston——

Mr. JOHNSTON. Yes.

Mr. RANKIN. This hearing is being held on a couple of bills, one of which I introduced to outlaw the Communist conspiracy. There have been a great many who testified who have dwelt on trying to outlaw a political party. Don't you think some law should be passed to punish the participation in a conspiracy against the United States?

Mr. JOHNSTON. Well, Mr. RANKIN, I thought there were laws in existence now which would punish treason, conspiracy against the United States—our alien and sedition laws.

Mr. RANKIN. I am not sure they do.

Mr. JOHNSTON. If they do not, strengthen them. You are an expert on legislation. I am not.

Mr. RANKIN. I thank you for the compliment, but I am not sure that I could qualify.

Mr. JOHNSTON. Couldn't the Department of Justice tell you whether they are strong enough?

Mr. RANKIN. What I am driving at, and I think what you are driving at, and all other patriotic Americans are, is, putting a stop to these attempts to undermine and destroy this Government, the American way of life.

Now, they keep harping on the capitalistic system. Just offhand you would think they were talking about a few millionaires, but they are talking about everyone who owns a home or who owns a farm or a factory or a store or a shop or a filling station. In other words, it is to destroy the entire economic system of this country. So don't you think some law, if the law is not sufficient now—and if it hasn't been enforced—don't you think we ought to strengthen that law to prohibit and to punish anyone who joins in such a conspiracy here in the United States?

Mr. JOHNSTON. Mr. RANKIN, I am not an expert on law or legislation, and, as I said, I think you are. If the laws need to be strengthened, and if the Department of Justice does not have sufficient law to prosecute people who are now committing acts of sedition or treason against our country, then the law should be strengthened, unquestionably. In a free country, such as ours, people can change the form of government by constitutional methods. I do not believe in communism, I do not believe in anything which it stands for, I am unalterably opposed to it; but I also do believe, with the late Oliver Wendell Holmes, that freedom is the right to express the thoughts that are repugnant to ourselves if they want to express them. When you talk about treason, or overthrowing the Government by force, then something should be done about it.

Mr. RANKIN. Treason consists in levying war on the United States, or aiding or abetting an enemy in time of war. That is roughly the definition of treason in this country. Now the Communist conspiracy is a conspiracy to destroy this country. Wouldn't you call that a treasonable conspiracy? If it isn't considered treason under the law, don't you think it should?

Mr. JOHNSTON. I believe it is, but I think it should be prosecuted under the law. If the law isn't ample, the law should be extended so that it is ample.

Mr. RANKIN. That is what I am driving at.

* * * * *

Mr. RANKIN. If we passed a law, if Congress passed a law along the lines I suggested, that would enable you to get rid of them, wouldn't it?

Mr. JOHNSTON. That is correct.

Mr. RANKIN. We will try to help you.

The Lilienthal Appointment

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. O'KONSKI. Mr. Speaker, first as an American and second as a Member of Congress, I am fully aware and the American people should become fully aware of the propaganda and pressure to which Members of the Senate have been subjected relative to the campaign by so-called liberals, Communist tools, and innocent affiliates to force the appointment of Mr. Lilienthal to the Atomic Commission.

Americans should become fully aware that the appointment of David Lilienthal was the result of a well-planned program, and that the gentleman, himself, while holding a Government position, unceasingly and actively campaigned for this position. This is corroborated by no less a person than Harold "Honest" Ickes. I feel that careful consideration should be given to the remarks of William C. Bullitt, former Ambassador to Soviet Russia, when he stated that in his opinion Russia did not have all the necessary data to develop and manufacture the atomic bomb, and he concluded that if the Senate did have such knowledge, the people of these United States would have been so informed in a forceful manner.

I wish to stress the fact that at this moment in our Nation's history, we cannot afford to gamble on the loyalty or innocence of any individual or group of individuals. It is our opinion that if the slightest suspicion is cast on any person who is to be placed in a position where instruments of defense, either intentionally or through ignorance, fall into the hands of an alien power, that person should not be given one moment's consideration. We also feel that if the person himself is a true patriot, he would resign without hesitation.

A review of the background of the present Presidential appointee fails to reveal that he is a master mind. His greatest

claim to this position appears to be the years he has spent with the TVA. I am of the opinion that the job performed by Mr. Lilienthal in no way proves great ability. He has not been placed in a position where he has been compelled to meet competition. His financial backer has been the Treasury of the United States. All of the red tape with which similar utilities are daily confronted never existed for him. TVA has never been faced with a tax problem and if a few additional million at the end of the year was needed the powers that approved this social experiment helped to secure the money without too much effort.

It is my opinion that under the circumstances there are in this country several hundred thousand young men who would have done a better job than Mr. Lilienthal. His business life has been protected from the hardships and worries which daily confront the executive who is responsible to stockholders, and who despite red tape, competition, and other obstacles is expected to produce a profit at the end of the year. If Mr. Lilienthal had been in private industry he would not at the end of the year be able to show a profit, but reported that the business will be short two million this year, one million next year, and so on indefinitely, he would not be employed long. No, Senators, there is not actually any convincing proof that Lilienthal is a tried and unusually able executive.

Before reaching a decision to take a public stand on the appointment of David E. Lilienthal I made a systematic examination of the organizations and publications which have been propagandizing in behalf of the gentleman and for his appointment to the Atomic Commission. On a recent date some 21 organizations came out openly for Mr. Lilienthal. Among this group we find the National League of Women Voters. Now this organization, headed by Anna Lord Strauss, has consistently advocated and lobbied to retain as a part of our bureaucracy such agencies as OPA.

This organization among other things publishes a paper called Action. In May 1946, Vera Nicholes Dean wrote an article for this paper under the title "Is Russia Alone to Blame." In this article the popular Vera Dean has this to say:

> Since VJ-day our—United States—economic withdrawal, our naked materialism as exemplified by our attitude toward the feeding of starving peoples, our political vacillations, and above all, our moral negativism have done more to keep the world in a turmoil than Russia's actions.

Just exactly where Vera Dean has been in the past year it is most difficult to say. She probably never heard of UNRRA and if she has is not aware that 72 percent of the funds expended by this organization came out of the taxpayers in the 48 States of these United States. It is possible that she never heard of the $4,500,000,000 loaned to Great Britain, she may not have heard of the recent loan to Italy, or of the extensive credits to Greece and the pan-Slavic states. It is possible that she is in the dark in respect to the commodities which have been extended Tito, under very liberal conditions, which in turn have been used to finance communism in that nation and the death of five of our finest young soldiers. She appears to be ignorant of the wholesale looting of food and the stripping of machinery in Soviet-occupied countries. This nation which she attempts to glorify in a subtle manner, looted from Rumania alone 1,700,000 horses. We wonder if this lady fully realizes what this item alone means to the people of Rumania, where the horse is the prime factor in producing food. Our Nation has presently been made aware of the effectiveness of such looting.

Another organization which appeared on this endorsement list was the Federal Council of Churches for Christ in America. Now several days after this appeared a small item was carried in one of the leading daily papers which denied they had taken such a position. In our opinion the United States Senate should learn how the name of such an organization can be used in such a loose manner. It must be remembered that this organization claims to represent some 25,000,000 Protestants in this Nation. It might be well to learn by what authority this endorsement was issued, apparently without consulting the responsible executives in that organization.

With one or two exceptions each of the organizations which endorsed Mr. Lilienthal could be exposed for what they really are. We wonder if the innocents in these front groups fully realize what the ultimate consequence of their unthinking endorsements might lead to. These persons are the Chamberlains of the day—people who desire to appease. It is likewise very strange to us that many of these people, who now insist that we must get along with this totalitarian giant, were the chief propagandists against the Chamberlain appeasement policies. They held that America could not exist in a world in which one-half was under the domination of German totalitarianism, but now seem to think we can live in a world, now more than half dominated by Russian totalitarianism. Even the slow thinkers of our day are beginning to realize that Hitler's methods and objectives were a part and parcel of the Soviet Communist system. According to our late President, Stalin and the Government of the U. S. S. R. are just as vicious a state as Hitler's Nazi government.

The idealists in America who have conducted such an aggressive campaign to have Mr. Lilienthal confirmed, have little regard for the safety of our Nation as a nation. They have time and again indicated their preference for a one-world government regardless of what the results might be to our people and country. It is therefore only reasonable to conclude that they feel they have in Mr. Lilienthal a man who is innocent enough to bend to their will and desires. They seem to forget that we are living in a practical world and that one of the most capable and shrewdest realistic thinkers of our day is the man who heads the Kremlin. A Communist preaches idealism to all such innocents, but not since the day of Karl Marx have they ever been known to practice it. A Communist lives in a practical world and functions accordingly.

One of the leading publications promoting the Lilienthal appointment is the confused organ known under the title of the New Republic.

It is perfectly possible that Mr. Lilienthal is merely repaid a debt of gratitude, when on an early occasion he endorsed this publication with these words:

> The New Republic stands out in American journalism because it understands that unity and agreement, however much desired are frail and illusory unless forged out of the realities of modern life. The New Republic is admirably qualified for this essential role of vigorous, independent interpreter of complex facts.

Directly above this statement and picture of Mr. Lilienthal is a similar endorsement and picture of Orson Welles, who has been active in no less than 14 Communist-front organizations in the United States. On one occasion one of the leading members of the Communist movement in America, and now reformed, stated:

> Orson Welles is used by the Communist movement to the limit, but he is too unreliable to be accepted as a full-fledged member.

In this same document the New Republic stresses the fact that among most scintillating contributors to the publication are Bruce Bliven, George Soule, Max Lerner, Malcolm Cowley, and Michael Straight. To many persons this means little, but if one desires to learn how communistic these four persons might be all they need to do is to examine the public records of the House Committee on Un-American Activities and they will find that George Soule, is mentioned on 43 occasions, which related to his extensive Communist-front activity. Using the same index then look up Mr. Malcolm Cowley, there you find he is mentioned some 54 times and his Red-front activities exposed. Then using the same index look for the name of Max Lerner; he is spoken of on no less than 50 occasions and his Communist-front-activity exposed in detail. The fourth person referred to is Bruce Bliven; he is mentioned in this same index no less than 25 times, and his Red activities are brought to light. The background of Michael Straight and his indicated sympathies place him in about the same category as the other four.

Directly underneath these advertised contributors is the phrase: "And many others."

We do not pretend to know exactly what they mean by this additional remark, but we can inform you that among others who were given space in the publication to espouse and glorify the Russian Communists was none other than Earl Browder.

In the same pamphlet in which Mr. Lilienthal's picture and endorsement appeared is a picture of and an endorsement by Harold J. Laski.

At this point it might be interesting to review Mr. Laski's opinion on atomic energy, as stressed by him in December of 1945, when speaking before the Nation Associates as a guest of Freda

Kirchway and her Socialist-minded friends. Mr. Laski on this occasion stated:

> Free enterprise and market economy mean war. Socialism and planned economy mean peace. All attempts to find a compromise are a satanic illusion.
>
> It is clear to any honest observer that a society dominated by businessmen could not be trusted to create the mental climate in which the development of atomic energy would be confined within the framework of peace. They would not give the common people the education because they fear its outcome.

We are interested in knowing if Mr. Lilienthal shares this same opinion, inasmuch as he shares the same page.

Today this publication is now, theoretically at least, headed by Henry Wallace, who has been loud in his endorsement of Mr. Lilienthal.

We regret to mention that while some Members of the United States Senate might at this time be confused as to the direction to take, to these I say, the Browders, Laskis, Soules, Blivens, and Wallaces are not. They hope to change our Government in part or in whole and have a definite program laid out to reach this goal. It makes little difference to them who they will use to reach their objectives.

This publication, according to the House campaign hearings, sold to the CIO its congressional list.

I feel that if Mr. Lilienthal holds this publication in such high regard and not only loans his picture, but his signature and endorsement in a pamphlet gotten up to sell the magazine, he must endorse Mr. Welles, George Soule, Harold Laski, Michael Straight, Max Lerner, Malcolm Cowley, Bruce Bliven, and the policy which gives to Earl Browder, space in the publication to glorify the Communist movement.

The Constitutional Education League of New York City, recently called upon Henry Wallace to register as a foreign agent, when he assumed editorship of the New Republic. They charged that the owner resided in London, England. It might be interesting to learn if the red-wing labor group which now controls Great Britain, and of which Harold Laski was secretary have more than a casual interest in the Lilienthal appointment.

One leading newspaper which devoted considerable space in defending the appointment of Lilienthal, has on several occasions carried ads telling of activities and meetings of the Communist Party. The executive secretary of one branch of the Communist Party was for a period of time employed by this paper in the accounting department. He informs that according to the books of the specific branch of the Communist Party they were not asked to pay for the ads. In fact he said, "We did not have that kind of money in the treasury."

Still another publication carried headlines that the FBI issued a statement exonerating Mr. Lilienthal of any Communist activity. We have been informed that no such statement was issued.

One motion picture house carried ads in Washington, D. C., papers to the effect that they were showing a picture which had to do with Mr. Lilienthal, using these words, "Lilienthal confirmed." Only those who are acquainted with the Communist propaganda technique fully realize what such a distortion means. This method is commonly used to make the people believe that a highly controversial issue has been settled, and in this way discourage the opposition, which is led to believe the fight is lost. This of course, could have been an innocent error, but it is difficult for any person or group who understands the methods used by fellow travelers and Red propagandists to accept this explanation.

With one or two exceptions every Red sheet in America has carried on a direct or subtle campaign to have this gentleman confirmed.

In addition to close association with so-called liberals and twentieth century progressives, Mr. Lilienthal has at least on one occasion loaned his name to the leading Communist front in the South. This organization is known as the Southern Conference for Human Welfare. This front was established by a direct contribution of $2,000 from the Communist Party, and was established through the efforts of Robert F. Hall, a leading member of the Communist movement today, Paul Crouch, Ted Wellman and Joseph Gelders, the same names which appear time and time again in connection with the Communist cell in TVA.

Earl Browder, definitely identified the Southern Conference for Human Welfare as a front organization, describing it as a transmission belt for Red propaganda. James W. Ford, a candidate for Vice President on the Communist Party ticket, spoke of this front and the Southern Negro Youth Conference in these terms:

> The Communists through their pioneering work in the South may justly claim to have laid the foundation for great social movements." (Communist, September 1938, p. 826.)

On March 29, 1944, the Special House Committee on Un-American Activities, cited this organization as a Communist front. Senators, we wish to remind you that this was the finding of a committee composed of Members of the United States Congress, and not by some unofficial prejudice group. It appears that Mr. Lilienthal saw reason to ignore those findings. They were made public and have been printed over and over again, yet we heard no denials or repudiation of this Communist front by the presently appointed applicant for the post of Chairman of our Atomic Commission. If the man is sincere, we feel that we are within our rights as citizens of the United States to know just how he feels about this organization today. It is our opinion that any normal person and true patriot would loudly denounce such a group when the facts are brought to his attention. For some reason he appears to have reserved his decision. His testimony on the stand indicates that conveniently his knowledge of communism and its relationship with so-called progressives and pink liberals is limited.

You must realize, Senators, not only is the security of America at stake, but the security of the true freedom-loving people of the world, many of whom at this moment are being ground under the heal of a ruthless despot, and forced to accept a form of government which aims to destroy their individual liberties. The Members of the present Congress may one day be called to account by the patriots of the United States because they failed to consider the facts which have been herein set forth.

Testimony has shown that during the time Mr. Lilienthal served at TVA some of his closest associates and fellow employees had better than casual relations with leading Communists and Communist fronts.

For some reason officials of our Nation fail to comprehend the true purpose of the Communist front and do not realize that these fronts and their sponsors—innocent or otherwise—are as much a fifth column today as the German-American Bund. Despite the extensive testimony and written word of Browder, William Z. Foster, Lenin, Stalin, and many others, they cannot bring themselves to believe that the objectives of the Communist and the sympathetic fellow traveler is to destroy the capitalistic form of government, no matter where it exists. The chief purpose of these fronts have been, and are now, to carry on a plan of organized dissension—to carry the word of Marx and Lenin to the people and to conform strictly to the foreign policy of their fatherland—Soviet Russia.

Employed at TVA under Mr. Lilienthal was John Marshall Frantz, who was on the advisory board of the North American Committee to aid Spanish democracy. This front is cited no less than four times in the Red Book of the House Committee on Un-American Activities.

> 1. Received money raised by the Communist Party of Massachusetts. (Massachusetts, House Committee on Un-American Activities, report 1938, p. 562.)
>
> 2. International Workers Order (which is cited by the House committee and other official Government agencies no less than 13 times in the "Red book," published by the House Committee on Un-American Activities), contributed funds to the described Spanish front.
>
> 3. Cited as under Communist control, influence, and collaboration with the Communist Party by the Committee for Cultural Freedom, Prof. John Dewey, chairman, April 1942.
>
> 4. Cited as a Communist front by the Special Committee on Un-American Activities, March 29, 1944; January 3, 1940.

Among the membership of the advisory board of this organization there were on its board 20 people, and of that 20, 12 were TVA employees and 3 were relatives of TVA employees, making 15 of a membership of 20 either employed by the Authority or relatives of TVA employees.

One of the most intimate associates of Mr. Lilienthal at TVA and during the development of the Atomic Commission is Mr. Herbert Marks. He was identified under oath on July 6, 1940, by Mrs. Muriel S. Williams, a former member of the Communist Party as a person who attended pro-Communist meetings. Mr. Marks likewise has been identified as a member of the National Lawyers Guild. This organization is cited no less than

three times in the Red Book, published by the House Committee on Un-American Activities.

1. The late Frank P. Walsh, Comptroller, Joseph D. K. Golderick, Judge Ferdinand Pecora, Hon. Adolph Berle, Nathan Margold, then solicitor to the Department of Interior, and others resigned from the National Lawyers Guild on the ground that it is Communist dominated. (New York City Council Committee investigating municipal civil-service commission, pt. II, p. 55.)

2. Cited as a Communist front. (California Committee on Un-American Activities, report 1943, p. 39.) A. A. Berle, Jr., then Assistant Secretary of State in his letter of resignation dated June 5, 1940, stated that the leadership is not prepared "to take any stand which conflicts with the Communist Party line."

3. Cited as a Communist front by the Special Committee on Un-American Activities, March 29, 1944 (pp. 147-149).

Despite these disclosures we have failed to learn that Herbert Marks ever resigned or repudiated this organization. We have brought to the attention of officials, that without fail, you can usually find in every Government Bureau members of this organization who are placed in highly strategic positions and in this way have a heavy hand in the activity of the respective Agency or Bureau.

Selected by the Atomic Commission, 3 days after it had been set up, to head the General Advisory Committee of Scientists, was one of the leading innocents of our day, Dr. J. R. Oppenheimer. In 1940 he joined a Communist front committee which defended New York City public school teachers charged with Communist activities. He also was a member of the American Committee for the Protection of Foreign Born, one of the most notorious Red fronts in the United States. This organization is cited three times in the Red Book, published by and publicly distributed by the House Committee on Un-American Activities. To date, so far as is known, the good doctor has failed to repudiate the front or its Communist members.

During the recent hearing David Lilienthal failed to produce any evidence that he ever took one single step to repudiate the people employed under him and their Communist front organization associations. The issue at the moment is not whether Lilienthal is himself a Communist. If he was negligent in routing Communists out of TVA, he himself was so gullible that he joined a major Communist front—he ought not to hold a position of public trust, for there are many Americans who neither are negligent or gullible, and who can be trusted to their very last breath to defend and protect the best interests of the United States.

In addition to his association with the Southern Conference for Human Welfare, Mr. Lilienthal has likewise been accused of being an alumnus of the League for Industrial Democracy. Examination of the early development of this organization reveals that the Fabian Society of London—a creation of Frederick Engels, who was a protege and brother of Karl Marx—established some years ago the London School of Economics, whose purpose was "to raise and train the bureaucracy of the future socialist state." Later an American branch was organized under the name of Intercollegiate Socialist Society, whose object was to promote "an intelligent interest in socialism among college men and women." After World War I the word "Socialists" fell into disrepute and Marxist planners and the brother Socialists popularized—with the aid of some of our leading political figures—their system with the word "democracy," hence the name of the organization was changed to the League for Industrial Democracy. Its purpose declared was and reported still to be the creation of "a new social order based on production for use and not profit."

This organization has been infested by Socialists and Communists since its inception. One of the leading functionaries in this organization is Paul Blanchard who in 1943 entered the foreign-service branch of one of our Government agencies. He was one of the leading voices of this front, and when addressing strikers in Utica, N. Y., said:

I am sometimes ashamed that I am an American. Yes, I am Red and pretty Red * * * The things that happened in Russia are bound to happen in America. * * * The working class must have power. They cannot get that power unless they take it from somebody else. We must honestly try to abolish the superstition of Patriotism. I am an American only by accident of birth.

This same gentleman, and we use the word loosely, in his book on Social Planning and a Socialist Program, said:

The Socialists propose to supplant the competitive planning of Capitalism with a highly centralized planned economy. Our aim is frankly international and not narrowly patriotic. Daughters of the American Revolution, please take notice. If we gain control of the American Government, we would probably begin with a complete revision of the National Government system. We would do one of two things. We would write an Amendment to the Constitution giving the Federal Government the right to regulate all private business and to enter into any business which it deemed proper, or we would abolish the Constitution altogether.

On April 15, 1932, Blanchard told the Academy of Arts and Sciences in Philadelphia:

Having once captured the Government and shelved the Supreme Court, we Socialists would nationalize as many large industries as we could chew. We would do it peacefully, if possible, and would do it otherwise if necessary.

I could continue hour after hour on these associations of Mr. Lilienthal's and the invisible support he has received in his race for nomination to the Atomic Commission. However, at this point I wish to remind you Senators that atomic power is not only a military weapon but an instrument of our future economy. It might, therefore, be well to learn how many of Mr. Blanchard's policies as set forth above are also the policies of Mr. Lilienthal. The person who sits in the driver's seat of this Atomic Commission might find it within his power to quietly aid the program proposed by the League of Industrial Democracy, and in this way help to retain in our Government the Communist and Socialist program which the people repudiated at the election polls in 1946. It is our opinion that people do expect their duly elected legislators to place in responsible positions trusted patriots who can be depended upon under any circumstances regardless of their political affiliation.

I do not feel that the United States Senate has fully investigated the Wallace-Baruch-Acheson interests in respect to this nomination. It appears that one or more of these gentlemen were given to talking out of both sides of their mouth. The part played by these three in the development of this Commission should be explored to the last period. We have plenty of time at the moment, but when atomic energy is dropped on the metropolis of New York City, Washington, D. C., and other congested areas there will be no time to ascertain who was innocent or who was negligent for the damage will have been done.

David Lilienthal at the moment is asserting himself as the man to be trusted with this power. And, yet, his friends, who were yelling a year ago for us to give the knowledge of the atomic bomb to Russia, are the same people who are today yelling to rush his appointment. Such a rush by the Senate would be foolhardy and criminal recklessness.

As a last word of caution, I wish to bring to your attention the concluding words of the Acheson-Lilienthal report, in respect to the development of their proposed method of handling atomic energy:

When the plan is in full operation there will no longer be secrets about atomic energy.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mrs. SMITH of Maine. Mr. Speaker, with spring and the desire for more and better agricultural products, there is increased interest in the soil-conservation program. In one Maine county, Waldo, with a total acreage of 470,162, half of which are in farms, there are approximately 2,600 operating farm units, and on January 1, 23 percent had applied for or received assistance from the district.

From my own county of Somerset, Obed Millett, chairman, Somerset County Agricultural Conservation Committee, Skowhegan, Maine, writes:

SKOWHEGAN, MAINE, *March 21, 1947.*
Hon. MARGARET CHASE SMITH,
Washington, D. C.

DEAR MRS. SMITH: The Somerset County Agricultural Conservation Committee feel obliged to make known to you some of the results accomplished in Somerset County during the past 10 years of agricultural conservation program work. The program has had very nearly unanimous support from all the active full-time farmers in the county during the past several years, has been entirely voluntary on the farmers' part, and

administered by local and county committeemen on a strictly nonpartisan basis.

From a small beginning in 1936 of less than a thousand tons of limestone and a few thousand dollars in practice payments designed to improve and protect the soils of the county, the practices have increased, until 1946 shows nearly 7,000 tons of limestone spread and other conservation practices carried out which returned assistance payments, including limestone to farmers, of nearly $100,000. Of the several practices available to farmers under the program the farmer paid 30 percent of the cost of materials, the program paying 70 percent. Farmers are hearing of a drastic reduction or possible elimination of funds to continue the agricultural-conservation program on grounds that practices are being supported by Government funds that would be carried out by farmers at their own expense, and that it is the farmers' problem to maintain soil fertility and not the Government's.

The committee wish to point out that even under a well-organized program that less than one-half the limestone needed to maintain soil efficiency is being used, that only about one-third of the superphosphate is being used that should be to balance farm produced fertilizing materials, and many of the program practices that should be carried on to a much greater extent than at present are hardly being used at all.

The committee also feel that although the farmers have a large stake in the future of the farm soils, consumers have a greater stake and consumers interests can only be maintained and protected through a Government program.

Plans have been made to strike from the program any and all practices that may be considered as not absolutely necessary to a peacetime program, but there will undoubtedly be grave and costly consequences to any future program that does not take into account the heavy burdens placed on our farm soils during the past few years as well as the farmers probable inability to do even a small part of the necessary rebuilding at their own cost.

If the Somerset County Agricultural Committee can furnish you with information or affidavits that may help you in decisions regarding the future of funds to continue this program so vital to soil fertility please feel free to call on us at any time.

Yours very truly,

OBED MILLETT,
Chairman, Somerset C. A. C. A.

In referring to the soil conservation program, a Maine columnist, May Craig, writes:

There are farmers who think only of how much they can get out of the soil, just as there are owners of forests who think only of cutting as much as they can and move on. Just as there are manufacturers who want to get as much work as they can out of human beings, at as cheap a price as possible; and labor that wants the highest wage for the least work.

But most of us commit these sins out of ignorance or thoughtlessness. Farmers close to the land learn to love it and care for it. They think of the future not only of their own income but the future generations of consumers who will look to the land for food. They see erosion and the ruin it perpetrates on beautiful, fertile land. They know about the dust bowls of the prairies where we ripped the sod off and let the topsoil, which it took centuries to build, blow away. They know that land must be fed, that we cannot take crops off it year after year and put nothing back, lest we come too soon to the time when nothing can be taken out any more.

It is within our generation that we have come to the realization of the national, general, public interest in preserving our soil. Taxpayers have a general idea that they are paying a lot of money for the Department of Agriculture for conservation. They have a dim idea that this is for the benefit of the farmer and they don't like the word subsidy. But more of us are coming to realize that the spendthrift young United States is growing up; that our resources are not boundless; that our soil must not be robbed; that what we put into proper soil conservation, as into flood control, is for the benefit of all of us.

The Hour of Decision

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address which I delivered before a Republican rally in Waukesha, Wis., on March 28, 1947:

We are in the aftermath of the greatest and costliest war that mankind has ever known. Like evil ghosts, the effects of that colossal conflict stalk the council chambers of every nation in the world. Their cold breath blows and leaves its mark on the economic, social, and political life of every country on the face of the globe.

Man's faith in man is wavering; moral concepts are tottering, and nations which once were great now watch themselves crumble and decay. The world seethes with poverty, revolt, and undeclared conflict. The world is deliriously feverish from the shock of the wounds inflicted upon it during the past 8 years.

This is a bleak picture, but nothing can be gained by closing our eyes to the stark reality of the awesome scene.

There are only two great powers in the world today: One is the Union of Soviet Socialist Republics, dedicated to the religion of communism and to the suppression of individual rights and liberties. The other is the United States of America—a democratic republic—dedicated to the preservation of the inherent rights of the individual man.

We, the people of that United States of America, face our greatest challenge, for we are the last example of a government of the people. The hope of all men in whom the spark of liberty still glows rests in a strong United States—an America that will shine in the future, as it has in the past, as a beacon for the suppressed and the desolate. It is the one nation that stands out in this world in ruins with the potential to give courage and direction to the suffering.

Will it meet the challenge? Will it meet the needs of this hour of decision? There can be only one answer: It must and it will; for if it fails, individual liberty and freedom will become concepts without reality, Christianity will give way to godlessness, and our priceless heritage of the Bill of Rights will disappear into the oblivion of autocratic totalitarianism.

But, tonight, I sound this warning: We can meet this historic challenge only if we retain those qualities of strength and virility which have made us great.

The United States of America—with a sound government responsive to the will of the people, with a productive economy, and with an industrious, prosperous, and happy people—is our answer to the challenge which has been flung at us by the impartial hand of history.

Of what value is our economic or military aid to nations fighting for their freedom, to Greece or to Korea; of what value is our own military might; yes, of what value is our atomic bomb and our supersonic aircraft, if we are weak and soft and corrupt within our own borders? Let there be no mistake about it. If our Government succumbs to confusion, if the dictates of pressure groups take precedence over the welfare of the country as a whole, if our economy is stifled by the cost of huge and extravagant Government and by industrial warfare, and if our people are torn by class hatreds, suspicions, and jealousies, we will fail—and fail miserably—to meet the challenge of the year 1947.

I would be frank with you. There is a long, hard road over which we must travel if we are to strengthen ourselves to meet the grave responsibilities which are ours. Let there be no doubt about it, we face a terrific job right here at home if we are to provide for the world the shining example of a free and liberty-loving democratic republic at work.

Our Federal Government is swollen and expanded beyond the point of human reason; our national debt is $260,000,000,000. The annual cost of our Government approximates one-fifth of our national income. There is an almost unbearable tax load on our people and on our economy. Industrial strife menaces us like a dark cloud on the horizon. Our political and our social institutions are under attack by infiltrating Communists and fellow travelers. We must recognize in a hurry that these are the things which make us weak and disunited. These are the ills which sap our strength and these are the ills for which we must find the remedies.

Yes; these are days of decision—decisions of such magnitude that they are terrifying when we understand their implications. They are decisions that nevertheless must be made, and will be made, for even in failing to make them, we face the gravest of consequences.

It is going to require men of great courage, ability, and integrity to look these problems squarely in the eye. * * *

Let us look at a few of these problems in some detail, but indulge me for a moment to talk "politics." It seems good to get back on a political platform once more, and I'm sure you won't mind if I take advantage of it—just this once. This is one of the things that you and I are fighting for—the free give-and-take of unfettered political expression. It is an integral part of a strong and free America.

So, I say more power to those who disagree with me. I say more power to those newspapers, columnists, radio commentators, and cartoonists, whose wishes have become father to their thoughts and who are trying hard to make the people believe that the Republican majority in Congress is foundering without a program, sinking from want of leadership and dying from lack of energy, drive, and initiative. I say more power to them, because that is their right and their privilege. I know that they are going to say, "More power to you, too, John Byrnes," when I stand up here and fling their insinuations right back in their collective faces.

These men who have been weaned on the New Deal just don't understand.

They can't understand a political party which has thrown away the scepter of one-man rule and the rubber stamp of a "ja" Legislature. They can't understand a Congress whose leadership comes from the rank and file of its membership, with a free and undictated policy arrived at by free men whose only "boss" is the American people. Even before seats of the Eightieth Congress had been warmed they rent the air with their cries of "failure," "indecision," and "muddling." Oh, how they pray that their wish shall become the parent of reality. How sad will be their disappointment as the demo-

cratic process triumphs over government by fiat.

What are the facts concerning the accomplishments of the Republican majority during its 2½ months of existence?

First, the Republicans completely reorganized the legislative branch of the Government. This was necessary under the provisions of the Legislative Reorganization Act, passed by the Seventy-ninth Congress and adopted as the rules of the Republican-controlled Eightieth Congress. The deadwood of 48 House committees and 33 Senate committees had to be cleared away. Nineteen House committees and 15 Senate committees—brand new and streamlined for action—had to be organized, filled, and set into action. Now staffs and experts had to be found, qualified and hired. And, on top of this, the new majority had to take over the administration and direction of a Congress which had for 14 long years been controlled by the Democratic Party. These two colossal jobs had to be accomplished before one piece of legislation could reach the floor. And, none of it could be done before the first meeting of Congress on January 3.

Yet, 3 weeks after the opening of the session, these wishful thinkers, these fishers in the slough of despair, were pointing their grimy fingers and hollering like gleeful school boys, "See, what did we tell you? They're sitting on their haunches. They ain't done a thing."

The fact is that the Eightieth Congress was hard at work, under an intelligent leadership, seeking the democratic solution to our national problems.

With the Congress organized, the new committees began their job of sifting and winnowing the proposed legislation, seeking the facts and weighing the evidence before sending any legislation to the floor. Those hearings and deliberations took time, of course. Much slower, I'll readily admit, than the legislative process of the New Deal—when the bills rolled off of the mimeograph machines of the executive branch and slid noiselessly into the hopper for the imprint of the rubber stamp.

Here the cartoonist dipped in his inkwell and the radio commentator sprayed his throat. The former inked out a sleeping elephant; the latter screamed, "Delay." This was all new to them. They'd forgotten how a democratic republic operates under the Constitution of the United States.

The fact is that the Eightieth Congress was hard at work, under an intelligent leadership, seeking the democratic solution to our national problems.

During the hearings, differences of opinion among the Republican Members developed—not over the long-range objective, but over methods and means. These differences were brought out into the open, so they wouldn't fester under the dark light of secrecy.

"Heresy," our little friends shouted and wrote and drew. "Rebellion in the ranks. Undisciplined mob. Whoever heard of such a thing?" Fourteen years under the thumb had caused them to forget that honest men have honest differences which they air openly and honestly before setting their course.

The fact is that the Eightieth Congress, under an intelligent leadership, was democratically settling its minor differences in the open, and its majority was united in its objective of bringing sanity to our National Government. Its differences were compromised in the American way, not by threats, reprisals, and political purges.

Mark me well, those who have been persuaded by these men:

The Republican majority in Congress is mindful of the gravity of the hour.

Its course is well charted.

It will keep faith with the American people—the people who have expressed their confidence in democratic leadership during these days of trial and trouble.

It will meet the challenge of the postwar era.

That is our answer to those who wish us ill.

Our program has begun.

Our program is no secret. It is not unveiled with fanfare nor released with the precise timing of the stage manager the better to play upon the emotions and prejudices of the people. It is there for all to see. It is simply this:

A sound, solvent, and progressive United States, strong within, fearless in its might, and ready and willing to meet the challenge of this momentous hour.

The Republican program envisages a sound and solvent America.

There is probably no single internal problem more pressing or of more importance than putting our financial house in order.

We are laboring under the largest public debt in the history of any nation. Two hundred and sixty billion dollars—over 50 times the full assessed value of all of the taxable property in Wisconsin—a debt that is one and one-half times our total national income. This is the inheritance of the Republican Party.

The annual carrying charge on this debt is in excess of the annual average cost of Government prior to 1934. This is the inheritance of the Republican Party.

In 1932 the annual cost of operating the Government was $4,000,000,000. After 14 years of the more abundant life, the annual cost of the Federal Government had run up to $37,000,000,000. This is the inheritance of the Republican Party.

When the New Deal took over in 1932, there were 578,000 civilian Federal employees. Excluding the War and Navy Departments, there were on January 1 of this year 1,277,000 civilian employees on the Federal pay roll—four times the population of the entire Second Congressional District. They are an inheritance of the Republican Party.

Our Federal tax burden this year will be 22 times the tax burden in 1932. This is an inheritance of the Republican Party.

These legacies constitute the first challenge of the Republican Party. We are meeting that challenge, hour by hour and day by day.

The huge cost of Federal Government is being reduced. The President's so-called "tight" budget will be cut by between five and six billion dollars. This is in the face of an opposition that cries belatedly for economy, yet loudly wails that it can't be done.

The teeming thousands of pay roll hangers-on in the labyrinth departments of the executive branch are receiving their notices. The distributors and receivers of political patronage have their crying towels out and their tears are filling the Potomac, but the cuts are being made. This is being accomplished with no help whatsoever from the executive branch of the Government.

The budget will be balanced. Not only will the budget for 1948 be balanced but the unbalanced budget for 1947 inherited from the Democrats will also be balanced. The first balanced budget in 16 long years. How the pressure groups moan. How their congressional supporters cry when their pet projects are being eliminated. Oh, how the propaganda machines turn the sob stories. Yet, in the face of this opposition, the Republican majority is slashing at the ensnarled budget requests of the lush departments. Over a billion dollars has been eliminated already in the two appropriation bills that have been passed. Almost $700,000,000 have been rescinded from previous appropriations made by the Democratic Congress.

Debt retirement will begin. By cutting expenses to the bone and by encouraging business to maintain a high level of activity, we expect a surplus of from eight to nine billion dollars. A large share of this will go toward making payments on the national debt.

The terrific burden resting on the shoulders of the American taxpayer will be reduced. Already a bill has passed the House of Representatives which will reduce the individual income-tax load by from 30 to 10 percent. This has been done in the face of an opposition that said, "You can't do it."

This process of returning sanity to our fiscal affairs will continue. It requires a high degree of political courage. I have the highest respect for the members of the Appropriations Committee who are doing such a momentous, and, at times, thankless job. We in Wisconsin can well be proud of our member on that committee, Congressman KEEFE, of Oshkosh.

Thus, the Republican Party is moving toward a sound and solvent America. It is working as fast as is consistent with good business practice. It takes time to clean out the trash that has accumulated for 14 years in the Nation's Capital.

The Republican Party is working, too, toward a unified, productive America. It recognizes that industrial peace must be established through fair and reasonable legislation that will protect the American public from indiscriminate warfare. It has taken the lead in the fight against the infiltration of the Communists and the fellow travelers, and it will not rest until they are eliminated from those places where they can do so much harm.

This will be our answer to the challenge of the hour. A strong, solvent, unified, productive, and progressive America, well equipped to stand up and face the world and say, "This is democracy. Here is your choice. Come with us."

Army Day Outlook

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of April 7, 1947:

ARMY DAY OUTLOOK

Army Day, 1947, should be more than an occasion for reflecting upon past glories of our Army. It is an appropriate day to take stock of our present not-so-mighty armed might and of the prospect for building it up to proper strength.

This year Army Day comes only a few days after expiration of the draft. From now on the Army—admittedly taking a chance—will have to depend entirely on voluntary enlistments to achieve its peacetime goal of 1,070,000 Regulars. To reach this goal and to maintain this standing Army at scheduled strength will require, for an indefinite period, the enrollment of 30,000 men every month. This is about 10,000 more a month than the present rate.

We have never before faced so tremendous, so challenging a recruiting job. The raising of a volunteer peacetime Army of more than a million Regulars is without precedent. Yet the job must be done if we are to carry out our world-wide responsibilities—now and later. Today's Army is scarcely one to justify boasting. It contains relatively few combat veterans in the rank and file. Most of our troops abroad are handicapped by insufficient training and experience. Our military organization at home is largely a cadre affair.

Some units which exist on paper consist only of a token group of officers and men.

The world situation is such as to make many persons wonder if it was prudent to take a chance in the building of this new Army. While it remained on the statute books, selective service provided an effective support to lean upon in the event of failure of voluntary recruiting. Now that it is gone, along with the stimulus which it provided to enlistments, there is no recourse but to make the volunteer system work. No recourse, that is, unless we are to reenact a selective service law in peacetime—which is an unlikely eventuality.

Every citizen, therefore, should feel it his duty to share with the War Department the critical responsibility of raising America's postwar Army of volunteers in the shortest time possible. General Eisenhower and his officers cannot do it alone. They will need the understanding, cooperation, and active help of all the public if next Army Day is to be an occasion for real celebration.

Rich Man's Bill or Poor Man's Bill?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, H. R. 1 is the Republican tax reduction bill recently passed by the House. It reduces the Nation's individual income tax bill by $3,840,000,000. It provides:

A cut of 30 percent in taxes for an estimated 25,000,000 taxpayers including:

Single persons earning up to $1,667.

Married persons earning up to $2,222.

Married persons with 2 dependent's earning up to $3,333.

A cut of 30 to 20 percent in taxes for an estimated 6,000,000 taxpayers including:

Single persons earning up to $2,100.

Married persons earning up to $2,650.

Married persons with 2 dependents earning up to $3,750.

A cut of 20 percent in taxes for an estimated 15,000,000 taxpayers, not included in above, but earning less than $302,396.

An additional $500 exemption for persons over 65, eliminating an estimated 1,400,000 taxpayers from the rolls.

It maintains the present graduated tax scale. Under this bill, a married man with no other dependents, at different income levels, would pay the following amount for income taxes out of every dollar he earns:

	Cents
$1,100	None
2,200	6.6
2,750	9.1
5,500	12.7
11,000	17.4
16,500	21.6
27,500	29.1
55,000	39.7
110,000	50.5
1,100,000	72.9

Under present law, 44,817,360 taxpayers earning under $5,000 pay 56 percent of the income taxes. Under H. R. 1, they will pay 54 percent.

Under present law, 1,866,439 taxpayers earning over $5,000 pay 44 percent of the income taxes. Under H. R. 1, they will pay 46 percent.

It is evident that a large share of the tax relief proposed under H. R. 1 will be afforded to the lower-income groups. However, H. R. 1 is neither a poor man's bill nor a rich man's bill. It was designed to distribute the tax reduction equitably among all groups since the burden of all taxpayers was substantially increased during the war. It is, in my opinion, just and fair legislation.

Stop Communism Now

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. REEVES. Mr. Speaker, a few days ago Mr. Charles V. Stansell, associate editor of the Kansas City Star, was in Washington for a close-up study of the national and international situations. In an article in the Star he points out that only prompt and decisive action by the United States can stop the spreading domination of Europe by communism. Under leave heretofore granted I include the text of Mr. Stansell's article in my remarks:

HALT REDS NOW—OPPORTUNITY RIPE FOR BLOCKING THEM WITHOUT VIOLENCE, CHARLES V. STANSELL SAYS—MAY BE LAST CHANCE—AID TO GREECE AND TURKEY VITAL TO PREVENT SURGE TO SOUTH

WASHINGTON, March 26.—The time for a peaceable halt to Russian expansion is now.

If the American program to bolster Greece against Communist domination is not put through in the next few weeks the opportunity may be forever lost.

Turkey would go next, the coveted Russian control of the Dardanelles would be nearer and Soviet influence in the Mediterranean area and the Middle East would have been given a powerful forward push.

UNITED STATES AS BULWARK

UNRRA is leaving Greece at the end of this month and the British are pulling out at the same time. Without the proposed assistance from America, the situation would be left wide open for the Communist guerrilla forces to take over, and for the opening wedge for the spread of Soviet power throughout a wide area. Thus encouraged, Russia would proceed with its still broader program of expansion.

These are the immediate and tremendous stakes involved in the new American foreign policy. They point to the urgent need of prompt action which can save the day for peace and American prestige. If this step is taken at once it will head off the demand for much broader action later that might have far more serious consequences.

Such are the conclusions of the best informed circles on the administration proposal for $400,000,000 in aid to Greece and Turkey, with only the semblance of military assistance but with close State Department supervision over use of the money.

GIVEN TOP PRIORITY

This program is being given absolutely top priority in White House, diplomatic, executive department, and congressional discussion today. The answers to these pertinent questions have been pretty clearly developed:

"Are we starting a crusade against communism and Russian expansion around the globe to head off the Soviet ambition to become world power No. 1?"

No. We are moving to prevent the necessity of that sort of thing later. It's the seasoned conclusion that if we act decisively on a small scale now then much more costly procedure can be avoided and aid to other countries, such as China and Korea, can be held within controllable limits. There is an evident desire to avoid the fixing of a dead line for congressional approval but the fact is recognized that delay would be extremely hazardous.

COULD DELAY CRISIS

While no decision from Congress can be expected within a week or so, it is felt that evidence of a favorable decision would hold off the crisis for the time being. The absence of it would strengthen the will of the Communist elements in Greece and the expansion program of Russia generally.

"Do we propose to send troops into Greece and Turkey?"

Not troops, but only small military missions to work with the Greek and Turkish Armies. No definite figures are given, but the personnel of these missions could be counted by the score or even on one's fingers. We do have considerable military supplies in Italy which could promptly be moved over into Greece, if necessary, but this is not on the present schedule. There is the definite aim of avoiding any show of military power on our part, although we do have a sizable naval force in the Mediterranean.

The thought of provoking war, however, is positively in the background. For all practical purposes it's being dismissed by administration spokesmen and comes up only in the questioning by congressional committees.

"What of Russia in connection with this aid program?"

The Soviet reaction to date has been considerably milder than expected. Insiders here believe that Russia positively does not want war and that its economy is too weak to stand it, that its attitude has been more of a bluff than anything else and that if we call it decisively the Soviet will gradually back away.

LOOK FOR OPEN DOORS

A high official who has spent years in Moscow puts it this way: The Russians have pushed at a good many doors. If they found half an opening they rushed in. But if the doors didn't yield the Russians pulled back and turned somewhere else. They need only to be shown now that we mean business. They are not in position to go to war. They are engaged in a great internal struggle to rebuild. They will have a hard time doing that without our assistance, and they know it. Their economic resources simply cannot be pitted against ours. They know that.

The Negro Question

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday April 9, 1947

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a letter written to the Memphis Commercial Appeal and printed therein of

date of Sunday, April 6, 1947, which clearly states the stand of most southerners with reference to racial problems:

NEGRO SHOULD EARN RIGHTS

To the COMMERCIAL APPEAL:

Race relationship is the No. 1 problem of the Nation and the South is at least the laboratory for the working of a solution. There is being put forth the idea that race must be ignored and entire equality embraced, or, there is race hate. Many of us southern folks are so provincial that we don't accept the Negro as an equal, but by no measure can we be said to hate him. Any movement that supports the proposition that the white man is better qualified or entitled by race accomplishment to control public affairs is branded a hate organization.

We don't believe or recognize that the Negro race in three generations from slavery has progressed to where he is competent to take over.

Under the favorable conditions that we have created for him, he should make considerable progress in the next 10 to 15 generations. The Negro's right to protection by the courts in his property and life is denied nowhere in the South.

He is encouraged to better himself economically, physically, and culturally, but these things cannot be forced on any people, but must be slowly and patiently sought.

The FEPC'ers would force the employment of Negroes in industry and business whether they are competent or wanted. Likewise, a Negro business could be forced to employ whites whether wanted or not. This race interest could be just another effort to control American life and to annoy the South. Nothing more dangerous to liberty and the American way of life has yet been conceived by the fanatics.

Our Negroes must do something and be something to earn their place in our Nation. America has done far more for the Negro than the Negro has done for America.

A PLAIN CITIZEN.

DEVALLS BLUFF, ARK.

Your National Defense

EXTENSION OF REMARKS
OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. DEVITT. Mr. Speaker, since this is Army Week, it is a peculiarly appropriate time to turn our thoughts to the question of our national defense. In so doing we must also remember to be eternally vigilant in the weeks and months to come, to see to it that, after the music of the band has died in the distance and the shouting of this occasion is over, there is no relaxation in thought or deed in our maintenance at all times of a sound but not wasteful defense program, planned with care, and keyed to modern military and naval thinking and development.

Continually hoping and praying as we must for an effective, enforceable, and sincere agreement for international disarmament, let us not meanwhile so lose our perspective that we allow our Nation to be endangered.

Under leave to extend my remarks, I include an address which was delivered last Saturday, April 5, at an Army Day ceremony in Rochester, N. Y., by our able and distinguished colleague, the Honorable KENNETH B. KEATING, of New York:

Mr. Chairman, my comrades in arms, Mayor Dicker, President Shumway, chamber members, and guests, it is a genuine pleasure for me to return home today and to share with you a part in your annual celebration of Army Day. I am grateful to you, not only for the loyal support so many of you rendered last fall which has resulted in this privilege which is now mine to serve my country in time of peace, but also for this opportunity which you have afforded me to bring back to you a message, and voice some of the views and convictions I entertain on the subject of your and my national defense.

I am happy, as I know the citizens of Rochester are, that our city has been honored as the location of the headquarters of several combat units of air and ground forces, whose commanding officers have been presented to you here today. These Reserve and National Guard units will prove important factors both in the life of this community and also in the plan now being formulated throughout the country for the organization of the qualified citizenry for the continuing task of maintaining a readiness, both actual and psychological, to meet any emergency which may arise. Those of us who know personally the commanders of these units realize how fortunate we all are in the selections which have been made.

The first question we must ask ourselves in any discussion of national defense is: Against whom is it necessary to defend our Nation? The answer is: Any potential enemy either outside or within this country. We can concede at the outset that to create and maintain this defense would be easier under a dictatorship where all opposition could be crushed instantly under the heel of one man or clique, and anyone who stood in the path of their designs could be liquidated or brushed aside. But we simply don't do things that way. That system is anathematized, and properly so, by freedom-loving Americans. Let us never depart from that fundamental principle. In peacetime, in our laudable desire to strengthen our country and in our eternal vigilance, necessary as that is, to ensure that no enemy, foreign or domestic, is placed in position to deal a mortal blow at the vitals of our body politic, let us not at any time or under any provocation induced by the pressures of the moment, forget that we are operating and, with God's help, will continue to operate within the framework of a democracy, a system of government which permits freedom of expression and of debate, which exalts the dignity of the human soul, which nurtures tolerance, and which abhors extremist tactics.

Guided, therefore, by these lofty ideals, let us also not fail to be realistic. We must face facts. We must develop a true appreciation of the role of world leadership which we have either assumed or inherited. We must realize that in this fast condensing world of the airplane, the radio and the cyclotron, we can no longer consider the Atlantic seaboard as our first line of defense. We must understand, too, that guns and bullets, torpedoes and atomic bombs and diabolical disease germs are not the only weapons of modern warfare, that the most insidious of them all and perhaps the most destructive, is subversion. We must remember that bloodless overthrow from the foundation, if it can be accomplished, as it has in some countries, is the most effective instrument known to man to accomplish the imposition of the will and ideologies of one nation upon another.

Our second great question is: What shall be the nature of our defense? Obviously the economy of our country cannot permit the maintenance of a standing army and navy of the size or with the equipment appropriate to a period of great national emergency.

True, we must make provision, just so long as all the other great nations do the same, for an adequate standing force to form the core, or nucleus, for the great body of defenders of our Nation if defense again becomes necessary.

I am most sympathetic with the attitude of those who urge international disarmament. It would be an unmixed blessing if all nations could be brought to the realization of the utter futility of settling their differences by the sword, but the trouble is that we must realistically face the fact that this millenium has not arrived. May God speed the day when it does arrive.

Until that time, however, I conceive it to be the duty of the Congress of the United States, the guardian in peacetime of this Nation's safety, to insure that our national security be not imperiled and that we maintain a sufficient strength in arms and men and alertness and advanced awareness in scientific research that we may not furnish an open invitation to attack by possible aggressor nations.

Every informed person knows of the important role played by the Reserve Corps and the National Guard in our national defense. I am happy to be able to advise you that it is my distinct impression from talks I have had just this week in preparation for this address with members of the Appropriations Subcommittee dealing with War Department matters that they are acutely conscious of the contributions, both actual and potential, of the citizen soldiers who comprise these units. If the scourge of war should ever again afflict our Nation, the methods of waging it in all probability will differ from those we knew in World War II, even more than those in turn were so often unrecognizable to our comrades of the First World War. We cannot fairly expect next time that the continental United States will be spared the awful ravages and holocaust of the conflict. The lightning flash of aggressive concentrated attack on key installations will be the medium whereby an adroit enemy will seek to submerge us and prevent us from ever getting the wheels turning and democratic machinery functioning to fight an all-out war, which, I guess, the nations of the world now realize is the only kind of language this country knows, when challenged.

For this reason, then, it is particularly important, not only that we work ardently and pray unceasingly for peace, but also, so long as naked aggression stalks the globe and other countries continue their militaristic preparations, that we maintain on our soil a body of men who passionately desire peace but who also love and are ready to defend their country and give them at least the bare minimum in men and machines to do that job. These alert groups, disciplined and trained, even though as yet inadequately, would be towers of strength in the face of sudden attack.

The impact upon a disorganized and naturally terrified citizenry of their courageous calm, born of their devotion to duty and nurtured by discipline, is incalculable. Therefore, it seems to me the work you men are doing in organizing these units is so very important.

Nor must we forget that wars are not fought with men alone, nor solely with the weapons and tactics of former wars. It is truer today than ever before that one of our principal concerns in planning and spending for national defense should be with research, experimentation, and collaboration between Government and industry in the design and development of new weapons. The overriding importance of this field of endeavor should not be minimized.

Another absolute essential, as I view it, in the organization of our national defense

is the unification of the armed services. My only reservation regarding the legislation which is now pending and the subject of hearings before the appropriate congressional committees, is that it does not go far enough. If there is one lesson the last war taught us, it is the necessity for a unified command, not alone in the field, but also at the top level. We have one national defense problem: We have so many dollars, so many men, and so many materials which we can devote to national defense without pinching ourselves elsewhere. Common sense demands that those dollars, men, and materials be distributed over the entire defense program in accordance with a single master plan, in order that there be no unnecessary duplications and shortages.

In the past, hearings on War and Navy Department budgets were held before two congressional subcommittees, each of which was ignorant of what the other was doing. Moreover, it was repeatedly stated at those hearings that the Army estimates were prepared without knowledge of the Navy estimates, and vice versa.

It is true that some slight integration of the two budgets may have taken place when they were considered by the Bureau of the Budget and by the full Appropriations Committee. But even so, it is no exaggeration to say that in both the legislative and executive departments of the Federal Government the problem of national defense was viewed, for budgetary purposes, not as a single problem but as two separate problems.

There is no justification for continuing to prepare our defense program in this fashion. To do so is to invite both danger and waste. Until defense planning is conducted by the services jointly, until some means has been devised whereby conflicts and duplications between the two are automatically resolved before legislation is enacted and appropriations made, until we know that differences in treatment and seeming duplications are due to planning and not to chance and lack of planning, not until that time can we be sure that we are getting full value for our defense dollars. I hope action on this matter will be taken promptly.

Finally, there is another element of national defense transcending in importance the welding of our potential fighting men into a single team, or even the maintenance at all times of an adequate force, properly trained and equipped, both on active duty and in reserve. This element is basic and fundamental. Without it all else is a hollow shell, destined to collapse under the first strain engendered either by armed conflict with another nation or organized and insidious attack from within. This essential element is a sound economy.

Reasonable men may fairly and sincerely differ as to the best method to accomplish the objective of creating and maintaining an economic system capable of sustaining and protecting us, and either assisting to ward off or successfully carrying us through another catastrophic national emergency. But no one, it seems to me, can reasonably deny the urgent necessity for the existence of such an economy. Time does not permit of any detailed discussion of this big subject, but I say to you, with all the earnestness at my command, that the spending and taxing policies of our Government over recent years cannot continue if this Nation is to remain strong. Furthermore, unless we do maintain domestic strength, we cannot take the position in the world which is both our birthright and our obligation.

We must find a way and find it now to reduce drastically governmental expenditures, balance the budget, begin payments on our huge national debt and grant some relief to our over-burdened and harassed people in all walks of life from the mounting burdens of taxation. The line of demarcation must be drawn between the activities of the Government which are desirable and those which are essential. Fine furniture and elegant drapes add much to the looks and comfort of the home, yet these things are entirely out of place unless there is something in the pantry and unless the kitchen larder is stocked with the essentials of life. This principle of sane budgetary housekeeping must be applied to our Government before it is too late.

It has been a real privilege to me to come here today and set forth some of my views on these great problems. As your chosen representative, I bespeak most earnestly at this season of the year, and in the months to come, your prayers for a just and enduring peace and your continued interest and effort to maintain the internal strength of this Nation we love at a point where we can retain our position of world leadership for the ultimate good, not only of our own people, but as well our brothers across the seas. To that twofold objective, humbly beseeching divine guidance in this hour, so critical for our Nation, let us dedicate ourselves without stint and without reserve.

Aid for Greece and Turkey

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. COUDERT. Mr. Speaker, unanimous consent has been granted for the insertion in the Appendix of the RECORD of a letter addressed to the editor of the New York Times and published in that paper on April 6, 1947. This letter, written by my father, Frederic R. Coudert, gives his views on the important problem now facing us as to whether the Congress should favorably respond to President Truman's request that aid be extended to Greece and Turkey.

OUR NATIONAL SECURITY VIEWED AS BASIS OF PRESIDENT'S REQUEST FOR AID TO MIDDLE EAST

(The writer of the following letter is a lawyer, and was formerly president of the American Society of International Law. He is the author of Certainty and Justice and of numerous articles on law and international relations.)

To the EDITOR OF THE NEW YORK TIMES:

In the extended discussion that has arisen over President Truman's address to Congress regarding aid to Greece and Turkey, there has been a babel of voices. Would it not be well in attempting to view the matter objectively to look at the historic background to determine the dominant motive in requesting Congress to extend aid to both of these countries in order to prevent Communist inroads and annexations?

Many feel that the President's request was made because of the fear held by a large number of Americans that democracy, meaning thereby representative government based upon free elections and all respect in those lands for the rights of man, might be destroyed. Critics argue that extending aid to these countries would lead ultimately to an ideologic crusade all over the world and that we are no more justified in crusading for our principles of government than are the Communists in attempting to undermine our own system with a similar end in view.

I incline to believe that neither view of the problem accurately describes the situation and that we may be involved in an unreal controversy.

OBJECTIVE OF PRESIDENT

The primary objective of the President was the security and safety of the United States and this, I think, is the problem to which we must address our minds. If the Communist doctrine and its proponents were alone involved, we might hesitate to believe that their propaganda, unless it involves the use of national military force, would be of supreme danger to the people of the United States. All sane men would recoil from any such religious wars as afflicted Europe in the sixteenth century.

Most of the governments of the world have not been, and are not now, democratic. While many of them may have been so in form, we realize that in fact they have been and many still are of a despotic or totalitarian character. The immature democracies have ever tended to result in dictatorship by a man or a group, and this has been true from the classic days of Greece down through the centuries.

If it happened that Greece or Turkey, or any other nation, on its own initiative wished to establish a Communist or other form of government—socialistic, aristocratic, or otherwise—we could not and probably would not, object. This would be equally true of Great Britain which, since Waterloo, has lived amicably enough in a world ruled by every form of government.

Why was it that, notwithstanding all this, Great Britain through generations has always been ready to use force to prevent the dominance of the European Continent by any great power? Why was the British Fleet mobilized in 1878 to prevent Russia from overwhelming Turkey and taking the Dardanelles, and thus becoming a Mediterranean and Atlantic power? Russia was then under the czardom which, although an absolute government, was not one attempting to use propaganda as a means to subvert other governments. Yet, Great Britain felt that its own security was fundamentally involved.

THREAT TO BRITISH SECURITY

Why do we find British troops, funds, and British influence in Greece at the present time? Is it not precisely for the very same reason, not merely to save an anti-Communist or democratic government there (if the Greek Government be deemed such), but primarily because Great Britain is convinced that her fundamental security is affected and that she had to continue to oppose Russian extension, whether through Communist methods or otherwise, to the Mediterranean.

England got along well enough with the Czars' government, absolute as it was, save when it threatened the English idea of their own security; in technical, diplomatic language, "the balance of power." I realize the unpopularity of the term at the present time, but I think the refusal calmly to analyze the situation, which the phrase was intended somewhat awkwardly to denote, has led to obscure and misdirected thinking.

The policy originated in the desire of the people of the British Isles to protect themselves against dominance by any one nation of continental Europe by playing off one power against another; it was the natural dictate of the national will for independence and security. In itself it did not necessarily possess those evil connotations so often applied to it. As was stated by Vattel in the middle of the eighteenth century:

"England has the honor to hold in her hands the balance of power, and she is careful to keep it in equilibrium. This had been the instinct of British statesmen since the time of William III, and their avowed policy ever since; and the insular position of England, unassailable herself, and aiming at no conquest on the Continent, has enabled her to play with success the part of the Puis-

sance mediatrice of Europe—to quote Montesquieu's phrase. It was this policy, aiming, of course, primarily at the security of Great Britain and her Empire, which inspired Pitt and his successors in their implacable struggle against French imperialism and the efforts of the British Government to reestablish a just equilibrium in Europe after the downfall of Napoleon." (The Cambridge History of British Foreign Policy, vol. 2, p. 3.)

A nation frequently does and necessarily must seek its own security from foreign aggression and dominance, through availing itself of this so-called balance of power, or perhaps we should say balancing of power. The present problem must be to transfer the preponderance of power to the nations intent upon maintaining peace and the reign of law. Power politics, so called, is an inevitable concomitant of international relationships. The United Nations, if it is to succeed, must possess this preponderance of power.

NATIONAL SAFETY INVOLVED

But it will be said, Why should we shape our policy merely to follow in the steps of Great Britain? Should we not have our own policy, and look to our own safety? I agree wholly that this should be the dominant criterion, and that our policy should not be and is not a consequence of any Anglomania or any other emotional cause but that our policy is and must be a matter of American national safety. Until we can reach such a result through the United Nations, we must do so with our own power, aided by others who also desire peace through law.

Russia on the Atlantic, much more populous than the United States, with modern aviation, navies, etc., could be quite as much of a menace to the United States as was Czarist Russia to England in 1877 and 1878. Under modern conditions, Russia on the Atlantic would be nearer to us than she was to England in 1878, when she threatened to take Turkey into camp.

There is now the added feature that the Soviets of today are impelled by their aggressive and quasi-religious doctrines of a militant communism, sustained by many "fifth columnists" in our own land as well as in the other nations. Communism has become a potent means to aid in a national expansion movement of long duration. The fanaticism of ideologic belief added to nationalist ambition thus render the Russia of today far more dangerous as a possible opponent than the Russia of the Czars, whose government, even though despotic, was far less efficient and dynamic.

Why, then, has there been misunderstanding and perhaps camouflage regarding our dominant and real reason for drawing the line of Communist advances in Europe—in Greece and in Turkey? Perhaps some of this camouflage was due in part to the natural desire to avoid directly confronting Russia with a challenge, but more still, I think, to the discredit into which the term "power politics" has fallen. Power politics has in the end always existed among the nations, whether in the days of Alexander of Macedon, the Roman Empire, or the days of the glory of Spain under Philip II, or of France under Louis XIV or Napoleon.

POWER OF ENFORCEMENT NECESSARY

Power politics may well be abhorrent to the moralist and the idealist, but it works with the certainty of a biologic law, and it is more than a dangerous illusion to ignore that working; to trust to international law, whether found in treaty or otherwise, where there is no power of enforcement is sheer folly. The United Nations cannot work unless the great powers enforce that law; if they do, it would merely prove another very complete instance of power politics making law.

We cannot have peace while we are living in fear and dread of war, and while such fear dominates our policies. Fear is the worst of all counselors. If we now insist upon stopping aggression along the Mediterranean, carried on through communistic affiliations, we can, I think, assure our safety for some time to come while we strive meanwhile to strengthen the United Nations, so that right may be sure of the necessary sustaining might.

I realize that modern science has annihilated distance; that a policy that might have been wise for England in the past may not apply to America today; but it certainly has not been proved that a power dominant in Europe and in Asia, and, in addition, holding the Atlantic and Mediterranean lines, would not be a menace to the security of the United States. Our only foreign policy in the past—the Monroe Doctrine—was based wholly on our power to maintain it. We are thus confronted with something more than an ideological conflict, and our policy, as enunciated by the President and agreed to by leading members of the dominant party in Congress, is thus based not upon prejudice or a fanatical devotion to our own political system but upon fundamental considerations of national security. That security today is the mainstay of any survival of the community of independent nations under international law.

FREDERIC R. COUDERT.

NEW YORK, *March 27, 1947.*

Safety Regulations in Coal Mines

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

TWO HUNDRED AND FIFTY THOUSAND COAL MINERS HAVE LOST LIVES SINCE 1900

Mr. PRICE of Illinois. Mr. Speaker, if Congress will act quickly I am confident that it will give to the Federal Government full authority to enforce safety regulations for our Nation's coal mines, authority which was denied by a previous Congress when it considered a Federal mine-inspection measure back in 1941.

With one very important exception—power of enforcement—Congress passed a fine bill then. Let us now complete the work, this time closing our ears to the States' rights bugaboo—fine weapon for the opponents' lobbyists—and put real teeth into the Federal law.

I am sincerely hopeful that the special Senate investigating committee, as a result of their findings at Centralia, will make strong recommendations to the Congress. Then, with quick action, the proper course will be followed.

But if we delay, how quickly will the Centralia disaster be forgotten. The names of 111 coal miners will have been added to the long list of those who have made the supreme sacrifice in a vital American industry without fully awakening a Nation to its full responsibility. The old system has failed to protect our miners through the years. Strict Federal regulations with enforcement powers are necessary to solve the problem.

Under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the St. Louis (Mo.) Post-Dispatch, Monday, April 7, 1947, reviewing the record of casualities in the coal industry in the United States since 1900.

In the face of these alarming figures, how can Congress fail to act immediately?

The article follows:

TWO HUNDRED AND FIFTY THOUSAND COAL MINER HAVE LOST LIVES SINCE 1900; RECORD IN UNITED STATES WORST OF MAJOR PRODUCING NATIONS—CHIEF RESPONSIBILITY FOR CONDITION SEEMS TO BE WEAKNESS IN ENFORCEMENT OF SAFETY BY STATES—FEDERAL LAWS LACK TEETH TO COMPEL COMPLIANCE

(By Malcolm Hobbs)

WASHINGTON, April 5.—The deaths of 111 coal miners in the Centralia (Ill.) mine disaster has refocused public attention on one of the world's most hazardous occupations. How risky life is for coal miners is shown by the fact that some 250,000 of them have lost their lives below ground since 1900. Seventeen million more have been injured seriously. The world death rate in coal mines is running at about 5,000 a year; injuries total 400,000 yearly.

The most recent figures, compiled by the International Labor Office just before the war, show the risk to American coal miners is greater than in any of the other major coal-producing countries. United States Government officials admit that the same ratios undoubtedly exist today.

The United States, in the last year in which comparative data is available, 1935, led five other leading coal-producing countries in fatal accidents in coal mines. The other countries are Belgium, France, Great Britain, Poland, and Germany. Figures for the Soviet Union are unavailable. Two other less important producing countries—Canada and Japan—were the only ones with higher death rates than the United States.

COMPARATIVE DEATH RATES

Here are the comparative death rates of the 6 major coal countries, per 1000 year-long shifts by the miners: United States, 4.24; Belgium, 1.92; France, 1.27; Great Britain, 1.49; Poland, 3.03; Germany, 1.82.

In nonfatal accidents, the United States shows up a little better. France has the worst record in this category, with the United States next in line. No figures are available for Belgium. Here are the nonfatal accident rates: United States, 318.9; France, 560.2; Great Britain, 237.2; Poland, 249.7; Germany, 187.1.

The death rate in coal mining in the United States is about seven times as high as for American industry generally. Only Poland exceeds this proportion with a ratio of 10 to 1. Great Britain's rate is 2½ times as great as in the rest of British industry, while the German rate is three times greater. No figures exist for Belgium and France.

All in all, Great Britain's safety record is outstanding. Great Britain is the only country employing more workers in coal mining than the United States.

BACKWARD IN ENFORCEMENT

Accident and death rates bear witness that coal mining is dangerous work anywhere in the world. Why is the record of the United States in this field so notably bad? The logical reason would seem to be in the type and extent of safety regulations, plus the amount of power delegated to enforce them. A study of our system of safety regulations compared to those in other countries indicates that we are backward not so much in the regulations as in the enforcement of them.

Ever since the Federal Bureau of Mines was established in 1910, the Government has had a hand in mine safety, but it has been a

restricted hand because of States' rights. The Federal Government has a safety code for the coal mines and a system of inspections, but it has virtually no enforcement power to back it up. The Government can only make recommendations; it is up to the States to enforce safety regulations.

Unfortunately, State enforcement has shown itself vulnerable to political pressure and inefficiency. The Centralia mine is a good example of this. There were more broken regulations at No. 5 mine than there were those which had been complied with. The State of Illinois had sufficient safety regulations, but very little enforcement.

In European governments, where centralization is the rule, the problem is naturally simplified. Regulations are more uniform and the full power of the government is behind enforcement of regulations.

In Belgium, for example, full responsibility is placed in a district commissioner who must take all steps to see that regulations are carried out at once, and for this purpose may make use of the police and the gendarmerie.

In France, enforcement power is vested in a director general of mines. Local prefects can order mine owners to correct breaches of regulation, and mine labor has a voice in demanding these corrections.

Prewar Germany had regulations which provided that in the event of offenses, mine authorities are empowered to close the mine.

Great Britain has been steadily adding to its safety-control measures since 1911. Today "where the divisional inspector, or a majority of the workmen employed in any mine is of opinion that the general regulations applying to the mine ought to be supplemented" the demands are brought to the attention of the Secretary of State for approval.

RUSSIAN REGULATIONS

In the Soviet Union much of the authority for enforcement of safety regulations is vested in the individual worker. No workman is allowed in the mines unless he passes a medical examination for fitness. Inspectors for each mine are required to close all underground workings where danger threatens. Russia is the only country which specifically prohibits intoxicated workers from entering a mine or bringing alcoholic beverages into a mine. There are no figures available here on death and accident rates in Russian mines which would indicate the effectiveness of its regulations.

Polish regulations established in 1930 set up district mining offices with full power to enforce safety regulations if mining operators refuse to comply. Orders of mine closures can be appealed by management, but the order stays in effect during the appeal. Regulations provide for constant inspection.

Our State safety regulations—notably those of Pennsylvania, Illinois, and New Mexico—are considered to be as good if not better than those in effect in Europe. Evident laxness of State enforcement has resulted in our unfavorable rate of deaths and accidents in coal mines.

When the Federal Government took over the mines from the coal operators in 1946, agreement was reached with the United Mine Workers that Federal safety codes would be established. This would have been an opening wedge to eventual Federal enforcement. Progress in establishing these codes has not been rapid, however, probably because of the uncertainty about the mines being returned to the operators.

The present congressional investigation of the Centralia mine tragedy may result in more stringent Federal legislation with enforcement powers, but it is expected that the old bugaboo of States' rights will be raised to block such a move.

Loopholes in Loyalty Plan—Ban on Reds in Government Is Forward Step But Does Not Guarantee Security

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. REES. Mr. Speaker, I am submitting as a part of my remarks, an article by Rex Collier, one of our leading columnists. This article recently appeared in the Washington Evening Star and pretty well describes the President's program for ridding the Government pay roll of Communists and other subversive elements.

I have heretofore called attention to weaknesses in the President's order. Among other things, I called attention to a particular weakness whereby the order of the President provides in substance that the files of the Federal Bureau of Investigation be consulted. This order does not give the FBI any authority to do more than report to a department head whether the individual has an FBI record. There are, of course, hundreds of thousands of Government employees who do not have records in the FBI. This for the reason that there has been no occasion for making any investigation concerning them.

I agree that the President's order is really a forward step. My criticism is that it does not step far enough.

The article read as follows:

LOOPHOLES IN LOYALTY PLAN—BAN ON REDS IN GOVERNMENT IS FORWARD STEP BUT DOES NOT GUARANTEE SECURITY

(By Rex Collier)

Although President Truman's program for ridding the Government pay roll of Communists and other subversive elements is a bold move in the right direction, there are serious loopholes in the plan. They are loopholes which should be plugged if the movement to root out all potentially disloyal Federal employees is to meet with any reasonable degree of success.

In the first place, the Executive order setting up the new loyalty program draws a distinction between applicants for Government employment and employees already in the service. In the case of applicants, an investigation is compulsory. The language of the order is explicit in that respect. In the case of employees already on the rolls, however, the wording of the order is so ambiguous as to leave the way open for indifferent compliance or evasions that could circumvent the intent of the order altogether.

APPLICANT SCREENING SPECIFIED

For example, Part I of the order states unequivocally that there "shall be a loyalty investigation of every person entering the civilian employment of any department or agency of the executive branch of the Government." Moreover, the same section specifies the type of investigation that shall be conducted. It must cover "all available pertinent sources of information," including the files of the Federal Bureau of Investigation, the Civil Service Commission, Army and Navy Intelligence, the House Committee on Un-American Activities, State and local police records, former places of employment, educational institutions attended, etc. If these records produce any "derogatory information with respect to loyalty of an applicant," a full field investigation must be made by the Civil Service Commission.

Given sufficient funds and adequate personnel, the Civil Service Commission can do a highly effective job of exposing and turning back any applicant whose loyalty to the United States is a matter of serious doubt.

DISCRETIONARY ENFORCEMENT

Compare the positive phraseology pertaining to applicants with this directive regarding investigation of employees already inside the Government gates: "The head of each department and agency in the executive branch of the Government shall be personally responsible for an effective program to assure that disloyal civilian officers or employees are not retained in employment in his department or agency." Furthermore, the head of the department or agency is given the responsibility of "prescribing and supervising the loyalty determination procedures of his department or agency, in accordance with the provisions of this order, which shall be considered as providing minimum requirements."

By thus placing on department heads the responsibility for investigating their own employees and of establishing procedures, the order could be interpreted by some administrators as leaving matters pretty much to their own discretion. It is no secret that some departmental officials, including some personnel officers, have evidenced in the past a complete lack of sympathy with respect to loyalty inquiries. This apathetic, if not antagonistic attitude, may account for the fact that during the past year, when the departments were supposed to take over the investigative job relinquished by the Civil Service Commission for lack of funds, no effort whatever was made by some personnel officers to carry out their new responsibilities.

COMMUNISTS IGNORE OATHS

The President's Loyalty Commission, of which A. Devitt Vanech, special assistant to the attorney general, was chairman and Civil Service Commissioner Harry B. Mitchell a member, found that most of the agencies have been content to accept the oath of office taken by the employee as prima facie evidence of his loyalty. Yet Canada learned that Communists and fellow travelers have no qualms about violating oaths of allegiance when occasion requires.

Another weakness in the new plan for checking on employees already in the civil service is the failure to provide for anything more thorough than a "name check" by the FBI. Director J. Edgar Hoover has made it clear that such a check is far from conclusive. The fact that the FBI may have little or no evidence in its files against a particular employee does not mean that the FBI is willing to guarantee the loyalty of that person. Under the order the FBI has no authority to do more than report to a department head whether the employee has a record at the FBI.

Even if the FBI should report that the employee has a bad record, it is still discretionary with the department head as to whether action under the loyalty order should be initiated. And, as Mr. Hoover told the House Committee on Un-American Activities recently, there have been instances in the past when such discretion operated to permit a Communist to remain in office.

FINDING A SOLUTION

While these defects in the loyalty program are known to be worrying some of the officials concerned with safeguarding the security of the Government, no one pretends as yet to have a complete solution for what is admittedly a tough problem. The FBI, largest

of Federal investigative agencies, has neither funds nor facilities to undertake the huge task of conducting a "full field investigation" of every Government worker. Even the limited screening provided in the Executive order will entail large additional appropriations and the hiring of many new employees by the Civil Service Commission.

A compromise arrangement that would immensely strengthen the proposed program, with little extra expense, would be to direct the Civil Service Commission to supervise and periodically check on the administration of the loyalty order within the various departments. If the Commission found that some agency was not doing an effective job the dereliction should be reported to the President. Such pressure from higher up might have a salutary effect on indifferent or reluctant administrative officers.

Communist-Front Organizations

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Journal of April 7, 1947:

MAKE THE NAMES PUBLIC

At the direction of the President, Attorney General Tom Clark is preparing a list of Communist-front organizations in the United States, and some officials of the Department of Justice think there will be some 300 of them if local, State, and national groups are included. The information on which the list is being prepared is obtained through the FBI and the Criminal Division of the Justice Department, but the Attorney General says he has not yet decided whether it shall be given to the public or kept secret.

By all means there should be full publicity, according to our view—and for two reasons: First, in order that citizens may not be inveigled into joining some front organization masquerading under a high-sounding title; second, for the protection of organizations that have no connection, direct or indirect, with subversive activities. This second reason is based on the generally accepted belief that it is unfair to throw a cloak of anonymity about one member of a group charged with an offense and by this method cast suspicion upon all having membership therein. Only the sorriest of scandal sheets will print a news item about a certain lawyer, or a certain minister, or a certain newspaperman who has been caught in sin.

By the same token, then, Mr. Clark should see that his plain duty is to give the names of every outfit in this country known to entertain communistic ideas or to have sympathy for communism. Of course, the Attorney General cannot afford to do any guesswork, or take anything for granted; when he names an organization as one guilty of acting as a Communist front, he must be prepared to furnish proof, always remembering that membership in the Communist Party is not a crime. Secretary of Labor Schwellenbach recently suggested that it should be placed under the ban, but he has not been able to muster support for such legislation in this democratic land; that kind of law would be exactly on a level with the Russian system which permits just one political group to name candidates for office. But the American people should know the identity of every organization which actually seeks the overthrow of our form of government—they should be placed on guard against all such. The plain fact is that no communistic organization can last long in a land where it is subjected to pitiless publicity. Let them have just that.

Communism

EXTENSION OF REMARKS

OF

HON. FRED NORMAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 9, 1947

Mr. NORMAN. Mr. Speaker, under leave to extend my remarks, I am including a very thoughtful letter which I have received from a constituent of mine, Mr. W. Whittington Cadle, of Olympia, Wash. Mr. Cadle is a longtime resident of that area and has been a very active leader in community affairs, taking great interest in matters of a patriotic nature and those of general benefit to the people.

The letter follows:

OLYMPIA, WASH., *April 7, 1947.*

Hon. FRED NORMAN,
Congressman, Third District, State of Washington, House Office Building, Washington, D. C.

DEAR MR. NORMAN: I have been following what is being done, or left undone, regarding communism, both nationally and in this State. It seems to me that lack of definite action against communism is due very largely to the fact that there is no clearly established definition of communism, as it is being practiced here and abroad. I also believe that it is folly to try to combat communism abroad and let it run practically rampant here in the State of Washington and in the United States. I am herewith, therefore, submitting for your consideration a definition of communism as I know it.

"A DEFINITION OF COMMUNISM

"Communism, as practiced, is the materialization of a political ideology which justifies deception, trickery, subversion, and other questionable methods for the gaining of control of a majority by the use of any means available; primarily, in a democratic country and its labor organizations, through the infiltration of its leading advocates into political and economic organizations until they gain control of key positions therein, and then maintain that ascendancy through physical force, even, if necessary.

"Such practices, being diametrically contrary to the ideals and principles upon which a democracy is founded, hence communism, once defined, is an enemy of democratic government, and as such can, and should be, declared dangerous and inimical to the life, liberty, and pursuit of happiness principle on which this Nation was founded. Therefore its advocacy should not be advocated anywhere within the domain of the United States of America; and those who advocate it should be declared enemies of the State, traitors to the Government of the United States, and should be criminally prosecuted accordingly."

Sincerely, your constituent.

W. WHITTINGTON CADLE.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. SABATH. Mr. Speaker, since the House will not be in session on Saturday, April 12, the second anniversary of the passing of the greatest American of his age, the late President Franklin Delano Roosevelt, I have obtained consent to extend my remarks in the RECORD, and accordingly insert therein remarks which originally I had intended for delivery on the floor.

On April 12, 1945, while the Nation still bled from the wounds of the war yet raging in its victorious final months in Europe and Asia, the sudden passing of President Roosevelt was as severe a shock as we had ever sustained.

But it was not loss to America alone; his sure hand had steadied the entire world.

I say this with measured thought.

This Nation knows now that it was only after another generation of the world's manhood had been sacrificed to world aggression that the judgment of another great American, Woodrow Wilson, in matters of transcendent world importance had been vindicated. But not even the magnitude of President Wilson's work was so determinative and so complicated as that of President Roosevelt's. Mr. Roosevelt exhibited a grandeur in action and a stature of personality as great as any that history provides. The immensity of the arena in which he spoke and fought reduces the classic figures of Rome and Greece to the relatively inconsequential stature of actors in a drama of minor scope.

CIVILIZED WORLD MOURNED PASSING

The whole civilized world mourned the passing of this great humanitarian and colossal world figure, the most powerful personality of his generation, representing the most powerful Nation on earth.

THE "FOUR FREEDOMS"

This was the great patriot with never-dimmed faith in our Nation and with never-dimmed faith in the idea of democracy.

He believed, and made his belief real by his actions, in peace and freedom and justice for all nations. His enunciation of the "four freedoms" was no political gesture—it was the sincere and forceful expression of his inmost creed. Above all things, he longed and worked for the time when there could be that most fundamental of all freedoms—freedom from fear; for where fear is, there cannot be freedom.

Let us hope and pray that he has not given his life in vain. The world has not forgotten that dream, nor that dreamer. Realization of his dream for peace and freedom to all the world was denied him in his lifetime; we must pray and work for its attainment now in his memory.

His passing was especially grievous because the forces of the Allied Nations were rapidly bringing to an end, as he himself realized, the greatest evil that ever plagued the world; and henceforth we were not to have the benefit of his great ability, his courage, his industry, his faith, and his fidelity to his destiny to bring about the actual accomplishment of a just and lasting peace, which was his most-cherished dream, and to lead mankind through reconversion and recovery from the awful waste of war.

Men and women everywhere, of all beliefs and faiths, as never before in the history of the world, mourned for him, and continue to mourn his death; and I feel they join with us today in paying homage to his memory, and in ascribing high praise to his unsullied record of unparalleled accomplishment for all the people of America and of the world.

INSPIRING LEADERSHIP BROUGHT VICTORY

His singularly gifted and inspiring leadership brought us to the threshold of victory; but, victor in his war for peace, he himself became war's victim. We witnessed his valiant efforts to prevent war, his crushing burdens and sorrows in war, his aspirations, his prayers, and his works to conquer war, and did what we could to buttress those efforts.

This great patriot has taken his place among the gallant and illustrious dead who have made our Nation consecrate, and it is our part, the living, to preserve this Nation in fulfillment of our sacred debt to all our martyred dead. May we be equal to the demand in every hour of our danger or need.

FRIENDSHIP OF LONG STANDING

It was my good fortune, Mr. Speaker, to have known this great man from 1913, when he became Assistant Secretary of the Navy, to the time of his lamented passing. I learned early in our acquaintance to know and to admire his tact, the breadth of his human understanding, and the winning personality which opened all hearts to him. I followed closely his remarkable and able career in the Navy under a great Secretary, my friend, Josephus Daniels, who shared my interest. Consequently, at the Democratic National Convention of 1920 it was natural that I should urge and advocate his nomination for Vice President.

NOMINATED THE "HAPPY WARRIOR"

Then in August, 1921, he was struck down with a physical ailment that would have crushed any man of ordinary clay; but he would not admit that anything could stop him. His will to recover, to conquer the weakness of his body, was a thing of iron. Only 3 years later, in 1924, hale enough to attend the Democratic National Convention, I heard him nominate Alfred E. Smith as a candidate for the Presidency with a speech in which he first described his old friend as "The Happy Warrior."

From 1928 to 1932 he was preparing, as Governor of New York, for the greater work that was ahead. In 1930, after the great show of confidence in him by the people of his State, I wired him the very evening of his overwhelming victory that his reelection made him automatically a Democratic candidate for President of the United States, and the next President.

AIDED IN NOMINATION

On the occasion of my visit to Albany in January 1932, at his invitation notwithstanding the unfair attacks made on him because of his physical affliction I found him full of vigor, and in spite of the opposition of some of the Illinois leaders, I pledged him my support. From that day on I became active in his behalf. It was my good fortune to meet Col. Louis Howe and Jim Farley, who were actively in charge of his preconvention campaign for the nomination, and in conjunction with them I can justly lay claim to have aided in bringing about Governor Roosevelt's nomination as the Democratic candidate for President at the Chicago convention in June 1932.

It was my privilege to meet with Governor Roosevelt from time to time during the campaign. At his personal request, I was placed in direct charge of the publicity activities among all foreign-language groups. Inspired by the magnetic appeal of his golden voice, and by his firm grasp of the needs of the world, thousands of us worked incessantly and successfully for his election.

After his election, I had the honor of seeing President Roosevelt frequently in the White House to discuss legislation and more general matters; I found him, Mr. Speaker, to be a most resourceful and well-informed statesman whose grasp of detail, as well as of the broad outlines of great plans, always amazed us.

"ALL WE HAVE TO FEAR IS FEAR"

When President Roosevelt was inaugurated, the country was in its worst crisis since the War Between the States. Business had collapsed. Banks were closed in 38 States, and in the remaining 10 States their operations were limited. There was a run on gold. Some communities were reduced to using scrip. Prices of farm staples were at or near an all-time low. The chant of the auctioneer was heard in the countryside as farm mortgages were foreclosed. Nearly 18,000,000 were without jobs; but few were without fear.

Fear was everywhere.

Into this panic came this great leader and builder, fearless and courageous, with humanitarian understanding, with his fresh voice of confidence. In his inaugural address he proclaimed: "The only thing we have to fear is fear itself." It seemed as if the fog of fear evaporated before our eyes, and in the famous "hundred days" Congress carried out in laws the policies and recommendations made by President Roosevelt.

Banks, plants, and business reopened. We went off the gold standard. Roosevelt fed the hungry, clothed the ill-clad, sheltered the homeless, and brought strength and hope and confidence to all. All over the Nation men and women went back to work, as the President set up the Public Works Administration, National Industrial Recovery Administration, Work Projects Administration, the Federal Deposit Insurance Corporation, and many others too numerous to mention.

FDR RECOGNIZED THREAT OF HITLER TO AMERICA

Two months before Mr. Roosevelt, consecrated to the American way of life and to the democratic way of political action, came into office in America Adolf Hitler came to power in Germany and began to impose his new order of reaction and violence and hate, first upon Germany and then upon all Europe, "and tomorrow the world." From the time Hitler first made plain his mission of conquest and destruction, Mr. Roosevelt denounced and opposed him, recognizing the deep and deadly conflict between Hitlerism and Americanism. Yet for his courage in 1937 in calling attention to these, the appeasers, the isolationists, and the lethargic assailed and attacked him and called him dictator and warmonger, because he recognized the dangers to democratic institutions and warned us of them.

At home reform followed reform as the Roosevelt program was made effective. The Agricultural Adjustment Act was born. Prohibition was repealed. The Securities and Exchange Commission was created. Home Owners' Loan Corporation financed distressed mortgages. The Civilian Conservation Corps and National Youth Administration took form. The Tennessee Valley Authority arose as an arm of the pepole. The Social Security and Wagner Labor Relations Acts were passed.

Soon the President was the object of bitter attacks, many from the very men and businesses he had saved from utter oblivion, but he held steadfast to his humanitarian policies, helping the helpless, remembering the forgotten man.

NOBODY WANTED HIM BUT THE PEOPLE

In common with the people of 46 States, I continued to support him and he was reelected in 1936 overwhelmingly. Nobody wanted him but the people.

I need not further recite the accomplishments of this monumental genius. They are a part of imperishable history, and everybody everywhere knows them by heart.

Early in 1940 I was among the first to insist that President Roosevelt must be a candidate for a third term; that he owed it to himself to consolidate and make permanent his victories over reaction; and that he owed it to his country, as war moved toward America with paralyzing velocity.

I can say with all truth and sincerity that originally the President was fearful of breaking past precedents, and he was won over only with difficulty.

Again, in 1944, I was among the first to urge persistently that his country needed him, and that not only his country but the whole world needed his sure leadership, his vast knowledge and grasp. I begged him to carry on and bring the people to victory against their enemies and to a just and lasting peace for a sorely troubled world. I may say that it required greater persistence from his friends and admirers, with the interest of victory in peace and peace in victory at heart, before he yielded to our entreaties and the world's need of him. I recollect vividly the moment I stated to him that the world needed his sagacity, his resourcefulness, and his acumen, and recalled to him the tribulations of Woodrow Wilson and of our world after the previous war, and said the world would not be denied.

ROOSEVELT DID NOT WISH FOURTH TERM

He told me that, even though he were no longer President, he felt he would be accorded a place at the peace table. I then earnestly pointed out to him that, though there was no doubt his advice and counsel would be sought, he would not have that influence and power and authority which would be his as President.

Death struck him down before he could know the full fruits of his victory; but surely all that we do here is imbued with his spirit and his will.

On many complicated legislative questions President Roosevelt displayed not only supreme knowledge and understanding and courage, but patience and diplomacy seldom matched, and a political acumen possessed by very few.

HIS DEVOTION TO THE UNDERPRIVILEGED WAS MAINTAINED TO VERY LAST

Correctly to appraise Franklin D. Roosevelt's amazing character, Mr. Speaker, it is necessary to bear in mind his tremendous preoccupation with the underprivileged, the oppressed—with those who live with fear.

On the very day of his death, while triumphant Allied armies stormed through Normandy and our own American forces bore closer to the Japanese mainland, I received from one of the President's secretaries, Mr. Jonathan Daniels, what I believe to have been his very last legislative message.

That message had nothing to do with the vast and urgent problems of the war in Europe or in Asia; it was not a message of death and destruction for our enemies, but a message of hope and promise for our own people.

Mr. Daniels brought to me on the very day of the President's death Franklin Roosevelt's urgent hope that I should do everything in my power to bring about favorable action on the rule for the consideration of the bill for a permanent Fair Employment Practice Commission. President Roosevelt genuinely believed in Jefferson's principles, that there should be equal rights and benefits for all, special privileges for none.

PRESIDENT'S LAST MESSAGE TREASURED

Mr. Daniels delivered his message to me at 3 o'clock of that tragic day. Mr. Daniels told me that the President had been improving and was planning on an outing that afternoon and that he wanted to see me on his return to Washington. Afterward, when I learned that at that time he already had been taken away, I collapsed.

I have treasured that last mandate, and I have tried to make it effective. It was our great President's last message, and shows that to the very end his thoughts were with the people.

This truly authentic Great labored long, painstakingly and untiringly in the interest of humanity, with a singleness of purpose and in a spirit of self-denial and self-devotion genuinely heroic. Moderate in his views, unbending in his principles, charitable in his judgments, he was a ripe scholar, well versed in philosophy and the principles of sound government and sociology and economics, an inspired writer, a clever and magnetic conversationalist, a fair-minded and honorable opponent in controversy. He fell fighting in the breach; fell when not far beyond the noonday of his life, feeling that while he had accomplished something he had left much more undone.

ROOSEVELT WAS A STATESMAN IN THE BROADEST AND TRUEST MEANING OF THE TERM

His unflagging energy and intellectual versatility were the marvel of the world. He had explored the highways and byways of governmental knowledge, and the confusing labyrinth of parliamentary procedure was a plain and simple path to him. His keen eye discovered the slightest defect in the substance and form of every proposal presented for his consideration. Fearlessly he turned the light of constructive criticism on every suggested plan, whether its author was friend or foe. His one and only purpose was to promote safe and sane legislation, and to prevent the enactment of ill-considered and loosely drawn laws.

He was a statesman in the broadest and truest meaning of the term.

He was free of all affectation, sincere and genuine throughout. He followed always the path of duty outlined by a conscience that was ever responsive to the noblest and most patriotic impulses of true manhood.

"AS GOD GAVE HIM TO SEE THE RIGHT"

One of the outstanding traits of his sterling character was his fine sense of justice and fairness. Unerring in his judgment of the capabilities of his fellow workers, he was always ready and willing to give credit where credit was due. None so quickly as he encouraged the worthy and deserving, and none so mercilessly exposed shame and pretense. A complete master of the art of timing, he disdained the cowardice of temporizing when the time for action had come.

In the honesty of his soul he could not conceal his contempt for the man who would sacrifice principle for expediency. Pressing forward in the fight, as God gave him to see the right, he unhesitatingly took a firm and determined stand on every great question of public policy, regardless of the effect on his own political fortunes. With full confidence in his own integrity of purpose, undisturbed by criticism or abuse, he was content to look for vindication to the impartial judgment of the future.

ROOSEVELT WILL STAND AS BENEFACTOR OF HIS AGE

And so, when passions and prejudices have subsided, when clashing aspirations and conflicting attitudes have become more tempered; when, as he believed, society would have adjusted itself to the new order in which human rights transcend the rights of property; when the historian in a noon-clear atmosphere writes of our present era; then, Mr. Speaker, Franklin D. Roosevelt, able, conscientious, far-seeing statesman, doer of big things, humanitarian, will stand as one of the benefactors, not only of his age, but of all time.

I have always maintained, and I know that history will bear me out, that he possessed in his one great personality the attributes which made Washington, Jefferson, Jackson, Lincoln, and Woodrow Wilson great Americans, great Democrats, and great men.

I shall, to my dying day, be thankful to the Almighty for the privilege that has been mine to work and cooperate, first with Wilson, and then with an even greater American, patriot, humanitarian, and champion of justice, freedom, and humanity, Franklin Delano Roosevelt.

Soviet Air Power

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address by Senator OWEN BREWSTER, of Maine, to the American Legion First National Aeronautics Conference, Indianapolis, Ind., March 21, 1947:

SOVIET AIR POWER

Many world air routes may soon run through the Arctic in peace or war.

Establishment of four weather stations in the Arctic this past year brought a charge from the Soviet that this was a hostile and aggressive act aimed at Russia.

Sometimes one can infer the intentions of others from their suspicions.

In this light it is interesting to realize that in the last decade Russia has established over 100 weather stations in the Arctic with far more adequate lay-out than any on our side of the North Pole.

No one in America had hitherto considered these Russian weather stations (some with four planes as part of their equipment) as hostile and aggressive.

Russia has made crystal clear in official declarations, her intentions of becoming the world's greatest power. For example, on August 18 an official Russian document—the Communist Agitator's Notebook—declared:

"The aviation of the Soviet Union cannot lag behind that of other countries. On the contrary, in the interests of peace and the security of our people and of other peace-loving nations, Soviet airplanes must fly higher, farther, and faster than those of other countries * * * we must have the most powerful air force in the world."

William Courtney emphatically declares that Russia has captured scientific leadership in the field of rocket propulsion by taking the great majority of the captured German scientists and technicians back to her own country to perfect the projects they had already under way in Germany. Sweden has good reason to believe that Russia is preeminent in the field of rocket design.

The Moscow radio indicates that the Russian budget for national defense is some $4,000,000,000 greater than our own. Clearly, a large proportion of that budget is being spent on air power, because Russia does not have a large navy. A recent United Press dispatch of the week of February 24 estimated that 58 percent of the Russian military budget would go to the air force.

Bearing in mind the reported size of the Russian budget and the fact that a large proportion is being expended on the air arm, it is interesting to note that our Army Air Forces' appropriation accounts for less than one-third of the President's national defense budget (allowing for the AAF share of War Department costs as well as the AAF's own appropriation).

The appropriation for the Navy's Bureau of Aeronautics is only 15 percent of the total appropriation for the Navy.

In some circles it is still popular to underestimate Russian air power, but on this score it might be well to remember that Russian production of combat aircraft during the three peak years exceeded that of any other nation except the United States. Her production of combat aircraft, according to Russian data, was almost double that of Great Britain or of Nazi Germany.

BRITISH AND AMERICAN AIR POWER

Great Britain is reducing her Navy by 60 percent and is apparently depending in the future to a large extent on the American Navy for sea power. Meanwhile, Britain is concentrating on the development of air power.

There is strong indication that Great Britain is far ahead of us in the promising field of jet propulsion. Britain has captured the speed record and openly boasts that if we develop a plane that can recapture the record she has two or three more that can set the record even further ahead. Our own manufacturers testify that Britain is at least 2 years ahead of us in jet propulsion, and our military leaders are not prepared to challenge this claim.

In the commercial air-line field, Great Britain has already announced orders for super air liners to be jet propelled and for super air liners to be propelled by gas turbine-propeller propulsion. Those planes are already nearing the construction stage. There are no orders for similar air liners in this country.

Even more striking than the above facts is the news that the Royal Air Force is a larger Air Force than the AAF. The new budget for the RAF for the 1947–48 fiscal year provides that the strength of the British air arms shall be reduced from 760,000 officers and men in the current year to 370,000 officers and men in the coming year. The President's budget for 1948 proposed a 55-group force for the AAF. This 55-group force would average from 320,000 to 350,000 officers and men, or appreciably less than the RAF's force for the 1947–48 fiscal year.

In this connection, it is particularly alarming to know that the administration has stated that the major impact of any reduction in the President's budget effected by Congress will fall almost exclusively on the AAF. The Secretary of War has even stated that the reductions contemplated by Congress will force a reduction from the 55-group force to a 35-group force. A 35-group force would provide for some 250,000 officers and men, which is one-third smaller than the RAF's strength for 1947–48.

In view of the world-wide recognition that air power is absolutely vital to our security and the recognition by most of our military leaders that any aggressor likely to attack this country would carry out his attack through the air, the question may well be raised as to whether or not the major impact of necessary economies should fall upon air power.

A realistic appraisal of the possibilities of future warfare may point to an entirely different conclusion.

We cannot afford to remain the world's third ranking air power.

COMMERCIAL AIR LINES

Commercial air lines under the American flag at home and abroad are an absolute essential of air power.

Plane production in recent months has been at 2 percent of the war peak.

Military requirements cannot possibly maintain the aircraft industry at a level absolutely essential as a reserve in the event of any emergency.

Nor can military flying possibly supply the familiarization with world weather and topography and landing fields that will be a prime essential in any future conflict.

The State Department is reluctant to permit even one flight of B–29's around the world.

Britain is fully alert to this situation and is planning to dominate the commercial air routes of the world.

Yet twice in our generation it has been demonstrated that Britain is no longer equal to keeping the peace of the world.

America must realize how rapidly our air power would decline if American overseas commercial operations should dwindle. Yet that is a serious prospect under present policies and conditions.

Britain with her associates in air development in Holland and the Scandinavian countries and Australia is forging steadily ahead in the commercial field with unlimited and carefully coordinated government support.

Meanwhile American companies are struggling with each other and with a complicated and confusing set-up to secure the landing privileges to maintain American preeminence in air transport overseas.

The lessons of the American merchant marine in recent decades do not seem to be borne in mind as America repeats in the air the tragic policies that reduced American shipping to a point where it was carrying only about 10 percent of American foreign trade and less than 15 percent of American travel across the North Atlantic.

Private Property

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon address by Dr. Walter R. Courtenay, of the First Presybyterian Church, of Nashville, Tenn.:

PRIVATE PROPERTY

"Thou shalt not steal." Exodus 20: 15

One of the surest signs of the weakening of our democratic, free competitive system is to be found in much that is being written and spoken concerning private property.

Private property is the cornerstone of our way of life. It is a symbol of sacredness to all who love American democracy. It is the heart of our free-enterprise system, the foundation of all our liberties. It is the north star which drew men from all the nations of the earth to this Nation, quickening their hopes and aspirations, sharpening their wits, enriching their experience, assuring them that here in this land of the free and the home of the brave they would cease to be poor and underprivileged, abused and forgotten, that here they could be men, men with new minds, new souls, new horizons, new vocations, aye, the owners of property.

No nation in all history has ever known such an influx of immigrants. Americ was deluged with people seeking new tomorrows. They did not come to us in order to forget. They came to gain. Their main objective was to live in a free land and be owners. Here poor men could find lucrative employment, some becoming landowners and home owners, others becoming well to do, some becoming very wealthy. Here the forgotten could become the noted, for in America, the land of new paths and high goals, a man could climb as high as he desired.

I speak of these matters today because the time has come when every American had better do some fundamental thinking about private property and the trends of today, but let no one think that I am speaking for the comfort of the comfortable or the pacifying of the rich. Today, as every Sunday, I speak to all men, because all men need God and need to know the truth which God has given.

I presume that most people in America would gladly grant the authority and value of the Ten Commandments. They are still fundamental, and we cannot build a better world without them. Then permit me to observe that in these Commandments, which stress for us the sanctity of God, the sanctity of worship, the sanctity of the Sabbath, the sanctity of life, and the sanctity of marriage, also emphasizes the sanctity of private property, or, as Dr. Elton Trueblood has phrased it, "the dignity of property." The decalog which says I must love God and love my fellow man also says that I must respect the property rights of others. I must not steal.

Therefore, as a Christian and an American, permit me to affirm my faith in the sanctity of private property.

1

I believe in private property because I believe that our American way of life is superior to that of communism, which is our only rival in the world today. I believe in our democratic free-enterprise system because of what communism stands for and does.

1. Communism is based on a policy of expediency, intrigue, murder, and larceny. Their program is a program of revolution and robbery. They willingly break every divine commandment in order to achieve the overthrow of the economic and governmental systems of other nations. Strangely enough, although they create their new state by means of murder and larceny, as soon as their state is organized they immediately write into their laws the words, "Thou shalt not murder"; "Thou shalt not steal." It is wrong for a Communist to kill a Communist. It is wrong for a Communist to steal from a Communist, but it is not wrong for a Communist to kill a capitalist and steal his possessions. A man can be an honest Communist but he cannot be an honest man.

2. Communism can only be brought into being through armed force and can only be maintained by the power of secret police, the threat of prison, and the firing squad. Communists promise equality in the new state, but what equality does one find in communistic hands? Even if it were humanly possible to create equality, by what means could a government maintain it? Any nation that is created through murder and larceny and maintained by secret police and fear is not in the same class with countries like our own.

3. Communism boasts that its way of life is superior to ours. Is this true? Are Communists better fed, better clothed, better housed, better treated? Are they better educated and more privileged? Dare they criticize their leaders or find fault with the governmental program? Are communistic lands cleaner, more sanitary, and freer from graft? Are the people of Communist lands more moral and nobler?

As I have read the reports on Russia over the last decade I find no such evidences. I find that they have borrowed almost all their technical information from us. I find that they have looked to us for their industrial and transportation development. Their "know-how," like the materials that enabled them to beat back the Germans, is labeled "Made in the U. S. A." The advances Russia has made are directly traceable to our own tremendous progress under the free enterprise, private-property system. I cannot conceive of any American believing that citizenship in Russia is superior to citizenship in these United States. We have all they possess, and tower above them as the mountains do the plains.

4. The Communist states cannot be superior to us, for they face the same problem

that troubles us, namely, human nature. If we, with a better system, with a higher code of morals, and with virile Christianity cannot solve the human equation, how can Russia?

It is my opinion that communism is a decayed form of society, and whereas Americans express their social advancement in terms of private property, the Communist must do so in terms of promotions in the party, which, in turn, must be achieved by means of intrigue, "politicing," bootlicking, and self-seeking.

I have long noticed that those who take socialism and communism seriously are either theorists who live as capitalists while they dream of socialism, or are crackpots, frustrated egoists, and downright scoundrels who feel that by overturning society they will improve their own positions. These "isms" are breeders of envy, covetousness, and greed to a degree never attained within a democratic system such as ours.

5. Communism, like nazism, will be vigorous and united only as long as it is feeding on the properties of others. When the parasite comes to the place where it can no longer feed on the host, it must feed on itself and die. If the nations of the world were communistic today and Russia had no democracies outside her borders to make the scapegoat of her own wickedness, there would be world-wide revolution within 5 years and the boasted harmony and superiority of the communistic state would blow up like an ammu-

[illegible]

6. Communism hates conservatives, and therefore hates the business and professional and agricultural people of America. Why do they hate conservatives? Is it not because conservatives are those who are owners, people who have a stake in the country, people who are not willingly going to throw away their properties and positions? Only a fool or a crazy man or a sincere Christian is going to throw away his possessions and substitute totalitarianism for free democracy, and I find very few sincere Christians in the Communist ranks.

What is conservatism after all but the stability of a people. What is stability but two-thirds conservatism. Can any person be creative and dependable apart from such stability?

What American, be he employer or employee, banker or baker, factory owner or farmer, professional man or priest, miner or minister, wants to be robbed of all he has, spied on for the rest of his life, browbeaten and threatened every day he lives, and with nothing to hand down to his children except a black tomorrow filled with the horror of a nightmare?

No, my friends; communism has not the way to build a better world, a world filled with happier, healthier people, a people noted for noble character.

Our own system is far from perfect. We all admit that, but if we, with all we have, are unable to control the raw material of human nature, what chance has communism of doing so?

II

I believe in private property and the American system because I believe ownership builds better people.

I believe that the possessive pronouns are important. I believe that a man is more a man when he owns property and controls it than when he does not. I believe that ownership is the power of democracy, the very life-blood of the state. That is why the demagogue consistently appeals to those who are not owners.

I believe that ownership makes man more creative, more industrious, more stable. I have not forgotten that in the first year of the Plymouth Colony the ground was parcelled out by families with the understanding that whatever was grown belonged to the colony as a whole. It was not a fruitful plan, so much so, that in the second year the plan was changed, and while the families gardened the same amount of soil they were told that whatever they raised belonged to them. That year the crops were 10 times greater.

I believe that ownership also makes one fellow-conscious. One learns a great deal about himself in taking care of other people. If the state takes care of all, the individual loses much of that which makes a man human. In meeting the needs of loved ones and friends and customers and citizens one learns the significance of good government and constructive economy. If governments had to go out and earn the money they use, or borrow it on their own, they would do a better job in spending it. They would better understand the meeting of needs in a sensible manner. Government spending is never conservative.

I believe that ownership builds better citizens. When a man builds he not only increases his material possessions, he somehow increases his inner possession. He is a bigger man spiritually. How often I have heard men who served as officers in Army and Navy during the last war say that the bravest men, the men who stayed on the job longer when the going was tough, came from those American homes where parents worked and saved and shared and voted. The picture of the citizen who leans on a shovel is a picture of what happens when government makes the

[illegible]

I believe that men will work harder for material rewards than they will for vague social ideals. Men do all right when they are assured of faithful compensation for faithful work. America, the greatest democracy in world history, the Nation with the highest standard of living, the Nation which has done more to lift mankind nearer security and enlightenment than any other nation, was built, not on the communistic pattern, but on the pattern of private property.

III

I believe in private property, its sanctity and dignity, because I believe God does.

This is most certainly the teaching of the Old Testament as a whole. The eighth commandment of the Decalog, with the expression of the basic idea in chapters 21 and 22 in Exodus clearly state God's approval of the sanctity of private property.

Let no one believe that the commandment was given for the safeguarding of the rich and powerful. Actually it was the poor man's welfare God had in mind. One sees it clearly as Elijah stands before the king and denounces him for stealing Naboth's vineyard.

"Thou shalt not steal" applies to all men, and is God's way of saying that what a man has honestly earned is his and has a sanctity recognized by the very laws of Heaven. As Dr. Trueblood has said, "Stealing is evil because ownership is good."

Not only does the Old Testament teach the sanctity of private property but it emphasizes the responsibilities of the owners of private property. Property must represent services rendered to society. If a man can work and does not work he has no right to the security of society or the necessities of life. The Bible makes no place for the loafer or the idle, wasteful rich. God means for men to work, to save, to share, and to live righteous lives.

God believes a man should be justly rewarded for services rendered and that what a man earns should be wisely used.

The owner, according to Scripture, is a trustee. What he owns is:

(1) Derived from God and from others;

(2) Is limited by the brevity and insecurity of life;

(3) And is dependent on the owner's wisdom in acting as a trustee.

God holds us all responsible for the wise use of what we call our own.

According to the ancient tribal laws of the Jews every man had a place of dignity within the tribe. As long as he obeyed the laws of the tribe and did his part for the welfare of self and society he had full claim on all the tribe possessed and stood for, but when he disobeyed or did not work, he could be turned into the desert where every man's hand would be turned against him.

It is doubtless this ancient day and custom which explains why there are no words in Hebrew for alms and beggar. Charity in Hebrew means "right doings." To help another who had tried and failed was merely doing what was right, and hence no man who had honestly tried and failed could be a beggar. Every man knew that failure was not a disgrace and did not blemish a man's standing in society. Only those who did not try, like the one-talent man in Christ's parable, was hopeless—and he was not worthy of any sympathy at all.

To the ancient Jew the privilege of increasing one's possessions was a sure indication of God's favor, and the Jew raised his hands to God in thanksgiving and opened his hand and heart in generosity toward all who had tried and failed.

Whenever the owners acquired wealth by ways and means unapproved by God or stored up wealth merely to have more or forgot the needs of men less fortunate or the safety of the nation as a whole, God always sent His prophets to remind men that they were responsible to Him for the wise use of possessions. The owner must do right toward God and toward his fellow men.

How we need prophets in America today! So much of our charity is foolishness and morally wrong. We feed people who will not work and clothe and shelter people who have no loyalty to God or America. We pledge security to the man who would destroy us if he could—and we think we are doing right. I wonder what Amos would say about our day? He would condemn many whose sole interest in life is to have more. Certainly he would strike out against all who exploit and oppress. But would he not also condemn our policies of soft-headed charity and immoral social legislation?

Every man owes something to society and he who can but does not serve for the total good as well as his own has no claim on society be he rich or poor.

Roger Babson has well said, "The body was made for use, and to use it properly is to cooperate with God in the grand purpose of the world's salvation."

Many who will agree that the Old Testament teaches the sanctity of private property will not agree when I say that the New Testament teaches the same. They will remind me that Jesus said, "Lay not up for yourselves treasure on earth," and His words to the rich young ruler, "Go, sell all that thou hast, and give to the poor," and to the disciples, "Sell what you have and give alms." But may I point out that in the first instance Jesus was talking to men who were to walk up and down the earth as evangelists. They would have no time for treasures on earth. In the second instance Jesus did not imply that the young ruler had no right to call his property his own or to keep it or sell it. In the third instance He indicated that the disciples owned something which was their's and could be sold.

I believe Jesus believed in the sanctity of property as His Father, God, did. And so did Paul. Neither Jesus nor Paul nor any of the apostles said it was wrong to possess, they merely said that in possessing we must not be unmindful of the claim of God and of our fellow men.

As I read my Bible I am conscious that in the mind of God trusteeship and possession are inseparable, but a man has every right,

nay, a moral responsibility, to work, to save, to share, and to serve. What he has honestly acquired is his.

I am glad I am not rich. I am happy I am not poor. I am thankful I have enough for each day's need, a little over for the happy times and the shaded times, and something to share in God's service and in the service of my less fortunate neighbors. I am content!

The Bible stands before me to remind me that I must work. The Bible stands before me to teach me that I must seek to accumulate, for only by so doing can I relieve my fellow men of caring for my needs, and only by accumulating can I help others less fortunate. The Bible says I must not live and strive to accumulate merely to have more than others—I must not hoard! The Bible says it is a sin when I can increase my possessions and my power to help others and do not do so! The Bible clearly states I have a right to own and that no man has a right to take from me that which is legitimately mine.

With all its faults, our system of private property is nearer to God's social plan for humanity than any other system and I regret that many ministers and Christian leaders do not believe so! Those who say that we should not give our support to any one system above another are being most unrealistic and unbiblical. It would not be difficult to demonstrate that Christianity can express itself more openly and constructively through our system than it ever can through communism. He who will not uphold our democracy and work for its improvement by democratic methods is not a true lover of Christianity and men.

The safety of our religion, our homes, our property, our very lives, depends on our ability to retain and improve our democracy.

IV

Today is January 19, and in this area of Am-rica that means the birthday of our favorite southerner—Robert E. Lee.

It is not amiss, therefore, for me to point out that the main reason why Lee refused command of the Federal forces and cast his lot with the South was because he, as a Christian and an American, believed in the sanctity of private property.

Lee did not believe in slavery. Lee had liberated his own slaves before the War Between the States thundered across our land. But Lee knew that millions of dollars had been invested in slaves and that no government and no group of States had any right to cause men to lose that investment without due process of law and just compensation. To wage a war to destroy that investment was in Lee's mind, and in the mind of most southerners, immoral. It was not that the South intended to unduly prolong slavery, for the records show that the South was rapidly moving in the direction of emancipation. The South fought, not so much in defense of slavery, in fact, not at all for slavery as such, but for the sanctity of private property. The war of the sixties was the South's affirmation that property is sacred and no man or government has a right to destroy it without due process of law.

I believe the words "mine" and "thine" are sacred words, and I pray God that they may ever be in America, and that each of us will so use the rights of private property in this generation that all generations may possess the open Bible and the blessings of democracy.

I want this church, all churches, and our own denomination in particular to say to all men in all parts of the world today, "Property, under the laws of God, is sacred."

"Thou shalt not steal." Let all men hear. Let all men obey.

Reasons for Aid to Greece

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 10 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article on the pending proposal to extend assistance to Greece, written by William Philip Simms, and recently published in the Pittsburgh Press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT IT MEANS

(By William Philip Simms)

WASHINGTON.—The President sat in his White House study. Probably never before had he been so grim. Said he:

"Not since Jamestown and Plymouth Rock has our American civilization been in such danger as now.

"Frankly and definitely, there is danger ahead—danger against which we must prepare. But we well know that we cannot escape danger, or the fear of it, by crawling into bed and pulling the covers over our heads.

"Let us not blind ourselves to the undeniable fact that the evil forces which have crushed and undermined and corrupted others are already within our own gates. Their secret emissaries are active in our own and neighboring countries.

"No man can tame a tiger into a kitten by stroking it. There can be no appeasement with ruthlessness.

"I make the direct statement to the American people that there is far less chance of the United States getting into war, if we do all we can now to support the nations defending themselves against attack * * * than if we acquiesce in their defeat.

"RISK IN ANY COURSE

"We must admit there is risk in any course we may take. But I deeply believe that the great majority of our people agree that the course that I advocate involves the least risk now and the greatest hope for world peace in the future.

"Democracy's fight against world conquest is being greatly aided, and must be more greatly aided, by * * * the United States.

"We must be the great arsenal of democracy. For us this is an emergency as great as war itself."

It was not President Truman talking. It was Franklin D. Roosevelt. The occasion was his fireside chat of December 29, 1940, a year before Pearl Harbor.

President Truman just as well could use those exact words today. Ruthless totalitarian power again is expanding in Europe and Asia and using the same fifth column tactics within our own gates and neighboring countries.

SOME DON'T GRASP DOCTRINES

Indeed President Truman's message to Congress last week, in many respects, greatly resembled that Roosevelt pronouncement. He warned that "the national security of this country" is involved, and he proposed aid to democracies wherever threatened by totalitarian aggression.

Like President Roosevelt, he called on America to make herself the arsenal of democracy in order that "we and other nations will be able to work out a way of life free from coercion." Such, at least, were the clear implications.

Many in Congress failed to comprehend the Roosevelt meaning back in 1940. Some, though fewer, do not seem to grasp the full import of the Truman doctrine now. Some can't discern the forest for the trees.

Incredibly enough, they seem to think that Mr. Truman is trying to force King George II upon the unwilling Greeks, while others insist that we should make them adopt a government of the kind we Americans like. Both of which miss the mark by a mile.

The Truman doctrine is simply the Atlantic Charter principle that peoples everywhere should have the right to live under a government of their own choosing, whether of the right, left or middle, monarchy or republican.

A New Tax Plan

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. JENKINS of Ohio. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

BRIEF OF JOHN C. WILLIAMSON, ASSISTANT DIRECTOR, NATIONAL LEGISLATIVE SERVICE, VETERANS OF FOREIGN WARS, BEFORE THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON MARCH 14, 1947, PROPOSING AN AVERAGING PLAN AS AN ALTERNATIVE METHOD OF DETERMINING SURTAX

Mr. Chairman and members of the committee, the National Legislative Committee, Veterans of Foreign Wars, has had under consideration since the forty-seventh national encampment several resolutions the objectives of which were to encourage small business, the flow of venture capital, and at the same time to provide some measure of tax relief to veterans during the postwar years of readjustment to civilian life.

Several of these resolutions have been transformed into legislation which is now pending before various committees of the Congress.

At the same time the national legislative committee has devoted considerable study to a tax plan which, although it does not provide for tax relief in the form of straight tax reduction or exemption, does remove certain inequities in the present tax structure and at the same time is designed to encourage new business venture with a resultant higher level of employment. The VFW plan will also provide some tax relief to veterans and nonveterans alike whose incomes during the war years and for some years hence will be subject to considerable fluctuation.

Briefly the plan is an alternative method of determining surtax and will parallel the present section in the Internal Revenue Code on surtax rates. It is a 5-year moving-average plan which compares what a taxpayer would have paid in surtax had his total income received during the current and four preceding years been received in equal yearly amounts with what he had actually paid in surtaxes during the four preceding years. The difference is what the taxpayer owes for the current year.

Following is the plan as incorporated in the proposed bill:

In lieu of the surtax imposed by section 12 (b) (1), Internal Revenue Code, an indi-

vidual may elect, for each taxable year, to compute the surtax or surtax refund in the following manner:

(1) To the surtax net income for the current taxable year he will add the surtax net income, if any, reported by him in each of the four preceding taxable years. If for any of the four preceding taxable years, the tax was computed under the tax table, the taxpayer adjusts the figure shown as adjusted gross income to reflect the surtax net income by taking the standard deduction of 10 percent and the surtax credits.

(2) Add the surtax net income of the earliest year, not to exceed the fourth year preceding the current taxable year, to the surtax net income of the current year. To this sum add the surtax net incomes of the intervening years regardless of whether a return was filed in any of these years.

(3) Average the above to obtain an average surtax net income.

(4) Compute the surtax for each year on the average found in 3, above.

(5) Compare this total average surtax with the surtaxes actually paid. If he actually paid more surtaxes than the total of the average surtaxes obtained in 4, above, he is entitled to a refund of the difference; and if he actually paid in the four preceding taxable years less surtax than that obtained in 4, above, his surtax for the current year will be the difference.

It is apparent from the above that this averaging plan would benefit all veterans who are presently earning their first moderate income since induction in the armed services. It would also benefit those veterans who may not earn their first appreciable income until some years after their readjustment period. It would stimulate increased investment in risk enterprises; thereby increasing employment; and, of course, it would provide a more equitable means of surtax determination for those individuals whose incomes are continually subject to wide fluctuation.

The only distinction between veterans and other taxpayers would be a technical amendment to permit veterans to average income over any of the 5-year period in which they were on active duty even though no returns were filed for the years while in service. For example, a veteran in the Army in 1943 could average his 1947 income over 1943, 1944, 1945, 1966, and 1947. A civilian who filed his first return in 1945 could average his 1947 income, under the proposed law, only over 1945, 1946, and 1947.

Joint returns, themselves, would present no particular problem under the proposed law but provision would have to be made for segregating income when taxpayers change from filing a joint return to filing single returns as is now done in the case of capital loss carry-overs.

Attached to this brief is a draft of the bill which would amend the Internal Revenue Code so as to provide a 5-year moving average plan for the computation of individual income tax.

Also attached are two tables, A and B, which set forth comparisons of present surtax with surtax based upon average surtax net income.

Also enclosed is an article by Douglas Larsen which appeared in the New York World-Telegram on March 22, 1947. This appeared also in the Washington Daily News and other newspapers covered by the Newspaper Enterprise Association.

[Excerpt from The Finance and Tax Program for Small Business, by J. C. Dockeray, Finance and Tax Division, Office of Small Business, Department of Commerce. (Original article in February 1947 issue, pp. 10–14, Domestic Commerce—U. S. Department of Commerce publication)]

All business, both large and small, must grow in order to enjoy a healthy economic life. Economic survival is related to ability to grow and to adapt to the ever-changing environment. Most business grows in part from within through the retention of earnings but due to its financial situation small business must grow principally from within. Outside capital has not been available on favorable terms or in adequate amounts. For this reason high-tax rates limit the ability of small concerns to expand.

The net earnings of small business fluctuate more widely than do those of big business. This leads to the payments of larger amounts of taxes over a period of years by small business than would be true if its earnings were more stable. This situation is especially serious for unincorporated enterprises that pay taxes under the highly progressive personal income-tax rates. Since small business is typically unincorporated, it faces a real problem in this particular. A satisfactory method of averaging income subject to taxation over a number of years must be developed if businesses with fluctuating characteristics are to be taxed comparably with businesses having stable income.

The article below appeared in the New York World Telegram, issue of March 22, 1947:

FIVE-YEAR TAX PLAN CONSIDERED—"AVERAGE" METHOD OFFERED IN CONGRESS BY VFW

(By Douglas Larsen)

WASHINGTON, March 22.—Many Congressmen are enthusiastic about a new method of computing income taxes which is designed for the benefit of veterans, small businesses, and others whose incomes vary greatly from year to year.

The plan has been offered by the national legislative committee of the Veterans of Foreign Wars, which presented it to the Ways and Means Committee. Legislators who have studied it say that it might become the GOP's No. 1 tax program.

For want of a better name it is referred to as an "averaging plan." It would permit any taxpayer, if he chose, to base his tax payment on his average income over a 5-year period, instead of forcing him to pay each year on what he earned that year.

The proposal can be illustrated like this:

Jones served a year in the Army and had no taxable income to report. His first year in civvies he started a little business; his net income was $2,500 and his income tax $510. The next year business improved; he took out $5,000 net, and his tax is $1,100. The third year as a civilian brought him $7,500 net, on which he must pay $1,810. And on the fourth year's $10,000—the business now being established and prospering—he must shell out $2,640.

During these 5 years he has earned a total of $25,000 net and has paid a total of $6,060 in income tax.

Under the VFW's "averaging plan" he would average the 5 years' net income at $5,000 a year, on which the tax would be $1,100 a year. This would total $5,500 and save him $560 over the period.

Another example would be an author, who spent 2 years in service and then 2 years writing a book. During these 4 years he has no taxable income and pays no tax. During the fifth year he completes and sells the book, it is published, and makes a hit, and he takes in $25,000 net.

The present law permits him to consider the 2 years of writing and distribute his income over that period. But the proposed law would take account also of the 2 years in the Army and let him split his $25,000 five ways, paying $5,500 in all.

The privilege of spreading income like this is restricted now to a few cases, such as authors, artists, inventors, who work for some time and then reap their reward all at once.

It does not apply, as the proposed law would, to baseball players, movie and stage actors, and others who work every year, are paid at once, but have great variations in income from year to year.

As suggested, the plan would provide a "moving average." That is, the taxpayer each year could average in the last 4 years if that would reduce his tax, however he may have filed the previous year. Or, if he chose, he could ignore the average and consider only his current income.

If the taxpayer's income should drop materially, by averaging in the last 4 years, he could get a refund.

John C. Williamson, a VFW spokesman, who presented the plan to the Ways and Means Committee, explained its purpose like this:

"Veterans, as a group, will experience wide fluctuations in their incomes for the next few years of readjustment. The present income-tax system is designed for persons whose income is fairly steady from year to year. This averaging plan will make it possible for persons to balance lean years with good years.'

A recent poll of leading tax experts revealed that 86 percent favor some system of averaging yearly earnings. But previously suggested plans have been rejected for one reason or other.

Author of the VFW's plan is Richard A. Mullens, tax attorney and former Army captain, who served in the Pacific in World War II He is special tax consultant to the VFW's national legislative committee. He has worked on his plan for some years.

TABLE A.—*Comparison of present surtax with surtax based upon average surtax net income*

	Earnings of sample taxpayer over 10-year period	Surtax computed under present system at 1945 rate	Cumulative surtax paid under present system	Average surtax net income as computed under averaging plan	Surtax computed under averaging plan at 1945 rate	Cumulative surtax paid under averaging plan
1944	$1,600	$320	$320	$1,600.00	$320	$320
1945	1,600	320	640	1,600.00	320	640
1946	500	100	740	1,233.33	100	740

President Monroe's Message in 1823 Erected Standards for Our National Defense Which Now Apply to the Mediterranean

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1947

Mr. HAYS. Mr. Speaker, it is not because Russia is communistic, but rather because her communism is aggressive, that we concern ourselves with the problems of her neighborhood, meaning Greece and Turkey. We cannot decide for the Russian people what form of government they shall have. Our foreign policy has never been based upon interventions to influence the people of other nations to prefer our system. We would not be abandoning this policy to intervene in the Mediterranean in the present difficulties. The problem is simple enough if we regard the lessons of history concerning aggressions. Even under the old methods of transportation and warfare, we found our national interests involved in European aggressions. The contagions spread more rapidly than ever under modern conditions, and Athens is less distant from Washington than some cities of South America embraced within the area covered by the Monroe Doctrine.

President Monroe's famous message of 1823 contemplated the same type of potential aggressions we are witnessing today. What logic would there be in committing our resources to the defense of the Western Hemisphere to preserve our freedom but to neglect a defense of the Northern Hemisphere for the same purpose? Greece is very much involved in the strategic areas of our Northern Hemisphere and for that reason the Truman doctrine logically grows out of our traditional policy. It would be inaccurate obviously to regard the two doctrines as one but basically they have the same purpose, that of defending our own Nation and its free Government.

Under leave to extend my remarks, I quote the following pertinent passages from the address of President Monroe which constitute his famous doctrine:

A strong hope has been long entertained, founded on the heroic struggle of the Greeks, that they would succeed in their contest, and resume their equal station among the nations of the earth. It is believed that the whole civilized world takes a deep interest in their welfare. Although no power has declared in their favor, yet none, according to our information, has taken part against them. Their cause and their name have protected them from dangers, which might, ere this, have overwhelmed any other people. The ordinary calculations of interest, and of acquisition, with a view to aggrandizement, which mingle so much in the transactions of nations, seem to have had no effect in regard to them. From the facts which have come to our knowledge, there is good cause to believe that their enemy has lost forever all dominion over them; that Greece will become again an independent nation. That she may obtain that rank, is the object of our most ardent wishes.

It was stated at the commencement of the last session, that a great effort was then making in Spain and Portugal, to improve the condition of the people of those countries, and that it appeared to be conducted with extraordinary moderation. It need scarcely be remarked, that the result has been, so far, very different from what was then anticipated. Of events in that quarter of the globe, with which we have so much intercourse, and from which we derive our origin, we have always been anxious and interested spectators. The citizens of the United States cherish sentiments the most friendly, in favor of the liberty and happiness of their fellowmen on that side of the Atlantic. In the wars of the European powers, in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded, or seriously menaced, that we resent injuries, or make preparation for our defense. With the movements in this hemisphere, we are, of necessity, more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different, in this respect, from that of America. This difference proceeds from that which exists in their respective governments. And to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole Nation is devoted. We owe it, therefore, to candor, and to the amicable relations existing between the United States and those powers, to declare, that we should consider any attempt on their part to extend their system to any portion of this hemisphere, as dangerous to our peace and safety. With the existing colonies or dependencies of any European power, we have not interfered, and shall not interfere. But, with the governments who have declared their independence, and maintained it, and whose independence we have, on great consideration, and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling, in any other manner, their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States. In the war between these new governments and Spain, we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere, provided no change shall occur, which, in the judgment of the competent authorities of this Government, shall make a corresponding change, on the part of the United States, indispensable to their security.

Mr. Speaker, these words of President Monroe give force and meaning to the recent editorial comment of Roscoe Drummond in the Christian Science Monitor:

It is altogether useful that there is a wide agreement on what the Government's aid-to-free-peoples policy really means. The difference is that the evils which its opponents—mostly the extreme prewar isolationists—attribute to the policy are, in the judgment of its supporters, its real virtues.

Its opponents say they are against aid to Greece and Turkey because it means carrying the Monroe Doctrine to the Mediterranean, because it is equivalent to peacetime lend-lease.

Its supporters are for aid to Greece and Turkey because they believe the Monroe Doctrine must be carried to the Mediterranean—to the frontier of free peoples; because they believe that unless freedom is defended where it is at stake a chain of events will be set in motion which will make its defense nearer home vastly more costly, vastly more perilous.

The Monroe Doctrine in the Western Hemisphere has not operated as an instrument of aggression nor as an instrument of imperialism. It has been utilized by a free people to help secure freedom.

The Truman-Monroe Doctrine embodies the same fundamental to accomplish the same purpose. It is a modern fulfillment of traditional American policy carried out on a scale which the times demand.

From Nebraska to the Nation: Arbor Day

REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 9, 1947

Mr. STEFAN. Mr. Speaker, from March through May, throughout the United States, thousands of Americans of all ages will plant millions of trees and shrubs on Arbor Day. The fact that there is no uniform date set apart nationally for this observance is, of course, due to variation in climate among the several States. Any other State might have given this enduring symbol of the limitless blessings of nature conferred upon our beloved country, to the American people. But it was Nebraska—and Nebraskans—who gave our Republic Arbor Day. The wisdom, the forethought, the patriotism, and the confidence in country which brought Arbor Day into existence makes me proud that I am a Nebraskan and that I serve the people of Nebraska.

Arbor Day was no accident. It was not the creation of men or events in a particular historical era. It was not established to meet a passing need only to be retained on the statute books without significance or meaning after that need had vanished into time. At its very birth in Nebraska, Arbor Day was steeped in tradition. Arbor Day, after originating in Nebraska on April 10, 1872, has gone on to play an important role in Nebraska agricultural progress during every season of each succeeding year. In this respect, Arbor Day adheres closely to the pattern of another great American holiday—July 4, Independence Day.

The great names of the War for Independence are familiar to all of us—Washington, Greene, Francis Marion, Mad Anthony Wayne, Jefferson, John and Samuel Adams, Benjamin Franklin. But, the true heroes, the men who never enjoyed the freedom for which they fought, lie in forgotten graves from Lexington to Valley Forge, from King's Mountain to Yorktown. These unremembered ones made liberty possible and gave real meaning to Independence Day. Other Americans whose names will never be found in any of our history books kept the message of the Liberty Bell alive down through the decades until this very day.

I have spoken of the Fourth of July because it is similar to Arbor Day—because it is built on the broad base of the

small man's faith in freedom as his work-worn hands reach up in prayer to God.

The history of tree planting in Nebraska goes back beyond written record. Archeologists tell us that a group of early farmers who lived in almost all of the river valleys of Nebraska, except in the shadow of the eastern Missouri River bluffs had learned the secret of planting trees to protect their crops from the elements.

Manuel Lisa, who came upriver from St. Louis in 1807 to trade in furs, landed on Nebraska soil near the present site of Omaha. On his rafts he brought cattle, hogs, poultry, squash, lima beans, potatoes, and turnips. He also brought small trees. He planted for himself. Yet, he had brought more than he needed for his own use and he gave of his bounty freely to the Indians who greeted him upon his arrival. Not only did he give to the Indians. He told them how to plant these new crops, how to care for them, and how to plant trees.

Other planters followed Manuel Lisa, the unknown "Johnny Appleseeds" of the Midwest. So widespread had become the lore of planting trees that when, in 1832, eastern Nebraska was visited by the distinguished American artist, George Catlin, he—Catlin—could describe what once had been a treeless prairie as "everywhere covered with beautiful green turf and with occasional patches and clusters of trees."

From Michigan, Indiana, Kentucky, and Missouri settlers poured into Nebraska. To some finding a home in Nebraska was an accident. A broken prairie-schooner wheel; an Indian attack; the loss of a team of horses; a family could go no farther. They built sod houses, traded with the friendly Indians, collected wild plants, and—somehow—existed through the winter, fully intending to go on in the spring. But instead they learned to love the land and stayed on to prosper. More purposeful settlers, intent on building permanent homes in the new country, brought plants and tree sets with them. Some of these far-bought trees flourished; more died. Still such was the spirit of the undaunted pioneer that he and his family kept on fighting to make a garden out of a wilderness.

During the 1840's and the 1850's friends gave friends tree sets as presents on birthdays and holidays. Tree trading became almost as common as horse trading on the Nebraska frontier. Trees and the products of trees occupied a place of honor at the first Territorial fair in 1859. Under the Homestead Act of 1862, inducements were held out to tree planters. A claim could be proved more quickly if there was evidence of a grove or the planting of trees along section or boundary lines.

In the spring of 1868, a Nebraska pioneer, Dr. George L. Miller, in writing of another pioneer, said:

> He is constantly sticking the cuttings or roots of fruit or forest trees into the ground. When he is not doing this, in the proper season, he is using a pair of shears ingeniously fastened on a long pole and operated with a string, in trimming the limbs of the tall trees, which his own hand planted, that have grown out of his reach. One of these, the king of cottonwoods, which arose from a few inches of a limb of one of those trees * * * is about 12 years of age. It stands 40 feet in its subterranean stockings, and measures at the butt 60 inches in circumference. But his fruit growing is the great thing. He already raises peaches for market and his apples will be counted this fall by hundreds of bushels.

It is no wonder that the Nebraska State Horticultural Society was organized in 1869. Interest in the planting of fruit trees as well as the planting of shelter trees was at high pitch. J. Sterling Morton, who was to become the third United States Secretary of Agriculture; Nebraska City orchardist, J. H. Masters; Editor Robert W. Furnas; and Chief Justice Oliver P. Mason were among the society's 23 charter members.

To J. Sterling Morton goes the honor of giving Arbor Day its name. As a member of the State board of agriculture, he offered the following resolution on January 4, 1872:

> *Resolved*, That Wednesday, the 10th day of April 1872, be, and the same is hereby, especially set apart and consecrated for tree planting in the State of Nebraska, and the State board of agriculture hereby names it Arbor Day; and to urge upon the people of the State the vital importance of tree planting hereby offer a special premium of $100 to the agricultural society of that county in Nebraska which shall, upon that day, plant properly the largest number of trees; and a farm library of $25 worth of books to that person who, on that day, shall plant properly, in Nebraska, the greatest number of trees.

That resolution was unanimously adopted.

As the immediate result of that first of all Arbor Days, over one million trees were planted. Nor was this a false start. It is a matter of record that approximately 350,000,000 trees and vines were set out in Nebraska during the 12 years following that first Arbor Day. Today, Nebraska observes Arbor Day on the second Wednesday in April and this—Arbor Day, 1947—is the diamond-jubilee observance, the seventy-fifth anniversary of the first Arbor Day.

In the 1930's we talked a lot and listened to a lot of talk about shelter belts. In advocating this boon to the farmer, many considered it something new—a practical movement to enrich the soil, to protect the crops, and to beautify the land. Actually, it represented a return to one of the basic agricultural principles which had helped to make Nebraska great in farm production. The early Indian farmer of the Republican River people, Manuel Lisa, J. Sterling Morton—all contributed to it. But, as in all great gifts to mankind, it was the "small man," the forgotten, the unknown, who dared fire and flood, blizzard and brutality, to mold disaster into destiny. In its noblest sense, Arbor Day is Nebraska's enduring monument to the "little man."

Some years ago, I planted a white pine on the Capitol grounds. That tree had been sent to me by Sterling Morton, Jr. from the Morton arboretum in Illinois. I hoped that this tree might eventually take the place of that one which had been planted by the late Secretary of Agriculture and which had been removed to make way for the expanding department. I think Mr. Morton must have understood the meaning of my act for I was thinking of his words while I turned the earth:

> The cultivation of flowers and trees is the cultivation of the good, the beautiful, and the ennobling in man, and, for one, I wish to see this culture become universal in the State.

Arbor Day 1947 has a message to the community, the State, the Republic, and the world. Through Arbor Day, Nebraska's unknown planters down through the years, speak, saying, "To destroy is evil. To cause to grow is good. Yesterday's planting is the harvest of tomorrow."

The Lilienthal Nomination

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 10 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Confirm Lilienthal," which appeared in the Pittsburgh Press of April 4.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONFIRM LILIENTHAL

David Lilienthal's opponents have done their worst and have been outvoted. It is not likely that on any other test they can show greater strength than on the Senate's 52 to 38 rejection yesterday of the motion to send the nomination back for further committee investigation.

So the Senate should get along with the business now, promptly confirm Mr. Lilienthal and the other nominees for the Atomic Energy Commission.

It should do that to enable the Commission to work unmolested in the development of atomic energy, keep ahead of the rest of the world and thus advance our national security. And to enable the Senate itself to devote its attention to controversies of more substance.

Disposal of War Housing

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a copy of an editorial by Drew Pearson of recent date, and my answer to a letter from a good friend of mine, Mr. George B. Neff of Avoca, it being the only letter I have received from my district concerning the Pearson editorial. I feel that in fairness to all this explanation must be made of the issue to the American people.

[From the Des Moines (Iowa) Register and Tribune of March 25, 1947]

HOUSING

The fur is flying backstage over another fast housing deal in big real estate lobbyists

have put over in Congress—and on the veterans.

The deal involves a resolution, adopted behind closed doors of the House Banking and Currency Committee and by an Appropriations subcommittee whereby surplus war housing can be sold only for cash.

Innocent on its face, this means a big advantage for the big real-estate operators, who can afford to put up spot cash for the multiple-unit surplus-housing projects.

Since most of the projects are big ones, ranging from 100 up to 3,000 units in size, veteran-purchaser groups cannot compete on a cash basis with the big real-estate syndicates. The latter would be in a position not only to put up the money, but, because of the limited cash bidding on such large transactions, could force down sales prices.

The deal was put over by Chairman JESSE WOLCOTT, of Michigan, of the Banking and Currency Committee, and Chairman BEN JENSEN, of Iowa of the Government Corporations Subcommittee.

APRIL 8, 1947.

Mr. GEORGE B. NEFF,
Walnut, Iowa.

DEAR GEORGE: The Drew Pearson attack on Congressman WOLCOTT and myself is just another example of the unfair tactics used by certain radical groups here in a well-planned program to discredit Congressmen who will not go along with Government ownership and control of everything.

Here are the true facts about the war housing issue. The Federal Public Housing Administrator asked us to give them the green light to dispose of war housing under a plan they have cooked up whereby mutual ownership corporations would be formed by the present occupants in these war housing projects. Most of these tenants are nonveterans. The present occupants under that plan would then have first priority to buy the house they now occupy, whether they are veterans or not. They are to pay 10 percent in cash and pay the balance over a 45-year period. Thus keeping the Government in business and in virtual control of the property for the life of the contract.

Our committees unanimously opposed that plan for very good and definite reasons. In the disposal of all surplus property the Congress has said in the laws now on the statutes that veterans should have priority over nonveterans to purchase surplus property, but the FPHA officials contend it is not proper, fair, nor feasible to give veterans priority in this instance. To this contention neither my colleagues nor I can agree at all, and we so informed the FPHA.

I contend, as do most of the members of the committees, that veterans should have the privilege of a 60-day period to purchase the houses direct from the Government, so long as the bid price is at least 75 percent of the appraised value of the property. Certainly, the veteran who served his country for the comparable small pay in relation to those who worked in defense plants, should have this advantage. And I am certain that is the wish of the American people too.

Also, we have substantial information that in most of the cities in which these housing projects are located, if given an opportunity the cities would purchase these projects in toto at a responsible price and dispose of the units at a reasonable price to veterans on such terms as are satisfactory to the interest of the individual veteran. All recognized veterans' organization representatives to whom I have talked are in full agreement with the position taken by us.

The private lending institutions in the respective areas where these projects are located are ready and anxious to furnish the needed capital to the veterans, either by a direct loan or by FHA loans, which ever are agreed upon between the veteran and the lending institution, whether the purchases are made direct from the Government or city.

Mr. Dillon Myer, Director of FPHA, assured us at a duly called joint meeting of the Banking and Currency Committee, headed by Congressman Wolcott, and the Subcommittee on Government Corporations, House Appropriations Committee, of which I am chairman, that he would abide by our decision, because the law now in effect for the disposal of these war housing projects was not too plain. Therefore, he did not want to dispose of them until we had looked into the matter. So, after due consideration of our joint committee, we unanimously adopted the following resolution:

"It is the sense of this joint committee that sales of permanent war housing units by the Federal Public Housing Authority be limited to such transactions as will return all proceeds of the sales in cash to the general fund of the Treasury of the United States at the time of the consummation of the sales."

We hoped that the effect of this resolution would be to hold the disposal program in abeyance until the Banking and Currency Committee could have hearings, and then write a bill which would be in plain understandable language and be a sound practical disposal plan, and one that would give justice to the veterans. The committee will start hearings within the next 10 days and we hope to have the bill made law within the next 60 days, if possible.

With kindest good wishes, I am,
Sincerely yours,

BEN F. JENSEN.

The Final Product Is What Counts

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times:

THE FINAL PRODUCT IS WHAT COUNTS

(By Kyle Palmer)

When Republican majorities were returned to the United States Senate and to the national House of Representatives in 1946 there was general agreement among Democrats and Republicans alike that the GOP not only would retain control of the Congress, but would coast gayly into the White House in 1948.

Last November Republican jubilation was at its zenith and Democratic despair hit a nadir.

Political wiseacres could furnish scores of reasons and cite innumerable precedents in history to bulwark their arguments; Republicans couldn't lose; Democrats couldn't win.

SHAKY ELEPHANT?

An era had come to a close; the old cycle of political change had been restored.

But now, from all we hear, both the jubilation and the despair were a bit premature; the elephant is a trifle shaky on his legs, we're told, and the donkey's ears are perking up.

The same group of experts that proved by chapter and verse that "any Republican will win" are hard at work demonstrating the likelihood of GOP losses in Congress 2 years hence, along with the probable retention of President Truman at 1600 Pennsylvania Avenue.

Mainly they describe "Republican failure" or "vacillation" as the cause for this somewhat precipitate reversal of form.

REVOLVING PROPHETS

Given another set of circumstances or conditions 3 months hence they'll solemnly do a double reverse and establish, to their own satisfaction, at least, that their original premise was correct.

Political likelihoods are not subject to such volatile judgments, nor are political realities so responsive to superficial influences; victory or defeat for Republican and Democrat in 1948 can be swayed by events and conditions yet to occur, but the weights and balances continue to favor the election of a Republican Congress and President at the next general election.

Chicago's heavy Democratic majority for the first politically respectable mayor the Kelly machine has put forward in many years may be a straw in the April wind—but Chicago is a windy city and the breezes there are variable.

NATIONAL TRENDS

Where national political trends are concerned, about the only change that has occurred since last November is represented in a growing realization that the Republicans face a fight instead of a frolic during the months ahead.

The Republican Party as represented by Members of the Senate and House has been in control of Congress just a little more than 3 months. New and old GOP legislators were barely seated before the Democratic propagandists began their chant of failure.

President Truman invited cooperation, and at the same time he and every other Democratic leader identified with the administration's political fate and future turned to the job of making the Republicans look foolish and frustrated.

What chiefly is the complaint against Republican Senators and Representatives at this time—less than 90 legislative days after they assumed office?

That they predicted much and have produced little? That they have not fulfilled promises to curb labor-union excesses and are not likely to do so? That taxes have not been reduced? That the housing shortage remains? That they fight too much among themselves?

Substance can be found in some of the critical generalizations, particularly as they apply to lack of harmony, or unity, or party discipline, or whatever you prefer to call current difficulties encountered by those seeking to have the Republicans work as a group.

MORE QUARTERBACKS

True it is that there have been more quarterbacks than linemen on the GOP team. Teamwork takes time and is a matter of training, association, and understanding.

After nearly 16 years of consistent Republican defeats and denial of authority and responsibility, the odd circumstance is not that the Republicans find it difficult to work as a unit, but that they can find opportunities to work together at all.

A Nation too long accustomed to the autocratic rule of Roosevelt and to the imposition of one man's will on a party in power has not learned to appreciate the value and the ultimate welfare and security of independent thinking by men who, in general, have identical objectives in view.

PRESIDENTIAL HOPES

If you look carefully at these GOP quarrels, contradictions, contrarieties, and discrepancies, you will discover more controversy as to methods than applies to policies and convictions.

Again, there is truth in the charge that too many Republicans are interested in their personal chances to become President. That

is a legitimate criticism, but since when have Democrat and Republican differed in that human respect?

While FDR was alive he succeeded in keeping all party rivals safely relegated to the status of political pygmies. Mr. Truman was one of them, and he was elected for the Vice-Presidency as an insurance policy. The selection was made by shrewd and cynical men who expected to benefit from that policy.

Mr. Truman is now a candidate to succeed himself because it would represent political suicide by his backers to desert him now. He was their best bet when the ailing Roosevelt was renominated; he continues to be their best bet. He is a smart politician and, now that his surprise and, no doubt, genuine humility under the sudden impact of the Presidency show signs of wearing off, he will be a good campaigner.

CAMPAIGNING TRUMAN

He is campaigning right now.

However, the final GOP legislative product rather than the preliminary models will be the determining factor in Republican success or defeat in 1948.

Collectively the new and old Republican Senators and Representatives went into office as the joint custodians of the Nation's hope for better things and as the exponents of a national protest against many New Dealers and many New Deal policies.

Some aspects of the New Deal were falling apart from age, decay, and structural faults, but in the main the professional and bureaucratic political machine which Mr. Truman took over was soundly and securely intrenched.

NOT IN MONTHS

With all the will in the world, the new Republican-controlled Congress cannot in the space of a few months untangle a web that has been so many, many years aweaving.

By far the great majority of Republicans elected to the Eightieth Congress are able. Each in his own way may interpret his mission or his party's mission according to individual or even sectional approach, but in the main—and after much inescapable trial and error—something in the nature of a cohesive legislative policy is sure to emerge.

Count on Mr. Truman and friends to do all possible to make the Republican effort appear small and trivial. Look to the White House for an endless succession of inspired pronouncements for the benefit of "the little man," who, by the way, swings the biggest influence at the ballot box.

THEY ARE WORKING

But don't lose sight of the fact that Republicans are really working, that most of them not only realize the political expediency of getting results, but also comprehend the vital need for accomplishing objectives which the people will recognize as substantial.

Neither Governor Dewey, of New York, nor Senator TAFT, of Ohio—regardless of any rivalry for the Presidency—can afford to allow personal differences or political interests interfere with basic party responsibility for sound legislation. The same rule applies generally.

Each may maneuver for advantage and may encourage individual followers to skirmish for position, but none can overlook the danger to himself that lies in a Republican legislative fiasco.

DEFEAT FACTORS

There have been occasions in the political history of the United States when an election was lost by those who could only lose because of their own mistakes and inadequacy.

There are numberless factors contributing to such a condition: overconfidence, straddling, over-ambition, cynicism, surrender to expediency, venal politics, compromising associations.

The approaching national election has every appearance of falling into such a category.

Democrats may fight with all of the energy and enterprise at their command, but the outcome of the battle depends upon Republican competency and integrity. These—or their deficiency—will be demonstrated to the satisfaction of the voter considerably in advance of day of decision.

Truman Avoids Domestic Issues

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, President Truman, in his Jefferson Day dinner speech, announced his candidacy for reelection and in so doing avoided reference to highly important domestic problems. He was content to emphasize the danger inherent in the present international crisis. It was purely a political speech, for which devoted brethren paid $100 per plate. The President might well have stated the issues confronting this country and advised what he intends to do about them. As yet he has failed to recommend any constructive legislation to meet these current issues. Under leave to extend my remarks, I am including herewith a timely article by that eminent political writer, Mr. Gould Lincoln, which appeared in the Evening Star on Tuesday, April 8, 1947:

THE POLITICAL MILL

(By Gould Lincoln)

President Truman's candidacy for reelection in 1948 had a second launching at the Jefferson Day dinner here Saturday night. Mr. Truman said nothing about being a candidate in his address. It remained for House Minority Leader RAYBURN, Gael Sullivan, executive director of the Democratic National Committee, and others to proclaim again that the Democratic Party had its choice for the Presidential office. The declarations for Mr. Truman, however, were merely supplementary to the casting of Mr. Truman's hat in the ring months ago by Postmaster General Hannegan, chairman of the Democratic National Committee, in a speech delivered in New York.

It has been obvious almost since Mr. Truman took over the Presidential office after the death of Franklin D. Roosevelt he would be the Democratic nominee for President next year. A President is always a candidate for renomination—and he has to be—except when he is completing a second term in the White House. In the case of Mr. Roosevelt, he was a candidate at the end of both a second and a third term.

The Democrats today proclaim their chances of winning next year's national election are bright. They have been encouraged by a favorable Truman press, by a Gallup poll, and by a mayoralty election in Democratic Chicago.

However, when the Presidential campaign shapes up in 1948 there are a number of questions the Democrats will have to answer satisfactorily if they are to win. The Republicans won the congressional elections last year because the people were sick of Democratic fumbling in labor relations, were sick of Democratic high taxes and huge expenditures, and were sick of bureaucratic control of their affairs. They took over majority control of both the Senate and House on these issues.

What have the Democrats done since that election to remove these causes of irritation? Outside of the elimination of various wartime controls—and they have not all been eliminated—the Democratic administration has done nothing. Instead of helping the Republican majority in Congress with labor legislation, with still further cuts in the Federal budget, and with tax reduction, the administration registered, in one way or another, its opposition. Now, how is that attitude going to make a hit with the American voters?

Furthermore, the President before very long is going to be compelled to go on record on some of these vital issues. The Republican Congress is going to send him tax reduction and labor bills. If he vetoes them—and there was an indication in the Jefferson Day address he would veto a proposed tax reduction at this time, although he said nothing whatever about labor legislation—it will be in direct opposition to the expressed wish of the voters in the 1946 election.

There has been much talk about improved relations since the elections. If there has been an improvement it is largely due to the fact that the new Congress was known to favor amendments to the labor laws. And now threat of new Nation-wide labor troubles is not helping the administration—the telephone strike, the threatened telegraph strike and the coal mine work stoppage.

The Truman Jefferson Day address, delivered on a political occasion when funds were being raised for the Democratic National Committee, must be considered a political address. Noticeable about it was the fact that the field of foreign policy was placed first. What the President had to say about domestic issues—tax reduction and reduction of Federal expenditures—was in the nature of excuses why the administration could not go along with them.

Foreign policy has been kept out of partisan politics successfully since the close of the war—largely through the efforts of the Republicans under the leadership of Chairman VANDENBERG of the Senate Foreign Relations Committee. It was Senator VANDENBERG who stiffened the backbone of the Truman administration in its dealings with Soviet Russia, and the policy today is as much Senator VANDENBERG'S as anyone else's. It does not appear likely, under these circumstances, that the foreign policy will become an issue in the Presidential election. However, it is within the bounds of possibility that the Democratic campaign next year will be to run Mr. Truman against Joseph Stalin, rather than against his Republican opponent.

Inflationary Dangers of Rising Prices

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. KEATING. Mr. Speaker, on the domestic front, certainly one of the major problems is the rising cost of living. It was with considerable interest that I read of the action of the President in calling his Cabinet together to consider what steps might be taken to halt this

trend. But it was a disappointing letdown to receive the announcement from the President's spokesman after that meeting that no plans of action were laid down at all.

Apparently it was not recognized or discussed in this Cabinet meeting, that one of the principal inflationary trends is the continued excessive governmental spending. The administration still resists emphatically, and even violently, any efforts to reduce expenditures, particularly those having to do with employment of staff.

Our Democratic friends oppose relief to the overburdened and harassed taxpayers in the form of a reduction in taxes and an increase in the take-home pay, ostensibly because the spreading of such relief to the extent of $5,000,000,000 among the people of this country, thus increasing their purchasing power, will accentuate an inflationary trend. They lose sight of, or at least do not mention, the fact that this increase in the workingman's take-home pay is likely to have a very salutary effect in reducing the extent of demands for increased wages which, as we all know, are a part of the inflationary spiral. They would prefer, instead of giving this $5,000,000,000 to the people to spend, to have the Government spend $6,000,000,000 more than this House believes is necessary to perform the essential functions of government. I believe the people will back us up in our insistence that they, not the Government, have this money to spend.

A clear-thinking constituent of mine, Mr. A. E. Piesner, who runs the New York Bakery at 385 Joseph Avenue, Rochester, N. Y., has sent me a letter addressed to the President by the National Bakers Supply House Association, a part of which, under leave granted, I include in these remarks:

MARCH 28, 1947.

The PRESIDENT,
Washington, D. C.

MY DEAR MR. PRESIDENT: From an Associated Press dispatch from Washington, dated Wednesday, March 26, we understand you have appealed to manufacturers, such as ourselves, for lower prices; moreover hoping that we as businessmen would see the handwriting on the wall—the inflationary dangers of rising prices.

In the first place, Mr. President, we are completely in accord with this view. We believe in lower prices and have tried valiantly to keep them down. We are with you, to a man, on this point; moreover we not only see the inflationary danger of rising costs, we feel it, every minute, every hour of the day.

But may we ask you a question? We are for the most part agricultural processors—producers of food from agricultural products, and as such manufacturers and processors, businessmen too. What, if anything, is the Government doing to keep prices down, either in the way of reducing the cost of government—and taxes have a very considerable bearing on prices—or in trying honestly and realistically to stabilize our markets? No, we don't want control, but we do want some degree of realistic, positive action from our Government. There are too many press conferences, too much talk, Mr. President, and too little action.

You were once a small businessman, and I am sure in operating that business if you didn't keep your selling price to the public in line with what you were paying for your merchandise, and your other costs of doing business, you had an unprofitable operation.

Your Secretary of Agriculture has talked at length in many sections of the country concerning the wild and speculative grain market today, and has advanced many reasons, blaming everyone but himself and his coworkers in his own Department. Actually, Mr. President, the Government has the wheat market cornered, and every move of administrative officials influences the options. There isn't a thinking businessman, and for that matter a thinking farmer who will not tell you the advance in grain prices has been absolutely without justification.

Considering figures from the Department of Agriculture, wheat certainly was not worth 85 cents per bushel more on March 17 than on February 1, and there certainly is no reason why on Thursday, March 20, this price should be 30 cents less than on Monday, March 17. Ten-cent fluctuations in the price of wheat, in both directions, mean an entirely false set of values. Who in this world, with this sort of stuff going on, can say what the real value of a bag of flour is, or the price of a loaf of bread?

We have other problems, too, but I am speaking of the one that bothers us most—the lack of support and cooperation from those whom we have charged with the responsibility of operating our Government.

We think honestly that you can blame no one else but your administration for the deplorable condition which has not only brought wheat prices to the very highest point in 30 years, but likewise increased the cost of living substantially because of the increased price of flour—all types—and finally baked foods, including bread. Other food processors are similarly affected. Today, I understand, the American housewife is paying about 42 cents out of every dollar of income for food. Flour has advanced from $4.70 per hundredweight in October 1946 to $7.20 per hundredweight today, March 28. In sympathy with wheat we now have corn at its highest price in 28 years. Corn sirup from $4.20 per hundredweight in October 1946 to $5.15 per hundredweight today, March 28. Dextrose has advanced; sugar has advanced from $7.95 in October 1946 to $8.76 today, March 28. Shortening has advanced from $18.75 per hundredweight in October 1946 to $43 per hundredweight today. Again, Mr. President, farm products: Cottonseed, soya. Egg yolk advanced from $1.02 per pound, Mr. President, in October 1946 to $1.20 per pound today, March 28. Your Department of Agriculture continues to support the many bad principles involved here.

Now, we are not letter writers, we are not complainers, we are just plain, honest business people, trying to do our part to keep America straight and strong. All of us for the most part, as I have said, are agricultural processors, and we should like to have you, or Secretary Anderson, tell us how we, using all of those products as our basic ingredients, can keep prices down, and how in turn our customers, the bakers of America, when forced to pay our higher prices and the prices of other processors, can keep from charging the consumer more. I don't think you can, but we stand ready to listen.

We realize what a terrific and tremendous job you have, and while we agree with your thoughts, as well as your wishes, as expressed in your statement to the press on Wednesday, we don't know that we can do anything for you. We think it looks pretty much as if we are headed fast for hell in a hand basket, and we are not pessimists, in fact if we were we would not have remained in business through 70 years. Generally speaking, everybody in this country is for making the most for himself, both money and otherwise. Even personal prejudices, face saving, political expediency, is costing the people of this country a lot of money. Is it not up to the farmer, the businessman, the laborer, and all of us, as Americans, to realize our position and get on the band wagon? We think so. We are prejudiced; we are silly; we are the laughingstock of the world; we are the shackled Gulliver that the elder statesman Baruch described in Time magazine a month or so ago. We are trying to help everybody in the world, but we cannot help ourselves.

I think you would get a tremendous kick out of an article appearing in Reader's Digest this month—The Land of Plenty. It tells the story—your story and our story, and we as one little group of manufacturers wish with all our hearts that you had read it before you made your statement to the press Wednesday.

To us, just a small group of plain, ordinary businessmen, as I say, trying hard to do our best every day—and we don't think that business is without its faults—we are not trying to leave that impression, nor do we want other people to have the reverse of that impression—it appears that what we are doing is killing the goose to get the golden eggs. We will wake up without the goose, and, of course, the eggs. We will wake up without America.

Please do not pass this letter along to the Secretary of Agriculture with the request that we get an answer. We are simply talking to you as our President. Let the actions of the Secretary of Agriculture, or the actions of others in your administration, be our answer. We don't want any mimeograph replies * * * we are in no mood to receive them.

I might add, because of the wide publicity given your statement, and for the effect that it had on our customers, and in turn on their customers—the American housewives—that this letter is being released to our trade press, and other periodicals.

We, Mr. President, like you, are for lower prices, but we are going to have to get a little better support and a little more action on the realistic side from the banks of the Potomac if we are to do the job that you would like us to do.

Sincerely,

NATIONAL BAKERS' SUPPLY HOUSE ASSOCIATION.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Hartford (Conn.) Courier of March 22, 1947:

STATEHOOD FOR HAWAII

Hawaii's 47-year battle to be granted statehood has at least progressed to the stage of a favorable report to the House of Representatives. By 4th of July this year or next year the flag of the Union of "Indestructible States" may have 49 stars, the new one for our first overwater State. If Congress should approve the measure, President Truman would unquestionably sign it. He advocated statehood for Hawaii in his annual message to Congress.

Time has weakened most of the arguments formerly invoked against statehood for a territory 2,200 miles from the mainland. To

our west coast Hawaii is nearer geographically, and in the matter of communication, than was California to the Nation's Capital when it was admitted as a State. Moreover, the residents of Hawaii of Caucasian blood have been increasing so that now they represent 35 percent of the population of 500,000. And more importantly, residents of Japanese extraction have been declining in number. By percentage they are fewer than the Caucasians.

The case for Hawaii as a State, excluding consideration of foreign policy and our interest in the Pacific, is a strong one. Its economy is far sounder than that of many of our own States. Furthermore, it is not plagued by lamentable racial issues to the extent that is our South. It has proved its capacity to conduct its own affairs through an orderly government chosen by its electorate although always subject in major matters to congressional review. Moreover, Hawaiians have justly complained that with no voice in levying the taxes they pay to the United States Treasury, they have been in a position strongly paralleling that of the American colonies to Great Britain. From their experience, and with no credit to us, they could repeat: "Taxation without representation is tyranny."

There are even larger considerations in this issue. The granting of statehood to Hawaii, it is said, will bind this strategic base more closely to the Union and intensify the loyalty of the American citizens in Hawaii. Favorable congressional action will serve notice anew on the world that we intend to stay in the Central and Western Pacific despite our relinquishment of control over the Philippines. In the first analysis, if we do not intend to admit Hawaii to statehood, we should offer it its freedom and proceed to negotiate for military bases as we have in the Philippines. For a territory of this character, sound as it is governmentally and economically, to remain a Territory contains too strong a suggestion of an outdated policy of subjugation.

President Truman's Present Situation

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Frank R. Kent:

THE GREAT GAME OF POLITICS—PRESIDENT TRUMAN TURNS TABLES ON THOSE WHO SNEERED AT "POOR LITTLE MAN"

(By Frank R. Kent)

It there has been a swifter change in the history of American politics than that evidenced by President Truman's situation now as contrasted with his situation 4 months ago, it would be interesting to know what and when and where. The change, in fact, has been so sudden and so complete as to be practically ridiculous.

Last December, for example, Mr. Truman was at so low an ebb that Democrats and near Democrats in every section were figuratively throwing stones at him. A Senator of his own party—Mr. FULBRIGHT, of Arkansas, who must feel particularly silly when he thinks his windy utterances over, was solemnly—and very loudly—calling upon him to resign for the good of the party and in the interests of the Nation. This absurd suggestion was echoed and endorsed in several quarters and with varying degrees of enthusiasm. It became the fashion to write disparagingly of Mr. Truman and to speak of him with contempt.

The country was full of his detractors and he had extremely few defenders. In particular, he was assailed by the professional liberals and the left-wing journalists and politicians of the Roosevelt regime. These sneeringly referred to him as that "poor little man," and with extraordinary unanimity agreed that he had made a dreadful botch of his job and ought to remove himself. In other words, they swept the "poor little man" up in a corner and struck a match to him. Actually, it was one of the most wholehearted efforts to politically bury a President while still in the White House that has ever been made—and quite the most unsuccessful.

TABLES COMPLETELY TURNED

That Mr. Truman should survive this fervent attempt on his political life, participated in not only by the Republicans but by a considerable number of slap-happy Democrats of the Fulbright type, to say nothing of the radical Roosevelt groups, was remarkable, indeed. However, not only to survive but so completely to turn the tables on both his Democratic critics and his Republican foes as in 4 months' time to have the first rushing up on the roof to cheer him and compel the latter hurriedly to drop their attitude of derisive disdain and openly recognize him as a formidable 1948 contender for the Presidency, absolutely certain to be the Democratic nominee—that is in the nature of a real political miracle.

And, yet, that was the situation before the Jefferson Day dinner here on Saturday night, when Democrats of all factions and degrees gathered in their annual celebration of the birthday of the party's founder. It was attested by all the latest polls, by editorial comment all over the country, by the posture of the politicians, and the reports of objective observers of both parties. But it was very greatly emphasized at the Jefferson Day dinner by the ovation accorded Mr. Truman when he rose to speak and by the really fine address which he then delivered. No one possibly could read that speech and believe for a moment it came from a beaten or a discouraged man. There was not in it so much as a trace of defeatism or dismay.

SERENE AND CONFIDENT

On the contrary, it unmistakably conveyed the impression of a serene and confident man, who fully appreciates the gravity of the great problems with which he has to deal, but does not for one moment shrink from them, nor is he appalled by the heavy responsibility they lay upon him. Though he addressed a strictly partisan gathering on a strictly party occasion, his was anything but a partisan speech. His reiteration and amplification of his foreign policy was clear, firm, and carried conviction. He dealt with domestic affairs with admirable restraint and common sense. His one mistake was in repeating some of the cheap claptrap with which the Republican cuts in appropriations, particularly those in Coast Guard and customs funds, have been met.

But, take it as a whole, the speech was clear, calm, adequate, and straightforward. It is not exaggeration to say that it has increased the Truman prestige. The 1948 election is still 19 months away. Mr. Truman's popularity may sink as swiftly as it has risen. Before the end of summer he will have had to take some positions and make some decisions that may affect very greatly his political prospects. Whether he blocks or approves the Republican effort to protect the public against the abuses of the power-drunk labor bosses is one of them.

Or, regardless of anything he says or does, world events may shift the whole political scenery. This is an uncertain and critical period in history and no one can see very far into the future. However, odds are no longer being offered, as they were 4 months ago, that any Republican can beat Mr. Truman next year, and those who contend that the Republican 1948 nomination is equivalent to election are nothing like as numerous, and no one at all is going about sneering at Mr. Truman as that "poor little man."

Time To Write Better Tax Bill

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. KELLY. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Pittsburgh Press on the subject Time To Write Better Tax Bill.

The Pittsburgh Press is one of the most influential papers in western Pennsylvania and is owned by the Scripps-Howard chain. It is heartening to know that the editorial policy of a paper of such importance notes the haste with which the tax bill was written and the inadequate preparation which went into it. No further comments are needed, as the editorial speaks for itself.

TIME TO WRITE BETTER TAX BILL

The tax reduction bill was steam rollered through the House. That will not happen in the Senate.

The Senators say they will take their time. They should. Take time, first, to cut down on Government spending. They'll know better then how much revenue can be spared. So far, the much-advertised economizing by Congress has been little more than loud talk.

Good use could be made of the time by opening Federal tax laws to general study and revision. There's no valid reason for limiting consideration to the House's 30, 20, and 10 percentage cuts on personal income taxes. There are other things wrong with the tax structure besides the high rates on personal incomes.

Some of the excises are also too high. There are inequalities of taxation as applied to different types of incomes, and to incomes of the same amount.

The hurry-hurry pressure for the House's "quickie" bill can be set aside by eliminating the retroact've feature of the tax cut. It doesn't make sense to burden next year's budget with a promise to rebate taxes already paid. Not when the payments have been made in a period that has been generally prosperous, and especially not when the public debt is as large as it is. Better that the surplus revenues be used to slash that debt.

People are doing business, and doing pretty well, on the basis of plans long since made, plans which took into account the present tax rates. They have filed returns on this year's anticipated incomes, and are paying the taxes. The Senate, in our opinion, would do well to let the present rates stand for this year. And start on legislation to make next year's tax burdens lighter and fairer.

An Absolute No!

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Charles Clayton Morrison, editor of the Christian Century:

AN ABSOLUTE NO!

Congress should reply with an absolute "No!" to President Truman's request for $400,000,000 to be used in bolstering with American arms and personnel the military strength of Greece and Turkey against Russia. Mr. Truman has taken the road that leads to war. He solemnly confessed that he was fully aware of the broader implications of the course on which he asks this Nation to embark. The tone of his address to Congress was portentous. It was punctuated by such words as "the gravity of the situation," "in this fateful hour," and "the security of this Nation is involved."

Moreover, he conceded that the aid now asked for Greece and Turkey may be insufficient, in which event the President frankly announced that he would return to Congress for more funds and further authority. This ominous warning served notice that he stands ready to send armed forces for another purpose than merely to suppress terrorists in Greece. The Nation is thus confronted by its President with the sharply defined imminence of World War III. Mr. Truman recognized that his proposal embodies a policy of defiance and threat toward Russia and is willing to stake American lives on its outcome.

The worst feature of his address was his attempt to justify his proposed course by invoking the principles of the United Nations in its support. Read these quotations, then rub your eyes and read them again: "We shall not realize our objectives (in the United Nations) unless we (i. e., the United States) are willing to help free peoples * * * against aggressive movements that seek to impose upon them totalitarian regimes." "We (i. e., the United States) cannot allow changes in the status quo in violation of the Charter of the United Nations." In the action now proposed "the United States will be giving effect to the principles of the Charter of the United Nations."

I

How could the President of the United States make so obviously false a claim? The course, outlined by him, is in reality a repudiation of the fundamental principle of the Charter of the United Nations. That organization was created for no less a purpose than to preclude just such unilateral action by a single nation as Mr. Truman now asks the United States to take. Its Charter cannot be invoked as sanction for a single-handed intervention in the situation which now obtains in Greece and Turkey. When the President pleads for our independent assumption of the responsibility that belongs alone to the United Nations, he cannot conceal the fact that he regards its principles as not binding on the United States. His tribute to these principles cannot be accepted as sincere. His reasoning in support of the proposed action thus constitutes nothing less than a torpedoing of the United Nations. It will be so regarded by all the world.

Who would have thought that in less than 2 years after its Charter had been adopted, and after its organization had taken form and begun to function, the United Nations would be repudiated in principle as well as in fact by the very power which had fostered it and by the President who had acclaimed it as alone holding the promise of world peace? Mr. Truman's excuse for bypassing the United Nations is lame and implausible. He says: "We considered how the United Nations might assist in this crisis, but the situation is an urgent one requiring immediate action, and the United Nations * * * [is] not in a position to extend help of the kind that is required."

II

This is incredible. The Security Council of the United Nations is in continuous session only 200 miles from the White House. The full Assembly can be brought into special session as quickly as Congress can adjust itself to the handling of the crisis. Moreover, the issue would be defined in much simpler terms for the United Nations than for the American Congress. It falls clearly within the purview of that organization, whose fundamental purpose is "to maintain international peace and security, and to that end to take effective collective measures for the prevention and removal of threats to the peace * * * and to bring about * * * adjustment or settlement of * * * situations which might lead to a breach of the peace." The situation in Greece and Turkey as described by President Truman perfectly matches the purpose of the United Nations as defined by the opening words of the Charter.

The President now asks the United States to take the law into its own hands. In total disregard of our solemn pledges to maintain international peace by collective action he proposes to meet the speculative threat of Russian aggression by an overt threat of American military power. And he piously puts forward this unilateral action of ours as a realization of the objectives of the United Nations. This is sheer hypocrisy, be it ever so unconscious. Still more amazing is it that men like Senator VANDENBERG and others who helped form the United Nations and paid eloquent tribute to it as the hope of the world, should now be the foremost champions of this proposal to betray it.

The assertion of the President that the United Nations is incapable of dealing with this situation is simply not true. The Assembly is empowered to consider it and to recommend to the Security Council a course of action. The fact that the United Nations has no military forces at its command and no such funds as Mr. Truman now asks Congress to appropriate is no reason at all for disregarding its jurisdiction. Nor need the veto power of the Soviet Union in the Security Council inhibit action. The interpretation of the veto which gives an aggressor nation or one threatening aggression or one believed to constitute a threat to world peace the power to estop action by the Security Council reduces the whole idea of a United Nations to either a monstrous or a childish absurdity. The present case affords an ideal occasion to expose that absurdity.

How could these alleged hindrances to United Nations action in the present situation be overcome? The problem would not be difficult. The Assembly—representing 54 nations—could recommend action. The Security Council could register the necessity of action despite the probable (but not certain) veto of the Soviet Union. For funds, an assessment of a reasonable amount could be levied upon the member nations which the United States would supplement to make up the $400,00,000 the President now asks this Government alone to appropriate. Armed forces not yet having been provided to the United Nations, the United States (or any other country) could be appointed to carry out the collective mandate with respect to Greece and Turkey with whatever military and civilian forces the task would require. If this were done, the entire adventure, even though the burden of its execution was borne by the United States, would wear a wholly different face from that displayed by the single-handed operation proposed by Mr. Truman.

The threat to world peace admittedly existing in the Greco-Turkish situation would thus be recognized as a world problem to be handled by the world organization created for precisely this purpose. The operation would not be an American operation, but a United Nations operation, with the United States action under the authority and with the backing of the world community. The sharp edge of suspicion with which American political and economic policy is regarded all over the world would be dulled if not allayed by this procedure. The United Nations would be invested with the dignity and respect which it can never possess until it has demonstrated its ability to take decisive action in concrete cases. The present crisis provides that organization with its first opportunity to prove its worth.

The irresponsible unilateral seizure of its most essential function by the United States can result in nothing less than a scuttling of the United Nations. This is the way in which the old League of Nations was rendered impotent. American public opinion has heaped scorn upon the European powers for similar treatment of the now defunct league. This country invites the same judgment upon itself if it takes the Greco-Turkish situation into its own hands.

III

Why did not the Truman administration adopt this obvious course? Why has it taken the ball away from the world organization and run wildly out of bounds in utter disregard of the team play which it called at Dumbarton Oaks and San Francisco? Plainly, Mr. Truman has something else in mind than world peace. He cannot conceal it under the sentimental verbiage about America's love for little nations seeking to maintain democratic institutions and their national integrity. Such sentiments Americans do indeed hold, even though they are under no illusions concerning their applicability to Greece or Turkey. But the President is under an illusion, once cherished but long since worn out, when he refers to the free peoples of the world who look to us for support in maintaining their freedom. The truth is that they do not look to us; they look to the United Nations. They fear us. We think their fears are groundless. But they are very real to them.

The smaller countries, save only those whose governments are the puppets of some imperial power, have unanimously put their hopes in the United Nations. One reason is that they hope the United Nations will protect them against the great powers, including the United States. It is hard for us to swallow this bitter fact. These nations are disturbed at the prospect of the United States extending its power by independent measures outside the functioning of the world organization. To be sure, Greece and Turkey, prompted by Great Britain, have asked us to come over and help them. But even they, desperate as they are, would infinitely prefer that our help came through the United Nations than unilaterally. They prefer it because such intervention would not only promise greater immediate security but would preclude the possibility of imperial domination.

Mr. Truman's excitement over this crisis is not rooted in pure altruism. It reflects the militaristic ideology that has become ascendant in his administration, which is now dominated by military-minded statesmen headed by himself and his new Secretary of State. This mentality has little use for the United Nations. It feels its own power. It feels the great power of the United States. And its policies do not rise above the level

of power. It says in effect: "We can clean that situation up; let us, then, hasten to do it." The long-time consequences of such policies it does not see or, if it sees them, is willing that the world shall be dominated by a single power so long as that power is in their hands. They see Great Britain bankrupt, its empire disintegrating, the Mediterranean unpoliced, and they want to take the broken fragments of that empire—Greece, Turkey, Egypt, and the whole Near East with its multibillion investments in oil—under the wing of the United States.

A pax Americana would thus succeed to the pax Britannica. This military-minded statesmanship does not see that by usurping Great Britain's imperial position we would take over also the permanent liabilities which have brought her empire to ruin, and this without the assets which for two centuries have filled the coffers of the ruling country. Chief among the liabilities will be the sacrifice of the moral position in world esteem which has been our proud possession for more than a century. We shall win an imperial position and hold it only at the cost of being feared and hated by the rest of the world.

All this we could avoid by acting through the United Nations. We should then have the world on our side, not alone in the present crisis, but in the future more terrible crisis which may be irrepressible. That final atomic war, if it should come, would probably annihilate civilization in both Russia and the United States. But our maximum chance of avoiding it is not to invite it as we do by single-handedly challenging Russia now.

Our foreign policy must be taken out of the framework of imperialism in which the militaristic mentality of our statesmen are projecting it. The American people are not ready to cast their traditions and ideals on the scrap heap. They want to help the stricken peoples of the world, but they do not want to dominate them. They are willing to give millions for humanitarian relief, millions—yes, and billions if necessary—for the support of the United Nations in the discharge of its world mission against every threat of war, but not $1 for empire.

Naval Aviation and National Security

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rear Adm. J. J. Clark, United States Navy, Assistant Chief of Naval Operations for Air, at first national aeronautics conference of American Legion, Indianapolis, Ind., March 20, 1947:

Today, almost 2 years after the termination of the greatest war in history, we find the world far from the peace which we envisaged at the war's end. On every side we see the festering sores of incipient war. The greatest empire the world has ever known is slowly disintegrating and in the wake of this disintegration are problems which are the concern of the entire world. There are, also, ideologies abroad which are directly opposed to this Nation's concept of freedom, liberty, and democracy.

This Nation emerged from the recent war as the most powerful country on the face of the earth, and as such we have certain responsibilities which we must shoulder. The most important among them is the responsibility of insuring the peace which was bought at such a terrific sacrifice. It is not sufficient for us to say, "We did it twice and we can do it again," for on those two occasions our allies gave us the much-needed time interval to get our industrial potential into high gear in the production of munitions of war.

Today we must face the facts—there will be no time interval the next time. Modern warfare travels with the speed of sound and we must be ready for it whenever and wherever it may arise. This means that we must have a well-balanced fighting force trained and equipped, and provided with the best that our research and development program can develop. In the meantime we must utilize the proven tools of the last war until such time as they can be replaced by better ones. Naval aviation, in planning for its part in maintaining the national security, intends to do exactly that.

Air power is a vast subject and means different things to different people. To the Navy it means air-sea power as exemplified by our carrier task forces during the war in the Pacific. It means, too, our long-range seaplanes and landplanes employed in long-range naval reconnaissance, search, and antisubmarine operations.

As a matter of fact, air-sea power is the descriptive term for present-day naval operations. The Navy employs aircraft in teamwork with its surface and subsurface vessels. Naval planes and submarines work together to destroy the enemy's fleet and other seagoing forces. Naval planes and destroyers team together to destroy the enemy's submarines. Carrier planes go in and maintain control of the air in a given overseas locality, keeping the war in the other fellow's back yard instead of our own. In landing operations carrier planes provide one of the most successful techniques ever employed, namely, air support of ground forces. Besides all this activity, naval patrol planes perform their multiple missions of search, patrol, reconnaissance, convoy, transport, and antisubmarine warfare.

The principles of naval warfare have not changed, but means for carrying them out have been radically altered. Naval aircraft can carry all types of bombs and guided missiles many miles beyond the range of the big guns and accomplish the same, if not greater, destruction because these weapons are not committed to their objective when they leave the ship, but are only committed when the pilot releases them at the target.

None of us can predict what the future holds in the field of development. It may be that antiaircraft defense some day will progress to the point where the piloted aircraft is outmoded. Split-second fire control, proximity fuses, long-range radar, guided missiles, etc., may reach the point where we will have to turn to other means for carrying on naval warfare. Perhaps a submarine aircraft carrier loaded with guided missiles and pilotless aircraft, as well as conventional planes, will become one of our major weapons. But all that is in the future.

The Navy must maintain ready at hand the necessary means for upholding national policy. It must organize this strength so the penalties for becoming involved in a war with us are obvious to any would-be aggressor.

Unless we employ our armed forces on such broad objectives as these, we are jeopardizing our national security and inviting war. We do not have to turn to the pages of history very far to find the results of disarmament, appeasement, isolationism, and impractical idealism. They have failed so many times that it should be a matter of principle to ignore totally any suggestion that this Nation subscribe to them. The United Nations organization has made one significant step in preventing war, and that is by the realization that war cannot be outlawed by a vague resolution, but it can be prevented by a visible and ready military power, equipped to stifle the aggressor who challenges the peace of the world. It has taken two bloody wars for us to realize this concept of the relations between nations. Let us hope that the lesson has been well learned.

We must maintain our proven weapons and techniques. We must develop new weapons and techniques and we must plan the direct application of this and all our military power so as to realize the most efficient use of all our armed forces.

As you all know, the United States Fleet is at present built around the aircraft carrier. Presently we have 12 large carriers in commission, including the CVB's *Midway* and *F. D. Roosevelt*, the two largest carriers afloat. In addition, we have a comparable number of escort carriers to provide air support of ground troops and antisubmarine warfare aircraft. These carriers provide our seaborne mobile striking force in wartime. Their peacetime function will, of course, be that of training for the wartime mission. Also, we are maintaining a ready Naval Air Reserve throughout the country at their wartime proficiency, absorbing new techniques in order that they may be in a high state of readiness to man the reserve carriers.

The strategic disposal of our mobile carrier force should discourage any attack, but should it come, a carrier fleet will be in a position to intercept and nullify it, since they are capable of going anywhere in the maritime world. Once this attack is repulsed, this mobile striking force could proceed to the enemy's homeland and proceed with the same successful treatment which our Japanese adversaries have so good reason to remember.

The use of this mobile striking force does not in any way mean that we shall not be dependent upon our land bases. There are bases throughout the Atlantic and the Pacific that are vital to the protection of the continent as well as our possessions. These bases are necessary to the support of our striking forces even as they were in World War II. These strategic land bases provide the wherewithal to make the mobile tactical force a hard-hitting effective fighting unit, since they carry out the vital task of providing necessary logistic support.

Even though land-based air be supported at these bases, there are still areas outside the reach of these land planes, which fall to the carrier task forces to cover. We are all in agreement that no two wars have ever followed the same pattern. I see no reason, therefore, to believe that any future war will follow the strategic geography of World War II. Taking this into consideration, together with the possible loss of some of our bases and the technical limitation of the range of land-based air, it is factual that carrier aviation will be the only weapon, which can be effectively brought to bear in certain areas.

Though this carrier aviation will be our most potent weapon, we must still depend on our long-range patrol planes for reconnaissance with the fleet, patrol of large ocean areas, antisubmarine warfare, and air-sea rescue operations. As to whether these planes are sea or land planes is dependent upon the circumstances under which they are to operate.

Another vital cog in our air-sea power is marine aviation, which provides tactical air support for amphibious operations. Such operations without proper air support are likely to be doomed to failure. Their success is directly proportional to the efficiency of their close air support.

To sustain the air-sea power organization, we have now 6,130 operating aircraft. Of this number, 3,526 are first-line combat planes, while the remaining 2,604 are used for training, transport, research, development, experimental work, and for support of air activities ashore. Another 1,933 planes

are assigned to the Naval and Marine Corps Air Reserve for use in our Nation-wide air-reserve program. Of the 3,526 combat planes in the fleet, over half of them are carrier aircraft.

I know that you are interested in the planes the Navy is now using and what planes it plans to use in the future. Aboard our carriers today, our fighter complements consist of the combat-proven Corsairs and Hellcat planes plus the twin-engined Tigercat and the speedy Bearcat. For our dive bombers, we are presently employing the improved Helldiver while the missions of the torpedo planes are being carried out by the well-known Avenger.

The Navy has, of course, endeavored to keep pace with the march of science with particular reference to jet aircraft and turbo-jet aircraft. Squadrons are already operating with the Ryan Fireball aircraft which is a fighter with a reciprocating engine forward and a jet engine aft. The McDonnell Phantom, which has already been service-tested, flies at a speed in excess of 500 miles per hour, yet can be slowed down for landings on board a carrier, a fact which was proven in recent tests. In addition to the Phantom, an Army jet aircraft, the P-80, has been modified and successfully landed aboard a carrier. We have two new carrier planes which combine the functions of dive bombing, torpedoing, and gun and rocket firing. One, the Martin Mauler, mounting an engine of over 3,000 horsepower, has a maximum combat radius from a carrier of 700 miles. This plane, designed for operation from the Midway class carrier, has as its prototype the Douglas Skyrider which operates from the usual type carrier. Both planes are single-seaters with maneuverability and rate-of-climb characteristics heretofore found only in fighter aircraft. As dive bombers, they perform in accordance with that old Navy theory that only the shots that hit count.

Our development, however, has not been restricted to carrier type aircraft exclusively. I believe you are all familiar with the recent record distance flight of the *Truculent Turtle* from Perth, Australia, to Columbus, Ohio. This plane, the Lockheed Neptune or P2V, is a twin-engined landplane especially designed for long range reconnaissance and antisubmarine warfare. It is the result of all the lessons we learned during the war about how to combat the submarine menace as well as how to protect our overwater shipping. The Neptune unescorted will perform these missions and be able to defend itself against hostile attack. Also the Neptune can operate from small unprepared fields, a characteristic vital to the success of its assigned missions.

These are planes which we already have. We have others in the design and test stage which will keep abreast of our research and development of newest and specialized weapons. The performance of our present jet aircraft and the excellent prospects for gas turbines as power plants for carrier planes have encouraged the most advanced research into all types of jets and turbines. Our research, of course is proceeding in the field of winged guided missiles of which we have the Lark, Loon, Bumble Bee, and the Gorgon, besides the Bat, which no doubt you have all seen in the newspapers and news reels.

In closing, I should like to leave with you this one thought. In order to maintain the peace we must be ready for war. Twice we have been involved in wars not of our own making and each time we were unprepared. Let us not be a party to such a grievous mistake again. You veterans of World War I remember the white crosses at Chateau-Thierry, Belleau Wood, The Marne and Soissons, and you veterans of World War II remember the white crosses from Africa to Normandy and from Guadalcanal to Okinawa. Each and every one of those crosses mark the final resting place of one of our comrades who died in the belief that the peace for which he fought would be everlasting. We failed after World War I by scrapping the biggest Navy the world had ever seen. Let us not fail this time.

News From Guam

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial taken from the New York Times of April 7. It will be noted that I have introduced a bill to accomplish the very thing this editorial points out and I reiterate that we should practice in this country the democracy that we are attempting to preach abroad.

NEWS FROM GUAM

A report of the Eighth Guam Congress, recently come to hand, offers convincing evidence of the ability of the people of that island to deal with public affairs in an orderly and competent manner. A joint session of the House of Council and the House of Assembly debated several controversial measures having to do with the rebuilding of Agana, including the allotment of land and the zoning for business and light industry. One by one the disputed points were disposed of by reasonable compromise. A proposed petition to the Navy Governor of Guam requesting the setting aside of 10 percent of tax collections to provide scholarships in the United States for Guamanians choosing professional studies, such as medicine and law, was carried over for further consideration when some members found flaws in the petition as worded. A communication was received from Navy Governor, Rear Adm. C. A. Pownall, acceding to their request that all ordinances for governance of the island be presented to them for their comment before promulgation. There was no discussion, although the qualifications by Admiral Pownall that in certain circumstances this might not be possible must have been somewhat galling.

On Guam more than 20,000 people have lived under the United States flag for almost half a century. They are still second-class citizens, with only an advisory voice in their affairs, ruled by laws that are what the Navy governor or the Navy Department says they are. Navy government of Guam has been, on the whole, benign, contrary to some exaggerated reports. Most Navy governors have been conscientious men. Some of them, such as Admiral Pownall, have been deeply interested in the welfare of the Guamanians. But it still has been government without the consent of the governed, taxation without representation, and a violation of fundamental democratic principles.

The Guamanians have been governed largely for the benefit of the United States, in order to make the most efficient use of Guam as a forward military base. That is the situation today. The military comes first in everything. Guam is now one of our most important naval bases in the Pacific. It is all the more important that the United States should practice there the democracy it preaches. Congress would do well to grant citizenship to the Guamanians and give to the Eighth Congress of Guam the right of local self-government to which the Guamanians are entitled and for which we believe they would prove their competence.

Equitable Extension of the Social Security Act

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. McDONOUGH. Mr. Speaker, extension of social security has been recommended by the Social Security Board and by a special report submitted to the House Ways and Means Committee. A coordinated, national system should be substituted for the present patchwork. The Social Security Act is in need of extensive revision. The system should be extended to provide more adequate coverage for those already included in its scope; to include large numbers of people not now covered; and to provide protection against hazards not now included. Living costs have risen materially since the passage of the act in 1935. This means that allotments that were adequate at that time are no longer sufficient. Increases in certain categories of benefits authorized under 1946 amendments to the act are of a temporary nature. Most of them will continue only through 1947 unless further action is taken. Minimum weekly unemployment insurance benefits are too small, and old-age assistance is still inadequate in many States.

Twenty million persons in the United States are currently excluded from old-age insurance. Workers in small firms, Federal employees, maritime and agricultural-processing workers are excluded from unemployment-insurance. Moreover because of the constant shifting of people between covered and uncovered employment, and migration from one State to another, many gaps and much undue delay occurs. A Nation-wide coordinated system would eliminate much of this, as well as the great variations in payments made by different States.

Types of coverage not now furnished under the act include: Temporary and permanent disability under the old-age insurance system; Federal aid to the handicapped, or to pay the medical expenses of needy persons; a broad health program. The self-employed could not practicably be insured against unemployment or temporary disability but could receive the other coverages.

Extension of social security will help to maintain purchasing power in the hands of consumers and hence will help to prevent another depression. This is particularly true in view of the increasing industrialization and urbanization of the Nation, since industrial workers are directly dependent on jobs for income. Even with full employment, hazards of sickness, death, and unemployment will occur and these can best be met through group action which spreads the burden of these risks over the population as a whole and which spreads income over periods of nonearning. Reserves of the old age insurance system, accumulated by the Federal Government, amounted to $7,000,000 in 1946, thus forming an ample

base for expansion. Social security provides a maximum of security with a minimum of cost. In the postwar period technological unemployment is likely to continue; indeed it appears to be accelerating. Increased security on the part of people in the lower income brackets will make for national stability, less labor unrest, less demand for extreme economic measures. This will safeguard free enterprise. It will also minimize resistance on the part of the workers to technological change.

Social security does not destroy individual initiative, but instead provides a minimum base of protection on which the worker can build through his own efforts. If the system is based on the past earnings of an individual, it will be sufficiently flexible, since it will reflect differences in wage rates in different parts of the country It should be extended to cover all our people, both for the sake of national prosperity and also because it is inequitable that some groups of workers should be protected while others are not. A high level of national income and buying power, all of which would be fostered by such a program, would mean that the added expenses of an expanded program could be more easily met, and in a sense the program could be said to pay for itself in improved national health and productivity.

Income Tax Status of Married Persons in Non-Community-Property States

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. TWYMAN. Mr. Speaker, the House Committee on Ways and Means has under consideration H. R. 1759, a bill granting to married persons living in non-community-property States who file joint returns the same income-tax treatment as if they lived in community-property States. I submit herewith House Joint Resolution 11 of the Sixty-fifth General Assembly of the State of Illinois, which urges that steps be taken to relieve Illinois and other States of a tax burden which is considered discriminatory:

House Joint Resolution 11

Whereas under our present Federal income-tax laws there exists an area wherein the personal income-tax burden exhibits a gross inequality; and

Whereas this gross inequality of personal income-tax burden is based on the fact that some of our States by law have adopted a so-called community of interest in property as between husband and wife, giving each spouse a half interest in income of the other; and

Whereas this community of property interest permits the husband and wife in the community-property States to file separate Federal income-tax returns showing a division of the income between them and thereby to make lower income-tax rates applicable; and

Whereas in all other States, including Illinois, which do not recognize such community interest in property, the husband and wife are not permitted to divide a spouse's income and a single income-tax return accordingly results in higher tax rates being applicable; and

Whereas such provision in the Federal income-tax law discriminates against taxpayers in States which have not adopted a community-property law to the extent of approximately $1,000,000,000 annually; and

Whereas this inequality and discrimination have resulted in recommendations for remedial legislation by the American Bar Association, tax administrators, and others: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois (the Senate concurring herein), That to allow such discrimination and inequality to continue to exist is undemocratic, discriminatory, burdensome, and contrary to the very essence of a tax system which purports to place a fair and equal tax burden on all citizens of the United States, regardless of the State wherein they may reside; and, be it further

Resolved, That the Congress of the United States now assembled be urged to take such steps as may be necessary to remedy this unfair and discriminatory tax burden which is unjustly placed on the citizens of the States of Illinois and that full and favorable consideration be given to proposals allowing division of income for tax purposes between husband and wife in all States of the Union; and, be it further

Resolved, That suitable copies of this preamble and resolution be sent by the secretary of state to the President pro tempore of the United States Senate, to the Speaker of the United States House of Representatives, and to each Member of Congress from the State of Illinois.

Adopted by the house, February 18, 1947.
HUGH GREEN,
Speaker, House of Representatives.
FRED W. RUEGG,
Clerk, House of Representatives.
Concurred in by the senate, March 12, 1947.
HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times of March 23, 1947:

STATEHOOD FOR HAWAII AND ALASKA

The House Public Lands Committee has recommended approval of the grant of Statehood to Hawaii and will take up the issue on Alaska next month. Arguments pro and con and conditions relating to both Territories are similar. Both have been under the American flag for more than a half century; both have voted in favor of statehood; both are noncontiguous to continental United States; both are of the utmost importance in global military and economic strategy; both can assume statehood's financial burdens; both have substantial elements in the population of non-Caucasian descent; both are meshed to the progress of the Pacific coast; both meet the requirements for statehood.

Arguments against their admission were weakened during the war. Before Pearl Harbor and on that fatal day it was feared that the larger percentage of those of oriental extraction in the islands was a menace to security. But Hawaii came through the crucial test of war in the Pacific with honor and glory. A committee of the House is on record that from Pearl Harbor onward, not one act of sabotage was committed in the islands. The people of both Territories were injured by Japanese aggression, both fought and in the highest degree earned the right to be Americans.

Their physical separation from the other 48 States is of small consequence in this age of airplane and radio. In 1850 when California was admitted, the nearest State was 750 weary horseback miles away.

California will gain advantages by their admission. Their four Senators and the number of their Representatives may be expected to support in sectional measures the congressional delegations from the 11 Western States. As their economy develops it will bring increased movement of tonnage through the ports of Los Angeles and San Francisco.

Alaska's population in 1940 was 72,000. At present it probably is 90,000. Minnesota and Nevada had less than 7,000 residents when admitted. The Territory's known resources are immense. As established industry, she mines coal, gold, copper, and tin. There are potential oil fields. Agriculture is a major project. Fur, timber, and fisheries yield in the millions annually. These industries have been developed with totally inadequate internal transportation and at the sluggish pace concomitant with Federal landownership.

If Alaska is erected into a State the Federal Government will give her a dowry of land and it may be expected that the State government will encourage widespread development in a fashion the Federal Government does not do. At present, Alaska is exploited without full consideration of the Territory's benefit. Only $1,000,000 remains in Alaska of the annual $60,000,000 yield of her fisheries. A substantial number of Alaskans anticipate that Statehood will cause an increase in taxation. This is true, but the cost should be more than offset by the enlargement of revenue following economic development.

Hawaii's population exceeds 500,000. Her numbers and wealth are greater than those of any other Territory except Oklahoma's were upon admission. Hawaii's great crops are sugar, pineapples, and coffee, and as evidence of her wealth, in 1945 the Territory paid $173,000,000 into the Federal Treasury, a sum larger than the contribution of some States. This amount was considerably more than Hawaiian expenditures, aside from the military budget. In the 5 years before World War II, Hawaii imported more goods from the United States than any nation excepting the United Kingdom, Canada, France, Japan, and Germany.

The evidence is against the statement that those of Japanese descent will vote in a bloc. While those of Japanese blood represented 32 percent of the population in 1940, the Territorial legislature has never contained more than 20 percent of Nisei's.

By votes of 2 to 1, both Territories have asked for statehood. Our public men have made the world conscious of the American principle of self-determination. Here is a good place to make application of the principle.

It's Your Money

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. REED of New York. Mr. Speaker, every hindrance possible to the development of old industries and the expansion of new industries is being used by Government bureaucracy through its controls and regulations. The present resistance to cutting expenditures is reflected in the publicity emanating from Washington. The citizens of this Nation know that unless the expenditures of Government are cut to the bone and the tax level of industries reduced the free enterprise system will bog down, instead of expanding as it should at this time.

The most cursory examination will indicate the appalling duplication of time, money and personnel which now exists in the Federal Government.

SPRAWLING FEDERAL GOVERNMENT

A recent survey shows difficulty of applying wise economy to the Federal budget. No less than 93 agencies, operating under 17 Government establishments, lend Government funds. Insurance is provided through another 22 agencies operating within 16 different departments. Labor questions are handled by 27 agencies in 14 different establishments; business problems by 64 agencies scattered through 32 different establishments; acquisition of land by 34 agencies; wildlife preservation by 16; home and community planning by 12; forestry by 14; materials and construction by 10; social welfare by 28. Statistics are gathered and published by 65 different agencies. In 1932 there were 521 agencies ranked as bureaus or their equivalent; today, 1,141. President's 1948 budget asks more than $8,800,000,000 for independent offices of Federal Government—$5,500,000,000 more than they spent in 1940.

Why should the taxpayers be called upon to carry such a load as this? Does it make sense? The people of this country know that it does not, and they want relief from this burden.

The new scheme to protect the jobs of the New Deal is to create relief organizations to operate in foreign countries to which displaced employees may be transferred if and when the ax falls on a bureaucratic pay roll on the home front.

I commend to my colleagues' attention in both branches of Congress an article by Frank C. Waldrop which appeared in the Times-Herald under date of April 10, 1947:

IT'S YOUR MONEY

(By Frank C. Waldrop)

The Treasury, you will maybe be glad to know, has made a slight $6,000,000,000 mistake with your money and mine. Repeat, the Treasury is in error by $6,000,000,000 on taxes.

Details of this staggering news were disclosed yesterday by John W. Hanes, chairman of the board of the Tax Foundation of New York City.

Mr. Hanes qualifies as a money expert in banking, business, and government. What's more, lest it be suggested that he is a partisan needler of the Truman administration in turning up this—repeat—$6,000,000,000 error—it ought to be borne in mind that he was brought into Government by none other than the late Franklin D. Roosevelt and served the New Deal as a member of the Securities and Exchange Commission, Assistant Secretary and Under Secretary of the Treasury.

He quit the New Deal of his own will and under his own steam when he concluded there was no chance of bringing any order out of the Roosevelt program of Government finance, but he remains a respected and authoritative expert on government and money and has been called numerous times by committees of Congress to help clarify our tax problems.

His disclosures of yesterday were made in a letter to Senator EUGENE D. MILLIKIN, Republican, of Colorado, chairman of the Senate Finance Committee, and Senator WALTER F. GEORGE, Democrat, of Georgia, minority senior member.

Some high points:

1. Last January, President Truman forecast that Federal revenues would be $2,300,000,000 less than Federal expenditures for the current fiscal year ending June 30.

2. But the facts of actual cash revenues to the Treasury now show that on June 30, there will be a surplus of revenues over expenditures of between $3,000,000,000 and $4,000,000,000.

In other words, Mr. Truman was off, in round figures, $6,000,000,000.

Is that important? Mildly so because taxes are planned and levied on the basis of estimated Government income and expenses.

Government income, just to underscore the point, comes from only one source, and that is the pockets of the people. It comes from the tax collections out of your money and mine.

The Federal Government is collecting in this current fiscal year $6,000,000,000 more of your money and mine than Treasury figure sharks had thought, or said, it would.

Why? The Treasury has some answering to do on that one, but for one part of the answer Mr. Hanes gives a view that Socialists, Communists, and all other people can spend some profitable time considering. It is that the capitalistic system in the United States is running ahead of the Government's understanding of it.

Our system that has built this Nation to its present point out of 150 years' hard work is bigger and better than its adversaries could realize. The Socialists and the Communists have had to come to us to finance, equip, feed, and win the last two World Wars.

And after the wars they have had to come to us for food, money, brains, and direction for a fresh start.

A pretty good system. But it can be destroyed. We could be defeated in war—a trick nobody has yet turned; we could be corrupted from within.

Mr. Hanes yesterday discussed that second prospect. It is contained in the simple facts that everybody knows.

The individual citizen's place in the community can and inevitably will be corrupted when he doesn't know his income, is reckless with his outgo, and kids himself about the state of his bank balance. Just so with the Nation.

If the Federal Government goes on sucking money out of the people's pockets at the present tax rate, keeps on spending anywhere near the present rate, and keeps on piling up the public debt, the end result is obviously ruin.

Our American capitalistic business system is clicking right now in handsome style. So now is the time to get our balance sheets in order. Mr. Hanes' financial prescription:

1. Fire at least a million of the 2,300,000 Federal employees, now.

2. Reduce Federal taxes, now.

3. Reduce the Federal debt, now.

As to the first point, he spoke as an experienced governmental administrator and held that governmental essential services could be preserved and even improved, by cutting Government personnel. Washington knows what he means and knows he is right.

As to the second and third, Mr. Hanes said that the present tax rate and level of business operations indicate the Treasury will have a surplus of $11,000,000,000 by June 20, 1948, if the Federal budget now being authorized in Congress is cut by six billions as ordered by the House of Representatives.

If the lesser Senate cut is put through there is still a surplus in sight for 1948 of $9,500,000,000.

The Government has no business taking that much more money out of our pockets than it needs for an orderly program of debt reduction and essential service.

It has no moral right to it as a matter of common honesty, and as a matter of national safety to the capitalistic system it must leave money alone that it does not prove it needs.

Why does the Federal Government still try to grab off more of the people's money than it can justify a claim to?

Well, habit is a powerful boss. Since 1933, the Federal Government has been grabbing more and more money every year in taxes and spending more and more and more in appropriations.

It just has the habit and it can't and won't quit until the owners of the money make it quit. The owners of the money are the American taxpayers.

The agency that has the power to act for the owners of the money is Congress. With all good will to Mr. Truman, he is a President caught in the works of an executive branch that has had nearly a whole generation of unbridled power over other people's money.

The job of breaking that power lies with Congress. These next few months will tell whether Congress has the will and the brains to break that power. Mr. Hanes said yesterday:

"It will take every ounce of political courage and wisdom for Congress to go through with this tax and debt reduction program.

"You can be sure that with 2,300,000 Federal employees propagandizing for their appropriations, the pressure will be enormous.

"But our hope of financial security and our individual personal ability to pay our bills, meet our tax payments and have a prosperous business economy depend on it. Federal taxes and debts must come down. The Treasury figures show it can be done—but only if we want it done."

Immigration Visas of European Refugees

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. MILLER of Maryland. Mr. Speaker, I have received from time to time protests relative to the type and physical condition of the refugees who are being admitted to the United States from Europe. For the benefit of others who may be disturbed at the reports they receive concerning this situation, I herewith include, under leave to revise and

extend my remarks, a letter I wrote to the Secretary of State and the reply thereto, just received, from the Visa Division:

MARCH 12, 1947.

The Honorable the SECRETARY OF STATE,
Washington, D. C.

DEAR MR. SECRETARY: I am in receipt of reports from reliable persons, recently in Bremerhaven, who have observed the operations at the seventeenth port where, I understand, most of the refugees embark for shipment to the United States. They advise me that these shipments are designed to take up the unused portion of the immigration quotas of various European countries. Certain details in these reports I find highly disturbing.

It is stated that only a small proportion of these refugees will be capable of supporting themselves in the United States; that a large number of them are in such bad physical condition that they have to be carried on shipboard on stretchers; that, despite a policy of giving priority to children, many shipments contain more persons over 65 years of age than those of under 10; that the sanitary condition and standards of these people, as a whole, are distressingly low; that, of the some 12,000 refugees shipped up to the middle of last month, 90 percent were Jewish.

I would appreciate very much your comments as to the accuracy of the reports I have received. I would also like to know if there has been any waiver or modification of our normal requirements and physical standards, for admission with respect to emigrants who pass through Bremerhaven. Is there no priority being shown children? Is there a special priority for members of the Jewish faith? What is the total number of these refugees that it is contemplated will be admitted to the United States this year?

Sincerely yours,

EDWARD T. MILLER.

APRIL 2, 1947.

The Honorable EDWARD T. MILLER,
House of Representatives.

MY DEAR MR. MILLER: I have your letter of March 12, 1947, requesting certain information in regard to refugees who are coming to the United States from Germany.

In implementing the displaced-persons visa program which was instituted in pursuance of the President's directive of December 22, 1945, American consular officers are governed in the issuance of immigration visas by the existing laws and regulations, including the so-called public-charges provisions of the laws and quota limitations.

As required by law, quota nationality is determined by country of birth. The only exceptions are for children accompanying their parents, who take the nationality of such parents, and wives accompanying their alien husbands, who may, under certain conditions, take the nationality of their husbands. No unused quotas are being utilized for displaced persons who are not by nationality (country of birth) chargeable to such quotas.

All applicants are examined physically. Visas are not issued to persons found to be afflicted with a dangerous or contagious disease or tuberculosis, which are mandatory grounds for exclusion. In the event an applicant is physically defective otherwise, that circumstance is taken into consideration in determining whether his assurances of support, as shown by evidence presented to the consular officer, are adequate. As you are probably aware, the President's directive of December 22, 1945, provides for the issuance by American welfare organizations of corporate affidavits of support approved by the Attorney General.

In the issuance of visas under the President's directive, consular officers have given priority to orphaned children. Moreover, every effort is made by consular officers to provide for a nondiscriminatory distribution of visas among displaced persons of the various faiths and creeds. Owing to the slowness with which some of the non-Jewish welfare organizations developed their program of issuing corporate affidavits of support as compared with Jewish welfare agencies and in consequence of the limited number of corporate affidavits made available by some of these non-Jewish agencies, the distribution of visas by faiths has been inevitably affected. Another factor which has led to the predominance of Jewish displaced persons among the immigrants coming to the United States under the terms of the President's directive has been the circumstance that, for obvious reasons, the majority of the persons qualifying under the German quota have been Jewish prosecutees. The status under the Nazi regime of many of the displaced persons of German ethnic origin has, of course, affected their screening and this in turn has also had some bearing upon the distribution of visas.

The issuance of immigration visas to displaced persons under the President's directive commenced on March 31, 1946, and the number of such visas issued through January 31, 1947, has, according to consular reports, been as follows with respect to faith and creeds:

Catholics	2,173
Jewish	9,627
Protestants	1,969
Others	705
Total	14,474

Records regarding the actual entry of aliens into the United States are kept by the Immigration and Naturalization Service of the Department of Justice. Consequently, I am not able to furnish statistics regarding the arrival into this country of displaced persons to whom visas have been issued, but I hope that the foregoing information will meet your requirements.

Sincerely yours,

G. J. HAERING,
Chief, Visa Division,
(For the Acting Secretary of State).

Scientific Research, the Foundation of Air Power

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. JOHNSON of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by John F. Victory, executive secretary, National Advisory Committee for Aeronautics, at the National Aeronautics Conference of the American Legion, Indianapolis, Ind., March 20, 1947:

It was with keen appreciation of the potential significance of this meeting that I accepted the invitation of your national commander to speak here today. As executive secretary of the National Advisory Committee for Aeronautics, familiarly known as the NACA, it has been my privilege to participate in many significant events which have marked milestones in aeronautical progress through the past 32 years.

It is encouraging to know that the American Legion is planning to take special cognizance at this time of the increasing importance of American air power in promoting the security of America.

To you Legionnaires who were "over there" on Armistice Day, 1918, and to all Legionnaires who served in any capacity in the struggle to "make the world safe for democracy" and who thought they had won "the war to end wars," it is particularly disappointing to see history repeating itself. Why does history repeat? Because human nature does not change. Men forget; and each generation seemingly must learn in the bitter school of experience. The causes that have led to wars in the past still abound. So, unless our generation, including the veterans of both World Wars, does something positive and effective to change the course of history, World War II will have been but another armistice. The President's recent message to the Congress on foreign policy points up the seriousness of the situation.

The United Nations is the present great hope of the world. Before the United Nations comes of age, however, and develops a restrictive influence on aggressive warfare, you are gathered here to do something positive and effective to get our country out of the groove, so to speak, that leads from one war to another. You are to deal with the efficacy of air power as a means of preserving peace; and it is my privilege to discuss the foundation of air power—scientific research.

By the outbreak of World War I in 1914, the Government, practically the only customer of a then-meager aircraft industry, had purchased less than 100 airplanes. Aeronautics was still a new science about which the world knew but little, and America, the birthplace of aviation, even less than some European countries which had sensed more acutely the potential military significance of the airplane and had forged ahead in aeronautical research and development.

It was during the first session of the Congress following the outbreak of that war that the National Advisory Committe for Aeronautics was established to "supervise and direct the scientific study of the problems of flight with a view to their practical solution." The NACA was also authorized by law to direct and conduct research and experiment in aeronuatics in such laboratories as might be placed under its direction. The vision of that Congress in 1915 was tempered, however, with a fine regard for economy in appropriating the taxpayers' money, for the NACA was started with the significantly cautious appropriation of "$5,000 a year for 5 years, or so much thereof as may be necessary." It was never clear whether the phrase "so much thereof as may be necessary" related to the $5,000 or to the 5 years.

By the end of World War I the NACA had one research laboratory building and one wind tunnel in operation on the Army's Langley Field, Va. It had, however, brought the then-existing aircraft industry together for the first time in 1916; and in 1917 had formulated the first aircraft-procurement program, effected the establishment of the Aircraft Production Board, brought about the cross-license agreement, which gave peace to a patent-troubled industry, and led the industry to organize so that it could advance its own interests and secure the necessary capital to expand in order to meet war needs.

Before the shouting and celebration on Armistice Day, 1918, were over, the Government had canceled, by telegraph, all contracts for aircraft production. The war to end wars had been won. Civil and commercial aviation

were virtually nonexistent; the military significance of aircraft had not been demonstrated; and maintenance of an aircraft industry was no concern of the Government at that time. It was most fortunate for American aviation and the country, however, that the Congress continued to support scientific research.

While the NACA was laying the foundations for the new science and designing and developing novel research facilities and techniques, it also found time and had the vision to urge the inauguration of the air-mail service in 1918, and, when its continuance was challenged, to advocate its support as providing at least an experimental demonstration of the possibilities of civil and commercial aviation. The NACA was also a prime mover in urging, for 7 years, legislation culminating in the enactment of the Air Commerce Act in 1926 for the encouragement and regulation of civil and commercial aviation. After that the NACA left such matters to other agencies and concentrated on its own prescribed function of scientific research. Emphasis was devoted to improving the efficiency and safety of aircraft, which made possible new achievements from time to time in their speed, range, altitude, and general utility.

Today the NACA consists of 15 members appointed by the President, and includes the heads of the Army Air Forces, Naval aviation, Civil Aeronautics Administration, Bureau of Standards, Weather Bureau, and Smithsonian Institution; and scientists or aeronautical authorities from the aircraft industry and from private life, all serving as such without compensation. The committee elects annually its chairman and vice chairman. Assisting the main committee are 6 major and 20 subordinate committees, comprising more than 300 leaders in science and engineering, who also serve without pay. Through this form of organization the talent of America is marshaled in the formulation of research programs. These programs, upon approval by the main committee, are executed by a paid director of aeronautical research. The committee has three major research stations—one on the Army's Langley Field, Va.; one on the Navy's Moffett Field, Calif.; and one on the Cleveland Municipal Airport, having an aggregate plant value of about $85,000,000 and an operating staff of about 6,000 employees.

Even with all its staff and facilities, the NACA does not design or build airplanes or engines. Its function is not competitive with that of industry.

Some examples of NACA contributions up to the time of Hitler's ascendancy include the NACA cowling in 1928, which added 15 percent to the speed of single-engined airplanes; the optimum location of engine nacelles in wings, and filleting at the juncture of the wing and fuselage, in 1930. These two principles justified, for the first time, the use of retractible landing gear. The introduction of those three principles into use at one time had a revolutionary effect upon aircraft performance, military strategy and tactics, and upon commercial aviation. Two years later the committee demonstrated to the aircraft industry the advantages of the now-widely-used tricycle landing gear.

It was generally conceded by 1932 that America led the world in the technical development of aircraft for both military and commercial purposes. Then came Hitler whose dreams of world conquest were based largely on gaining supremacy in the air. The air program was entrusted to Goering, who started not by rushing into production the types of aircraft German industry then knew how to build, but rather by expanding Germany's research facilities until, by the time of the pact of Munich in 1938, they were five times as extensive as America's. Hitler was not bluffing. He had stolen a march on the peace-loving nations. The world faced the stark reality that World War I had been fought in vain, and that the job had to be done all over again and on a much larger scale.

In the meantime, the NACA, by scientific investigations had accumulated a considerable backlog of research data awaiting application by industry, including, for example, such laboratory contributions as low-drag wings, high-speed propellers, new devices for stability and control, improved systems for cowling and cooling engines at high speeds, advances in knowledge of structural design, prevention of ice formation by use of heat, and many others. This reserve of scientific data was quickly drained by the military services and the aircraft industry, and applied in the design and development by industry of America's aircraft, which, type for type, were equal to or superior to those of any other nation.

I prefer to leave to others the interpretation of the military significance of superior performance of aircraft in warfare; but whatever it amounted to in the winning of World War II will be small in proportion to its significance in any future war.

During the late war the NACA took a calculated risk in suspending long-range basic research in favor of making our aircraft immediately more effective than the enemy's. This amounted to sacrifice of the future to the present, but it was of great value in the decisive struggle for control of the air.

Aeronautical science stands today on the threshold of a new era, made possible by the advent of new forms of propulsion. The airplane in its present form is no longer a sound basis for future planning for the national defense. The achievement of really high-speed flight is within the grasp of any nation willing to make the effort. The possibilities offer a challenge to scientific research, to the aircraft industry, and to the military services. We all have accepted the challenge and are working together as an air-power-development team. Our success will not only have profound influence upon military science and upon the progress of civilization, but will also be vital to the security of America, to say the least.

Out of the late war came the astonishingly simple, lightweight, and powerful jet propulsion engine, providing the answer to the sharp drop in propeller efficiency which occurs above 500 miles per hour.

With jet engines, airplanes now fly faster than 600 miles per hour, and continued scientific research and development, both here and abroad, will increase and multiply this speed. But man has not yet flown as fast as the speed of sound, which varies from about 660 miles per hour in the cold temperatures at 40,000 feet to about 760 miles per hour in summer temperatures at sea level.

To achieve the speed of sound is not a simple problem, for as it is approached the airplane wing meets the same difficulty that the propeller tip experiences—compressibility, with its accompanying great increase in drag and loss of lift. This phenomenon occurs when the airflow over any portion of the airplane reaches the speed of sound. Its pressure impulses, which move in all directions at that speed, cannot move ahead fast enough to prepare the way for the passage of the airplane, so that these pressure impulses build up into shock waves, which cause a tremendous increase in drag or resistance.

It appears certain that really high-speed flight is going to require extremely thin wings, perhaps of such radical form as diamond or double-wedge shapes, circular arcs, or other unconventional sections, and swept back, so that in plan form the airplane may resemble an arrow.

To fly above the speed of sound, or at supersonic speed, an airplane or missile must pass through the transonic speed range, in which air flows over some portions of the airplane at speeds lower than the speed of sound, and, at the same time, over other portions at speeds higher than the speed of sound. This mixture of subsonic and supersonic airflow occurs between 600 and 800 miles per hour and presents enormous difficulties of stability, control, lift, structural strength, and power required.

As shock waves form, airflow conditions change sharply and perhaps with greater force than a pilot can apply. It now appears that airplanes will fly normally either at speeds below 600 miles per hour or above 800 miles per hour, at least until more scientific data become available that may permit steady flight in the transonic region.

Combustion problems are acute. When you reflect on how easy it is to blow out a match you can appreciate the problem of maintaining a flame in a jet engine that may take air in and eject it at a thousand or two thousand miles per hour.

As an indication of the remarkable progress that has been made in aircraft propulsion, it may be noted that the average weight per horsepower of aircraft engines complete with oil, radiator, water, and so forth, was, during World War I, about 5½ pounds. By World War II improvements had reduced the average weight per horsepower to 1½ pounds. There is now under investigation at the Cleveland laboratory of the NACA a ram-jet engine about 20 inches in diameter, weighing about 400 pounds, and, except for the means of controlling the fuel supply, having not a single moving part. When an airplane can be designed to fly safely at 1,500 miles per hour with that engine, it will be delivering a thrust equivalent to 20,000 horsepower, or an average of one-fiftieth of a pound per horsepower. This is a striking indication of the possibilities of the new era in aeronautical science that is just dawning.

The world's first high-speed flight research airplane is the Bell XS-1. This airplane represents a cooperative effort between the Army Air Forces, the Bell Aircraft Co., and the NACA. It was built for the NACA under Army contract. It is not a service airplane, merely a research vehicle. It is carried by a B-29 bomber and released at the highest attainable altitude. Then by the use of rocket propulsion and ingenious recording instruments, new and extremely valuable data are obtained in level flights of about 2 minutes' duration in and perhaps through the transonic speed regime. The objective is to investigate all of the aerodynamic phenomena encountered in high-speed flight, including the very important problems of stability and control, aerodynamic efficiency, and structural loads.

Structural problems have grown enormously more complex as the theoretical strength of the usual aircraft materials is approached. New alloys with improved strength characteristics are required. The thin wings necessary on high-speed aircraft will severely limit the room in which adequate internal structural strength can be developed. The structure of the high-speed airplane of the future must be enormously stronger, yet lighter, and of small dimensions.

Another structural problem looming in the high-speed future is posed by the heating action of air friction against the wing and the fuselage. Even at present speeds, the problem of skin friction heating has become significant. For example, the cabin of the Lockheed P-80 Shooting Star heats up about 50° F. higher than the outside air at a speed of 550 miles per hour. At the speed of sound the temperature rise would be about 100°. At twice the speed of sound the rise would be about 400°. To solve this problem inves-

tigations of cabin refrigeration, involving extremely lightweight and compact units, are in progress.

For guided missiles research, there is a Pilotless Aircraft Research Division of the Langley Laboratory of the NACA. There guided research missiles, powered by rockets, are used as vehicles for conducting supersonic research. Great accuracy and extremely high speed are essential if guided missiles are to be effective in war. Not only must stability and control be dependable, but target-seeking devices, which "home" missiles on sources of light, heat, or metal, must be foolproof in their operation.

Such problems illustrate the necessity for continued emphasis upon scientific aeronautical research. Without such basic research data, industry cannot proceed on a sound basis with the design and construction of high-speed aircraft and guided missiles; nor can the Army and Navy evolve tactical, or even strategic, plans for supersonic warfare, with assurance of practicability.

Time does not permit an attempt to list many of the scientific problems which face us today in aeronautics. But it is essential that we consider the promptness with which we integrate an air power development policy within the national-defense structure.

The first consideration of such a policy is that there should continue in time of peace that smooth and effective cooperation that existed during the war, beween the members of the air power development team, the NACA, the aircraft industry, and the armed services. We still have that cooperation.

The second consideration of an air power development policy is a clear statement of the responsibilities of each member of the team. We are in possession of that ingredient also. I refer specifically to the statement of a National Aeronautical Research Policy, dated March 21, 1946, copies of which I have made available to the secretary for distribution. That document was developed and approved by the Army Air Forces, naval aviation, the Civil Aeronautics Administration, the Aircraft Industries Association, and the NACA. In effect, that policy is the blueprint for the Nation's continued aeronautical progress, based as it is upon a record of fact and past accomplishments.

The National Aeronautical Research Policy was prepared at the request of the Congressional Postwar Policy Committee. It is gratifying that, after months of careful consideration, agreement was reached by all concerned and that the underlying factors in the differentiation of functions between the NACA, the industry, and the military services are so fundamentally sound. That policy provides in substance:

(a) That scientific research in aeronautics is the province of the NACA;

(b) That the application of the results of scientific research in the design and development of aircraft and equipment, both civil and military, is the function of the aircraft industry, assisted as may be necessary by contracts for experimental articles placed in a manner to stimulate competition for quality;

(c) That the evaluation of military aircraft and equipment developed by the industry, and the exploration of possible military applications of research results, are functions of the military services.

The policy further provides that expedition of the practical use in civil aeronautics of newly developed aircraft and equipment, insofar as Government assistance may be necessary, is the function of the Civil Aeronautics Administration.

The policy provides that scientific research in aeronautics is the function of the NACA not only because the law so provides, but also because: First, by its very nature, scientific research in aeronautics is necessarily a function of Government because of the long-range considerations that must influence research programs on matters so vital to national security, and because the cost of adequate wind-tunnel and research facilities is too great to be borne by private industry; secondly, when conducted by the NACA, with the Army, Navy, Civil Aeronautics Administration, industry, and others having a voice through membership on technical subcommittees, all concerned benefit alike, unnecessary overlapping and duplication of effort are avoided, and economy and efficiency are promoted; thirdly, because an independent organization devoted exclusively to research can attract to Government service, without compensation, the highest level of scientific leadership, and can serve impartially the best interests of aviation and of the Nation, uninfluenced by procurement or production problems; and, fourthly, because experience has shown that the value of the airplane for national defense and for commerce has directly followed the evolution of an advancing technology based largely on long-range scientific research, planned to anticipate the growing research needs of aviation.

The policy contemplates parallel attack by several independent research teams when necessary, such duplicating efforts, however, to be coordinated through the technical subcommittees of the NACA.

In the case of industry our recent war experience has proved that a sound and healthy aircraft industry is essential to national security, and that it must be competitive in order to develop initiative and technical competence, and provide the stimulation of imagination, the incentive of profit through production contracts, and company pride in achievement. Competition in the application of fundamental scientific data to the design of aircraft and interpretation in terms of their performance, economy, and safety, should provide America with the best possible aircraft.

The Army and Navy requirements for aircraft performance will, of course, always be in advance of the best the industry can produce. Each branch of the service will test and evaluate new aircraft for tactical use through its qualified personnel and diversified facilities. Evaluation can be made in accordance with the military requirements which govern the use of the equipment. Obviously, with a number of types from which to choose, the armed forces will, of course, weed out the inferior and encourage the superior.

The basic factors of research, development, and evaluation are already well developed in America. The blueprint for action in the form of a National Aeronautical Research Policy has been drawn and approved. Only one further step remains—to obtain a widespread and intelligent appreciation of the facts. The American Legion, representing patriotic America at its best, can be effective in crystallizing public thinking on these problems which affect so fundamentally our future security.

With technological developments revolutionizing air warfare, scientific research in aeronautics is an essential element of the price of survival, for no natural law has as yet been found that places a limit upon the power, the speed, or the size of aircraft; or of guided missles, or upon the vast potentialities of atomic energy. We dare not run the risk that optimism or complacency suggests We know too well the disappointments and disastrous consequences that often follow when we try to win with the second-best hand in a poker game. We simply cannot afford to gamble with our national existence. That is the stake, gentlemen. Right now it is wrapped up in the tremendous significance of scientific research as the foundation of air power.

After Us the Deluge?

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by C. N. Woods, formerly regional forester, United States Forest Service:

AFTER US THE DELUGE?

(By C. N. Woods, formerly regional forester, U. S. Forest Service, U. S. Department of Agriculture)

The conservation of the natural renewable resources (soil, vegetation, game) of the public lands of the West and the welfare of the people are seriously threatened by certain livestock owners, members of powerful livestock organizations. (I make no blanket indictment of stockmen. Many of them are conservation-minded and cooperative.)

These men are intent on having legislation enacted by the Congress to transfer to the stockmen now using these lands title to 130,000,000 acres of public domain lands administered by the Department of the Interior under the Taylor Grazing Act, and the nontimbered lands in the national forests, or all lands therein that have more value for grazing livestock than for the production of timber.

My discussion largely concerns national forest lands, because the resources of these are so susceptible to irreparable damage and because they have so great a public interest. These lands are at high altitude and get the maximum precipitation. They are the most subject to run-off of flood proportions. Most of the 130,000,000 acres of the public domain lands are at lower elevations, their slopes not nearly so steep. They are not subject to so much damage, have less public interest. These are the foothill and desert lands.

It should be stressed that these stockmen do not concede the right of anyone to buy these lands except those who at present graze livestock on them; sportsmen, timber users, recreationists, water users who depend on the lands for their water, none of these are to have an option to buy the lands, however long or important their use of them or however great the hazard from overuse by livestock.

Stockmen would also extend their use of Federal lands by entering the national parks with their herds. How long would they expect to graze in these before claiming the exclusive right to buy the national parks? Would they expect to buy the national park lands at a nominal price, as they do the public domain, considering no values whatever except forage values?

There have been many floods, the past half century, of greater severity on the average than those that had occurred previously in the history of the West. In Utah, for example, among many others, there were the Willard, the Farmington, and Mount Pleasant floods within the past three decades, the last-named occurring in 1946. The two former were within 50 miles of Salt Lake City. They extended down to the main Utah north and south highway and blocked it with mud and boulders. They took six lives and caused over a million dollars' damage to private property. The mud-rock flows ruined some valuable lands in the valley. Geologists tell us these were the biggest floods coming from these drainages in the thousands of years since Lake Bonneville receded. They say

this with assurance because the boulders carried so far exceeded in size any that were ever transported by these streams previously.

A number of these floods originated on overgrazed, privately owned lands in the mountains. Much private land is still being overgrazed by livestock and is deteriorating. Even now, negotiations are under way for the purchase by public and private interests of lands on the Ogden River watershed. The land is overgrazed by livestock, depleted, and is eroding fast and there is a threat to private property in the valley. If the deals go through, grazing use will be reduced and the land will be protected from further abuse. Some stockmen do not seem to realize that the steep slopes cannot be grazed heavily year after year without depletion of vegetation and accelerated erosion resulting.

Nearly all Utah's principal cities are at the mouths of canyons where immense loss can result from floods. Much loss has already occurred. This is not a drop in the bucket, however, to what will occur if grazing use is allowed to run wild on these great watersheds.

The Government has spent hundreds of thousands of dollars in Utah for the protection of private property from floods. It has spent and is spending much money to purchase land to stop overgrazing of livestock. Private citizens and organizations are purchasing land and donating it to the Government for protection.

But even the United States can do relatively little to repair the damage done by these floods. It is impossible to fill all the gullies and to replace the soil lost by sheet erosion. Only nature can repair the great damage done to land since man appeared on the scene. Nature will need immense periods of time at the best, but even nature cannot repair the damage if man continues at his pace of the last century, for he has been tearing down much faster than nature can build up.

Overuse of the ranges. Millions of acres of damaged desert range; eroded, gullied, denuded mountain slopes that once blossomed as the rose; mountain meadows, once verdant and lovely, now gullied, with lowered water table, dried out, succulent grasses largely replaced with unpalatable weeds and shrubs; some lands in the valleys, once of much value, now covered with mud-rock flows, unsightly, ruined; canals and reservoirs damaged by excessive erosion.

But the spoilers seem to be unrepentant. Their plans, if they materialize, will cause much greater destruction. Do these men have no sense of public responsibility? Have they no desire to leave these great renewable resources of watershed, soil, plants, and game with which a bounteous Providence has so magnificently endowed us in as good condition as man received them?

But let us go back 45 years. That was the turning point. The forces of conservation began mustering their strength. The dangers of natural-resource exploitation began to be clearly recognized. The national-forest system was established for the protection of timber and the regulation of stream flow. The Secretary of Agriculture, James Wilson, established the policy of coordinated multiple use in his mandate that the national forests should be managed for the greatest good of the greatest number in the long run.

Immediately there began the gigantic struggle which is reaching its climax today. The forces of conservation have been spearheaded by the Forest Service.

In Utah the national forests contain nearly 8,000,000 acres of Federal lands, which are owned and managed in trust for the whole people. These include the principal mountain ranges of the State and consist largely of steep slopes. In these national forests most of the streams have their sources. They are the most important of the public lands because of their great value as watersheds. Utah's people are dependent on these for the big part of their water used for domestic, irrigation, and industrial purposes. Much reduction of use of livestock has been made for protection of these watersheds and it has generally been made against the protests of stockmen. They have claimed that reduction has been unnecessary, that the range has not been suffering from overuse. Since the time that deer have become abundant in places, they have blamed the deer for overusing the range and have asked for more reduction of deer.

The Forest Service recognized the partial justice of this complaint against deer and became quite active 6 or 7 years ago in a campaign to reduce deer herds in Utah for the benefit of the browse on their winter ranges. In a few years, 88,700 doe deer, in addition to many thousands of bucks, had been removed. At the time this campaign was started, stockmen were notified that livestock use must also definitely be reduced to the permanent carrying capacity of the range. Reductions were to be completed by the beginning of the grazing season of 1946, at the latest. They were urged not to delay reductions any longer than was absolutely necessary, since ranges continue to deteriorate as long as they are overused. Besides, other interests than stockmen were suffering seriously from range and watershed abuse.

Many stockmen in the intermountain region made reductions in use and did not wait until 1946. Very few objections were heard to the policy until 1946 approached. Then the leaders of the Utah State livestock associations asked that reductions be postponed for 3 years to give stockmen time to have investigations made. They already had been given much time.

The Forest Service has studied these ranges for four decades. Among its personnel are geologists, soils experts, botanists, agronomists, ecologists, and practical stockmen. They are in unanimous agreement that there is much range on these national forests still overused and deteriorating. These conclusions are backed up by much range research which has been done on these lands during the past 20 or 30 years.

The Forest Service is not making blanket reductions. On many allotments it does not propose to make reductions. As a citizen I appealed in 1945 to the presidents of the two Utah State livestock associations, asking them not to fight the principle of reduction in use of the range, but to consider range allotments individually and to protest only if the Forest Service should ask for reductions of use on allotments which the associations did not believe needed relief. The issue would then be clear and an investigation could be had. The associations did not reply to my letters.

Much land in the national forests of Utah has more value for grazing than for the production of timber. By far its greatest value, however, and the principal reason for its having been included in national forests is for the protection of the watersheds. Based on the facts of history, we could not depend on stockmen giving these great watersheds ample protection if they acquired title to them.

I speak from experience and from first-hand information. For more than four decades I rode the ranges of Wyoming, Nevada, Idaho, and Utah as a stockman or in the Forest Service in positions from ranger to regional forester. I have been a friend to stockmen. While regional forester I worked to get them greater permanency in the use of their national forest allotments. Thereby I hoped to interest them more in taking proper care of the ranges and watersheds. With greater stability of use they could afford to manage their ranges so as to perpetuate the forage and retain the soil. They have been given this greater permanency, as far as consistent with the perpetuation of soil and forage. Without proper protection of these, use could never be stabilized.

I have been insistent that they properly manage the ranges, that they make the necessary adjustments in use and get down to carrying capacity where overstocked. A vocal and powerful minority protests the reasonable requests the Forest Service rightly makes. This minority is unwilling to make the needed adjustments in use, although assurance is given by the Forest Service that if the range improves so that it can properly stand more use, then more use will again be allowed the present users.

This struggle, as I have indicated, is reaching its culmination. The reply to the Forest Service proposal to reduce grazing use to what the land will stand is that "Congress investigate the Forest Service;" that "The land be turned over to the Department of the Interior for management until final disposal;" that "Forest Service appropriations be reduced;" that "land in the National Forests more valuable for grazing than for timber production be sold to the stockmen" for a very nominal consideration to be determined largely by themselves.

Livestock interests would intimidate and wreck the Forest Service because it has the courage to actively work for perpetuation of these great natural resources; because it is insistent that due regard be paid to the interests of the general public; because it demands that damage due to overuse of the ranges cease; because it is following the basic mandate given it by Congress.

The press relates that a committee of Congress has recently asked the Secretary of Agriculture to postpone any reductions in grazing use until further investigation can be made. Further delay in making adjustments in range use, which are known to be needed, is positively unwarranted. There already has been too much delay. The longer the delay, the greater the deterioration; the greater the deterioration, the lower the carrying capacity and the greater the reduction of use eventually necessary. The greater the depletion of forage, the more erosion; the more erosion, the less vegetation can be grown; and so, a vicious circle.

Fish and wildlife resources, among the greatest of our public land values, are being destroyed. Great damage has been done to fish life in many streams by erosion, accelerated through overuse of mountain slopes. Removal of supervision of the Forest Service can be expected to make matters much worse.

If deer are to survive in healthy herds, they must be furnished with ample winter range. Deer in large numbers have never been successfully fed over protracted periods. Should the livestock man deplete the winter ranges, he can move his stock or bring feed to them. The deer cannot be removed to feed nor, as has been said, can they be adequately nourished artificially.

We are gullible indeed if we believe these public lands can be passed to private ownership without great harm resulting to fish and game. I refer to upland birds as well as to big game. Depletion of vegetation and disturbances by livestock during the nesting season make it difficult for upland birds.

Stockmen who use the National Forests for grazing are but a small minority of all the people with interests in these Federal properties. Many of the stockmen themselves who do not have range on the National Forests have other vital interests in them. There are the recreationists and the sportsmen; the users of water for irrigation and domestic purposes and in industry. Also there are many whose property would suffer damage from floods.

The interests of this big majority must be well protected. A long-suffering public should not be content with the present conditions and certainly it should be highly

alarmed with stockmen's plainly announced plans. The people should awake, rise up, and assert themselves. They should demand that no brake be put on the Forest Service in its efforts to effect a prompt remedy.

OGDEN, UTAH, *February 26, 1947.*

United States Marine Corps

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Herald:

KEEP THE MARINES

The existence of the United States Marine Corps is threatened. The vagueness of the proposed bill to merge the armed services permits the President, if he wishes, to abolish the Marine Corps by Executive order.

The best argument for preservation of the Marine Corps is found in the brilliant record of that branch of service from 1789 to the present. The Marines have established and maintained a tradition of being first where the going is toughest. Their brilliant exploits at Tarawa and Iwo Jima are but the most recent additions to the glory record.

They were amphibious troops long before anyone thought of the name. They were "Commandos" in name and deed a century ago. They have been the shock troops and "suicide troops" in every war America has fought since the Revolution. They've carried out every order from quelling insurrections in Central America to planting the flag on Mount Suribachi.

The merger of the armed forces should be accompanied without destroying this important seagoing army of top-grade fighting men. Before Congress passes the merger bill it should guarantee preservation of this proud force, a most valuable asset in the atomic age of specialization in warfare.

Contributions of Veterinary Medicine to Victory

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks, I wish to present the following article by Brig. Gen. R. A. Kelser, United States Army, retired, who was formerly the Director, Veterinary Division, Surgeon General's Office during the period of May 3, 1938, to January 10, 1946. This article originally was submitted for publication in the Merck report on January 30, 1946.

The article follows:

Veterinary activities, undoubtedly, are ordinarily thought of by the public as service restricted largely to the professional care and treatment of sick and injured animals. It is quite understandable, therefore, that with the Army horse and mule replaced to a large extent by machines, there are many who do not realize that the veterinarian still has an important place in a modern army. Veterinary science, like medical science, is considerably broader than that phase of it which has to do with the treatment and care of the sick and injured. Among other things, it includes preventive medicine and various phases of sanitary science of great importance to the military establishment, particularly in time of war.

VETERINARY SERVICE WITH ANIMALS

In building up our Army to meet the tremendous task and responsibilities with which it was confronted in World War II, it was very properly mechanized to the fullest extent consistent with operational efficiency and the opportunity to gain superiority. Mechanization, however, did not entirely eliminate the need for animals. They were employed in limited numbers in the Army of the United States and to a considerably greater extent by the armies of some of the other countries involved in the world conflict. Nazi Germany, with all her "blitz" tactics and emphasis on mechanized warfare, utilized several hundred thousands of horses and mules, even in the early days of the war when her armies were rapidly overrunning the countries which she invaded. In Tunisia, Sicily, Italy, India, Burma, China, and in some of the Pacific islands, we and our allies found the horse and mule valuable supplements to the motor.

World War II also brought the war dog into prominence. Thousands of these faithful beasts were recruited for service with the armed forces of the United States. Anyone who knows anything about dogs will readily recognize the value of the service such animals are capable of rendering.

The Army Veterinary Corps, thus, did have the responsibility of providing a professional service for the care and treatment of sick and injured military animals, although the number involved was not very large. For such animals as the Army did employ, provisions were made whereby they received the very best in the way of professional care and treatment when sick or injured. Further, in connection with its animal service the value and importance of the Veterinary Corps' activities were not limited to benefit of the animal recipients. Protection and benefit to man resulted in many instances, and a number of highly important scientific accomplishments and contributions came out of the work and investigations of the Veterinary Corps with animal diseases.

Equine encephalomyelitis, the most serious of all horse and mule diseases in the United States and various other countries, has been of special importance, not only because of its prevalence and mortality in animals, but also because it is transmissible to man with very serious results. The Army Veterinary Corps has contributed richly to the knowledge of this disease, its transmission, control, and prevention. It was an officer of the Veterinary Corps who first discovered the ability of mosquitoes to transmit the malady, a finding of great importance from the standpoint of control and prevention of the disease in both animals and man. The discovery also led to the subsequent uncovering of evidence that St. Louis encephalitis in man is undoubtedly mosquito-borne. The extent to which encephalomyelitis has occurred among animals in the United States is apparent from the figures for the year 1938. In that year over 185,000 cases were reported, with large losses. Beginning in 1939 all Army horses and mules have annually been immunized against encephalomyelitis with vaccine prepared by the Army Veterinary School at the Army Medical Center, Washington, D. C. No Army animal thus immunized has contracted encephalomyelitis since the inauguration of the vaccination program.

Glanders, formerly a notorious scourge of the equine component of armies the world over, and transmissible to man, was nonexistent among military animals in the United States during the war, and of no important significance in our foreign theaters, thanks to mallein and serological tests, and preventive measures instituted by the Veterinary Corps. Anthrax, likewise of importance in both lower animals and man, became no problem even though it was necessary to send military animals into localities where the disease was especially prevalent. Vaccination and sanitary procedures prescribed and carried out by the Veterinary Corps were highly effective in the prevention of the disease among Army animals.

Early in the emergency the Veterinary Corps immunized all horses and mules against tetanus through the administration of toxoid. As a result no cases of tetanus developed among animals in the United States Army. Another very important accomplishment was the prevention of rabies among our war dogs. With dogs recruited from all sections of the United States and rabies prevalent in numerous localities from which the animals came, and further, with the disease occurring in epizootic proportions in several areas where dogs were being assembled and trained, there was plenty of chance for the infection to be introduced among the war dogs. Early recognizing the possibilities and danger, the Veterinary Corps adopted the policy of vaccinating all dogs upon receipt at war-dog reception and training centers, prior to their release from the prescribed quarantine period the animals were required to go through. The results were very significant in that not a single case of rabies occurred among the several thousands of dogs recruited and utilized by our armed forces during the war.

Research investigations conducted by the Veterinary Corps with equine influenza, periodic ophthalmia, canine filariasis and leptospirosis, equine trypanosomiasis, and other animal diseases, have yielded valuable results. Especially noteworthy are the results obtained in the studies of periodic ophthalmia, the cause of more blindness among horses than all other causes combined. Research studies of this disease, carried out at the Veterinary Research Laboratory, Front Royal Remount Depot, Front Royal, Va., have indicated that riboflavin deficiency is involved in the etiology of the disease and that the malady may be prevented by supplementing the usual ration with small amounts of riboflavin.

INSPECTION OF MEATS AND DAIRY PRODUCTS

While the requirement for veterinary service for animals was limited in proportion to the relatively small number of animals in the Army, a different situation existed with respect to the Veterinary Corps' functions and responsibilities in the inspection of food for military personnel. The requirements for this type of veterinary service were in direct ratio to the size of our Army in terms of manpower. It followed, therefore, that a large part of the duties performed by the Veterinary Corps in World War II was in connection with the inspection of meats, meat-food, and dairy products procured for the subsistence of troops.

The primary purpose of the Veterinary Corps' food inspection is the protection of the health of troops by determining that meats, meat-food, and dairy products are sound, wholesome, and suitable for human consumption. The inspection for this purpose is not limited to that made at time of purchase, but also while the foodstuffs are in storage, when moved, and when issued for the use of troops. Further, at the time of purchase or offer for delivery to the Army the inspection is extended to determine whether or not the food items meet specifications and contract requirements as to type and quality.

As everyone knows, during the recent war our troops were widely distributed throughout the world. In many places climatic and

other conditions under which perishable food items had to be received, stored, moved, and handled, were exceedingly severe. It was therefore, most important, in order to protect the health of our soldiers and insure their efficiency, that every safeguard possible be placed around their food supply. The most important classes of food from a nutritional standpoint are meats, meat-food, and dairy products. They are likewise the most vulnerable to contamination and spoilage, producing serious outbreaks of disease if consumed following such damage. The Veterinary Corps, thus, had a very great responsibility in insuring the wholesomeness, safety, and quality of the food supply for the Military Establishment.

With shipping space very critical, and cold-storage facilities nonexistent or inadequate, it was necessary that many of our overseas forces utilize to the fullest extent possible supplies of perishable food items which were, or could be made available locally. In line with this policy, the Veterinary Corps supervised or operated in various overseas localities, slaughter houses, poultry plants, dairies, ice-cream plants, and dairy and hog farms. These installations proved of great value in supplementing field rations with wholesome fresh meats and dairy products, thereby contributing greatly to morale. In places like Australia and New Zealand, where meats, meat-foods and dairy products were supplied our forces, principally on a reverse lend-lease basis, the Army Veterinary Corps supplemented the local veterinary inspection service.

Another valuable contribution of the Veterinary Corps concerned the fresh milk supply of the Army. Early in the emergency it was decided to make every effort to retain fresh milk as a regular ration item for soldiers undergoing training in this country. The huge demands for canned and powdered milk for overseas use, lend-lease commitments, and our civilian population, in addition to the fresh milk requirements, put the Nation's milk supply in a very critical category. It was essential, therefore, that steps be taken to promote and maintain the greatest possible production of milk and at the same time make adequate provisions to insure the wholesomeness and safety of that going to our troops. The effectiveness and proficiency with which this task was accomplished are attested by the fact that throughout the war period, soldiers in training in the camps, posts, and stations in this country received an average of a little better than one-half pint of fresh milk per man per day, requiring at the peak approximately 65,000,000 pounds of milk per month, and with it all no serious outbreak of milk-borne disease occurred.

The Veterinary Corps made many outstanding contributions in the development and improvement of special methods and procedures for the production of various types of foods to meet the exigencies of the war. These included such foods as desiccated eggs, powdered, reconstituted, and frozen milk, war hams and bacon, and various canned products.

Meat, meat-food and dairy products constitute approximately 38 percent of the soldier's ration and cost about 60 percent of the money allowance. The size of the job the Veterinary Corps had in inspecting these foods for wholesomeness and quality is indicated by the fact that when the war ended the Corps was inspecting every day over thirty million pounds of meats and dairy products.

Throughout the war the closest liaison and cooperation existed between the Veterinary Corps, War Food Administration, Department of Agriculture, and Food and Drug Administration, with respect to veterinary inspection of meats and meat products. Further, under an arrangement between the War Food Administrator and the Secretary of War, the Army Veterinary Corps provided basic veterinary inspection at a number of slaughtering plants which ordinarily would have been furnished such inspection by the War Food Administration.

VALUE OF VETERINARY SERVICE TO OTHER COUNTRIES

A more indirect but very valuable contribution which the Veterinary Corps made during the war effort was that which resulted from the benefits of its service to the people in the countries in which elements of the corps were located. For example, when the United States established its base in Iceland, conditions under which fresh milk and certain other foods were produced and handled gave rise to grave doubt as to the wholesomeness and safety of the local supply for our troops. Veterinary Corps officers were able to introduce many reforms and improvements, making local available supplies suitable and safe for our use. The marked value of these improvements was so apparent to the local people that additional help was sought from the Veterinary Corps in connection with diseases, problems, and conditions pertaining to their livestock, dairy, and fish industries. This help was gladly given and, as officially reported by the commanding general of our base, was an important factor in cementing firm relations between our military forces and the Icelandic people. Analogous occurrences and situation characterized Veterinary Corps service in various other countries, with China an exceptionally outstanding example.

When the submarine menace off our Atlantic coast was at its height and our supply line to the Panama Canal Zone placed in jeopardy, great impetus was given to the construction work on the Pan-American Highway. In connection therewith increased concern was felt over the possibility of introducing exotic diseases of man and lower animals into the various countries traversed by the highway and eventually into the United States. With a view to obtaining information for use in preventing spread of disease by way of the highway, the Pan-American Sanitary Bureau was designated by the interested countries to conduct a thorough survey. The Secretary of War was requested to assign representatives from the Veterinary Corps to perform that part of the survey concerned with animal diseases. This was approved and there was made perhaps the most complete survey of animal diseases in Central American countries through which the Pan-American Highway will pass.

United States Army veterinary officers have also been assigned to missions in Peru and the Republic of Panama to assist the governments of those countries in matters pertaining to military and civil veterinary service.

IMPORTANCE OF CONTRIBUTIONS BY CIVILIAN VETERINARIANS

I desire to especially emphasize the highly important part the civilian component of the veterinary profession played in World War II. To begin with, it was necessary to call approximately one-sixth of the Nation's veterinarians to active duty with the Veterinary Corps to enable it to perform its military mission. Thus, the small Regular Army component of 126 officers and about 600 enlisted technicians was expanded to about 2,200 veterinary officers and over 5,000 enlisted men. This country's vast livestock industry, important as it is to our food supply in peacetime, was a most vital necessity during the war period. To preserve and protect it from the ravages of disease was the responsibility of the American veterinary profession and in this the civilian component carried the bulk of the load. How very well it did the job is now a matter of history. Had it failed, the result would have been catastrophic.

FUTURE VALUE OF VETERINARY CONTRIBUTIONS

The future value to the United States of the accomplishments and contributions of American veterinary medicine in World War II will be considerable. There has been developed much important information of great value in the treatment, control, and prevention of a number of animal diseases, some of which occur in man.

Veterinary inspection of meats, meat-food and dairy products, conducted under severe conditions in many parts of the world have resulted in the development of ways and means for the special preparation and handling of many ordinarily perishable foodstuffs to withstand unfavorable conditions. Much of this will have a postwar application.

Observation of American veterinary science in action in various parts of the world has markedly and favorably impressed the people of many lands, thereby increasing their respect for American scientific standing and achievements. Further, the help rendered by the Veterinary Corps to the people of a number of countries in connection with the improvement of their livestock and dairy industries and the control of animal diseases, has been an important factor in promoting excellent relations of lasting value. On the other hand, our veterinarians have profited by the opportunity for observation and experience in many parts of the world. They have returned with first-hand knowledge concerning many diseases and conditions we, fortunately, have been able to keep out of this country. As a result they are better prepared to promptly recognize and deal with these exotic diseases should any of them, unfortunately, reach our shores.

As recently announced by the War Department, the United States, during the war, was alive to the possibility of attempts by the enemy to introduce disease in man and animals in this country. In preparing a defense against this possibility, personnel of the Army Veterinary Corps contributed extensively and with very valuable results. A number of the findings and accomplishments resulting from this work will have great postwar value.

American veterinary medicine served well and contributed much to victory in World War II and in so doing improved its knowledge and expanded its standing in both this country and abroad.

Natural-Gas Development

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 10, 1947

Mr. RIZLEY. Mr. Speaker, John L. Lewis has found ways to make good every threat to close the coal mines at will. No one, of course, would object to a mourning period for those who so unfortunately were the victims of the mine tragedy, and certainly if it is necessary to close all the mines in order to make working conditions safe, we say amen. However, it is high time that we in Congress began to find out how and why John L. Lewis can always bring our proud country to its knees.

When the Supreme Court of the United States upheld the injunction proceedings against the head of the mine workers, the country thought government by law had again prevailed.

However, the original date set for a coal strike prior to the lengthy legal proceedings—April 1—found the mines

closed. The majority are still closed. The supply of coal flowing from the mines is far below normal.

This situation focuses new attention on another, involving restrictions on the free flow and use of natural gas. In this instance a Federal agency, the Federal Power Commission, is guilty of arbitrary action. Our fuel uncertainties, with national inconvenience and heavy economic losses, will continue as long as the coal monopoly is upheld by restrictions on natural gas.

Limitations on development of natural gas, with tremendous implications for the oil industry, are due to efforts by the Federal Power Commission to extend its regulatory control beyond authority granted by Congress. Administrative and judicial legislation has replaced the intent of the Natural Gas Act of 1938. It must be clarified and redefined. The House Committee on Interstate Commerce will begin hearings Monday, April 14, on amendments to the Natural Gas Act. They are designed to remove the confusion threatening to undermine the natural-gas industry and deny to millions of people a superior and reasonable-cost fuel for domestic and industrial purposes.

If the restrictive policies now being applied to natural gas, obviously to protect the coal industry, had prevailed in the past, the railroads would have been halted to protect the stagecoach, electricity would have been banned to aid the candlemakers, and radio would have been curbed to help the phonograph industry. Yet today, in the face of frequent disruption of coal supplies, the policies of the Federal Power Commission are denying adequate supplies of natural gas to consumers through authority usurped in defiance of Congress.

Is it too much to ask that the American consumer be allowed to have a dependable supply of fuel which is not subject to the whims and caprices of a labor tyrant? If allowed to pursue its social theories to their indicated conclusion, the Federal Power Commission will make its contribution to the power of John L. Lewis by denying the consumers access to the large and steadily growing known supply of natural gas.

The unwarranted authority assumed by the FPC and the "clouds over the oil and gas industry" in the form of judicial decrees, have had effects on natural gas as follows:

First. Widespread distribution of natural gas is being retarded through uncertainties over future regulation, bureaucratic quibbling over proper elements of operating cost, and lengthy delays in action on development applications.

Second. Ignoring statistics on the tremendous reserves of natural gas and scientific progress toward new fuels—such as gas from coal—the Federal Power Commission is undertaking to decide for the American people how, where, and when they will use a particular type of fuel. Individual choice is giving way to bureaucratic decision as to what is best for the people.

Third. In a time of world strife, large industries are denied the use of a more desirable fuel, not affected by rail difficulties and coal strikes, and forced to be dependent upon coal and the whims of those in control of mining. Such action is a direct threat to national security.

Fourth. Applications for service expansion, estimated at a total of $500,000,000, are now before the FPC, but the execution of these vast programs will largely hinge on whether producing companies are permitted by law to operate with reasonable security, avoid waste, and plan orderly development in advance of consumer demand.

It has always been the purpose of Congress to encourage new industries in the public industry. In the case of the natural-gas industry, this was done through legislation giving the Federal Power Commission control over interstate movement of natural gas. The industry supported this legislation. Control over production and gathering of natural gas and distribution after the interstate movement was left to the States, in accordance with their settled constitutional right to regulate their internal affairs.

However, characteristic of Federal agencies in recent years, the FPC began to assume authority not granted by Congress. The natural-gas industry soon found itself in a jungle of uncertainties, delayed decisions, and undefined policies. In brief, the industry is being strangled by red tape of a particularly adhesive variety.

The purpose of amendments to the Natural Gas Act of 1938, sponsored by Members of the Senate and three Members of the House, is to clarify the policies and to define and limit the procedures of the FPC in its control of the natural-gas industry. What is now uncertain regulation by men will be replaced with specific direction by law. It is my earnest hope that Members of the House will participate in the hearings before the House Interstate Commerce Committee, beginning on Monday, and will support the amendments to clarify the Natural Gas Act.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Cleveland Plain Dealer of August 9, 1947. This expression from one of the great newspapers of the Nation and one of the most influential in Ohio, in strong and resolute manner, answers affirmatively the important question confronting us as to whether Congress should approve President Truman's recommended aid to Greece and Turkey.

NOW IS THE TIME

The time has come for a showdown with expansionist, Communist Russia. The Plain Dealer urges Congress, therefore, to approve President Truman's request for $400,000,000 to aid Greece and Turkey.

We support this somberly and after much soul searching, realizing it may lead to further commitments of money elsewhere—yes, and men, too. But the honor of the United States, the destiny of this Nation as a protector of free peoples and one which will not be pushed around, leaves us no alternative. God helping us once again, we must face reality in a world still troubled.

We do not delude ourselves that the United States will by this one move save democracy in Greece, where there is little, or in Turkey, where there is none. Democracy will come later. We believe it better to state this plainly now, without hyprocrisy. Our citizens will understand and respond more readily if we drop all false pretense.

Frankly, we recommend it on military grounds, for our own long-range protection against the menace of communism, the Red fascism, which has already gone quite far enough. The other free peoples will support our action.

This is the place to have the showdown—at the Dardanelles, in the eastern Mediterranean, where Communist stooge states do not yet exist, where no Russian troops are living off the already impoverished land. This is the time to throw a block at Russia, to call her bluff, in a spot where military advantages are obvious. We are already committed in Germany and Austria. Should we falter in the Balkans, we might as well abandon all Europe.

The people of the United States must quit deceiving themselves about Russia and what her pushing and porkiness mean. We have been struggling with our ex-ally diplomatically ever sinve VE-day. Russia has never fooled herself about what our opposition signifies. We should quit fooling ourselves.

The Russians know that American aid to Greece and Turkey, to shore up the faltering British, is an attempt to beat them to the punch. They have known all along the meaning of our protests against the rigged elections in Poland and Bulgaria, the shooting down of our planes in Yugoslavia, the faked-up revolution in Iran, the industrial stripping of eastern Germany, the cheapening and nullification of the high purpose of UN by constant haggling, the subsidizing of Communists and fellow travelers everywhere. Why continue to softsoap ourselves that these are peaceful tactics?

We heartily wish the Russians would come to their senses and stop trying to inflict communism on the world. But there is no sign they will. They have swallowed up Latvia, Lithuania, Estonia. They have the noose around Finland, Poland, and Yugoslavia. Their Gestapo dominates Rumania, Czechoslovakia, Bulgaria, and Hungary. They are proselyting in Germany and Austria, promoting a Communist government in France and egging on an ultraleftist minority in England to upset our friend Bevin.

In the United States they have bored from within so successfully, because the New Deal welcomed their support, that they have captured control of a large percentage of CIO unions and plunged that organization into a bitter, internal strife, which the anti-Communists must win, if they ever expect to advance their legitimate union aims. They have become so bold of late that they even defy the authority of Congress to subpena them; they tell freely of forging passports, which in our simple innocence we always thought was sufficient reason to go to jail.

We know from their own lips and writings that the creed of communism justifies lying, fraud, suppression of civil liberties—even kidnaping and murder if necessary—to advance the holy cause. It denies and debases the dignity of the individual, grinds it in the dust. It annihilates ambition, thwarts success. It is an evil, noisome menace, an accursed religion, whose believers are fanatical missionaries. It is a police state with

concentration camps, where the elite rule and live well, and the people share the poverty. Call it what you will—communism, state socialism, Red fascism, Stalinism—it's the same foul pestilence, the antithesis of everything American. We detest it thoroughly and so do all who love liberty.

We reject completely the Caspar Milquetoast philosophy that it is possible to crawl into our own shell, let Europe go hang, hope that communism will bite off more than it can chew. We reject the Henry Wallace asininity which forgives and excuses all aggression. We dismiss as puerile fantasy the lovely dream that if Stalin dies, some wondrous, beneficent statesman (name yet unknown) will take over and shed sweetness and light in all directions. We know different. The Politburo will still rule. Siberia will still cool off independent thinkers.

We learned once before, to our regret that we cannot appease tyrants with delusions of grandeur. In 1939 and before the menaces were Hitler and Hirohito. In the years it took us to get wise, the same fatuous arguments for appeasement and delay were advanced by timid liberals. You can't compromise with an aggressive police state.

We might as well out with it and face the ultimate possibility—war with Russia—for hundreds talk about it daily. It's a grim thought, and we hope it will not come. But we are convinced of this—there is less chance of war by blocking off Russia now than in lying down and hoping for a miracle.

In looking for an out, alarmed wishful thinkers predict that a policy of opposing evangelical communism will bankrupt us, prevent a reduction in taxes, commit us ultimately with troops, bring more demands for aid. We recognize that more demands for aid may come from countries in Europe, and are prepared to deal with them on their own merits. We don't underwrite in advance pouring money into every rat hole in Asia. This will not be necessary if we act swiftly and resolutely in Europe.

Of this we are sure—if communism should ever dominate our world, these woes would seem as insignificant as a hangnail to a man with appendicitis, kidney stones, and meningitis. We never know to what heights we can rise when we must.

We live in a dangerous age, a century of great and violent change, an era of hard politicians and revolutionary prophets.

Alas, there is no turning back to the status quo, the life of ease.

We cannot dream in our ivory tower of the higher life, full of philosophy and art, comfort and security, where no young man will ever need again to face danger in the uniform of his country.

As the richest, most productive Nation, the only really strong one, we have been forced to grow up, assume greater responsibilities in this shrinking world. And they are great, for dream though we may of a world government and peace on earth, dog still eats dog and force counts most.

If the Russians do not shift course, we must certainly restore the draft. Taxes will remain high. The debt will not come down. Airplane factories and shipyards must again come to life. Atomic bombs will still be produced. Like it or not, this is the inevitable sequence of preparedness and protection.

We Americans seek no territory to annex, no world to conquer. But we live in a world constantly made smaller through airplanes and radio, a world where a fanatical nationalistic religion is on the march. We have just fought and won a war (though it was far from our shores and we suffered little) to crush one such pestilence—Nazi fascism. We must beware of the dangers of Red fascism while there is still time. Wishing never yet stopped a war, but nipping aggressors when they are weak sometimes has.

So let's set our jaw and turn our face into the tempest. Help friendly nations while they are still alive. Cease this stupid business of pouring food and money into Russian stooge states, where Titos rule and everyone votes yes. Let our own administrators handle the funds in friendly nations, and show the local governments how to improve themselves and use the money best.

Let's notify the United Nations and invite it to help as Senator VANDENBERG suggests, but not expect it really to do anything. How can it, with the continuous Russian veto? Some day it may be strong enough, but not now.

Perhaps this strong action will cool Russia off. Let's hope so, but keep our fingers crossed. Hitler would have cooled off, had he been stopped at the Rhineland when he first began his aggressions. Ten years later, after he had swallowed his victims one by one, it was too late without a world war.

Let's get on with it resolutely, realistically. Our people are unafraid of anything on earth, once they know the facts and the danger. The facts about expansionist communism, like the facts on cancer, are just now beginning to dawn on them.

Appropriations for the Department of Labor

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me today before the Labor-Federal Security Subcommittee of the Senate Committee on Appropriations on the Labor Department appropriation bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am sure by now that the members of this subcommittee are convinced that the amputation of functions of the Labor Department proposed by the House Appropriations Committee and agreed to by the House in H. R. 2700 was a flagrant instance of false economy and of irresponsibility. This committee has heard many of the experts from the Labor Department testify on the exact nature of the functions they supervise and also has the advantage of some very intelligent appraisals of the situation made here and on the floor of the Senate by such Senators as Mr. MORSE and Mr. SPARKMAN.

In my appearance here I do not want to go back over all the arguments which have been made, pro and con, because I am sure this committee is attempting to make a fair-minded approach to the situation, and therefore, is acquainting itself with those arguments so that further repetition would be unnecessary. However, I do want to make clear, in case there is any doubt in the minds of any members of the subcommittee, that the functions of the Labor Department which would be curtailed or eliminated should H. R. 2700 become law in its present form—I am sure it will not—are of vital importance to the State of Pennsylvania and as such are important to the Nation and, in fact, to the world, for Pennsylvania and its industrial capacity together compose one of the major factors toward the rebuilding of a world in ruins and, through that rebuilding, the achievement of real and enduring peace.

That sounds like a very extravagant statement, I know. But it is not extravagant. In their own way, each State contributes much toward that goal, but it is Pennsylvania on which we and much of the world now depend for steel and coal and glass and firebrick, the best grade of petroleum, textiles, and an unlimited variety of major industrial needs. Therefore, any action of the Congress which has as its effect the disruption or the hampering or the delay of full production in Pennsylvania is a serious matter.

That is why I am so concerned about this bill as passed by the House. Practically every function of the Labor Department which would be curtailed or eliminated is an important function in my State.

Briefly, taking up some of the items in the bill, I would like to mention the significance of these cuts to my State.

THE WAGE AND HOUR DIVISION

A cut here of $1,147,100, under budget estimates is a cut of more than 20 percent. Now, as far as Pennsylvania workers are concerned, this would not on the surface appear to be too serious a matter because there are few establishments in Pennsylvania where wages are lower than, or even as low as 40 cents an hour. So there would therefore appear to be not much need for wage and hour inspections. But the picture is misleading.

Although employment is booming in most parts of Pennsylvania, there are areas of the State which are rapidly falling into the category of "distressed area" and where unscrupulous employers might attempt to recruit workers at starvation wages if they thought the Federal Government was powerless to enforce the Wages and Hours Act. As a matter of fact, even today in our present high-wage economy, wage-hour inspectors, making a limited number of inspections, are still finding violations. If the number of inspectors in the State is cut from 61 to about 46, as would be required should this appropriation reduction stand, the inspectors would not nearly be able to keep up with new enterprises started in the State, let alone get around to many employers whose operations have never been inspected. It is possible these 46 inspectors would not only have to cover Pennsylvania, but adjoining States as well. Lack of sufficient inspectors is an open invitation to violations of a law which today is a woefully inadequate law, but is the only law we have on the subject.

Just the other day, after the House had seriously cut back the customs service appropriation, and that service had to grant emergency furloughs or hand outright dismissals to the major portion of its force, smugglers recognized an immediate invitation to lawlessness. It was no surprise to me, therefore, to see an Associated Press dispatch reporting the murder of a customs patrol inspector by a smuggler in Arizona, almost immediately after the service was crippled by the false economy drive of the House. Here we have a case of murder which I think can be attributed directly to the House Appropriation Committee's action. I do not look for any murders as a result of emasculating of Wage and Hour Division enforcement, but I do fear that the invitation to smuggling represented by the false economy of the House bill for the Treasury Department would be duplicated to some extent in this bill as an invitation, not to smuggling, but to chiseling on our wage earners in some areas of Pennsylvania where there is a labor surplus and in any other areas which may be hit by periods of unemployment. There is a more important aspect of the problem from the standpoint of my State and it is this:

Pennsylvania, being generally a high wage State, continually faces the prospect of unfair competition from other States where wages have a tendency to sink to substandard levels. The textile industry in Pennsyl-

vania especially, is continually beset by ruthless competition from fly-by-night and runaway shops in other States where unscrupulous employers take advantage of the labor surplus to beat down wages and living conditions to deplorable levels. As low as it is, this 40-cent minimum wage which the Wage and Hour Division is to enforce is of substantial protection to Pennsylvania.

I don't want to cast aspersions on any other State, but I think it worth noting that the textile State of South Carolina in the fiscal year 1946 reflected a rate of minimum wage violations of 29 percent of all inspected establishments. This compares with a rate of less than 8 percent in Pennsylvania, and the rate in Pennsylvania was as high as it was only, I am sure, because the limited number of inspectors sought out those establishments which they thought most likely to be in violation.

I am sure that no representative of the State of South Carolina would approve of a crippling of the Division charged with enforcing minimum wage regulations because South Carolina, I am sure, has no desire to encourage wage chiseling at the expense of its citizens. In a case like this not only do South Carolinians suffer from low wages, but Pennsylvania industries and workers suffer because their product must face unfair competition.

I would like to remind the members of this committee that when the portal-to-portal bill was before the Senate, I attempted to amend it to provide for a 60-cent minimum wage. Senator TAFT succeeded in having that amendment tabled after he declared that the Senate Labor Committee, of which he is chairman, intends to bring out some comprehensive amendments to the Fair Labor Standards Act with the intent of strengthening that act and raising standards. A bill to do just that was passed by the Senate last year, indicating that if the Senate Labor Committee acts in the manner Senator TAFT promised it would, it is very likely the Senate will approve a bill calling for a minimum wage of at least 60 cents—the figure we approved last year—and no doubt even higher than 60 cents.

Senator MORSE announced on the Senate floor that he voted to table my amendment for a 60-cent minimum because he thought it was not high enough. I agree it is not high enough. I hope he and other members of the majority party will approve a bill calling for a higher figure. But in the meantime, unfortunately, the minimum wage is still only 40 cents.

I mention all this because I think it is apparent we are going to have a higher minimum adopted soon—and I trust it is soon—and that the duties of the Wage and Hour Division will be increased as a result. If these inspectors found 325 violations of minimum wage standards in the 1946 fiscal year in a high-wage State like Pennsylvania it is obvious that a 60-cent minimum wage or a 70-cent minimum wage or a 75-cent minimum wage might be violated more frequently than the 40-cent minimum wage was violated in those cases where discovery of the violations was made. And if 29 percent of all establishments inspected in South Carolina in that year showed violations of a 40-cent minimum wage, what can we look for in the way of violations if the wage is raised and if there are insufficient inspectors to detect violations?

OFFICE OF THE SOLICITOR

I want to make some brief observations on this item which was cut by the House by about $500,000. This committee knows of the tremendously important functions of the Solicitor's Office, including advisory opinions on the Wages and Hours Act, the making of predeterminations of prevailing wage rates as required by four statutes relating to public construction, and so on.

There is not a single function of the Solicitor's Office that could be eliminated because they are all provided for by law. The effect of a half-million-dollar cut—nearly a 50-percent cut—as provided by the House would mean not the elimination of any unnecessary functions but merely the delay of necessary ones. Mr. Chairman, I don't think I have to emphasize the importance of speed on the part of Government agencies in dealing with the explosive issues of labor-management relations, particularly where wage rates are involved.

The most dramatic single instance where speed on the part of this office of the Labor Department was necessary occurred recently in Pittsburgh during that paralyzing power strike which brought mighty Pittsburgh to its knees. This strike was not halted even when the courts issued an injunction against it and jailed the president of the independent union which called the strike. The strike was halted, however, suddenly and dramatically, after several weeks, when the Solicitor's Office of the Labor Department was asked to give a ruling on a legal question which up to then had stalemated any settlement. The question revolved around the application of wage-stabilization regulations to any wage increase which might be arrived at should the issues of the strike be submitted to arbitration. It was a very complex legal question. The Solicitor's Office was asked for such an opinion immediately. The very next day this dragging strike which had prostrated the great city of Pittsburgh was ended and it was ended because the Solicitor's Office, working at top speed, prepared an opinion which convinced the union involved it could safely submit the dispute to arbitration.

Mr. Chairman, if the Solicitor's Office had been so understaffed as this bill in its present form would make it, it could not have acted so promptly. I venture to say that every day that that strike continued because of delay in the Solicitor's Office in providing an opinion on the legal question involved, would have cost Pittsburgh perhaps as much as the entire budget estimate for an adequate staff for this office next year. The Solicitor's Office needs were estimated by the Budget Bureau at $1,251,000. The half million dollars which the House proposed to save out of this item is small change compared to the savings which accrued to the people and to the industries as a result of prompt termination of that strike.

I will have a little more to say later about how this power dispute in Pittsburgh was finally settled, partly as a result of the prompt and efficient and reliable work of another agency of the Labor Department, the Bureau of Labor Statistics. But at this point I want to complete my statement on the Office of the Solicitor.

One of the jobs of this office is, as I said, to make predeterminations of prevailing wages required under four statutes relating to public construction: The Davis-Bacon Act, the National Housing Act, the Federal Airport Aid Act, and the Hospital Survey and Construction Act. The Solicitor's Office must determine the currently prevailing wage rate in the locality—usually the county involved—for each class of laborer or mechanic to be employed on a particular project. Individual rates are established in that way for carpenters, bricklayers, painters, plasterers, and every other craft to be employed on the project. These prevailing wage rates, once established, become statutory minimum wages and must be included in the advertised specifications for the project and in any contracts let for the construction work.

This is not a function which can be even partially eliminated. It is mandatory by law, and it must be done before any of the contracting agencies can go ahead with their work. It affects all kinds of public construction—vitally needed veterans' housing, educational facilities and hospitals, airports, public buildings, and many other things. The volume of construction in my own State affected by these laws is considerable.

From the beginning of January to the middle of March of this year alone, there were 112 requests to the Department of Labor from various agencies for predeterminations of wage rates for construction to be performed in Pennsylvania. One of these was for a veterans' hospital to be constructed at Wilkes-Barre, whose estimated cost is over $17,000,000. An $11,000,000-construction project is planned in Lebanon.

The National Housing Agency is putting up low-rent apartment houses in Philadelphia and elsewhere.

Veterans' educational facilities, each at an estimated cost of anywhere from $21,000 to close to $350,000 are being constructed in many places in Pennsylvania, including Chester, Huntington, Elizabethtown, Slippery Rock, Loretto, and the State college in Centre County.

War Department projects at Cumberland and New Cumberland, planned for the near future, have a combined estimated value of $374,740.

Municipal airports at Westmorland, Hazleton, Beaver, Somerset, Eagles Mere, Emlenton, Franklin, Waynesburg, to mention only a few, are planned by the Civil Aeronautics Administration under the Federal Airport Act.

The Public Buildings Administration has requested a predetermination for repairs to the United States Mint in Philadelphia.

Every one of the requests for predeterminations that comes into the Labor Department must be answered by the Office of the Solicitor. A reduction in the budget of the national office will simply mean that the answers will be delayed until an inadequate staff can get to them, and the practical result in Pennsylvania will be that millions of dollars worth of construction work will be held up.

Homeless veterans in my State will not be satisfied in their demand for decent shelter with the explanation that their needs cannot be met because Congress failed to appropriate adequately for the Solicitor's Office in the Labor Department.

Building trade-unions and construction contractors will regard it as very false economy indeed if by failure to appropriate an adequate sum we cause unemployment or hold up their businesses. I need hardly say that the cost to my State, directly and indirectly, of such false economy may even exceed the entire amount requested for the Office of the Solicitor.

Another function of the Solicitor's Office which will become increasingly important as a result of proposed legislation is that of giving advisory opinions on the application of the wage-and-hour laws. The portal-to-portal bill would make of such opinions official rulings which could be cited by an employer as his defense under good faith for a violation of the law resulting from his following such an opinion. Should that law be enacted it is obvious that the Solicitor's Office will have to be extremely exact and careful in its opinions, and this means more work for the agency rather than less. I do not mean to say that the Office is not now extremely exact and careful in its rulings, but it seems obvious to me that the added responsibility thrust upon that agency under the bill would increase the burden of its work.

DIVISION OF LABOR STANDARDS

Here the House has gone hog-wild. It has eliminated the agency. It is thus presumably saving the Government $718,700. I do not have readily available much detail on what this means in safety and health work in Pennsylvania—I am sure it is substantial—but in a recent issue of the Christian Science Monitor in an article by Josephine

Ripley, published April 4, I read the following:

"In Rhode Island alone, last year, the Division (of Labor Standards) at the State's request stepped in to help reduce industrial accidents by 14 percent over the year before, thus saving labor and industry an estimated $3,500,000—a sum far greater than the $800,000 required for the Division's work."

Of course, if the Congress is going to adopt the position at this late date that industrial health and safety are not important, then there is nothing I can say to assure the continuation of this important function of the Labor Department. But, if the Congress is going to give up this work, I think the labor committee of the Senate should bring out a bill to eliminate the Division of Labor Standards and not let the House Appropriation Committee, which is not noted for its understanding of industrial problems, make the decision for us on so far-reaching a matter.

THE CONCILIATION SERVICE

The action of the House in this case was so ridiculous I doubt if I have to say much at all on this item for I am sure the Committee recognizes the importance of this Service in maintaining industrial peace.

I note that Senator TAFT in his proposed labor bill provides for substantially increased functions and responsibilities for the Conciliation Service, whether it be under the Labor Department or an independent agency. We are preparing to vote on the funds for this agency for the next fiscal year. Are we to make a deep slash here, decapitate the agency, in fact, and then turn around and give it much to do and find we have to vote it a deficiency appropriation? The $500,000 which would be saved under the House bill might result in the loss of millions of dollars to industry and labor in Pennsylvania alone, as a result of even one strike resulting from a lack of sufficient Conciliation Service personnel.

In my own city of Philadelphia, the Conciliation Service formed the Philadelphia Assembly in which employers and labor representatives meet with the branch director at the Philadelphia office to discuss general and specific problems of labor-management relations. Gentlemen, did you know that largely as a result of this work, the city of Philadelphia now has the best labor record of any city in the United States?

Mr. Chairman, a record like that does not just happen.

Just selecting at random some of the cases in which the Conciliation Service was involved in Pennsylvania recently, I might cite the instance in January when the Service brought about an eleventh-hour settlement of a dispute involving 36 foundry companies in the Philadelphia area, and the International Molders and Foundry Workers Union. This would have involved 2,000 employees directly, and indirectly thousands more and the economy of the State. Is a service like that worth a half million dollars to the whole country when this was just one individual dispute it settled.

A strike involving 15,000 workers of the American Viscose Corp. was averted by this same Service only recently in Pennsylvania. Last October the Conciliation Service settled without a strike, a dispute between the Radio Corp. of America and 2,000 electrical workers at Lancaster. Is it any wonder I do not want to see a guillotine used on this agency decapitating its head and its directing leadership?

THE BUREAU OF LABOR STATISTICS

I have two letters here I would like to read before I say anything myself. One is from the head of the Department of Economics at Carnegie Institute of Technology and the other is from the sales manager of the S. Morgan Smith Co. at York, Pa., to the Bureau of Labor Statistics, a copy of which was sent to me. In both cases I asked for their permission to make public their communications, and they were happy to oblige. The letters are as follows:

CARNEGIE INSTITUTE OF TECHNOLOGY,
Pittsburgh, Pa., April 3, 1947.

Hon. FRANCIS J. MYERS,
United States Senate, Washington, D. C.

DEAR SENATOR MYERS: It has come to my attention, through the press and through acquaintances in Washington, that the House of Representatives has recently voted to reduce the appropriation of the Bureau of Labor Statistics in the Department of Labor by about 60 percent from the fiscal 1947 level in the budget for fiscal 1948. I should like to urge that you do not support this drastic reduction. While it may well be appropriate to reduce the governmental expenditures at this time, surely a cut of this magnitude in the Bureau of Labor Statistics appropriation will do harm far out of proportion to the relatively small volume of funds which is saved.

In particular I should like to emphasize the great value for the schools, for business research, and for intelligent planning at the governmental level of the sort of statistical data currently being collected and analyzed by the Bureau of Labor Statistics. These figures are of a careful, nonpartisan, scientific nature. They provide an objective factual basis for the making of intelligent economic decisions on a wide range of questions, such as price policies of individual firms, establishment of wage rates, man-hour productivity in different industries, etc. If the 60 percent cut is approved by the Senate, nearly everything except purely routine operations on a few series will have to be given up. The valuable series now obtained and published regularly by the Bureau have been built up over a long period of years. It would be a very serious backward step and loss to the academic and business communities for these years of progress to be reversed.

I urge, therefore, that you vote to moderate substantially this cut in the Bureau of Labor Statistics appropriation.

Very truly yours,

G. L. BACH,
Head, Department of Economics.

APRIL 5, 1947.

We were, indeed, very much alarmed the other day when we read in a New York newspaper that Congress was intending to cut the Bureau of Labor Statistics appropriation about 60 percent. Most of the durable goods industry is dependent upon your statistics for use as indices in price adjustment clauses contained in pending contracts. If these statistics have to be discontinued for lack of funds, the industry will be in a pitiable condition. A lot of companies holding long-time contracts will just about be wrecked. We have some contracts extending back to 1942 which were held up and then resumed after the war. The United States engineers, Bureau of Reclamation, and TVA advise us that they cannot accept statistics for use as indices unless they are compiled by a Government agency. Outside of the Bureau of Labor Statistics, we do not know of any Government agency that is set up to compile such statistics.

Undoubtedly other industries who have been relying on the Bureau's statistics of commodities, labor, etc., will be seriously affected. If Congress votes to cut down the Bureau's appropriation, it should indicate clearly what services should be pared down or eliminated and thus make sure that an economic crisis will not result.

We certainly appreciate your past help and the obliging manner in which you have tried to aid various industries.

Very truly yours,

D. J. MCCORMACK,
Sales Manager,
S. Morgan Smith Co., York, Pa.

One conspicuous example of the value of this Bureau is its occupational wage-rate survey providing wage rates for individual occupations in all major industries in localities of 100,000 population or more. These surveys would be eliminated under the House bill, and only national averages would be available, thus depriving employers, unions, mediators, and arbitrators of authoritative information which very frequently aids in the settlement of disputes and the negotiation of wage contracts at the local level. Let me cite one case:

I mentioned the power strike in Pittsburgh. The strike was ended but not settled by a ruling from the Solicitor's office. The strike was settled by arbitration. The arbitrators in this case kept the Bureau of Labor Statistics busy for about an entire month answering requests for pertinent wage information needed in the settlement of this case. Pittsburghers who went through the power strike would say it was a peculiar type of economy which would make it impossible for the Bureau of Labor Statistics to have provided the information which helped substantially in removing the threat of a repetition of that costly strike. Yet if the proposed budget cuts go through, this type of information will cease to be available, not only in Pittsburgh but in Philadelphia, Reading, Erie, and the Allentown-Bethlehem area.

Cost-of-living indexes prepared by the Bureau of Labor Statistics showing changes in consumer prices would be eliminated on a monthly basis in this bill, in Philadelphia and Pittsburgh, and would be available only on a quarterly basis. In this period of changing prices—I trust they will be changing downward substantially—it is vitally important not only to Pittsburgh and Philadelphia, but to the whole State and to the Nation, to know what is really happening to prices, and this is the agency of the Government charged with finding out.

I can understand why some Members of the Congress desire these statistics eliminated entirely, because they show all too graphically what has happened to our economy since this Congress ruthlessly murdered price control by passing an unworkable bill last year. BLS has shown the fallacy of the arguments advanced in the Congress that without price control there would be a short period of rising prices and then a readjustment and everybody would have plenty at prices he could afford and everyone would be happy. Rather than assuming blame for the error of judgment and the wrong predictions made at that time, some Congressmen apparently want to eliminate BLS cost-of-living studies so that they would not be confronted every month with the figures showing how wrong they were last summer. That is hardly a valid reason for doing away with the studies which chart the lifeline of our economy.

Housing statistics gathered monthly on new construction in Philadelphia, Pittsburgh, York, and Lancaster would be discontinued under this bill. These studies constitute the only available information showing the progress of housing for veterans and for the public generally, and are widely used by the building industries and the real estate industry. Similarly, BLS now makes rent surveys twice a year in Philadelphia, Pittsburgh, and Scranton. These surveys would be reduced to once a year. Yet if Congress allows rents to rise, these surveys would be necessary at least four times a year, as the President has requested.

I am sure it is unnecessary for me to document all of the activities of BLS which are already known to this committee, and, I assume, appreciated.

UNITED STATES EMPLOYMENT SERVICE

Mr. Chairman, throughout my statement I have been repeating the word "amazed" in

discussing some of the cuts made by the House. None is as amazing as the cut for USES. Here the House committee and the House voted $71,728,000—every cent which was requested—for the various State employment services which the Federal Government is subsidizing 100 percent. For the central office, the home office, headquarters, the nerve center of this far-flung program, the committee and the House allow $900,000, and cut $3,000,000 from the budget estimate. That would make of the home office, of the national headquarters a bookkeeping office and nothing more, a paymaster.

We are turning loose here $71,000,000 for the States to do with largely as they like, with no supervision, no control, no direction. Gentlemen, is that what the House means by good business in government? Would any of our large chain business organizations think of putting every State manager on his own, with no supervision or control from the home office? Would any large chain business organization, any great corporation operating in every State, think it good business to let each State manager devise his own policies, set his own program completely independent of any national policy? Would it consider withholding from its State manager the information and discoveries made elsewhere which would help him in promoting the business in his own State?

Of course not.

Yet, here, we would have a $71,000,000 Nation-wide business—a big business—departmentalized by States in such a manner that no one State would know what the next State was doing, that none of us in the Congress would know what any of them were doing with this tremendous amount of money we are providing in a blank check. I this be economy, then I don't think we in the Senate want any part of it—not this kind of economy.

In Pennsylvania, the USES provides a working link with all other States in the Nation, many with similar employment-area problems, to improve the standards of operations for those in Pennsylvania who need jobs and for those employers in Pennsylvania who need skills not available in our own State, but procurable through the national clearing house of USES which is now serving more than 200 Pennsylvania employers.

Among some of these firms who enjoy a service which would not be available if this bill were left unchanged are some of the most important in Pennsylvania, not only in the industrial field, but in research and education. To name a few:

Publicker Industries, Sharp & Dohme, Atlantic Refining Co., American Gear Manufacturing Co., Mellon Institute, Rust Engineering, Altoona Pipe & Steel, Aviation Corp., Armstrong Cork Co., Hercules Powder Co., Piper Aircraft, Pittsburgh Steel, Commercial Solvents, Sharples Chemical Co., Baldwin Locomotive, Carnegie Institute, Chamber of Commerce of Philadelphia, Corning Glass Co., and Talon, Inc.

The type of employees they seek through the National Clearing House of the USES is usually a type difficult to find, men technically trained in unusual specialties. I have not had an opportunity to investigate many specific cases in which USES has been of significant help in its recruitment of technical specialists for Pennsylvania firms, but I do know of several instances where this help has been of vital importance. USES is presently recruiting geologists, petroleum engineers, and geophysicists for one large corporation in Pennsylvania, and recently obtained several scarce specialists for another firm.

Now, we in Pennsylvania have many fine technical schools whose graduates cannot always find jobs in their specialties in our own State, but who are just the thing industries in other States may be looking for. To get them jobs, are we to depend on each State's sending out to the other 47 a list of all job opportunities of a highly technical nature and receiving in turn similar lists from each of the other 47 States in order to do all by itself what this National Clearing House of USES is doing from one central agency? In other words, are we expecting each of the 48 States to build up an agency of its own which would be as efficient as the one central agency we now have? Gentlemen, that would be bureaucracy compounded.

This is not only true in connection with the recruitment of technical personnel but applies to all sorts of job opportunities. There are parts of Pennsylvania where there are labor surpluses and where job seekers sometime are required to find openings in other States. Similarly, there are these same labor surplus areas in other States where are found skills needed in Pennsylvania. The object is to fit the man to the job and the job to the man and if we are going to "balkanize" our employment service, as Senator MORSE recently said, this appropriation bill would "balkanize" our entire economy, we are certainly stretching economy to a point where it may break our economy.

The committee has heard at great length about the various functions of USES and nearly all of the important ones are important to Pennsylvania for the simple reason that Pennsylvania is such an important industrial State. I do not want to take the time to repeat all of this information, but I would like to cite a few examples of what this agency means to our State.

The personnel manager of a garment factory in Hazleton, Pa., recently found his employee turn-over was running as high as 58 percent. Testing programs developed by USES were put to work in this plant, and, as a result, the veterans who were hired under the on-the-job-training program—those who were tested and found suitable—have stayed at work and turn-over has been reduced to 2 percent. At the request of a textile manufacturer in Wilkes-Barre it studied plant operations and developed two types of tests for quiller operators and weavers. These tests were so successful they are being adopted elsewhere. In a rubber company in Erie techniques of testing developed by USES reversed a high turn-over rate to such an extent that during the first 30 days after installation of the program, there was not a single resignation. There have been many such cases and I don't want to take the time to cite them all.

One of the things the 77-percent cut in USES funds would mean to Pennsylvania is the elimination of regional offices. Eleven of the 12 regional offices would probably be abandoned. That would undoubtedly mean the end of the Philadelphia office, since it is so close to Washington. Pennsylvania employers who have had the experience of having to run to Washington for a decision every time a problem comes up will not, I am sure, find conditions improved in the employment field by the elimination of the Philadelphia office.

Mr. Chairman, I would like to repeat what I have said many times on the floor of the Senate in recent weeks. If the Congress is determined to do away with basic features in our Government—and the Labor Department represents one of the most basic departments of all—then, I submit, the Congress must have the courage to enact legislation specifically aimed at eliminating those things the majority of the Congress believe should be eliminated and do it openly and above board and not in a back-door fashion through the thoroughly dishonest method of starving out functions and agencies by means of appropriation bills.

The chairman of the Senate Appropriations Committee, Mr. BRIDGES, said to me during the debate on the legislative budget that one of the reasons the joint committee could not give a break-down on how cuts could be made was that this would be prejudging the work of the Appropriations Committees. Mr. Chairman, I submit that in these appropriation bills the House Appropriations Committee is attempting, all by itself, to reorganize the executive branch of Government, and I don't think that is its function, and I am sure that this committee and the Senate will not tolerate it.

Newsprint and Newspapers

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Col. Robert R. McCormick, the distinguished editor and publisher of the Chicago Tribune, before the committee which is investigating the newsprint shortage. The statement was made by him on March 17, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Gentleman of the subcommittee on newsprint shortage, there has been so much confused testimony before your committee on the subject of paper that I take the liberty of sending you a short résumé of the history of paper and printing of newspaper publishing.

Paper and printing came, as they had to, together. One would have been worthless without the other. They increased the possibility of acquiring knowledge from the very few to the many. It was not until the rotary paper machine and the rotary press were invented that knowledge became possible to the many.

It was when the ground-wood process was developed—as I have been informed by Warren Curtis, Sr.—and modern paper mills were designed by Warren Curtis, Jr., and George F. Hardy, and linotypes and printing presses of modern design were installed in specially designed newspaper buildings, that knowledge became possible for everyone.

When the new mills were put into operation near the forest and near the paper market, such as ours that we built at Thorold, Ontario, in 1912, hoping to free ourselves from the vagaries of the paper market, the cost of paper declined so rapidly (at one time it was down to $20 a ton) that competing newspapers progressively reduced the price of daily papers to 1 cent and Sunday papers to 5 cents, making their information available to everyone.

This led to a tremendous demand for newspapers which, as I have said before, could only be put out by means of newly designed and invented newspaper machinery. Large circulations in turn made advertising increasingly profitable to advertisers which again made possible still lower circulation rates.

At the beginning of the present era, pulpwood was readily available. It could be bought from pulpwood dealers as other materials are bought from drummers. As the years have gone by, the nearby pulpwood has been cut off. The remaining wood has receded farther and farther from the mills, and the mills going after it have receded

farther and farther from the market, involving higher and higher freight rates. Wood is no longer found along existing railways or highways or easily driven rivers. To obtain wood today, logging operations have to be carried on with road building and river improvement carried out in many places on a scale comparable to the Panama Canal.

I believe the first great logging operation was performed by the Ontario Paper Co. some 25 years ago, but this was an operation to conserve wood that had been killed by fire.

The price of wood at Thorold, after freight had been paid on it, fluctuated from as low as $9 a cord to the present price of $36 a cord. All of the other costs of paper mounted until now I do not know whether the mills of average economy can be supported at the present price of $84 a ton.

To meet these and other increasing costs, newspaper prices and advertising rates have been constantly raised. The daily papers are mostly back to 5 cents, with the Sunday papers at 10, 12, and 15 cents, but the papers are vast improvements over the ones that sold for those prices a half century or more ago.

Not the least of these improvements has been the printing of halftones, which was born into the newspaper world in my time. Whether the improvement in paper made this possible or whether this made improved paper necessary, I do not know.

Another great improvement is in color printing. That was introduced about a half a century ago but badly. It could be used only for grotesque comics. Improved presses now permit fine art work. The curator of the Chicago Art Institute has told me that some of our rotogravure reproductions of great paintings are better than the originals.

With the recession of the spruce forests, other materials must be found. We are grinding 10 percent of poplar at Thorold today, but vastly larger quantities of other raw materials must be found.

We may find them chemically. Our alcohol plant was founded as a war service. Its economic condition in the peacetime world has not been established, but we also make yeast, and we make a substance which vastly improves cement. It is not beyond the grounds of possibility that the sugars and lignins of wood, from being waste, will become the main products, the fibers the by-products. If this happens, we will have an economy in paper making and a better sheet of paper.

This brings to mind other raw materials than wood. Sugar mills reverse the pulpwood process. When the sugar has been squeezed out of the sugarcane by calenders such as we use, the cane becomes a waste material. It becomes a paper-making raw material with no cost. There is a pilot plant in Mexico experimenting with this now.

The passing of the horse has all but destroyed the market for straw at the very time that the agricultural machinery companies have perfected a hay baler with which one man can do the work that formerly required 10. Straw is an old raw material for paper making and in this new economy may come back again into its own.

Geographically sugarcane paper would reach our southern newspapers with minimum freight rates, and straw paper may well compete in the interior with paper made in Labrador, Hudson Bay, or Alaska, not to say Europe.

Strange things will be said to you about newspapers. The strangest one is that what it takes to start a newspaper in these days is a lot of money. The only publisher who started a successful newspaper in the last 50 years who had lots of money was Hearst. He also had great newspaper ability. Adolph Ochs came to New York from Chattanooga, Tenn., with practically nothing and made the great New York Times. Victor Lawson took the Chicago Daily News for failure to pay its rent. Pulitzer started in St. Louis with nothing and came to New York without much more. He died leaving his newspaper enormously rich and successful, but his successors did not have the know-how and brought it to ruin in a few years.

The New York News went to press modestly on the presses of the New York Mail. Within a year it moved into a small building on Park Place and only after its success had been established did it take a 20-year lease on a larger building, and even there used some second-hand equipment. When its success was assured and its circulation becoming a factor in the paper market, we enlarged our paper mill to supply it and eventually built a paper mill for it.

Successful newspapers are started in a small way. Their mistakes are small mistakes. It is only when they have become successful and the demand for them great that they need large buildings, extensive press capacities, and complicated organization. Large newspapers have all the problems of small newspapers and others, too.

That money can make a newspaper can be disproved by the experience of Frank Munsey, Mrs. Thackrey, Marshall Field and David Stern.

A newspaper has to stand on its own feet. It cannot be supported even with the full power of the Federal Government. A decision of the Supreme Court given at the instigation of the executive was utterly impotent to bring success to an improperly edited newspaper. On the other hand, no amount of outside attack can harm it. For some years now, our newspapers have been subject to boycotts, to the bitter propaganda of the British Foreign Office, conducted throughout the entire press of the British Empire and such publications as it controls in this country. We have been barked at by every living magazine jackal. We have been maligned by every writer that could be suborned for pay, and in consequence of all this, we have the two most successful newspapers in the world.

The paper seeks its readers by its appearance, which is the quality of the paper, plus the style of the type, plus the attractiveness of pictures. It sells them by presenting interesting reading matter called news.

Nobody has ever been able to define news. An unusual happening is news, but this meeting is news without being unusual. It is news because it is an important happening. If you look through the roto sections, you will find that beauty is news, humor is news, child and dog pictures are news, catastrophes are news. Daily happenings of people who have made themselves interesting, whether in politics or music, or what is known as society, are news.

Most news makes itself, but the writing of it almost inevitably requires the exercise of description. How speedy was the pitcher? Did the jockey ride magnificently? How loudly was the speaker applauded?

It is alleged by those who would destroy the newspapers that this necessity is exercised to the detriment of the reader. Utter nonsense. Many people know the facts as well as the writers. Indeed the writers get many of their facts at second hand. If the facts are not correctly reported, the writer and his publication soon discredit themselves.

How are selections of news made and how are assignments given out? They are made by men with a natural aptitude for editing and assignment. These men pass from beginners to editors by demonstrated ability, by the general reputations they have acquired. If men who demonstrate their lack of qualifications are retained, their publication becomes unacceptable to the readers, who leave it and it dies. The men who can make the best blend of art, humor, and news will make the best newspaper and it will be recognized as such.

This cannot be done by law, by a journalistic OPA, by a college student, or by any group of pinko professors living off the money other men have made. Such things may attempt to destroy newspapers but I do not think they can even do that.

A particularly American provision in the Constitution is that providing for free speech and a free press. While the language would appear to be all inclusive, we find that this freedom has never been extended to the stage or the moving picture. It is nullified in periodicals by the large subsidies they receive from the Post Office Department. Everything said over the radio is said under the threat that the radio license will not be renewed.

Freedom of the press, therefore, is actually freedom of the newspaper press, and this has been exercised under trumped-up prosecutions and widespread conspiracies to discredit newspapers of independent habit, but the press of the United States has remained substantially free in great contrast to the press of the British Empire, which in many matters is directed by the Government.

Its consistency and reliability may be accounted for by the fact that to continue to exist, it has to retain constantly the confidence of its readers. Sensational falsehoods may pick up readers but not retain them. Conversely, an author or book publisher may hope to make such a killing in one book as not to need to write or publish another.

America's Ten Legal Commandments

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "America's Ten Legal Commandments," prepared by Mr. Albert Brick, an able attorney of Washington, D. C., for the April 1947 issue of the Public Service magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S TEN LEGAL COMMANDMENTS

(By Albert Brick [1])

Out of our experience in the last decade and a half, the American people might well have learned 10 great truths in relation to the law. These might be called her ten legal commandments. They are not necessarily new truths; indeed, some are as old as the recorded history of a free people. Yet, they speak with new strength, new dignity, new meaning, to an America starting out on a bold, new path after her victory in the Second World War. These truths go to the very heart of America's system of private enterprise and of her constitutional Republic. They differentiate free America from Collectivist nations, America ruled by law from lands ruled by dictatorial men.

What are these ten legal commandments?

1. POWER MUST EXIST IN LAW AND MUST BE LIMITED BY LAW

"Where the law ends, tyranny begins," said William Pitt in 1770. We have seen that when power in government exists merely because of the capricious will of one man or a group of men and where it is uncontrolled,

[1] Albert Brick is a member of the bar of the District of Columbia and President of the Florida State Society for the District of Columbia.

it tends to oppress. "Absolute power," says the Actonium dictum, "makes for absolute corruption." Limited power, power which is checked and balanced, makes for purity in government, for fiscal sanity and political health.

2. LAW MUST HAVE THE RESPECT OF THE PEOPLE

It is folly for a government to pass a law which is not held in high esteem by the overwhelming mass of the populace. One wit has remarked, "A law will fail when too many people believe that it must be enforced rather than observed." If the only way that it can be respected is through compulsion and enforcement, it will require police power, and where it requires police power, evasion of it will be attempted. The strongest law is the law in which the people most strongly believe.

3. LAW MUST BE AS MODERN AS THE NEEDS OF THE TIMES

W. S. Gilbert said, "The law is the true embodiment of everything that's excellent."

But, in time, even excellent laws may become obsolete and must be changed. This does not mean that they must be changed precipitously; on the contrary, they must be changed only after careful deliberation.

Law, too, must be a dynamic instrument for the future. Said one observer, "law should be an alliance of foresight and insight against short sight." But, the only thing that is changeless in the world is still change itself. Sydney Smith said, "When I hear a man talk of an unalterable law, I know that I am listening to an unalterable fool."

4. THE FORMULATION OF THE LAW MUST BE A CAREFUL, DELIBERATE PROCESS

Aristotle said that the law is reason free from passion. Where laws are enacted or amended with rash haste, passion, and the fever of the times may militate against their effectiveness and righteousness. This does not mean that legislatures must go at turtle pace, but rather that each proposed legislative item should be given the consideration which is its just due.

5. EXCESS LAW CAN HARM AS MUCH AS INSUFFICIENT LAW

"Quantity production tends to cheapen everything, including the law." "The more laws, the less justice," goes an old Proverb. "The more corrupt the state, the more numerous the laws," said Tacitus. Congress or any State legislature can do no greater harm than by wildly enacting a stack of laws for which there is no need nor justification.

6. THE PRACTITIONERS OF THE LAW DESERVE THE RESPECT OF THE PEOPLE

It is commonplace to jibe at the legal profession. "What would the devil say if he sat down between two lawyers?" asks the old gag. "Virtue in the middle!" Also, "A lawyer, like a wagon wheel, must be well greased." These jibes, though they may be justified for an insignificant minority of those who shame the legal profession by wearing its garb, are completely inapplicable and unjustified for the overwhelming mass of the practitioners of the law who respect the rights and privileges of their profession. To place the bar in disrepute is to place a grave handicap on the order of the Nation.

7. THE OCCUPANTS OF THE BENCH DESERVE THE HIGHEST RESPECT OF THE PEOPLE

Bugs Baer used to say that some politicians act as if they want "the best judges that money can buy." Yet, we know that where judges are for sale, either to foreign ideologies or to corrupt groups, the power of the law and the merit of the law are corrupted. The Good Book says, "Judge not according to the appearance but judge righteous judgment." The voice of the judge should be the voice of the law speaking and should be so recognized by the people.

8. LAW MUST BE EQUAL TO ALL—TO HIGH AND TO LOW

In some circles of Government, there has developed a feeling that "the powers that be" are immune to the law and can break the law. Lawmakers must not be lawbreakers. "Be you ever so high, the law is still above you," an old saying goes.

"The voice of nations, and the course of things,
Allow that laws are superior to kings."

9. THE SELF-RELIANCE OF THE PEOPLE IS MORE IMPORTANT THAN THEIR RELIANCE ON LAW FOR ECONOMIC GOOD

Theodore Roosevelt said, "It is difficult to make our material condition better by the best laws, but it is easy enough to ruin it by bad laws." Law is no panacea for the economic problems of the Nation; these must still be solved in the grass roots by the diligent efforts of an enlightened, courageous populace.

10. A LAW-ABIDING PEOPLE IS A HAPPY PEOPLE

There is no greater serenity nor peace of mind than that which comes to a free people which respects the law and because it respects the law, gladly observes it. In such a condition, the prosperity of a people, and the morale of a people can reach superb new levels.

These, then, are 10 legal commandments which America might follow toward the goal of a greater and ever sounder Nation.

United States of Europe

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States of Europe," which was written by me and published in the St. Louis Post-Dispatch of April 6, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES OF EUROPE—SENATOR FULBRIGHT ARGUES THAT SUCH A FEDERATION AMONG NATIONS NOT DOMINATED BY COMMUNISM WOULD BE EFFECTIVE STEP TOWARD CONTAINING RUSSIA, BRINGING PEACE, AND REVIVING THE CONTINENT

(By J. W. FULBRIGHT, United States Senator from Arkansas)

On March 21 Senator THOMAS of Utah and I introduced a concurrent resolution providing that the "Congress favors the creation of a United States of Europe within the framework of the United Nations." On the same day a similar resolution was introduced in the House of Representatives by Congressman BOGGS of Louisiana.

This is not a new idea. For centuries the leading thinkers and statesmen of the world have, from time to time, urged the creation of a federated Europe as the best method of bringing peace and prosperity to that unhappy region and as one of the essential conditions for a peaceful world.

We know that both world wars grew out of the conflicts which are inherent in the fragmented sovereignties of Europe. We should know that so long as this senseless conglomeration of separate political and economic entities exists there is little hope for the peace and prosperity of the world. We also know that the most propitious time to move forward is just after society has been disturbed by some great upheaval, leaving it in an unstable and fluid state. Europe is in that condition today, and the time is ripe for a change. It is our job to see that the change is forward, to a system of freedom and self-government, rather than backward, to slavery and tyranny.

NATIONS SHOULD DRAW UP A TENTATIVE CONSTITUTION

No one can tell at this time how this proposal will be received by the European countries. The practical thing to do would be for representatives of these countries to meet and draw up a tentative constitution for the consideration of their own people and the world. Only by formulating a specific proposal dealing with all the matters involved in a federal union can the ideas of the people crystallize and arrive at a reasonable judgment. If the Congress should adopt now Senate Concurrent Resolution 10, I think it would give impetus to the calling of such a constitutional convention.

It is, of course, certain that many people will dismiss the proposal as naive and utopian, but we should remember that all proposals that promise any significant improvement in human affairs have always been branded utopian. The United States of America was, in the beginning, branded utopian, and its failure predicted by those who, if they were here today, would look with derision upon this proposal.

For several centuries, under the Roman Empire, Europe was united. Later Charles the Great, in the ninth century, united all of Europe from Spain to the Elbe River under a single power. Europe has always been a cultural entity, and in the great days of the Renaissance national lines were not closely drawn. Culture was not French, or German, or Spanish, it was European. Since prehistoric days the inhabitants of Europe have belonged to the same white race whose branches are to be found in northern Africa and western Asia. They possessed a common primitive civilization going back to the neolithic age and the philologists tell us that, with one exception, all their languages are derived from a common mother tongue. Their political organizations and customs developed along similar lines and throughout their history were distinguishable from the servility which characterized oriental despotism.

Western Europe, exclusive of Russia, consists of a well-integrated economy and a land mass of approximately 2,000,000 square miles, with 300,000,000 inhabitants. Physically, racially, and culturally there is no insuperable obstacle to a reasonable federation of these peoples.

There are very special reasons why the people of the United States should consider at this time the re-creation of the unity which, in ancient days enabled the Europeans to live in relative peace and happiness. Already we have made, or are committed to make, enormous loans to the nations of Europe. We are spending hundreds of millions of dollars feeding the people of Germany and the devastated countries. We are faced in the immediate future with the further obligation of supporting Greece and Turkey at great cost. But overshadowing all these obligations is the supreme interest that we have in creating a peaceful world. The primary reason for these loans and grants is the creation of a stable and orderly world in which we may live in peace, and yet we should know that money alone will not achieve our objective.

This proposal for a United States of Europe is not an idealistic dream to bring relief to the suffering people of Europe. Americans can be, if they are of a mind to be, sound, practical businessmen. As President Truman said recently, we have already invested

$341,000,000,000 in preventing tyranny from enveloping the world. In addition, we are committed to spending $600,000,000 annually to support Germany, many billions of loans to other European nations, and in the immediate future we probably shall undertake the support of Greece and Turkey. As practical people we may well ask ourselves, how do we finally work out from under these obligations?

There is no simple all-inclusive answer to this question, but one of the essential conditions to any solution is the re-establishment of industry and commerce within the framework of a stable political system. In the Near East and in Europe a prerequisite to the revival of trade and industry is a United States of Europe. Without a prosperous Europe to consume the produce of the Near East and other countries, and without the production of Europe's industry, I can see little hope for a revival of commerce on a substantial scale.

In Moscow at present, the representatives of the great powers are trying to find a solution to the problem of what to do with Germany. They are confronted with a dilemma. On the one hand all of Europe and the Near East is in need of the goods which Germany could produce. Without that production, the rehabilitation of those areas will be slow indeed. But, on the other hand, the great powers fear that if the industrial capacity of Germany is turned loose to produce at a maximum, for a third time, a militant Germany will emerge to attack the world.

Herbert Hoover in his recent report to the President effectively presented the case against the present policy in Germany. Under this so-called level-of-industry policy the industrial capacity of Germany is arbitrarily reduced. For example, with a capacity of 19,000,000 tons of steel she can produce 6,000,000 tons and the production of basic chemicals such as nitrogen, which can be used for fertilizer, is reduced to 40 per cent of prewar production.

Although we in the United States are short of these same articles we are forced to send to Germany huge supplies at the cost of the American taxpayer. In addition, the other countries of Europe are desperately in need of these articles and are unable to purchase them anywhere.

This inability to get fertilizer for food production and steel for reconstruction of worn-out factories is prolonging the chaotic conditions in Europe which is, I believe, one of the principal causes for the spread of communism. In desperation the people bargain away their freedom for a promise of food and employment. They do not know the promise is false, but they do know their hunger and idleness are real.

In the Near East we see another facet of the same problem. If we undertake the support of Greece and Turkey, how and when can we stop the lavish outpouring of our resources? We are not likely to stop it until those countries are self-supporting economically, which, in turn, will give them political stability. Before the war Turkey sold one-half, and Greece one-third, of her exports to Germany. Without the restoration of that market, it is improbable that either country can prosper and thereby relieve us of our burden.

FEDERATED EUROPE A WAY OUT OF DILEMMA

The way out of the dilemma in which we find ourselves is the creation of a United States of Europe. There are 14 states which are not yet dominated by the Communists. These states have a population of nearly 300,000,000 persons. If Germany should be reorganized as a federation of states, as she was before Bismarck, and these states then merged into a United States of Europe with 300,000,000 people, there would be little danger of a revival of German militarism and slight chance of her dominating the federation.

With the federalization of Europe would come freedom of commerce, the free movement of persons, a common currency, and efficient transportation. The result would be a rising standard of living and a lowering of the political rivalries and economic tensions which generate war.

If we grant that a United States of Europe is the answer to our dilemma we may then ask ourselves what are the prospects for its creation? It is to be expected that Russia will as usual oppose it. Such a federation would not threaten Russia, but it would, with the return of decent living conditions, put an end to the spread of communism in Europe. Russia's opposition, exerted through her influence on the Communist parties, especially in France, is the greatest obstacle to the achievement of federation. But even in France the Communists control less than 30 percent of the votes, and, therefore, with strong leadership in the democratic parties of France, she could take the lead in promoting the union. Although France is torn by internal dissension, I cannot believe that she is through as a great nation or that she will not develop again statesmen of the caliber of Jaurés or Briand, who advocated so eloquently the creation of a United States of Europe. If France should take the lead and is supported by this country and England, I think a federation could be created in spite of the possible opposition of Russia.

Russia has since the days of Tehran worked overtime the theme of her fear of aggression and concern for her own security.

But during the intervening years we have seen that by a combination of the Red army and the infiltration of her secret police she has acquired the domination of many smaller nations with more than 60 millions of people. She has professed a faith in the United Nations, but her actions in and out of that organization belie that profession. Her expansion already is so great that she threatens the power to survive of all other independent nations, except our own. If the United Nations is to have a chance to succeed as a voluntary union of peoples, it is imperative that, pending the realization of its objective, the existing power relationships among the great nations be preserved. This country cannot tolerate the expansion of Russia to the point where she controls, directly or indirectly, all the resources and manpower of Europe, Asia, and Africa. If that should come about no longer would there be an opportunity for a voluntary association of nations. The issue would certainly be decided by war. In seeking to maintain the integrity of Europe by federation, we would not threaten Russia's security, but we would make a substantial contribution to the ultimate success of the United Nations and incidentally assist Russia to develop the self-restraint which is so patently lacking in her present philosophy of government.

In any case, I think it has now become clear to us that Russia does not intend, if she can help it, to permit the rehabilitation of any European country, except under the aegis of the Communist party. I do not think she will go to war in the near future to enforce this policy, but she is prepared to bring the full force of her economic and propaganda power to bear on the issue.

Unless we are willing to write off Europe as a friend and supporter of democratic principles, it behooves us to use our economic power, and our talents of persuasion, to induce Europeans to create a free and democratic federation of states. Under such a union the world may again see a renaissance of culture, of freedom and of spiritual power which once before led the world out of the tyranny of the Dark Ages.

Socialism in France and England

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and timely address delivered in Los Angeles, Calif., on March 21, 1947, by Col. Robert R. McCormick.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

As far back as I can remember, France was considered the most conservative of all countries. It was thought that her revolutions were past; the royalist and imperial parties merely historic organizations; the republic so strong that it could permit the use of titles as names, conferring no political or economic privileges; the land under the Code Napoleon widely held; most business small and remaining in the family from generation to generation; France was the leading nation in art, and was high in science. Her industries were in the luxury trades. She pioneered the high priced automobile to be run on the military roads, and after the Wrights invented the airplane, France developed it as an expensive sport. Although the people were freed, almost nothing was done by them in such things as plumbing, electrity, and household gadgets to improve their living conditions. They kept their earnings in cash or government bonds which became worthless with inflation.

Defeated in all of her grandiose conquests, France had learned to be self-supporting and was carrying on an unprofitable colonial policy of military conquest at high cost, as it was explained to me, to regain her military self-respect.

One thing we did not know was that her bureaucracy remained through all revolutions, continued to grow in size and to enjoy privileges over citizens not existent in America or England, privileges called the "administrative law." It was so harsh with dissidents that only men of revolutionary determination dared dissent.

I was in France in 1915 as a correspondent and as a soldier in 1917 and 1918. I billeted in French houses and served with French troops. If confirmation of the French reputation for solidity and conservatism had been needed, I would have furnished it.

We started a newspaper for the Army in 1917. We continued it for 10 years after the war, during every one of which I spent considerable time in France. Year by year I could see the growing degeneration of the French people. Wartime rent controls were continued, demoralizing tenants and preventing new building. The enormous bureaucracy was not liquidated. France continued conscription and a large army when it was not needed, and which had become obsolete and mutinous when it was needed. The victorious generals of 1918 were perniciously active to retain their war rank. Communism grew to the point where workmen would not produce weapons to be used against Hitler, then allied with Stalin.

Rescued by American arms, France has confiscated almost all wealth-producing properties, is operating them badly or not at all. The country is completely bankrupt

financially and morally, with no gleam of hope for recovery.

England, on the contrary, was, as Lord Curzon put it, a proud empire. Her wars of conquest had all been successful except our Revolutionary War. As much by diplomacy as by battle, she subdued her rivals—Spain, Holland, France, Russia, and Germany.

Britannia ruled the waves. Under this protection, beginning in the reign of Elizabeth, there came a great outpouring of chartered companies and other organizations for trade and conquest. Some of them developed into colonies, of which only the American colonies achieved independence. The India company, as we know, acquired a substantial part of India. Cecil Rhodes brought on the South African war and the conquest of South Africa. Other companies obtained extraterritoriality in China and in Turkey.

The industrial revolution begun in England gave that country a head start. The presence of coal, iron, and tin on the islands in close proximity furnished natural advantages, in trading with countries strong enough to resist aggression but backward in commerce and industry.

During the life of the Long Parliament and the Cromwell dictatorship, merchants controlled the government and greatly expanded British trade. When the Stuarts returned to power and afterward when the aristocracy took over under William and Mary, trade was again given every consideration to keep the middle class contented. With complete command of the sea, other nations could only trade by British sufferance and with some coercion were required to patronize British banks and British insurance. Britain could import and export whatever she wanted to.

The principle that competition is the life of trade did not find its way into British jurisprudence. No laws preventing restraint of trade or preventing railroad rebates were enacted. Special privilege and monopolies were a definite part of government policy. In consequence the nation became immensely rich with the riches in few hands.

In 1873, Joseph Medill, writing from England, said:

"Nothwithstanding the enormous, unprecedented riches of Great Britain, the distribution of the wealth is fearfully far from general or equal. There are now 1,000,000 poorhouse paupers in England, whose condition is depicted by Dickens. They literally enough constitute the 'undercrust' of English society. The 'upper-crust' number, perhaps, a hundred thousand families, or half as many persons as the paupers. One-third of these are born nobles, and own all the land; the other two-thirds were generally born rich, and own most of the residue of the property, in the form of buildings, improvements, ships, and railroads, stocks and bonds, goods and chattels, moneys and credits of all kinds. Between those extremes of absolute destitution and over-gorged affluence come the great toiling millions, who produced all the wealth and development. They live, as a whole, comfortably; but they have little or no accumulations, but, while self-supporting, subsist from hand to mouth as artisans, or on the product of each year's crops as farmers. They own no land, and few have a house they can call their own. They are all tenants, and the greater part laborers, depending on their weekly wages for means of existence. The tenant farmers number 500,000 families, who, by almost starving a million of hirelings, manage to pay their enormous rents and save a little money. Thus Great Britain is a land of extremes in everything. The British nation are the most industrious, frugal, enterprising, sagacious, pugnacious people on the face of the earth. They have the richest men in the world, and the largest number of paupers, and the greatest percent of landless persons."

It was the laws of primogeniture and entail that kept property in few hands.

As protection to themselves, the aristocrats allowed a few successful and rich people from the middle class to be elevated to lower grades of the nobility, up which their decendants could climb through the generations. Thus it became the objective of businessmen to seek success, in order to obtain titles and then retire from active business. As success was never an end in itself, there was little incentive to continue the improvement of an institution. Sons did not take pride in carrying on and enlarging the businesses of their fathers and grandfathers as with us. It was enough for the ennobled owner to ride along on the old momentum and avoid competition by the cartel system and by keeping wages at a minimum.

Life, with the court, the royal enclosure, fox hunting, polo, $1,500 hand-made shotguns for the exclusive use of landowners, was organized for the rich. Commissions in army and navy and livings in the church were confined to the ruling class.

Neglected and ignored, condemned to belong to the lower classes, the workmen became sullen. They refused to accept labor-saving machinery and produced less per man than any other workmen in the world. So strongly established was British control of world trade, however, that it prevailed until the blow of war set it on the road to ruin.

The adoption of free trade in 1853 deprived the treasury of much revenue. The owners of the distilleries and breweries, now in the aristocracy, were able to prevent substantial excise taxes. The system of income taxes was devised to maintain the Government. It operated to destroy the Empire.

Imperialism, the doctrine that wars were fought to make money for the insiders, was widely held in the early years of this century. When the English found themselves at war in 1914, because of a secret treaty, many of them thought that it was an imperial war. They failed to enlist, they went on strikes. As one means to conciliate public opinion heavy corporation and income taxes were imposed. So heavy were they and so small was the output of English labor that England, the great trading and manufacturing country, could no longer compete in the world markets. Foreign investments made in previous years were sold to finance the war so that that form of income disappeared. While the war did not come to the island in appreciable extent, considerable wealth in shipping was lost. Drained of capital by these losses, which could not be made good because of overtaxation, the British could not replace obsolete equipment or start any new industries. In 1932 the cartel system, the German and Italian forerunners of fascism, was adopted. Under this system each industry undertook to regulate the quality, quantity, and price of the output of each of its members. In the case of the E. B. B. W. Vale Steel Co., that company borrowed money from the Bank of England to build a steel mill on the American pattern. The bank named the competitors of the bank to a majority of the places on the board and they held down the output of the only modern steel factory in England.

The aristocratic system had run its course. A revolutionary election put in the present Socialist government, which is confiscating all property. An interesting side light on this Government is that half of its members are from the aristocracy. The aristocracy cannot demean themselves by entering private trade, but they may operate business conducted by the Government without loss of face, but they don't know how to. The character of the government is illustrated by the following:

A farmer named George Milton Odlum owned a model farm in Wiltshire, stocked with an exceptional herd of Friesian cattle. From the outbreak of the war in 1939 Odlum was bedeviled by Government regulations, promulgated by the Ministry of Agriculture under R. S. Hudson and applied by the county war agricultural committee. By April 1942 when he had been forced by the committee to part with three-quarters of his herd, Odlum was thoroughly discouraged. At this time, opportunely, a buyer for the farm turned up.

This was none other than Hudson, the minister of agriculture. Odlum named his price for the farm (about $240,000) and Hudson closed the deal with him. On that very same day, a member of the local war agricultural committee directed Odlum to restock his farm with cattle. He was instructed to buy enough to fill his No. 1 shed which would hold 100 cows. Odlum protested the inconsistency of being forced to sell his quality herd and then being directed to restock mongrel cows which might be diseased. Apparently, however, he complied before Hudson took over the farm 3 months later.

Odlum at no time had recourse under the law. His life was made miserable by the application of the ministry's orders by Hudson's local bureaucrats. In addition, the local committee had power to seize his farm if charges of inefficiency could be proved to the satisfaction of the minister—Hudson himself. He was muscled out of his farm by a cabinet officer coveting that particular farm of all the farms in England.

The scandal finally reached the courts through an action brought by Odlum for libel against one of Hudson's agents. By the time the case was heard, Hudson had been in possession of the farm for 4 years and the libel itself was 3 years old. The hearing developed the facts as to discriminatory treatment against Odlum and preferential treatment accorded Hudson by the minister's own appointed bureaucrats. Justice Atkinson, who rendered judgment for Odlum, expressed amazement when it emerged during the hearing that the ministry of agriculture had undertaken to indemnify the defendant agent of the ministry.

"Why the country should be made to pay the damages," he said, "I do not know."

How terrifying is the government is shown by the fact that the London newspapers did not cover the trial, except for brief stories about the judgment.

The country is bankrupt and only subsisting on American charity.

Having traced the course of France and England into socialism, tending to communism, let us see whether the same movement under way in the United States can be arrested. I hope so.

America began departing from European ways with the colonial settlements. People left Europe to get away from Europe. This movement was greatly accelerated by the Restoration. While in England the Restoration put a graded society in charge, with its doctrines of privilege and exploitation, which, as we have seen, was only ended by the recent political revolution; in America the Puritan movement continued to grow. Excesses in this country have been excesses of puritanism, not of aristocracy.

Virginia, the most British of the Colonies, developed the republican theory to a greater extent than any of the other colonies and led all the others in the revolution and separation. The rights of man were adopted as the principles of the country. The privilege of the established church was abolished. Belief in a certain form of government was no longer prescribed by religion. Entails and primogeniture were done away with. Property was divided every generation either by will or relationship. Every man was given an equal chance in life.

During the colonial period, when enterprise was held down, development was all in

the political field. With the coming of freedom, economic improvements began almost instantly. What kinds of improvements were they? Improvements not for the few, but for the many. First came the cotton gin, removing the toil of making cotton. Then the reaper, saving the men and women on the farm from the back-breaking toil of harvesting. The steel plow opened up the prairies to ownership.

The railroads were conceived to benefit the seaboard cities and, of course, to earn profits, but they brought the farmers' products to the market and immigrants to the land. They supplanted the immigrants' wagons and the stage coach. We who accept them as a matter of course should read Mark Twain's panageric over this marvelous invention less than a century ago. Plumbing, almost unknown abroad, is almost universal here. The stove, converted into the furnace, has broken the back of winter for everyone. The telephone is an apparent luxury. A hundred million phone calls a day attest its wide use.

Petroleum was developed to put a lamp on every table, and when the lamp gave way to the superior electric-light bulb, petroleum remained to drive the automobiles, and what automobiles! Not Rolls Royces, Mercedes, Panhards, at great price, but Fords, Plymouths, and Pontiacs, reached by the purse of almost everyone. They brought in concrete roads for everyone to enjoy, not for cannon to pound over.

With small beginnings, the producers of these popular articles had to amass capital to enable them to meet the demand for their product. It is well known that Henry Ford began with subscriptions of $28,000. The last time I was here in 1933 Harry Chandler told me how he and a number of other forward-looking Los Angeles men endorsed Donold Douglas' note for $10,000 each to start his modest factory. The next day I went to the factory and saw the first DC2 under construction. These examples are typical of all the industrial developments that have created our civilization. Very few men produced them all. In addition to the leaders I have mentioned, you easily think of Edison and Westinghouse, and of Wright, but do you know of Igor Sikorski? You may not know who Roebling was. You have never heard of Curtis, who made newsprint possible. Do you remember Selden, inventor of the automobile, or Hughes, of the electric stove? Pullman, who did so much to make Chicago and modern travel, is only remembered for the obstinacy he developed in old age. Supply all the names you can think of. How many are there? The men who created our industrial civilization, our American way of life, are numbered in the hundreds—not even the thousands. They could do it because they had been freed from aristocratic suppression and had not run into demagogic suppression.

The accumulations necessary to production inevitably made their possessors rich, many times richer than the bulk of the people, and made them a cause for envy, upon which demagogs like the Roosevelts and Huey Longs played for their political gain. Slogans were invented to outcry reason. Taxation according to ability to pay developed into confiscation. Share the wealth turned out to be share the poverty.

All advance, as I have said, is the creation of few men, inspired in their respective fields. All the rest benefit from their genius. The car builder benefits me far more than I him. Years ago I used to make frequent trips to Buffalo and put up at its poor hotels. One day I found that a first-class Statler hotel had been erected. The last thing in the world I would care to do would be to collect a string of hotels, but I am more the beneficiary of the man who does than he is.

Now we have come to the point where there cannot be any more such men, there cannot be any more Ford factories or Douglas airplane works or Statler hotels. From now on the men who have ideas for the betterment of human life will not be able to put them into force, for they will not be allowed to accumulate the money necessary to production. There will be no new industries. There will be no new instruments.

Inevitably existing ones will gradually die off with nothing to take their place. That is the road down which we are traveling. How fast I am not prepared to say.

Both the French and English civilizations went to pieces in about 30 years. Yet without the causes which brought about their decline we may proceed just as fast to our doom—or not necessarily so. The evils which were so apparent in them have not existed here. If men of vision will have the courage to explain and expound, we may get a change in the tax laws which, in the present state of public ignorance, Congressmen are not courageous enough to write.

Isn't this modern and progressive community the place to start such education?

The Lilienthal Nomination

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, April 11 (legislative day of Monday, March 24), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Lilienthal Debate Ends," from the Philadelphia Inquirer of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LILIENTHAL DEBATE ENDS

After many weeks of stormy debate, the Senate's confirmation of David E. Lilienthal as Chairman of the Atomic Energy Commission came as an anticlimax.

The Senators had talked themselves out on the issue. And for all practical purposes decision had been reached a week earlier when Senator BRICKER'S motion to return the nominations to committee indefinitely was rejected by a 14-vote margin.

The opposition to Lilienthal, headed by the aged feudist from Tennessee, Senator MCKELLAR, was distinguished by its ineptness as much as by its bitterness. It failed to produce one sound reason why the appointment should be overturned.

It is true that President Truman could have made a much less controversial choice for this important post. Because of grudges held against Lilienthal since his TVA days, opposition to his confirmation was certain.

Once the nomination was made, however, Lilienthal was entitled to confirmation unless his incompetence or unworthiness for the job was demonstrated. But the only things brought against him were irrelevancies.

Now that he and his associates on the Commission can go ahead with their duties after weeks of precious time lost in the Senate, they should be given every possible support. Development of atomic energy has taken on such an importance to this country as to baffle the imagination. We cannot afford to see it hampered by petty political sniping.

Need for Aviation Expansion

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. KEATING. Mr. Speaker, my attention has been called to an address delivered by our distinguished colleague from Connecticut [Mr. LODGE]. Although it embraces some points on which I have not yet completed my study so as to take a final position, it bespeaks such sincerity and loftiness of motive that I feel we can all profit by a reading of the able gentleman's remarks, which follow:

ADDRESS OF HON. JOHN DAVIS LODGE AT THE CONNECTICUT AIR POWER CONFERENCE IN BUSHNELL MEMORIAL AUDITORIUM, HARTFORD, CONN., APRIL 13, 1947

Members of the American Legion, distinguished guests, ladies, and gentlemen, I am glad to be with you here tonight in the great capital city of Hartford. I am honored to be on the same platform with such distinguished speakers. I regard it as a rare privilege to be asked to participate in the activities of the Connecticut Air Power Conference.

Our gathering here tonight demonstrates our deep and abiding interest in air power. But it has another more sinister, more ominous meaning. It means that we are worried. We are worried because our aviation which played a decisive part in the winning of World War II is now but a tattered remnant of its former self. We are worried because we know that aviation is constantly growing and changing and that, therefore, we should be exerting constantly greater efforts to perfect the great flying machines which we already have and to create new types of aircraft. We are worried because less than 2 years after the end of the war, our military aviation is falling behind not only that of Russia but also that of Britain.

The eminent aviation experts on this platform are far more competent than I to discuss the present predicament in which American military, naval, and industrial aviation finds itself. I do not intend to talk about the technical details of aviation. I shall deal with it rather in terms of our foreign relations. But I cannot refrain from saying that the rapid, not to say headlong, deterioration of our air power is a cause for serious concern. It is time that we brought this vital element in our national defense in line with our international commitments. Our air power must be a reflection of the turbulent crisis in which we are called upon to play a leading part.

Let us briefly examine some of the basic factors in the air picture as it exists today in America.

First, it is essential that we have an alert and intensive program of research and development. At the end of World War II we were, I am reliably informed, five to ten years behind the Germans in many categories of air power. This was particularly true with respect to jet propulsion, advanced air dynamics, and the development of guided missiles. In air armament and aerial torpedoes even the Japanese were ahead of America and the Japanese received their knowledge from the Germans. Today we are even further behind than at the close of the war. Russia captured from Germany many valuable installations, the invaluable supersonic wind tunnels and most of the other research and laboratory equipment. In addition, the Russians captured German records and German scientists. I am in-

formed that these German scientists are treated with the greatest hospitality and care by the Russians. If the Russians, whose standard of living ranks twenty-sixth in the world and who are suffering from the devastation of war, can afford an extended program of research and development surely we with the highest standard of living in the world, we who have suffered no devastation, can afford to do far more than we are doing in this field. In any event, I conceive it to be a matter of imperative necessity.

Secondly, it is vital that we have a readily expansible aviation industry. You have been told by the Assistant Secretary of the Navy for Air about the Air Coordinating Committee's recommendations. The minimum yearly production which would enable the aviation industry to expand to war mobilization needs was fixed at 3,400 planes weighing 37,000,000 air frame pounds. As a matter of fact, this was the minimum estimate for a peaceful partially disarmed world. According to General Echols, former Assistant Chief of Air Staff, Matériel, and Services, a total of 1,330 military planes and 467 transports were produced in 1946. This "was worse than in peacetime 1939" when we built 2,500 aircraft. He said: "If something isn't done about the situation, and quickly, we are going to be right back to the point we reached after World War I when we had only three manufacturers in the business." He goes on to estimate that we are now turning out approximately 400 engines a month, half of which are produced by a single company. He points out also that most of our heavy aircraft industry is operating in the red and that if this continues there is great danger that little will be left of its productive capacity. Our skilled aviation workers will be dispersed and we shall lose the nucleus of industrial organization and expansion which we built up during the war. This is a matter which concerns the military, labor, and industry. Most of all, it concerns the American people.

I am not suggesting that, now that the war is over, we should maintain fifty or one hundred thousand planes. Indeed, if other nations are ahead of us merely in quantity there is perhaps not too much to complain about. We know that planes become obsolete very quickly. But it is vital that we should achieve predominance in the quality of our planes and in the ability to convert rapidly and readily to the production of new aircraft of every kind.

The gravity of this situation can hardly be overestimated. I feel sure that when it is exposed to the pitiless rays of publicity it will come as a shock to most Americans. Yet it is but a symptom of our reluctance to recognize the world crisis in the light of its grim actualities. Day by day almost imperceptibly, we are sliding back into our prewar condition. Now, of course, there is no reason for us to devote such a large part of our national effort to the maintenance of armed forces as we did during the war. It is important that many expenses of Government be curtailed, that payments be made on the national debt in order to diminish inflationary pressure, and that people be granted some relief from burdensome income taxes. This is important not only as a stimulus to expanding production but as an aid to morale. We must cut down taxes on ambition—curbs on incentives—which place a premium on idleness rather than on productive work, which encourage reliance on government rather than self-reliance. The income-tax reduction bill, already passed by the House, attempts to do this also by providing substantial additional relief for 30,000,000 people in the low-income group.

But it would be suicidal folly for us to pretend that because World War II is over, we are not living in a period of conflict. We know better than that and we shall ignore the relentless realities of this troubled planet at our peril.

It seems unjust that we who have so recently emerged from a titanic struggle should so soon again be compelled to face these inexorable facts. In spite of the blessings with which we are surrounded in our beloved America, we are a tragic generation. The countless felicities which abound in our land make it hard for us to turn our faces toward the bitter hatreds, the rivalries, the despair and cynicism, and the tangled web of human relations of a prostrate and ravaged Europe. We have won two world wars but we have not yet gained a pattern of international relations which enables us to deal in words rather than in power. Until this has come to pass, it is essential that we think in terms of our national self-interest not only for the preservation of America but because a vigorous America is the best hope of the world. In 1778 Thomas Paine said, "The cause of America is, in large measure, the cause of all mankind." This is as wonderfully true today as it was then. Accordingly, while it behooves us to continue our efforts to achieve peace through the medium of the United Nations, in the creation of which our country took the lead, it is urgent that we understand that the United Nations is at this point in its development powerless to deal with many of the more critical and explosive issues which beset this tired world.

It is in this light that we should regard the proposed aid to Greece and Turkey. If we had confronted the United Nations with this problem, we would have asked it to do a thing for which it has neither the resources nor the power. This might have well ruined the United Nations before it had a chance to gather strength.

The proposed aid to Greece and Turkey is not a relief measure. It is a strategical measure which may be regarded as directed toward the accomplishment of the following principal objectives:

1. To protect Greece and Turkey, at their request, from coercive foreign pressures and thus allow them to evolve under their own impetus toward a more abundant life.

2. The safeguarding of our own national interest and national security by our efforts to contain the totalitarian forces which, in spite of the war's end, are still very much on the march.

3. The maintenance of world peace, not by the policy of abject appeasement, which failed so woefully at Munich in 1938, but by a policy predicated on the thought of Abraham Lincoln that we should be at once "compromising and stern." Compromising in order to reach a modus vivendi and stern in our efforts to safeguard the principles of the Atlantic Charter, which were agreed to by us and our allies.

4. To act in defense of the United Nations Charter by giving effect to the policies set forth in its preamble until the United Nations shall have gained sufficient cohesive strength to act on its own.

There can be no doubt in the mind of a dispassionate observer that the United States has no intention of embarking on a course of world conquest. We want to conquer war. But we still feel that the slogan "peace at any price" is as obsolete as the horse-drawn street car. Americans have never been the self-indulgent pleasure-loving pacifists they were thought to be by our enemies in World War II. We gave these traducers of our national character the lie on every battlefield of the world. There are things worse than war and one of those things is abject surrender to the forces of darkness, despotism and reaction, which as always in the past, constitute a threat to the forces of light and freedom and brotherhood on which our great Nation was founded. Yes; there are things worse than war, horrible though war is. Surely we are not so tired that we are ready to deliver ourselves and our friends into slavery. Surely having fought through World War II, at a tragic cost in human lives and a gigantic cost in National treasure, we are not now prepared to sit on the side lines while the beacon light of freedom flickers and dies. Certainly we, the inheritors of the great traditions which launched America on her dynamic adventure, will not foreclose a free future for our children by a loss of faith at this perilous time. Surely we realize that a passion for peace will not protect us from war. Our readiness to fight for our faith will be a greater deterrent of war than our willingness to surrender now what we fought the war to preserve.

This is indeed a sickening time for us who have so recently emerged from the tragedy and devastation of war. But it is also a challenge. It is a challenge to accept the leadership, which is being thrust into our hands as a result of the determining part we played in the war. It is a challenge to bring our moral force in line with our industrial power. It is a challenge to every man and woman in America to discharge their peacetime responsibilities as citizens in order that we shall not at some future date be called upon to perform our relentless duty in another more formidable war. World War I and II were caused, in large part, by German miscalculation as to what America might do. Let there be no miscalculation now. Let it be resoundingly clear that there are certain principles from which we will not depart; that there are certain ideals which we regard as more precious than life; that we believe mightily in our own faith and in the timelessness of the great truths on which our country was founded.

During the recent war an old poem was, from time to time, revived as Americans went off to battle:

"Though reason chafe and love repine,
There came a voice without reply,
'Tis man's perdition to be safe,
When for the truth he ought to die."

Ladies and gentlemen, it is vital, nay it is urgent, that we who survive live according to these truths, in order that future generations of Americans shall not perish in an atomic apocalypse born of our own weakness. If we here in this blessed land can give a vigorous demonstration that we believe deeply in the dignity of the individual, that we are as alert to assume our obligations as we are to exercise our rights, and that we value freedom more than security then I say to you, our light will shine forth for all the world to see. Then we shall have achieved the only real, the only worthy security which man can achieve, the security which comes from the knowledge that our strength, a strength based on a dynamic faith and buttressed by massive power will be exercised in the cause of peace and freedom.

Congress Slow? That's Good!

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1947

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following timely article appearing in the April 23 issue of Pathfinder magazine, written by Wheeler McMillen, able and well-respected editorial director of that excellent publication:

CONGRESS SLOW? THAT'S GOOD!

"He has the slows," President Lincoln once said of General McClellan. People are making the same complaint about Congress.

"You fellows were elected to change things. We sent you down there to economize, cut taxes, fix up the labor laws, and straighten the country out. For nearly 3 months you have been talking. How about some 'acts'?"

In language more or less polite than that, citizens are repeating the complaint. The first 3 months have, in fact, seen few major laws enacted.

The "slowness" of Congress is good rather than bad. The country ought to congratulate Congress upon taking its time.

True, the problems are great and many are urgent. They require, because they are great and urgent, the ablest solutions man can devise.

Thorough study by individual Members, exhaustive inquiry and discussion in committees, and ample debate on the House and Senate floors are essential to wise lawmaking. Minds that clash have to find their way to agreement. The effect of every word of law has to be weighed.

Otherwise the country will get hasty legislation. It may be recalled that 17 acts hurriedly passed in 1933-36 were carried to the Supreme Court. Fourteen of these were declared unconstitutional. One was that masterpiece of hurry-up, the NRA. Presented on May 18, it was reported to the House May 23 and enacted May 26.

This Eightieth Congress faced several time-using hurdles on the opening day. The Reorganization Act imposed numerous changes in set-up and procedure. It took time to work those out. A new majority, long out of power, had to organize and prepare for work. The Bilbo episode delayed the Senate.

Impatient citizens do not always allow for the fact that the Congress majority holds views that the President, on partisan lines, may choose to oppose. While a technical majority prevails, and may pass a bill, the President can exercise his veto. Then two-thirds must vote to support the bill or it is lost.

For that reason alone the Republican majority seeks to bring forth legislation sound enough and fair enough to attract support from Democrats in the event of a veto. Otherwise, even on such vital matters as tax, economy, and labor measures the Nation might get none of the changes the election called for.

Also, fortunately, this country supports no dictatorships, not even by a majority. Several million Americans did not vote for a change. The representation of minorities is no less important in the American system than is the rule by majority.

Senator ED THYE, of Minnesota, has reminded critics of the new Congress that building a house appears to be a slow and disorderly procedure. The materials have to be assembled, the basement dug, and foundations laid. At that point the owner who looks at his crowded and littered property wonders what sort of mess he has on his hands. Eventually things begin to take shape. But it may be quite a while before the lawn can be seeded.

So, says Mr. THYE, the materials and plans now being assembled on the legislative lot will in proper time become an orderly structure. His comparison is a good one.

What Americans want we usually think we want right now. Nevertheless we would rather have a competent, high-quality job done than a quick and careless one.

Decisions made by this Congress will, in some cases, affect history for generations. Most of them are too important to too many people to be made hastily.

Let Congress take its time. Let the Members debate each issue fully. Enough human errors will be made at best.

And even if every law passed proves to be the top of perfection, society will have a few ills left that Government cannot cure.

Letter to Hon. Wright Patman, of Texas

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD a copy of a letter which pays a fine tribute to Representative WRIGHT PATMAN, our colleague from Texas. The letter was written to Representative PATMAN by Hon. Carl Estes, a leading Texas publisher, of Longview, Tex.

The letter follows:

DALLAS, TEX., *April 11, 1947.*

Hon. WRIGHT PATMAN,
Member of Congress from Texas,
Washington, D. C.

DEAR WRIGHT: You have for years done more for the people in your district than any other man in the Congress of the United States I have ever known—either Democrat or Republican.

For years you have done far more than anyone I know for both veterans of World Wars I and II.

Ever since you left the pine-clad red hills of our beloved east Texas over there around Hughes Springs and went to the marble Halls of Congress, you have constantly been the watchman in the tower for all east Texas—never passing up an opportunity to help us all—rich and poor, white and colored union or nonunion, New Dealers and antis (like me).

Your latest successful fight against the big United States Steel Trust, in which you will make possible more jobs for the people of east Texas, more pay rolls for our merchants, and more development of another of our great natural resources—iron ore—deserves the everlasting gratitude of every living soul in not only east Texas but the entire State as well, and I just wanted to write you and tell you how grateful to you I am for your Lone Star steel battle.

You have done the most remarkable job of any man in Congress in our generation. I have seen you spend your own money and even the time after normal working hours in this fight, just as you fought for housing for the veterans of the entire Nation. Truly Texas and the Nation are grateful and appreciative of what you are doing for all of us.

I am taking the liberty of sending a copy of this letter to my own Congressman, the Honorable LINDLEY BECKWORTH, with a request that he have same printed in the CONGRESSIONAL RECORD.

Sincerely yours,

CARL L. ESTES,
President, Estes Publications.

Our National Prosperity Is Dependent on Our Farm Income

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. JENSEN. Mr. Speaker, on April 10, my good friend and colleague, the gentleman from Minnesota, Congressman CARL ANDERSEN, inserted a statement in the CONGRESSIONAL RECORD in regard to the apparent drive to bring about lower prices for commodities. In this statement he pointed out that for 25 years we have had approximately $7 of national income for each $1 of gross farm income.

A man from my State, Carl H. Wilken, a common-sense economic analyst for the Raw Materials National Council of Sioux City, Iowa, has carried on 10 years of research work in connection with this factual relationship. Ever since I have been a Member of Congress he has been calling the attention of congressional committees to its importance.

In 1944, the Country Gentleman, after a thorough check of Mr. Wilken's analysis, published an article in their December issue of that year entitled "The Key to Prosperity." I have checked this relationship of farm income and national income. It makes sense to me, and I feel that Mr. Wilken has performed a great service for the American people if we will but act on his suggestions.

In my opinion, we as Members of Congress have been negligent, in not using it as a yardstick for legislation. The ratio has never been refuted by any economist or anyone else and has remained unchanged in periods of prosperity, depression, war, and even in spite of legislation has been passed and made law.

It makes a science of our economy instead of a lot of confused theories. The need of such a yardstick is apparent from the underestimation of our national income by our Government experts in 1946 of approximately $25,000,000,000. This error, for example, resulted in approximately $5,000,000,000 more of revenue for the Treasury than they expected.

These same experts are now sending out propaganda that prices must come down. They are flirting with disaster for the Nation. The ratio, I have mentioned proves that a drop of 10 percent in our price level for agricultural products sets the stage for a 10-percent loss in national income. With $260,000,000,000 of national debt and a minimum Federal expense load of at least $30,000,000,000 annually, we need to have what they term as high farm prices if we are to survive as a Nation.

A few short years ago, in 1940, we had a national income of approximately $77,000,000,000 or only twice that of the fiscal year 1948 budget the President has asked for. At that time we had a national deficit and 8,000,000 unemployed because there was not enough income created by our farm production. Now when we have for the first time a balanced budget, these theorists want to reduce prices and destroy the income for national solvency.

We have made that error in the past. The cry "we must come back to normalcy" in 1920 precipitated the depression that closed many of our banks and forced many individuals into bankruptcy. In 1929 the world was forced into another era of low prices for farm products. This brought on the socialized planned

economy here and the growth of similar ideologies all over the world.

At the present time the world is threatened with communism. The cure for communism is prosperity and there is no other. The formula of $1 of gross farm income which creates $7 of national income is the yardstick which Mr. Wilken has uncovered in his research work and given to us for guidance.

In the period 1930–41 the United States had farm prices at a level which forced agriculture to lose a total of $67,500,000,000. The seven times turn of farm income forced the Nation to suffer a loss of $473,000,000,000 in 12 years of peacetime economy. By permitting farm prices to drop back to 1940 levels the period which the Department of Agriculture usually discusses could mean an annual loss in national income up to $90,000,000,000. It would mean disaster. The Republican Party must not and will not let it happen regardless of pressure from any source.

I have had Mr. Wilken tabulate the expenditures for food, clothing, housing, and household operation the necessary items of living costs. The figures cover the period 1929–45 and they prove to my mind the complete accuracy of the 1–7 formula. As farm prices increase the per capita income increases and the cost of living does not increase, on the basis of per capita income created. As farm prices drop the percentage spent from the national income for the four necessary items—food, clothing, housing, and household operation—increases and as prices go higher the percentage spent for costs of living decreases. For example in 1932 the year of low farm prices the American public had to spend 85 percent of its income for the items I have mentioned while in 1942 with the same price level as in 1929 they spent only 49.2 percent.

This may all seem like a paradox and it is just the reverse of much of the economic thinking. To prove it let us apply common sense. Our Nation today has full employment and we have now the greatest per capita consumption of food and clothing in the history of the Nation. Given the opportunity and a continuance of our present prices we will build more new homes, more new cars, and so forth, in the next 10 years than any period in the history of the United States. Yes, we will even have the income to help other nations less fortunate. But should this cry for lower prices result in a loss of income, then we can again soon head into another depression with its unemployment and economic chaos.

I feel that it is time for us to throw off this confusion and develop a program under which we can assure our producers in the mine, in the factory, and on the farm that they will receive a stable and lasting price for their production and that we intend to do away with any and all war powers which give any department of Government the power to bring about price levels which mean poverty to our people. The free movement of trade at a proper price level must be maintained so that production will create prosperity.

Year	Expenditures for food	National income	Percent of national income

President Asks for Another Round of Wage Increases

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1947

Mr. SHAFER. President Harry S. Truman's remarks to reporters about the current high price level were interpreted generally by observers in Washington as a rather flagrant invitation for labor union leaders to seek another round of wage increases.

More thoughtful labor leaders have been holding the line against the demagoguery of a few radical labor union men who wanted to press for much higher increases this year. Now, the President has played into the hands of the radical element. Any wave of strikes, thus, can be traced to the White House itself.

Mr. Truman, like his immediate predecessor as President, seems to have developed a very convenient memory. His economic advisers are not ignorant men, but they, too, seem to overlook the same fact as they call on business and industry to lower prices and subtly blame the Republicans for helping keep up the high prices.

Certain fundamental facts of fiscal life may as well be faced by the American people. Thus facts, deliberately overlooked by Democratic propagandists generally, are:

First. This Nation has the largest public debt of any nation in the world. This debt is 10 times as high as the debt following World War I. It is the Democratic legacy to the people—and it alone would assure high prices for years to come.

Second. Government expenditures, because of administration pressure, remain higher than ever in history. Despite the cuts that will be made by Republicans—over the vehement opposition of all New Dealers—Government expenditures will remain from two to three times higher than in the prewar period.

Third. The Democratic administration has embarked on a policy of feeding overseas panhandlers who pretend to be against communism. Under Secretary of State Will Clayton frankly admits that the Greek gift is an extension of lend-lease, but note that the same administration which now wants to turn lend-lease against Russia spent billions on lend-lease for Russia.

Fourth. American industry admittedly has been making higher-than-normal profits, but if all the profits of industry were eliminated, there would not be more than a 10-percent cut in prices—almost insignificant in view of the actual rise in prices since 1939. And the same labor leaders to whom President Truman threw out his invitation to disaster by OK'ing their strikes in advance are the very men who have made the present high prices inevitable. They do not

really want lower prices—they merely want a bigger slice of the national income pie. Generally, they want to get it from the public, for they realize that management's part of the pie in the long run, is generally not too high.

Fifth. President Truman, as he hints that industry and the Republicans are to blame for high prices, forgets that it was he, himself, who last June vetoed the only workable OPA bill that could be gotten through Congress. By his veto, he made inevitable the OPA holiday and the confusion that followed. This confusion and price tangle caused the demise of OPA.

If the people only will remember a few facts of recent history as they pay the highest prices in history for goods, they can correctly place the blame for their troubles. If they listen to the half-truths of demagogs, they will become further confused and will acquiesce in other policies that inevitably will but compound their sorrows.

The Republican program for meeting inflation is a sound one. It has stood the test of time. It is to cut Federal expenses, to keep our overseas spending to a minimum, to encourage industry to produce, to keep the heavy hand of Government out of business and to keep both labor and business out of Government. If the people support that program, there is still hope. If they do not, we are long gone down the road to perpetual chaos and fiscal insolvency, with all the heartaches and disillusionment such a policy has brought to other peoples in other climes in other days.

Let us face the facts—and let us be brave enough to recognize that only by back-breaking toil can America be saved.

We Need More Rural Electrification Lines, More Poles, More Wires, More Switches To Avail Ourselves of the Great Quantities of Cheap Power Now at Hand and Transmit This Low Cost Energy to Every Farmer in Alabama

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. BOYKIN. Mr. Speaker, there is probably no bill that comes before Congress which so completely cuts across party lines and receives greater support from Members on both sides of the aisle than does the annual appropriation for rural electrification.

In my long service in this House I know of no bill to which my colleagues—without regard to sectionalism or political differences—give a greater measure of thought, time, effort, and study than they annually bestow upon the matter of financing of rural electric lines.

This interest which gave rise to the original passage of the Rural Electrification Act, has continued to find support for every beneficent thought that any Member could bring to bear in extending the great benefits of cheap electric power to all citizens on farms in rural America.

Every last man in this House is proud of the little part he played in fostering and effectuating the purpose of the act. The membership as a whole are constantly and zealously on guard to see that the administration of upward of the $1,000,000,000 they placed at the disposal of the Rural Electrification Administrator are ever and always judiciously handled. It is altogether fitting and proper that they continue to give it this scrutiny inasmuch as this House has constituted in the REA, one of the greatest single industries in our Nation—an industry fostered and annually refueled with funds appropriated from the Federal Treasury itself.

Mr. Speaker, I recently received a letter from Mr. Maury A. McWilliams, president of the Alabama Electric Cooperative, Inc. Mr. McWilliams is also president of the State Wide Alabama Rural Electric Co-ops as well as a director in the National Association of Electric Cooperatives.

The Alabama Electric Cooperative, Inc., as well as other electric cooperatives, is not a rural-electrification cooperative, which we in this House ordinarily understand such an association to be. It is rather a sort of parent organization or a kind of a super co-op. It is engaged in generating and brokering operations in buying and selling electric power to a number of regular rural electrification distribution cooperatives.

It was originally organized in our State to take over what we in this body remember as the old Hopson power interests or the Alabama Water Service Co. You will recall that the old holding company was compelled to sell these holdings under an order from the Securities and Exchange Commission and the death-penalty clause.

As you also remember, there was some criticism at that time not alone as to the price paid but as to the economic soundness, as well as the wisdom of acquiring these old properties, some 3 or 4 years back. I am advised, however, that despite the uphill pull of maintaining them in operation that under the leadership of Mr. Maury A. McWilliams, the properties are still operating and that the board itself is doing a comparably fine job.

Now, Mr. Speaker, I was most happy to receive a letter from Mr. McWilliams, and I will, with your permission at this point, introduce into the RECORD both Mr. McWilliams' letter to me and my response:

ALABAMA ELECTRIC COOPERATIVE, INC.,
Andalusia, Ala., March 14, 1947.
Congressman FRANK BOYKIN,
House Office Building,
Washington, D. C.

DEAR MR. BOYKIN: Appreciate your going along with us fellows on our expansion Alabama Electric Cooperative, I remember you telling me that you were for REA 100 percent.

We in REA in Alabama—and there are nearly 100,000 now—appreciate your help, and know that you will continue to support us.

Trank you, Mr. Frank.

MAURY A. MCWILLIAMS,
President.

P. S.—As president, State-wide, Alabama director in national association, it is a pleasure to tell the REA consumers who our friends and ENEMIES are.

MAURY.

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 14, 1947.
Mr. MAURY A. MCWILLIAMS,
President, Alabama Electric Cooperative, Inc., Andalusia, Ala.

DEAR MR. MCWILLIAMS: I exceedingly regret not having had a visit with you on the occasion of your recent trip to Washington. Upon learning of your being on Capitol Hill, I endeavored to contact you at the offices of several of the Alabama Members, but was not successful in reaching you.

I was particularly interested in discussing with you, as president of the State-wide Alabama Rural Cooperative Association, several items in the annual report of the Rural Electrification Administrator, Mr. Wickard, to the Congress for the fiscal year 1946. This report came to me just prior to your arrival in Washington and its perusal and disclosures distressed me no end.

Primarily I would have liked to have discussed that part of Mr. Wickard's 1946 report which discloses the very low percentage of the farms in Alabama as compared with other States that now enjoy the benefits of the Rural Electrification Act over which I personally labored so long and hard to implement with a large annual appropriation of funds.

As you stated in your letter, "I am 100 percent for the REA." I have always been for REA—lock, stock, and barrel." I have gone overboard for maximum appropriations by Congress in obtaining every last dollar I could get for lighting up the farms in Alabama.

All during my long years of service in this House I fought side by side with our dearly beloved and revered Senator John Bankhead to bring the benefits of the magic of white power to every farm home in our State. The records will support the fact that I succeeded in getting the first project for Rural Electrification started both in Clark and Washington Counties. There my brother, R. M. Boykin, and I have REA lights and power in the houses on our farm at McIntosh, Ala., where we operate one of the largest diversified farms in our county.

I have always voted for every project brought up on the floor of the House by REA. I supported every appropriation for TVA * * *. You can be well assured that I will ever and always continue not alone to work in and with the Committee on Appropriations but to vote for every appropriation for Rural Electrification that will henceforth be brought out on the floor.

It is a matter of public record that there are only two other States in the country in which there is a greater power supply available than there is in Alabama. We in Alabama have the great Tennessee Valley Authority power available on the north; the Gulf Power Co. out of Florida sends its transmission lines across our boundaries at Flomaton, Florala, and south of Samson. These are supplemented by the tremendous line mileage of the Alabama Power Co., with its veritable grid work of high-tension lines criss-crossing our State. Altogether they give rise to the fact that there are more Alabama cotton and peanut planters, hog raisers, and dairy farmers now producing crops in the very shadows of high-tension power lines than in any State in the Union.

Secondarily, I wanted to discuss the cost of power purchased from public utility interests throughout the United States which is disclosed in table 5 of the Rural Electrification Administrator's 1946 report to Congress.

Inasmuch as that table in the report did not include the rates charged by the Alabama Power Co. to the REA co-op borrowers, I contacted Mr. W. W. Arnett in the Administrator's office in order that I might learn at first hand what the local public utility was charging the good farmers of Alabama and their farm cooperatives for the power furnished them.

What follows is table 5 abstracted from the report to Congress of Mr. Wickard, the Administrator, with the Alabama Power Co. rates inserted therein:

TABLE 5.—*Rates per kilowatt-hour offered by principal power suppliers contacted by REA*

Supplier	Old average rate per kilowatt-hour (cents)	New average rate per kilowatt-hour (cents)	Number of borrower co-ops served
Empire District Electric Co.	0.95	0.77	5
Kansas Gas & Electric Co.	1.14	.85	6
Mississippi Power Co.	.95	.80	5
Public Service Co. of Oklahoma	.85	.68	6
Southwestern Public Service Co.	.82	.72	10
West Texas Utilities Co.	1.05	.80	11
Alabama Power Co.	.80	.70	11

It will thus be seen from the report furnished to the Congress of the United States by the Rural Electrification Administrator Mr. Wickard, that the Alabama Power Co. is today furnishing power to the cooperatives of Alabama at rates comparable to and in most instances lower than most of the principal power suppliers contracted by the REA throughout the whole Nation.

In discussing the reduction in rates which have been effected, the Administrator reported to the Congress:

"Its search for cheaper wholesale power rates not long ago led the Powell Valley Electric Cooperative in Virginia to contract with Tennessee Valley Authority for power to serve four southwestern Virginia counties. TVA power will cost the co-op 7.5 mills a kilowatt-hour, a reduction of 26 percent below the price it has been paying. TVA's rate to this borrower is in sharp contrast to the rate of 10.6 mills a kilowatt-hour, the average wholesale price paid by all Virginia cooperatives to power companies in a recent year."

I have official information that Mr. R. E. McDonnell (Burns and McDonnell) of the engineering firm for your co-op, under date of March 8 advised your Alabama power cooperative in part as follows:

"It is apparent to anyone interested that as regards the cost of energy to the Alabama Electric Cooperative there is but a slight advantage resting with generated power."

Washington REA has advised that the average southern Alabama farmer uses approximately 65 to 80 kilowatt-hours per month.

They further advise that your co-op can purchase this power at a wholesale rate of seven-tenths of 1 cent per kilowatt-hour. It would, therefore, follow that your co-op could purchase enough electrical energy to furnish the average farm home 80 kilowatts of power for 56 cents per month—less than 2 cents per day.

I would be most interested to have you advise me with respect to just how many millions more would be required to rehabilitate existing pole lines, wires, hydroelectric and Diesel generating units, as well as to build the proposed steam-generating plant at Gannt.

Assuming that your generating co-op could generate this power as much as 10 percent less than you can now purchase it, is it not a fact that this savings would be so small that it would not enable the distributing co-ops to reduce the farmer's power bill by as little as 6 cents a month?

Be assured that my every business experience, acquired over the years, would make me shy away from in any manner "endorsing notes for millions" of dollars if the chance—and I mean chance—of getting a return was not a whole lot better than that one. If I played that loose and fast—I would have gone broke years ago!

Now, Maury, let's be honest and square, one with the other! We both in the past may have had our gripes about public-utilities rates, but you can't get away from the truth as it is revealed in the report of the Rural Electrification Administrator, Mr. Wickard, to Congress for 1946.

This report shows that not alone does your co-op and all the other distributing co-ops in Alabama enjoy cheap wholesale power rates from the local utilities (as is made evident in table 5), but that the co-op consumers of Alabama also obtain cheap retail power rates, as are shown by the billings disclosed in table 7 of that report.

Please note also the fact that the Alabama Power Co.'s rate to the Alabama electric co-ops are even lower than the rate of 7.5 mills or 0.75 cents per kilowatt which the TVA charges to the Rural Electrification co-ops in southern Virginia, as is shown by the Administrator's report.

Viewed in the light of simple business principles, it is because of these facts with respect to transmission coupled with the great abundance of cheap power available to our farmers and other rural consumers that I have never been able to reconcile myself as to the wisdom of acquiring "the old Hopson properties," which I recall was the Alabama Water Service Co.

Neither have I ever felt that it was economically sound nor good business practice for a small farm cooperative group to burden themselves with a great financial debt—haul coal 150 miles to 200 miles on a railroad to operate another small steam generating plant—in an endeavor to make power in competition with the gigantic hydroelectric properties of the TVA nor even with such an enormous steam generating plant as is now sitting right on top of the tremendous deposits of coal which underlie the turbines sending their electrical energy to the four points of the compass across the high-tension lines from Gorgas, Ala.

With respect to the report to Congress of the Rural Electrification Administrator, I am handing you herewith some pertinent data extracted from table 6, headed "REA loans and results accomplished by their expenditure, by States, June 30, 1946."

I am also sending comparable data extracted from the Administrator's report, table 7, "Consumption of electrical energy by borrowers and revenues by borrowers, July 1, 1945, to June 30, 1946."

May I point out that in table 7 the total of $25,159,649 allocated to our State it at the same time clearly shows up the fact that with all that money there are only three other States in the United States where a smaller percentage of farms are now electrified than in our own State of Alabama? Certainly it cannot be said it is or was because of the want of funds.

The report further discloses that with $11,570,294 advanced by the Federal Government to Alabama cooperatives, only 48,855 farmers and other consumers have so far been connected.

Table 7 as taken from the Administrator's report to Congress recites a total operating revenue of $2,381,716 derived from the sale of 104,530,000 kilowatt-hours billed to the Alabama consumers. A further analysis of that table discloses the fact that of the total of 104,530,000 kilowatt-hours billed by the cooperatives, more than 87,000,000 were purchased from public utilities and—that with this purchased power—there were only three States in the Union which enjoyed cheaper billed rates than we do in Alabama.

No man in all of Alabama is more God-fearing, honorable, upright, and respected—than is Bob Goode—who farms about 30 miles north of my brother and myself.

We have never had a more distinguished farm leader—nor one who has done more for the farmers in our State than has Bob Goode. He is a constituent of mine and one I am happy to say enjoys my fullest confidence and respect.

I have discussed rural electrification for hour upon hour with Bob Goode and Bob tells me:

"Frank, we have already got oodles and oodles of cheap power in Alabama. It is not power we need. What we do need is more farmers' distribution co-ops, not generating co-ops.

"Frank, let us take the money available to us in Alabama and put up more poles and more lines and get electricity in every farm home in the State.

"There is $13,000,000 more available now—more than has been advanced. If we would spend this money judiciously, we would in the coming year put cheap electric light and power into nearly 50,000 more farm homes in our State."

It is quite impossible for me to understand why it is with this enormous amount of cheap power available that Alabama is now so low in the roll call of States extending the benefits of rural electrification to its farmers and other rural consumers.

Moreover I am sorry to note that, whereas nearly 250 new industries were established in our State last year—all of which can avail themselves of cheap power—that the Administrator's report stated there was but one new rural co-op established in the northern part of the State.

I am not unmindful of the task you and your board have in operating the old Hopson hydro and Diesel plants and the fact that you might need new poles and larger line wires. If you need any help in obtaining funds to rebuild these things, you can rest assured that I will take off my coat and go to work to help you get them. You just say the word.

As for me personally, I am convinced that what we in Alabama need is not more power plants but that we do need more rural electrification lines, more rural co-ops, more poles, more wires, more switches, and more of everything necessary to distribute the great quantities of cheap electric power now available, and get this energy to every farmer in the State of Alabama. Let's use our money wisely to that end.

With every best wish,

Sincerely yours,

FRANK W. BOYKIN,
Member of Congress.

What follows are the tables taken from the 1946 annual report of the Rural Electrification Administrator to Congress:

TABLE 6.—*REA loans and results accomplished by their expenditure, by States, June 30, 1946*

North Dakota for Equal Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. LEMKE. Mr. Speaker, on February 28, the North Dakota House of Representatives unanimously passed Senate Concurrent Resolution 13, memorializing Congress to pass the equal rights amendment to the Constitution, and submit same to the several States for their approval and adoption. This amendment will put women on an equality with men.

The action taken by the North Dakota Legislature was due to the work and enthusiasm of a North Dakota woman, Mrs. Alfred Zuger. Mrs. Zuger is chairman of the North Dakota Branch of the National Woman's Party. She is also State chairman of legislation of the North Dakota Federation of Business and Professional Women's Clubs, and of the North Dakota Federation of Women's Clubs.

State Senator Carl E. Day, chairman of the judiciary committee, was the able sponsor of the measure in the State senate. Miss Haaugland, a State representative, sponsored the measure in the State house of representatives. Governor Aandahl, Attorney General Johnson, Secretary of State Hall, State Auditor Mrs. Baker, State Insurance Commissioner Krueger, State Treasurer Swenson, and Commissioner of Agriculture and Labor Dahl all endorsed and favored the resolution. In addition, many organizations of men and women in the State not only favored but actively worked for the passage of this resolution.

I am proud to say that North Dakota is the second State to take this action, preceded only by the State Legislature of New York, which, on March 24, 1945, memorialized Congress to pass the equal-rights amendment resolution and refer it to the States for ratification.

At present, women have different rights and privileges in different States. In some States they virtually have all the rights that men have. In others, they do not. I do not believe that women should be discriminated against in any State. I do not believe it is proper to permit any State to discriminate between the rights of men and women. By the very nature of things women are the equal of men and they should be treated as equal in the eyes of the law in every State.

In view of the spontaneous demand that the equal-rights amendment to our Constitution be referred to the States, it is not surprising that there should be some opposition, that there should be suggestions of delay and study. Such study is simply a waste of time. We know that there are discriminations in some States and that there should be none. We also know that in every en-

deavor woman has shown herself the equal of man. Why continue this discrimination? We also know that the rights of men and women is a matter that concerns the Nation as a whole. It is not a State issue.

On this subject a well-known economist, Dr. Miriam Oatman, has the following to say:

POSITION OF THE NATIONAL WOMAN'S PARTY REGARDING THE COMMISSION ON LAWS AFFECTING WOMEN

(By Dr. Miriam Oatman, secretary of the National Woman's Party)

I. We are always in favor of knowing the facts about anything. We are not in favor of duplicating work that has been done already, or of spending public money unnecessarily. The facts about the legal situation of women, up to the year 1945, have been brought together in several different studies.

In 1929 the National Woman's Party made a State-by-State survey of laws as they affect women. In 1932 the General Federation of Women's Clubs made a similar survey. In 1936 the Inter-American Commission of Women made a complete study of the subject which was published as a United States Senate document. In 1938 the Women's Bureau of the Department of Labor completed a similar study, which also is a Government document and has since been brought up to 1945.

II. If, despite these considerations, Congress should decide to establish a Commission to study the laws affecting women and to make recommendations, that Commission should be as broadly representative as possible and should not be confined to members of one political party or representatives of one social outlook. The National Woman's Party should be represented, also the business and professional women, the General Federation of Women's Clubs, and other important groups.

III. The appointment of such a Commission should not be accepted by us, nor should we permit it to be represented, as a substitute for the equal-rights amendment, or as an excuse to delay the passage of that amendment. Our demand for equal status is based upon the underlying foundations of democratic principle; hence, we cannot accept any substitute or brook any delay.

On the practical side, we cannot afford to await the report of such a Commission: (1) Since no finding would be new in view of the facts already before us; (2) since the recommendations might be adverse to our cause; and (3) since even recommendations embodying our viewpoint would have no mandatory effect. They might be useful in showing—once more—advisable changes in other laws; but the States would be free to ignore them. Our amendment, once made a part of the Federal Constitution, could not be ignored by the States.

IV. The passage of the bill in question is in no sense a fulfillment of the platform pledges by which both the Republican and the Democratic Parties committed themselves to working for equal rights. We insist upon the early fulfillment of those pledges.

The North Dakota resolution follows:

Senate Concurrent Resolution 13

Concurrent resolution memorializing the Congress of the United States to propose an amendment to the Constitution of the United States of America, endorsing equal rights for women

Be it resolved by the Senate of the State of North Dakota (the house of representatives concurring therein):

Whereas the women of America have shared equally with men in the hardships and sacrifices incident to the building of this Nation; and

Whereas they have shared equally in the pain and distress which have been involved in the maintenance of the American Republic and the ideals of free government against the aggression of tyrants and have participated, and are today participating, in the battles precipitated by the enemies of freedom; and

Whereas this Nation was "conceived in liberty and dedicated to the proposition that all men are created equal," and such declaration has no actual or implied limitations on equality before the law by reason of sex; and

Whereas the rights of women before the law are much abridged in many States, and this legal discrimination on the basis of sex constitutes an intolerable burden upon thousands of women who are solely dependent upon their own efforts for their livelihood, and is a source of irritation to many thousands of others who recognize in this discrimination a flat contradiction of the American principle of equality, wholly out of accord with the status of American women, which they have reached by their achievements in other field of human endeavor; and

Whereas there are today 985,000 more women than men in this country and women have served this country in time of war as well as peace, equally well with men in every field of work: Therefore be it

Resolved, That the senate and house legislature pass the following resolution and the amendment, as follows:

"EQUAL RIGHTS AMENDMENT

"Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have the power within the respective jurisdictions, to enforce this article by appropriate legislation. This amendment shall take effect 3 years after the date of ratification"; be it further

Resolved (if house and senate concur), That copies of this resolution be transmitted to the President of the United States (who has also endorsed this amendment), the Secretary of the United States Senate, the Clerk of the House of Representatives, and to each Member of Congress elected from the State of North Dakota.

That the foregoing resolution is sponsored by Mrs. Alfred Zuger, State chairman, legislation, North Dakota Federation of Business and Professional Women's Club, and director and State chairman of legislation, North Dakota Federation of Women's Clubs, and State chairman, legislation, North Dakota Branch of National Woman's Party.

The following State officials have endorsed the foregoing resolution: Gov. Fred G. Aandahl; Attorney General Nels G. Johnson; Secretary of State Thomas Hall; State Auditor Berta E. Baker; State Insurance Commissioner Otto Krueger; State Treasurer H. W. Swenson; Commissioner of Agriculture and Labor Math Dahl.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, previously obtained, I wish to include herewith a copy of an article from the New York Times of date April 11, 1947, in connection with the celebration held in New York for Army Week, and which article includes a statement by Gen. Courtney H. Hodges, United States Army, in connection with universal military training.

The article is as follows:

DUTY OF UNITED STATES HELD TO REMAIN STRONG—GENERAL HODGES AT ARMY WEEK MEETING SAYS UNIVERSAL TRAINING IS NECESSARY

Trained armed services are a concomitant of the United States world position of responsibility, Gen. Courtney H. Hodges, commanding the First Army, declared yesterday.

General Hodges, speaking at an Army Week observance, said that while there now exists a large reservoir of trained men both in and out of service on whom the country can call in any swift emergency, the backlog of battle-tested soldiers will have diminished to the danger point a few years hence.

Addressing a noontime gathering of several thousand persons from the steps of the Subtreasury Building, Wall and Nassau Streets, General Hodges asserted that national security is now dependent upon the adoption of a universal military-training program.

Maj. Gen. Charles B. Stone, deputy commander and chief of staff of the Air Defense Command, sounded the same warning at the ceremony, which was held under the auspices of the Military Order of the World Wars.

Other speakers at the ceremony, in which American Legion, Army, Navy, and Marine color guards participated, as did the Fort Jay band, were Rear Adm. Joel H. Bunkley, commander of the New York Chapter of the Military Order; Rear Adm. Reginald R. Belknap, former commander in chief of the order and chairman of this year's Army Day parade committee, and Admiral Thomas C. Kinkaid, commander of the Eastern Sea Frontier.

At a Governors Island ceremony earlier Admiral Kinkaid received from General Hodges the Army's Distinguished Service Medal, the citation hailing Admiral Kinkaid's service in the southwest and western Pacific.

Today, as part of the week-long Army observance proclaimed by President Truman, Governors Island will hold open house between 1 and 5 p. m. Ferries will leave the Battery at 15-minute intervals and half-hour tours of the installations will be conducted.

Who Said Prices Would Fall?

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM of April 13, 1947, by Fiorello H. LaGuardia:

WHO SAID PRICES WOULD FALL?

(By Fiorello H. LaGuardia)

Where are the wise guys who removed price control? Where are the big-mouths who shouted, "Remove controls and prices will go down"?

Just as was predicted by sound, sane, patriotic men and women a year ago, the cost of living has gone up and not down since the removal of price control. Inflation is creeping up. Yes; and people in Washington are commencing to worry. Too bad that their concern comes a little late.

On February 10, 1946, on this page, I said:

"Inflation is recognized by high prices for everything and requires more dollars to buy anything. The cost of living increases faster than wages or earnings. The only thing that is cheap is the dollar."

That was the time for the Treasury Department to get busy. Then it was that Congress ignored the interest of the American family and legislated for high profits and profiteering. There was the opportunity President Truman missed.

On April 28, 1946, in my weekly PM article, I pointed out that a combination of politically minded Republicans and cotton-minded Democrats in the House of Representatives were bent on killing all price control. Powerful, resourceful lobbies were at work. I called attention to the control that the profiteers, racketeers, inflationeers, politicianeers, and speculateers had taken on Congress. It was tough on every American family and the good old United States of America. I warned then that the way things were going, every family pantry would be pilfered and the wardrobe would be bare of clothes.

President Truman properly vetoed the first bill. Then Congress dragged the debate on until the very last minute and sent another bill to the President. This he signed. The dire results, the consequences, are now before us. The worst is yet to come.

On June 16, 1946, I cited the figures that OPA and the various agencies of Government had presented to Congress. It was no secret. The total increase in staple items of food and clothes, such as meat, milk, poultry, dairy products, and textiles, wools, rayons, and cotton goods, will cost the consumers, in the year following decontrol of prices, an estimated total of $5,720,000,000. Where will all this money come from? The average family hasn't got it to spend. It will, therefore, come from the table, from the comfort of millions of American men, women, and children.

THE VICIOUS CIRCLE IS CONTINUING

In my article of June 30, 1946, as the dirty work of decontrol was setting in, I estimated that the cost of food for a family of four, with a $3,000 income, would increase $250 a year; of clothing, $100 a year.

The vicious circle of increased cost of living, increased wages, is continuing. Unless proper economic adjustments are made, the spiral is going to end in inflation and be followed by a depression. This must be avoided. On July 7, 1946, I wrote:

"The fact is ignored that in this age there cannot be prosperity in our country unless 130,000,000 people are prosperous.

"A country of a small wealthy class and big land owners, with a suffering, exploited, helpless population, cannot survive today. It does not deserve to survive.

"We have learned that the prosperity of our country depends upon the purchasing power of the people. Purchasing power is created only by work coupled with decent wages, fair salaries enabling a high standard of living. If, every time an adjustment is made in increased wages, prices are jumped, then purchasing power is not increased and the relative position of the masses of workers, employees, and small businessman with industry remains the same. There is no net gain.

"We have talked so much about higher standards of living and purchasing power. Everyone agrees. There, though, it has stopped.

"There is but one place from which this differential necessary to an increased purchasing power and higher standard of living can be taken, and that is from profits.

"If the same standard of profits of the past is maintained, then the same relative positions continue. There will not be increased production. There will be the same large gaps between economic groups, dire poverty, semipoverty, moderate income classes with one wealthy class at the top."

PURPOSE OF A PROGRESSIVE INCOME TAX

That is not the American way. That is not the American system. That will not protect free enterprise. That is plutocracy at its worst. That is what must be avoided.

Big business, industry, and, yes, finance, must remember that the very purpose of a progressive income tax is to pass on in wages to producers and workers a better share of the profits. Yet there is a stubborn resistance to that. Good common sense would dictate that the distribution of the profits in a more equitable manner with those who help create them is the one salvation of our country and our present system.

Labor, too, has a responsibility. Labor must work harder, produce more. Now is not the time for feather-bedding, nonproductive fringe payments. Production is what is needed.

I repeated the admonition in my article of December 15, 1946:

"Business and industry must recognize that increased wages with increased prices, keeping the same relative ratio of wages and cost of living which existed prior to 1933, is simply impossible.

"We must reach a point where increased wages will provide a higher and better standard of living and security to all wage earners and salaried people. * * * The differential must necessarily come from profits. That means that what was a reasonable expectation on a dollar investment before 1933 cannot be expected today. It does mean, by greater production, fair profits can be made. No one denies under our economy that profit is a legitimate and important factor."

The Easter parade is over. Yes; there were many, many pretty bonnets on Fifth Avenue. For every pretty bonnet on the Avenue, there were a thousand housewives throughout the land who could not manage to buy a new pair of shoes for each of the kids in the family. The price of clothes has gone up so high, along with food and household furnishings, that it can be said, as was predicted a year ago, that not only the lower income group but the $3,000, the $4,000 family just cannot make both ends meet.

Congress has recognized the increased cost of living. Members of the House and Senate could not get along with $10,000 a year. That is quite true. They allowed themselves $2,500 pay raise, plus another $2,500 cost-of-living bonus in the form of tax-free expense accounts. I say "cost-of-living bonus" because it was not a salary; it isn't taxable; it is just $2,500 additional to meet the additional cost of living in Washington, D. C. I think the Members of Congress were entitled to that. They should be in a position to understand the plight of the average American family. They must know by this time that if prices continue to increase, with corresponding increases in salaries and wages, then inflation just cannot be avoided.

The administration naturally is panicky. They have every right to be. It is a panicky situation. It requires action. Mere talk won't do it; mere appeals won't do it. Why, the profiteers are laughing at the President and Congress. They are making theirs—at least, they think they are. They are, for the moment. They have no vision. Many of the smaller ones will go under if inflation sets in.

The American people, particularly the mothers and housewives, cannot be distracted from thinking of the present economic situation of the country by sending sharpened bayonets to Greece.

Last Wednesday the President called a Cabinet meeting. Fine. The White House said it was "like a session of a graduate class in economics." Well, perhaps that was a little too much. What was needed, judging from past performance, was a session in elementary economics. Too bad this economic education did not take place earlier so that the might of the administration could have been impressed on Congress before all the damage was done. I note everyone went to lunch after the "seminar." They did not eat statistics. Neither can the housewife feed her family with statistics.

HOW TO GET FIRST-HAND INFORMATION

If the President of the United States would have a conference with Mrs. Smith and Mrs. Jones, Mrs. O'Grady, Mrs. Olson, Mrs. Epstein, and Mrs. Esposito, who are struggling to keep families together on a weekly pay envelope, he could obtain first-hand information on the high cost of living. He might also get information on present rents and some help to avoid another catastrophe and more disaster to the American family. He might learn how much mothers worry about the cost of brother's shoes and sister's dress. He might learn of the many denials of the American family and how necessities of yesterday are luxuries today—in the richest land on earth

Incidentally, while we are talking about experts, it was noted that the President's economic advisers, appointed to prepare plans for a full employment policy of our country, attended the economic seminar with the Cabinet. What the American people want to know is what happened to the full-employment policy. There is no plan to absorb unemployment in the event of a depression. Here is a place where experts could really display their talents. There is little hope to be found in the report to the President prepared by these same experts.

It is also noted that nothing has been said in the guise of economy to abolish their jobs, and nothing will be said as long as they continue to submit innocuous reports and indulge in academic discussions.

There is another lesson in store. We criticize and are opposed to other forms of economy. People are getting tired of shifting from one party to another. The way to prove that our economy is the better is to make it work. We must demonstrate by a better, a fuller, a happier life that our system is the best. It can be done. It should be done. It must be done.

American industry and business and finance and labor can do it. If they do not, the Government will have to step in. There is no time to lose. Action! Action! Action!

So, again I say: Wake up Washington, before it is too late.

The Communist Party of the United States as an Agent of a Foreign Power

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1947

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting the report of the Committee on Un-American Activities of its investigation of un-American propaganda in the United States.

This report shows that the Communist Party is an agent of a foreign power

and that it is dedicated to the destruction of this Government and all other free governments throughout the world.

If every patriotic American could read this document and realize what communism is doing to try to destroy our form of government, our American way of life, in fact, our Christian civilization throughout the world, they would rise up as one man and drive this infamous influence from American soil.

The matter referred to follows:

THE COMMUNIST PARTY OF THE UNITED STATES AS AN AGENT OF A FOREIGN POWER

(Report of Committee on Un-American Activities, House of Representatives, 80th Cong., 1st sess., H. Rept. No. 209)

PREFACE

It is the unanimous opinion of this committee that the Communist Party of the United States is in fact the agent of a foreign government.

It is important that the Government and the people recognize this fact.

If the Communist Party is to be properly dealt with, it is essential that the legislation of Congress and the thinking of the people be predicated upon this fundamental fact. The purpose of this report is to straighten the thinking of the American people and the Government concerning the Communist Party and to dispel the idea that it is a domestic political party, or that it is a minority group operating within the democratic framework of our Constitution. This report is a documented refutation of this misconception.
